## SUMMARY RECORDS

Chapter III. GENERAL COMMITTEE

First Meeting, 13 November 1954, at 9 a.m. . . . . 237
Second Meeting, 15 November 1954, at 9 a.m. . . . . 240
Third Meeting, 17 November 1954, at 9 a.m. . . . . 241
Fourth Meeting, 19 November 1954, at 9 a.m. . . . . 244

Fifth Meeting, 22 November 1954, at 9 a.m. . . . . 247
Sixth Meeting, 24 November 1954, at 9 a.m. . . . . 251
Seventh Meeting, 26 November 1954, at 9 a.m. . . . . 253
Eighth Meeting, 29 November 1954, at 9 a.m. . . . . 254
Ninth Meeting, 1 December 1954, at 9.15 a.m. . . . . 257
Tenth Meeting, 3 December 1954, at 9 a.m. . . . . 258
Eleventh Meeting, 6 December 1954, at 9 a.m. . . . . 261
Twelfth Meeting, 8 December 1954, at 9 a.m. . . . . 264
Thirteenth Meeting, 10 December 1954, at 9 a.m. . . . . 266

Chapter IV. PROGRAMME AND BUDGET COMMISSION

First Meeting, 17 November 1954, at 5.30 p.m. . . . . 269
Second Meeting, 18 November 1954, at 10 a.m. . . . . 272
Third Meeting, 18 November 1954, at 3.30 p.m. . . . . 278
Fourth Meeting, 19 November 1954, at 10 a.m. . . . . 282
Fifth Meeting, 19 November 1954, at 3.30 p.m. . . . . 289
Sixth Meeting, 20 November 1954, at 10 a.m. . . . . 297
Seventh Meeting, 22 November 1954, at 10 a.m. . . . . 301
Eighth Meeting, 23 November 1954, at 10 a.m. . . . . 306
Ninth Meeting, 24 November 1954, at 3 p.m. . . . . 315
Tenth Meeting, 25 November 1954, at 10 a.m. . . . . 320
Eleventh Meeting, 25 November 1954, at 3.30 p.m. . . . . 329
Twelfth Meeting, 26 November 1954, at 10 a.m. . . . . 337
Thirteenth Meeting, 26 November 1954, at 3.30 p.m. . . . . 343
Fourteenth Meeting, 27 November 1954, at 9 a.m. . . . . 353
Fifteenth Meeting, 29 November 1954, at 10 a.m. . . . . 363
Sixteenth Meeting, 29 November 1954, at 3.30 p.m. . . . . 370
Seventeenth Meeting, 30 November 1954, at 9.30 a.m. . . . . 378
Eighteenth Meeting, 30 November 1954, at 3.30 p.m. . . . . 386
Nineteenth Meeting, 30 November 1954, at 9.30 p.m. . . . . 396
Twentieth Meeting, 1 December 1954, at 10 a.m. . . . . 403
Twenty-first Meeting, 1 December 1954, at 3 p.m. . . . . 410
Twenty-second Meeting, 1 December 1954, at 9.30 p.m. . . . . 418
Twenty-third Meeting, 2 December 1954, at 10 a.m. . . . . 424
Twenty-fourth Meeting, 2 December 1954, at 3 p.m. . . . . 430
Twenty-fifth Meeting, 2 December 1954, at 9.30 p.m. . . . . 439
Twenty-sixth Meeting, 3 December 1954, at 10 a.m. . . . . 446
Twenty-seventh Meeting, 3 December 1954, at 3.30 p.m. . . . . 454
Twenty-eighth Meeting, 4 December 1954, at 11 a.m. . . . . 461
Twenty-ninth Meeting, 4 December 1954, at 3 p.m. . . . . 466
Thirtieth Meeting 6 December 1954, at 10 a.m. . . . . 476
Thirty-first Meeting, 6 December 1954, at 3.30 p.m. . . . . 482
Thirty-second Meeting, 8 December 1954, at 10 a.m. . . . . 488
Thirty-third Meeting, 8 December 1954, at 3.30 p.m. . . . . 496
Thirty-fourth Meeting, 9 December 1954, at 10 a.m. . . . . 500
Thirty-fifth Meeting, 9 December 1954, at 3.30 p.m. . . . . 505

Chapter V. ADMINISTRATIVE COMMISSION

First Meeting, 13 November 1954, at 3.30 p.m. . . . . 513
Second Meeting, 15 November 1954, at 10 a.m. . . . . 515
Third Meeting, 15 November 1954, at 3.30 p.m. . . . . 520
Fourth Meeting 16 November 1954, at 10.30 a.m. . . . . 525
Fifth Meeting, 16 November 1954, at 3.30 p.m. . . . . 530
Sixth Meeting, 17 November 1954, at 3.30 p.m. . . . . 535
Seventh Meeting, 18 November 1954, at 3.30 p.m. . . . . 542
Eighth Meeting, 19 November 1954, at 10 a.m. . . . . 546
Ninth Meeting, 20 November 1954, at 10.30 a.m. . . . . 551
Tenth Meeting, 20 November 1954, at 3 p.m. . . . . 556
Eleventh Meeting, 22 November 1954, at 10 a.m. . . . . 562

Twelfth Meeting, 22 November 1954, at 3 p.m. . . . . 566
Thirteenth Meeting, 23 November 1954, at 10.15 a.m. . . . . 567
Fourteenth Meeting, 23 November 1954, at 3 p.m. . . . . 571
Fifteenth Meeting, 25 November 1954, at 10 a.m. . . . . 579
Sixteenth Meeting, 25 November 1954, at 3.30 p.m. . . . . 586
Seventeenth Meeting, 29 November 1954, at 10 a.m. . . . . 595
Eighteenth Meeting, 29 November 1954, at 3.30 p.m. . . . . 601
Nineteenth Meeting, 30 November 1954, at 10 a.m. . . . . 608
Twentieth Meeting, 30 November 1954, at 3 p.m. . . . . 613
Twenty-first Meeting, 1 December 1954, at 10 a.m. . . . . 620
Twenty-second Meeting, 1 December 1954, at 3.30 p.m. . . . . 626
Twenty-third Meeting, 3 December 1954, at 10 a.m. . . . . 631
Twenty-fourth Meeting, 3 December 1954, at 3.30 p.m. . . . . 638

Chapter VI. ADVISORY COMMITTEE ON PROGRAMME AND BUDGET

First Meeting, 1 November 1954, at 10.30 a.m. . . . . 641
Second Meeting, 1 November 1954, at 3.30 p.m. . . . . 645
Third Meeting, 2 November 1954, at 10 a.m. . . . . 651
Fourth Meeting, 3 November 1954, at 10 a.m. . . . . 657
Fifth Meeting, 3 November 1954, at 3.45 p.m. . . . . 664
Sixth Meeting, 4 November 1954, at 10 a.m. . . . . 672
Seventh Meeting, 4 November 1954, at 3.30 p.m. . . . . 679
Eighth Meeting, 5 November 1954, at 10 a.m. . . . . 689
Ninth Meeting, 5 November 1954, at 3.30 p.m. . . . . 695
Tenth Meeting, 6 November 1954, at 10 a.m. . . . . 704
Eleventh Meeting, 8 November 1954, at 10 a.m. . . . . 709
Twelfth Meeting, 8 November 1954, at 3.30 p.m. . . . . 718
Thirteenth Meeting, 9 November 1954, at 10 a.m. . . . . 726
Fourteenth Meeting, 9 November 1954, at 3.30 p.m. . . . . 732
Fifteenth Meeting, 10 November 1954, at 10 a.m. . . . . 738
Sixteenth Meeting, 10 November 1954, at 3.30 p.m. . . . . 745
Seventeenth Meeting, 11 November 1954, at 10 a.m. . . . . 753
Eighteenth Meeting, 11 November 1954, at 3.30 p.m. . . . . 761
Nineteenth Meeting, 12 November 1954, at 3.30 p.m. . . . . 769
Twentieth Meeting, 13 November 1954, at 10 a.m. . . . . 776
Twenty-first Meeting, 13 November 1954, at 3.30 p.m. . . . . 781
Twenty-second Meeting, 15 November 1954, at 10 a.m. . . . . 784
Twenty-third Meeting, 15 November 1954, at 3.30 p.m. . . . . 789
Twenty-fourth Meeting, 15 November 1954, at 9 p.m. . . . . 795
Twenty-fifth Meeting, 17 November 1954, at 10.30 a.m. . . . . 805
Twenty-sixth Meeting, 17 November 1954, at 4 p.m. . . . . 811
Twenty-seventh Meeting, 23 November 1954, at 3.30 p.m. . . . . 816
Twenty-eighth Meeting, 24 November 1954, at 10 a.m. . . . . 822
Twenty-ninth Meeting, 24 November 1954, at 3.30 p.m. . . . . 828
Thirtieth Meeting, 25 November 1954, at 12 a.m. . . . . 832
Thirty-first Meeting, 29 November 1954, at 3.30 p.m. . . . . 835
Thirty-second Meeting, 30 November 1954, at 10 a.m. . . . . 840
Thirty-third Meeting, 30 November 1954, at 3.30 p.m. . . . . 845
Thirty-fourth Meeting, 1 December 1954, at 10 a.m. . . . . 850
Thirty-fifth Meeting, 2 December 1954, at 10 a.m. . . . . 855
Thirty-sixth Meeting, 6 December 1954, at 6 p.m. . . . . 858
Thirty-seventh Meeting, 7 December 1954, at 10 a.m. . . . . 859
Thirty-eighth Meeting, 8 December 1954, at 5.30 p.m. . . . . 866

Chapter VII. NOMINATIONS COMMITTEE

First Meeting, 12 November 1954, at 4.30 p.m. . . . . 870
Second Meeting, 15 November 1954, at 3.30 p.m. . . . . 873
Third Meeting, 6 December 1954, at 4.30 p.m. . . . . 874
Fourth Meeting, 7 December 1954, at 10 a.m. . . . . 877
Fifth Meeting, 10 December 1954, at 3.30 p.m. . . . . 878

Chapter VIII. LEGAL COMMITTEE

First Meeting, 12 November 1954, at 6.10 p.m. . . . . 880
Second Meeting, 17 November 1954, at 10.30 a.m. . . . . 880
Third Meeting, 19 November 1954, at 3.30 p.m. . . . . 883
Fourth Meeting, 26 November 1954, at 10.30 a.m. . . . . 888
Fifth Meeting, 26 November 1954, at 3.30 p.m. . . . . 892
Sixth Meeting, 2 December 1954, at 10 a.m. . . . . 897
Seventh Meeting, 2 December 1954, at 3.30 p.m. . . . . 901

Chapter IX. CREDENTIALS COMMITTEE

First Meeting, 12 November 1954, at 11.45 a.m. . . . . 904

Chapter X. COMMITTEE ON REPORTS OF MEMBER STATES

First Meeting, 12 November 1954, at 6 p.m. . . . . 908
Second Meeting, 13 November 1954, at 10.30 a.m. . . . . 909
Third Meeting, 15 November 1954, at 10.30 a.m. . . . . 911
Fourth Meeting, 18 November 1954, at 10 a.m. . . . . 912
Fifth Meeting, 18 November 1954, at 3.45 p.m. . . . . 913
Sixth Meeting, 22 December 1954, at 10 a.m. . . . . 915
Seventh Meeting, 23 December 1954, at 3.30 p.m. . . . . 917
Eighth Meeting, 24 November 1954, at 3.30 p.m. . . . . 920
Ninth Meeting, 29 November 1954, at 3.30 p.m. . . . . 924

Chapter XI. HEADQUARTERS COMMITTEE

First Meeting, 15 November 1954, at 4 p.m. . . . . 926
Second Meeting, 25 November 1954, at 3.30 p.m. . . . . 927
Third Meeting, 1 December 1954, at 3.30 p.m. . . . . 933

INDEX . . . . . 937

# GENERAL INFORMATION

# LIST OF DELEGATIONS, REPRESENTATIVES AND OBSERVERS

## DELEGATES OF MEMBER STATES

### ARGENTINA

*Delegates :*
Dr. Leonardo José Antonio COLOMBO (Head of the delegation)
Dr. José Alfredo FERNANDEZ MORENO
Professor Prudencio OSCAR TOLOSA
Dr. Juan Emilio CASSANI
Dr. Enrique Roberto AFTALION
Dr. Carlos ASTRADA
*Deputy :*
Dr. Miguel Angel GUEZALEZ
*Press Officer :*
Mrs. Zoe MARTINEZ DE REYES URIBE

### AUSTRALIA

*Delegates :*
Mr. Joseph James PRATT (Head of the delegation)
Mr. Kevin Thomas KELLY
Dr. W. Gardner DAVIES
Mr. R. W. S. LINKSON
*Secretary :*
Miss J. DICKINSON

### AUSTRIA

*Delegates :*
H. E. Mr. Max LÖWENTHAL-CHLUMECKY
Dr. Fritz KALMAR

### BELGIUM

*Delegates :*
Baron François van der STRATEN WAILLET (Head of the delegation)
Professor Jean BAUGNIET
Professor Marcel FLORKIN
Mr. Louis de THIBAULT
Professor Armand HACQUAERT
*Adviser :*
Mr. Jean des ENFFANS D'AVERNAS

### BOLIVIA

*Delegate :*
Mr. Mario SANJINES URIARTE

### BRAZIL

*Delegates :*
Professor Paulo de BERREDO CARNEIRO (Head of the delegation)
Professor Joaquim COSTA RIBEIRO
Professor T. BRANDÃO CAVALCANTI
*Advisers :*
Mr. Ary MACHADO PAVÃO
Mr. Antonio FANTINATO NETTO
*Representative of IBECC ;*
Professor Isaias RAW
*Technical Adviser :*
Professor Inezil PENNA MARINHO

### BURMA (UNION OF)

*Delegates :*
Professor THA HLA
U THA MYAT
U PO CHEIN

### BYELORUSSIAN SSR

*Delegates :*
Mr. Stepan Andreievich UMREIKO (Head of the delegation)
Mr. Anatoli Emilianovich GURINOVICH
Mr. Giorgi Tijonovich KAVALEVSKY
*Adviser :*
Mr. Nicolas Jakovlevich AGAPOV
*Interpreter :*
Mr. Victor Sergueevich KOLBASIN
*Secretary :*
Miss Natalia Nicolaevna KOVALENKO

### CAMBODIA

*Delegates :*
H.E. Mr. Nong KIMNY (Head of the delegation)
Mr. HONG HOEUNG DOEUNG

### CANADA

*Delegates :*
H.E. Mr Sydney D. PIERCE (Head of the delegation)

Mr. Bona ARSENAULT
Mr. C.W. CARTER
Dr. Philippe PANNETON
Dr. Garnet T. PAGE

*Deputies :*

Dr. A. VIBERT DOUGLAS
Mr. F. K. STEWART
Mr. Fulgence CHARPENTIER

*Advisers :*

Mr. Malcolm N. BOW
Mr. C. F. W. HOOPER

## CEYLON

*Delegates :*

Mr. R. J. F. MENDIS (Head of the delegation)
Dr. B. A. ABEYWICKREMA

## CHILE

*Delegates :*

H.E. Mr. Carlos VASALLO ROJAS (Head of the delegation)
Mr. Julio BARRENECHEA PINO
Mr. Francisco WALKER LINARES
Mr. Manuel ZAMORANO HERNANDEZ
Mr. Alberto VILLALON GALDAMES

*Deputies :*

Mrs. Amanda LABARCA HUBERTSON
Mr. Héctor MARDONES RESTAT
Mr. Juan IBAÑEZ GOMEZ

*Adviser :*

Mr. Rodrigo GUTIERREZ PALACIOS

## CHINA

*Delegates :*

Dr. LI YU-YING (Head of the delegation)
H.E. HU CHING-YU
Dr. U TSUN-CHEN
Professor CHEN YUAN

*Advisers :*

Dr. SIAO-YU
Professor CHENG CHI-PAO
Dr. CHOU LING

*Secretaries :*

Mr. LEE WEI-O
Mr. CHEN KEH-CHI

## COLOMBIA

*Delegates :*

H.E. Dr. Rafael BERNAL JIMENEZ (Head of the delegation)
H.E. Dr. Pablo JARAMILLO ARANGO
Dr. Rafael GOMEZ HOYOS
Dr. Julio HOLGUIN UMAÑA
Dr. Agustín RODRIGUEZ GARAVITO

## COSTA RICA

*Delegates :*

H. E. Mr. Uladislao GAMEZ SOLANO (Head of the delegation)
H. E. Mr. Emilio VALVERDE VEGA
H. E. Mr. Luis DURAN MASIS
Mr. Eduardo TREJOS DITTEL

## CUBA

*Delegates :*

H.E. Dr. Orestes FERRARA y MARINO (Head of the delegation)
H. E. Mr. Miguel Angel CARBONELL
H.E. Mr. Francisco ICHASO
H.E. Mr. Ricardo RIAÑO JAUMA
H.E. Mr. Vicente VALDES RODRIGUEZ

*Advisers :*

Mr. Adolfo RIVERO RODRIGUEZ
Mrs. Patria MENCIA y de ARMAS

*Secretary :*

Mr. Fernando G. CAMPOAMOR

## CZECHOSLOVAKIA

*Delegates :*

Professor Jiří HÁJEK (Head of the delegation)
Professor Frano PAZÚR
Dr. Václav NAVRÁTIL
Dr. Václav VANĚČEK
Dr. Vladimír STĚPÁNEK

## DENMARK

*Delegates :*

Mrs. Bodil KOCH (Head of the delegation)
Professor Jakob NIELSEN
Professor Andreas BLINKENBERG
Mr. Hans KJEMS

## DOMINICAN REPUBLIC

*Delegate :*

Dr. Antonio PANNOCCHIA ALVAREZ

## ECUADOR

*Delegates :*

H. E. Dr. José R. MARTINEZ COBO (Head of the delegation)
E.E. Mr. Clodoveo ALCIVAR ZEVALLOS
Mr. José Rafael TERAN ROBALINO
Mr. Gerardo MARTINEZ ESPINOSA
Dr. Víctor CHIRIBOGA TERAN

*Secretary :*

Mr. Carlos ALCIVAR MUIRRAGUI

## EGYPT

*Delegates :*

H.E. Dr. Mohamed AWAD (Head of the delegation)
H.E. Mr. Mahmoud M. HAMMAD (Deputy Head of the delegation)
Dr. Soliman HUZAYIN
Professor Hussein FAWZI
Professor Abdel Aziz AL-KOUSSI
Dr. Ibrahim Hilmi ABDEL-RAHMAN

*Deputies :*

Dr. Mohamed Hassan EL-ZAYAT
Mr. Boutros ABADIR

## EL SALVADOR

*Delegates :*

Mr. Arturo BUSTAMANTE
Professor Armando MARTI

## FRANCE

*Delegates :*

H.E. Mr. Jean BERTHOIN (Head of the delegation)
H.E. Mr. Daniel MAYER (Deputy Head of the delegation)
Mr. Paul RIVET (Deputy Head of the delegation)
Mr. Paul HAZOUME
Father Pierre LEROY

*Advisers :*

Mr. Saâdeddine BENCHENEB
H.E. Mr. Edouard GUYON
Professor Henri LAUGIER

*Deputies :*

Mr. Louis FRANÇOIS
Mr. Georges GAYET
Mr. Pierre JUVIGNY
Mr. Charles MORAZE
Mr. Fernand TERROU

*Secretary-General :*

Mr. Jean Pierre CABOUAT

*Technical Advisers :*

Mr. Claude CHAYET
Mr. FAYET
Mr. G. MORLOT
Mr. Jean Marie SEDES

*Experts :*

Mr. Robert BRICHET
Mr. Robert LEFRANC

*Secretary :*

Miss Marguerite LEVASSEUR

## GERMAN FEDERAL REPUBLIC

*Delegates :*
Professor Walter HALLSTEIN (Head of the delegation)
Dr. Walter ERBE (Deputy Head of the delegation)
Dr. Kurt Fritz von GRAEVENITZ
Professor Arnold BERGSTRAESSER
Dr. Maria SCHLÜTER-HERMKES
*Experts :*
Dr. Eugen LÖFFLER
Dr. Dolf STERNBERGER
Dr. Heinz KÜPPERS
Mr. Kurt FREY
Dr. Elisabeth SCHWARZHAUPT
Professor Dr. Otto STOCKER
Count Heinrich von HARDENBERG

## GREECE

*Delegates :*
Professor Alexandre PHOTIADES (Head of the delegation)
Mr. Constantin VATIKIOTTY
Mr. Georges P. KAPSAMBELIS
Mr. Gregorio PANTAZOGLOU

## GUATEMALA

*Delegates :*
Professor Vicente DIAZ SAMAYOA (Head of the delegation)
H.E. Mr. Virgilio RODRIGUEZ BETETA
Mr. Antonio CARRERA MOLINA
Mr. José Luis MENDOZA
Mrs. Manuelita de CORONADO
*Secretary :*
Mr. Virgilio RODRIGUEZ MACAL

## HAITI

*Delegates :*
Mr. León LALEAU (Head of the delegation)
Mr. Max JEAN-JACQUES (Deputy Head of the delegation)
Mr. Lelio FAUBLAS
Professor Amilcar LAMY
Mr. Gerard LOISEAU

## HONDURAS

*Delegate :*
Professor Rafael BARDALES

## HUNGARY

*Delegates :*
Mr. Ernő MIHÁLYFI (Head of the delegation)
Mrs. Magda JOBORU
Mr. Imre SZABÓ
Mr. Aladár TAMÁS
*Secretaries :*
Mr. József ELSÖ
Mr. Gábor KOVÁCS

## INDIA

*Delegates :*
Dr. Sarvepalli RADHAKRISHNAN (Head of the delegation)
Dr. A. L. MUDALIAR
Mr. Humayun KABIR
Dr. B. N. PRASAD
Mrs. Rukmini Devi ARUNDALE
*Deputies :*
Mr. A. R. WADIA
Mr. M. MUJEEB
Mr. M. S. SUNDARAM
Mr. L. R. SETHI
Dr. N. S. JUNANKAR
*Press Officer :*
Mr. M. D. SHAHANE

## INDONESIA

*Delegates :*
H.E. Dr. Raden SUDJONO (Head of the delegation)
Professor Ir. H. JOHANNES (Deputy Head of the delegation)
Dr. SOENARJO
Mr. R. SOEBROTO
Dr. Sudio GANDARUM

## IRAN

*Delegates :*
H.E. Mr. Dr. Gholam Ali RAADI (Head of the delegation)
Dr. Zabihollah SAFA

## IRAQ

*Delegates :*
Dr. Ahmed Hakki AL-HILLI (Head of the delegation)
Dr. Nasir AL-HANI
Mr. Saadi KHALIL

## ISRAEL

*Delegates :*
H.E. Dr. Arieh L. KUBOVY (Head of the delegation)
Dr. Moshe AVIDOR (Deputy Head of the delegation)
Professor Samuel SAMBURSKY
Mr. Mordechai AVIDA
*Deputy :*
Mrs. Daphna ALLON
*Adviser :*
Mr. A. L. ALLON

## ITALY

*Delegates :*
Dr. Vittorio BADINI CONFALONIERI (Head of the delegation)
Dr. Vittorino VERONESE (Deputy Head of the delegation)
Dr. Bartolomeo MIGONE
Professor Francesco SEVERI
Professor Mario TOSCANO
*Deputies :*
Professor Giovani CALO

## FIRST PLENARY MEETING

*12 November 1954 at 10.30 a.m.*

*President:* Dr. Sarvepalli RADHAKRISHNAN (India)

CONTENTS

Opening of the session by the Head of the Delegation of India 35
Addresses of welcome by representatives of the Government of Uruguay . . . . . 37
Statement by the President on arrears of contributions . . . 39
Speech by the Delegate of USSR . . . . . 40
Establishment of the Credentials Committee . . . . . 40

**OPENING OF THE SESSION BY THE HEAD OF THE DELEGATION OF INDIA**

(1) The PRESIDENT: Mr. President of the Council, members of the Uruguayan Government, delegates to the eighth session of the General Conference of Unesco, and friends.

(2) May I extend to you all a very hearty welcome to this eighth session of the General Conference, meeting in this beautiful city, pleasing to the eye and soothing to the mind. It is the capital of Uruguay, reputed to be a model democracy in this part of the world. We are now witnessing democracy in action - the country is in the throes of a general election. It is said that democracies can function properly only in small States - here is an example. Hitherto, in history, when we wished to alter or abolish governments we have had either dynastic successions or violent revolutions. A more human, a more civilized, a more dignified method of altering constitutions, of changing government is the method of free elections, and in this country today we are experiencing such an election. I am informed that the people of this country do not look upon political freedom as an end in itself.

(3) Everything is being done to raise the material standards of the people of Uruguay. You have here free education - both in the schools and at university level; you have free medical services, you have pensions for the old and the sick and for people who have spent their lives in government service; thus the benefits of social legislation are widely spread. I believe then that Uruguay can be regarded as a model democracy. We wish it well. Nor have I any doubt that it is the more secure because the country has neither uranium nor oil.

(4) Since we last met, our membership has increased. We are very glad to welcome the delegates from the Soviet Union, which has for the first time joined this Organization. I venture to hope that their presence here will contribute towards dissipating the mists of misunderstanding, towards dissolving, so to speak, the frozen attitudes and rigid postures of fear, suspicion and distrust, and towards the development of world understanding, one of the main objectives of this great Organization. Not only the Soviet Union, but other countries have also joined, Byelorussia, Ukraine, Hungary, Czechoslovakia, Poland, who were with us for a time, then left us, and now return to the fold like sheep that have strayed. It is my hope that their presence here, too, will help to promote world understanding. I am informed of certain technical difficulties, but, without prejudging the issue, without committing the Administrative Commission to any decision, I am just throwing out a suggestion to you - as a strictly temporary measure - that they may be allowed full voting rights. I shall be making a statement on that question as soon as time permits.

(5) The world, once divided by oceans and continents, is today physically united, but there is still suspicion and misunderstanding. It is essential for us not to live apart but to live together, understanding each

other, knowing each other's fears and anxieties, aspirations and thoughts. We have all subscribed to the United Nations Charter - that Charter which affirms faith in fundamental human rights and in the dignity and worth of the human person. Political freedom and economic justice are two sides of democracy; both are essential. We should lay stress on improvement of the economic conditions of people as well as on liberty and independence. No society can claim to be democratic if it does not permit political liberty, freedom of conscience, a free choice between parties, and provide opportunities for peaceful and orderly changes of government. No true democracy can remain satisfied merely with conditions which safeguard political liberty and freedom of the individual. It must secure the economic conditions which will justify this faith in the dignity of the human person if our professions about the dignity of the individual are to be taken seriously, we must do away with all sorts of discriminatory practices, we must encourage the independence movements in colonial territories, recognize that poverty in any part of the world constitutes a danger to prosperity in any other part. We must not acclaim racial extermination, enslavement or segregation, but work for racial harmony. In large parts of the world there are millions of people, who, on account of their race, have no share in the civilization around them. In this Organization we must try to look within ourselves, to find out our insufficiencies, remedy them and get together in a spirit of humility and understanding.

(6) The international situation is somewhat better. The difficulties are many, the hazards great, but there is hope in the air. We find that the situation has to some extent improved. In Korea the war has stopped, although anxiety is felt that there is as yet no unification of Korea. It must be brought about on the basis of free elections. The Indo-China war has ceased and it is the general hope that the three States of Laos, Cambodia and Viet-Nam may become independent and answerable to themselves. Outside interference with these States may spoil the chances of a democratic settlement. The Anglo-Egyptian agreement over Suez is a considerable step towards peace in the Middle East. There are many colonial problems still unsolved, though a marked advance is noticeable in regard to the future of the Gold Coast, Nigeria, Tunisia and Greenland. I may be pardoned here for referring to a small colonial problem, the matter of the French possessions in India. It has been solved in a peaceful, democratic, civilized way. I should like to congratulate the Government and the people of France and their great Prime Minister, who has been acting with rare courage, vision and foresight in international questions. The France that gave the world the ideals of liberty, equality and fraternity can do no other.

(7) The ticklish problem of Trieste has also been settled with the goodwill of the powers concerned. The question of the Saar is, I hope, nearing solution. Even in regard to disarmament, we see signs of revived hope. While we are glad that such outstanding questions are being tackled, it is unfortunate that in many of these matters the United Nations has been bypassed. At the Geneva Conference on Indo-China, we had discussions with the People's Government of China, and their attitude was co-operative and helpful, yet that Government is still unrepresented in the United Nations, so that the Indo-China Conference had to be held outside the framework of the United Nations, thereby weakening the Organization itself.

(8) In spite of all its defects, the United Nations is a symbol of that hope of unity which man has sought for centuries. The spark of the spirit of man compelled its creation. Science and mechanical ingenuity have been busy for more than four centuries in knitting together the whole habitable surface of the planet by a system of communications. Every form of human intercourse is now rendered possible. The political unification of society is inevitable. The present system of a world broken up into 60 or 70 national States is an anachronism in an age which has discovered the technique of flying and the manufacture of the atom bomb. Will unification come about by force, which in this atomic age will mean not only material but moral devastation, or will it be by the alternative method to war, by voluntary co-operation without the use of violence and coercion? The United Nations asks us to learn to live in a world community and not die of chauvinistic nationalism. We may be French, we may be German, we may be American, we may be Russian, but we are essentially human beings. Let us not overlook that fundamental fact.

(9) The weakness of the United Nations is mankind's weakness. If it is unable to function better it is not because there is anything wrong with the Organization, but because we members who operate it are lacking in moral capacity. We still believe in nationalism, though we aspire to be members of the international community. Powerful nations in the world are attempting to use the United Nations and its Agencies as instruments of their national policies. If we are to develop an international outlook, it is essential that member nations should, at any rate in their relations with international organizations, subordinate national considerations to international obligations. This they do not always do.

(10) I am afraid that, in our attempts to defend democracy, we are throwing away the content of democracy. Governments are becoming more centralized, more thoroughgoing in their administration, more coercive towards their citizens, more effective in their control of thought and opinion, even in democratic States. Oliver Wendell Holmes, a great liberal, who was Associate Justice of the Supreme Court of the United States of America, once wrote that "freedom of speech is freedom for the thought we hate". There is no freedom in allowing freedom to express only what we desire. If we allow freedom to people who express undesirable, distasteful thoughts, then it is that we are the advocates of freedom. To attempt to compel persons to believe and live as we do is not a feature of democracy and has been a perpetual source of strife in the world. Evangelism in politics, in business, in religion will have to be restrained if we are to live together in this world. We should not punish people for holding opinions which are unpopular or disagreeable, we can punish them only if they commit offences or violate the laws of the land. We must assume people to be innocent unless they are proved to be guilty, and not hold them to be guilty until they prove themselves to be innocent. If the drift to totalitarianism in democracies continues, there will be nothing left for democracies to defend.

(11) The programme and the budget of Unesco will come up for detailed consideration in these three or four weeks. I do not wish to anticipate or prejudge your discussions and decisions. In considering the different items on the agenda, the main objective of Unesco - education for living in a world community with all that it means by way of fundamental education, international understanding and co-operation, economic development, improvement of health and community development - will have to be borne in mind.

(12) The gross result of the Second World War was not the defeat of the Axis powers - they have all been regaining their former positions and we welcome it - the real result of the Second World War was the rise of Asia and Africa. A large number of countries in the East have gained their independence - Pakistan, India, Burma, Indonesia, Ceylon and others. The outstanding fact about these countries is mass misery, and the redeeming feature is their anxiety to escape from the backward conditions in which they have found themselves. What they are attempting to do is to raise their standards, standards of literacy, standards of health and sanitation, and it is here that Unesco is doing a good deal of work. If we help to remove destitution and despair, we better safeguard the interests of peace. It is the one way of demonstrating that we are members one of another.

(13) This Organization has been concerned with the spread of fundamental education. It regarded illiteracy as the main disease from which millions of people in the world suffer. We are using all the media of mass communication for the spread of literacy. But fundamental education is not to be confused merely with the acquisition of information and skill. We have to impart scientific habits of mind. The immense impact of mass media upon our lives encourages passivity, acquiescence and conformity. Young minds are exposed to surface objectivity, to slogans and catchwords, to the acceptance and elaboration of the obvious. We all eat, think, hear and read substantially the same things. We are developing stereotyped attitudes of mind. We are resisting independent thought, individual creativeness or contemplation. But those are the ways by which we can best contribute to human welfare. All the finest work of scientific genius, of metaphysical insight, is done in those few moments when individuals withdraw into themselves and try to contemplate and meditate. In those few moments they are able to glimpse visions of beauty and truth, bring them to earth, clothe them with emotion, carve them into words, cast them into philosophies. These great achievements are the deeds of men and women who have known how to resist the current of the crowd and have been able to sit alone and in silence and reflect for themselves. If these mass media are going to make our minds automata, if they are going to destroy our spirit, then they are the gravest of dangers. Essential as they are, educators must be awake to the disadvantages of these things. Do not imagine for a moment that I am trying to discourage the use of mass media, I am merely warning against their abuse, which reduces human individuals to robots. That must be prevented.

(14) The most essential need of our age is the spirit of religion, religion not in the narrow sense of the term but in its widest sense. Think truth, live love - these constitute the essence of religion. The pursuit of money and pleasure, technological civilization, is killing the power of mind and spirit. T.S. Eliot said that when we come to die, the wind will blow over the ruins of our homes saying:

> "Here were decent godless people;
> Their only monument the asphalt road
> And a thousand lost golf balls."

That would be the comment on this civilization if it should become merely technological and cease to be moral.

(15) We in Unesco should base fundamental education, for youth and adults, for all of us, upon the twin principles of truth and love. Reverence for every form of life should be created in the minds and hearts of the young. Education, to be complete, must be humane, it must include not only the training of the intellect but the refinement of the heart and the discipline of the spirit.

(16) We live today in a state of cold war, that is, armed fear. It is not peace that we enjoy, but a precarious equilibrium in which dissension is prevented from declaring itself only by mutual fear. It is not a state of order, there is no inner tranquillity. We have to build up loyalty to the world community in men's hearts and minds. Only then shall we have a human society bound by love of one and the same end; then the outward order will be the spontaneous expression of an inward peace. To build that peace in the minds of men is our task.

(17) Wealth and power depart from nations as they depart from individuals. No nation in the world can maintain its primacy in perpetuity. What counts is our moral contribution to human welfare. Let us therefore try to develop the qualities of charity in judgment and compassion for those who suffer. If we adopt such an approach, the tensions of the world will relax rapidly. There is much misunderstanding but we can build peace even on the basis of misunderstanding. Once peace is built, misunderstanding will diminish. Let us work, therefore, with humanity for our goal. In the words of St. Paul: "If it be possible, so far as it depends on you, live in peace with everyone".

(18) I have great pleasure in declaring open the eighth session of the General Conference of Unesco.

### ADDRESSES OF WELCOME BY REPRESENTATIVES OF THE GOVERNMENT OF URUGUAY

(19) Mr. MARTINEZ TRUEBA (President of the National Council of Administration of Uruguay) (Translation from the Spanish): Mr. President, delegates, ladies and gentlemen, on behalf of the National Council of Administration, I have much pleasure in bidding you most heartily welcome.

(20) The holding of the eighth session of Unesco's General Conference in Montevideo is an event which confers an honour on us and gives us great satisfaction. You are in a country which is striving for the achievement of the same ideals that inspired the creation of your worldwide Organization, in which the hopes of all the peoples are centred. You will be

conducting your debates in a moral climate in which it cannot but be pleasant for you to live and work - a climate in which all currents of ideas can flow without impediment, a climate of freedom and understanding, favourable to the loftiest aspirations of the mind and spirit.

(21) We are persuaded that, of all the bodies set up to forge permanent bonds of peace and solidarity between men, yours is the one which has the greatest opportunities of helping towards the attainment of those ends. We think so in the first place because the abundant information regularly disseminated by Unesco on everything affecting man as a moral being, master of his own fate, and as a member of society, serves to work on men's minds and to build there the "defences of peace", as your Constitution describes them. We think so secondly because this activity of yours will have its effect on every man, by ennobling his life, and on every nation by exalting the worth of democracy as a way of life for the people and as a political structure for States.

(22) Our faith in Unesco's work arises from the fact that we have ourselves made the education and culture of the masses the cornerstone of our institutions and the bulwark and buckler of our freedom. And what we have felt to be good and effective for ourselves, we also believe to be good and effective for the other peoples of the world.

(23) The conviction that has guided us has been that all the main differences that divide men, whether political, social or economic, invariably have at their roots a cultural problem and that, if we apply ourselves to resolving that problem, the others will be more easily settled. The same idea is unmistakably implied in Unesco's Constitution, in its advocacy of the "wide diffusion of culture and the education of humanity for justice and liberty and peace."

(24) Our hearts are with you in your work and we are ready at all times to do what little we can for you, who do so much for us and all the world. The people and Government of Uruguay assent without reserve to the principles which govern your activities, and we have been at pains to serve them both at home and internationally. Our support of this conference furnishes full proof of our sympathy with Unesco's work and ideals.

(25) Unesco has done much already to develop and improve educational methods. Through its seminars and the expert missions assisting education in many lands, it is giving the work of leading teachers and educators a wider currency. It is doing much, too, to spread a knowledge of art and science among the masses. But what it can do, and what we need it to do, is much more still.

(26) This is particularly true in regard to science. If science is to contribute chiefly to the happiness and well-being of mankind and not to its suffering and destruction, there is an urgent need to convert it into a bond of understanding and concord, by spreading a knowledge of its advances as widely as possible. From this point of view, Unesco's support of various centres throughout the world for the dissemination of science can fairly be applauded; but where its active co-operation is chiefly to be desired is in connexion with research institutes.

(27) Ladies and gentlemen, the watchword of the day for those who, like yourselves, have embarked on that noblest of enterprises, the pursuit of freedom, is "persevere". Persevere until the day dawns when, in Bertrand Russell's striking words, "the desire for mastery shall be replaced by equality, the desire for victory by justice, aggressive ignorance by intelligence, competition by co-operation... to the point when we learn to think of the human race as a single family".

(28) On behalf of the Government of this Republic, I extend to you our warmest wishes for the success of your work, the ultimate aim of which is to build up the defences of peace by strengthening the solidarity and mutual understanding of mankind.

(29) The PRESIDENT: I call upon Mr. Zavala Muniz.

(30) Mr. ZAVALA MUNIZ (Minister of Education and Social Welfare of Uruguay) (Translation from the Spanish): Mr. President, delegates, ladies and gentlemen, in bidding you welcome to this country and at the commencement of our labours, allow me to say that here you are at home, not only because of the warmth with which the Government and people of Uruguay welcome you but above all because the warmth of our welcome derives from the very growth through the ages of our nation's spirit. The building in which you are assembled is the Palace of the Laws, a palace which we built to show to our own people and to the men of other lands that here the only sovereign who rules over our will is the law-maker who represents, guides and determines that will.

(31) We have received you, then, in the sovereign seat of our nation and we have received you to the sound of our youth chanting the Canticle to Hope, which is the canticle of our country. In this small territory of ours, with our frontiers open to men from all over the world who come here to work with us in the cause of human progress, with our minds open to ideas from all over the world which contribute to our intellectual and spiritual advancement, we welcome you simply but warmly, confident that we are worthy of your presence in our midst because here you will find the habit of freedom that is necessary for a meeting of this kind, freedom which we are striving to make secure for ever because for us the ultimate objective of all policy, of all government action, is man himself, in the full development of his moral qualities. Our whole activity is and ever has been directed to the protection of man from the political despotism which degrades his human dignity and from the economic tyrannies under which his just claims and aspirations can never find really free expression. We have fought and are fighting to defend man from the tyranny of ignorance, since it would avail nothing to have satisfied his material needs if we forbade him dreams of new adventures for mankind. And this brotherhood which has been our desire for ourselves is also our desire for the whole world. We make no distinctions of race or people; we are a country to which immigrants from all over the world have come, to enrich our land by their labour and our minds by their ideas.

(32) No man is a foreigner here who loves freedom and will work with us to build our future; though our tongues may differ, our minds are one.

(33) It is because of that attitude, ladies and gentlemen, that I am able to repeat with conviction, as

Uruguay's Minister of Education, that here you are at home, in an atmosphere supremely conducive to free consideration and discussion.

(34) The PRESIDENT: I call upon Dr. Armando Malet.

(35) Mr. MALET (Mayor of Montevideo) (Translation from the Spanish): Mr. President, delegates, ladies and gentlemen, the city of Montevideo and our whole country are conscious of the honour that has been conferred upon them by the choice of Montevideo as the place of this Conference.
(36) Neither the business of daily life, nor the recurrent group effervescence characteristic of the period before an election, such as that which will take place in our country in a few days' time, have been able in any way to detract from the significance of the fact - exceptional in the life of this city - that men and women from the most distant and diverse corners of the world should have come here at Unesco's request to discuss questions relating to education, science and culture. To discuss them, moreover, in world terms but in awareness of the significance of national cultures and of what they can contribute and in full realization of the fact that those cultures neither can nor should exist as separate and over closely welded entities.
(37) The question was once asked: "Can national culture exist solely as a monolithic entity embracing the whole nation, without heretics in its midst or, if heretics there are, without regard for them? And the questioner answered himself: "Without heretics, there is no culture". Who said that and where? It was a Spaniard, Don Miguel de Unamuno, and the place was Madrid, at a session of the Permanent Committee of Arts and Letters of the League of Nations, held there between 3 and 7 May 1933. That committee must, I suppose, have been one of the earlier institutions that were in people's minds when Unesco was set up.
(38) In the meetings now before us, we all have something to say, whether we come from underdeveloped or from very advanced countries, whatever the standard of life of our people. And, however varied and disparate the forms of culture which may here be represented, we all know that truth, beauty and justice inevitably convey an awareness of the oneness of the world - an awareness which gathers strength and becomes more widespread as the era of the primitive community gives place to a cultural awakening whereby man is enabled to raise his whole being to a higher level, to refine his sensibilities, to live by reason and to acquire the sense of justice that is essential if society is to survive. But all that is not enough.
(39) At the Madrid meeting in 1933, of which I was speaking a few moments ago, another Spaniard, also a philosopher, who was then lecturing in a Montevideo faculty, argued that the suppression of freedom could never serve to improve culture or to set it in the right direction. That philosopher was Manuel Garcia Morente. He went on: "There are people in our day who think that, because we are not quite clear what to do with freedom, it is better to abolish it. That is not only useless; it is also absolutely impossible. Once man, in the process of his evolution has reached a certain level, it is madness to imagine that he will sink back from that level. Certain phases in the evolutionary process may perhaps be looked upon as reversions to a lower standard, but they are so in appearance only. To my mind, evolution is really more like a spiral, on which man is always turning round the same perpendicular, but each time, of course, at a higher level.

> "I consider it absolutely impossible to maintain that the upsurges of dictatorship, harsh or mild, which have set limits to individual freedom, can prove to be anything more than mere episodes... It is as though we were to argue: 'since it is difficult to live as free men, let us do away with freedom'. That is easy enough to say, but difficult to do - so difficult that I am convinced that the various attempts to suppress liberty which have been made in our day can only endure very briefly."

(40) This, may I remind you, was said nearly twenty-five years ago, at a meeting not, perhaps, on so impressive a scale as the present one, but where, as I have already mentioned, Unamuno and Garcia Morente were present, besides other eminent people such as Jules Romains, Paul Valéry, J. B. S. Haldane, Madame Curie Sklodowska, F. Orestano, Julio Dantas and others.
(41) During that quarter century the world has lived through hours, months and years of anguish and tragedy. It saw the extinction of freedom under régimes which came to power in different nations, and witnessed later the revival of freedom which is still proceeding.
(42) This very conference is a confirmation of the words I have quoted from our Spanish philosopher, and those words have a singularly fitting ring in this land and city - living as they ever have in and for freedom - and in this meeting of delegates, met likewise under the banner of freedom, to whom the city of Montevideo, through my mouth, extends its greetings.

### STATEMENT BY THE PRESIDENT ON ARREARS OF CONTRIBUTIONS

(43) The PRESIDENT: I have now to make a statement on the question of arrears. According to Article IV, sub-section 8(b) of the Constitution, the right to vote is made conditional upon the payment by Member States of their financial contributions. Certain States whose contributions were in arrears were advised of this fact by the Director-General in letters despatched between 7 and 13 October of this year. These States are: Bolivia, China, Czechoslovakia, Cuba, Hungary and Poland. These States will be unable to vote during this session of the General Conference because the amount of their arrears exceeds the amount of the contributions due from them for the current year and the immediately preceding financial year.
(44) Paragraph 8(c), of Article IV declares, however, that the General Conference may permit such Member States to vote, if it is satisfied that the failure to pay is due to conditions beyond their control. It is

therefore left to the delegations of the countries concerned, if they think fit, to request the General Conference to adopt this latter course. Requests should be addressed to the President of the General Conference, who will transmit them to the General Committee. The General Committee will decide which body of the Conference shall examine these requests. I should inform the Conference that such a request has already been addressed to the Director-General by the Head of the Chinese delegation by letter dated 23 October 1954 (document 8C/9). The Director-General has also received communications from the Governments of Hungary and Poland requesting special treatment regarding the arrears of their contributions (document 8C/ADM/8 (III) Add. 1 and 2).

**SPEECH BY THE DELEGATE OF USSR**

(45) Mr. STOLETOV (Union of Soviet Socialist Republics) (English text supplied by the Soviet delegation): Mr. Chairman, ladies and gentlemen. The delegation of the Soviet Union deems it necessary, at the very outset of the work of the eighth session of the Unesco General Conference, to draw the attention of the Conference delegates to the abnormal situation which has arisen in the matter of the representation of the Chinese People's Republic in Unesco and its organs.
(46) Can we really consider it a normal state of affairs where the great People's Republic of China, which has an ancient culture and which, along with other Great Powers, plays an outstanding part in the settlement of international problems, is so far not represented in Unesco and where the seat of China's lawful representatives is still occupied by persons belonging to the Kuomintang Chiang Kai-shek group with which the Chinese people has finished once and for all?
(47) The General Conference has met to discuss and settle important questions of international co-operation in the field of education, science and culture. In this connexion it cannot but be recognized that the work of the Conference would yield the most successful results if the above-mentioned abnormal situation were eliminated.
(48) It would be a good moment to point out that, in the interval which has elapsed since the proclamation in October 1949 of the Chinese People's Republic, the Chinese people have achieved remarkable successes in every sphere including also cultural development; that, I have no doubt, is sufficiently well known to the delegates to our Conference.
(49) A proper settlement of the question of China's representation in Unesco would be in the interests of peace-loving peoples and would be consonant with the principles and standards of international law. There is no need to make special mention of the fact that such a solution of this question would be a serious contribution towards the development of international co-operation in science, culture and education.
(50) In drawing the attention of the Conference to the abnormal situation which has arisen in that China's lawful seat in Unesco is so far being occupied by people who do not represent the great Chinese people, the USSR delegation expresses the hope that the General Conference will take appropriate measures for a proper settlement of this question.

(51) The PRESIDENT: This is not a point of order. All the same it will be discussed in the Credentials Committee, and its report will come before the Conference.

**ESTABLISHMENT OF THE CREDENTIALS COMMITTEE**

(52) We propose that the Credentials Committee consist of the following States: Colombia, Egypt, France, Indonesia, Philippines, United Kingdom, Uruguay, United States of America, Union of Soviet Socialist Republics. (Approved) The Credentials Committee will meet in Room 6 immediately after the end of this meeting.

The meeting rose at 12.40 p. m.

# SECOND PLENARY MEETING

*12 November 1954 at 4 p.m.*

*President:* Dr. Sarvepalli RADHAKRISHNAN (India)
*later:* Mr. ZAVALA MUNIZ (Uruguay)

Report of the Nominations Committee and election of the President and ten Vice-Presidents of the General Conference . . . . . 45

**REPORT OF THE CREDENTIALS COMMITTEE TO THE CONFERENCE**

(1) The PRESIDENT: I will ask the Chairman of the Credentials Committee to address the meeting.

(2) Mr. BERNAL JIMENEZ (Colombia) (Chairman of the Credentials Committee) (Translation from the Spanish): Mr. President, Mr. Director-General, ladies and gentlemen, the Credentials Committee, appointed by the General Conference of the United Nations Educational, Scientific and Cultural Organization, at its eighth ordinary session, met today, its members being the representatives of Colombia, Egypt, France, Indonesia, the Philippines, the United Kingdom, the United States of America, the USSR and Uruguay. The Committee elected the Head of the delegation of Colombia as its Chairman. The Committee then examined the credentials submitted through the Director-General of the Organization by the States mentioned later.

(3) The delegate of the USSR raised objections to the credentials presented by the delegation of China, and submitted the following resolution:

Draft resolution by the USSR concerning non-recognition of the credentials of the Kuomintang representatives of the Chiang Kai-shek group at the eighth session of the Unesco General Conference:

"The General Conference,

In view of the proposal by the delegation of the Union of Soviet Socialist Republics concerning non-recognition of the credentials of the Kuomintang representatives of the Chiang Kai-shek group at the eighth session of the Unesco General Conference,

Decides to consider invalid the credentials of the Kuomintang representatives of the Chiang Kai-shek group, at the eighth session of the General Conference of Unesco."

(4) The representative of the United States of America tabled the following motion on this question:

"That the General Conference decides to adjourn any consideration at its eighth session of any proposal to exclude the representatives of the Government of the Republic of China or to seat representatives of the Central People's Government of the People's Republic of China."

(5) After a discussion in which the delegates of Indonesia, the United Kingdom, Uruguay, the USSR and the United States of America took part, the Committee decided to put to the vote the question of which of the two proposals should be voted on first. The Committee decided by 5 votes to one, with two abstentions, to vote first on the proposal of the delegation of the United States of America. The proposal in question was adopted by six votes to one, with one abstention.

(6) The Committee decided that the delegates of the States listed hereunder were duly accredited in conformity with Rule 22 of the Rules of Procedure of the General Conference by instruments issued either by the Head of the State or by the Minister of Foreign Affairs or by another Minister authorized by the Minister of Foreign Affairs to issue credentials: Australia, Austria, Burma (Union of), Byelorussian Soviet Socialist Republic, Cambodia, Canada, Ceylon, China, Costa Rica, Cuba, Czechoslovakia, Denmark, Dominican Republic, Egypt, El Salvador, France, German Federal Republic, Greece, Guatemala, Haiti, Hungary, India, Indonesia, Iran, Israel, Italy, Japan, Jordan (Hashemite Kingdom of), Laos, Libya, Monaco, New Zealand, Nicaragua, Norway, Panama, Poland, Spain, Sweden, Switzerland, Thailand, Ukrainian Soviet Socialist Republic, Union of South Africa, USSR, United Kingdom, United States of America, Uruguay, Viet-Nam, Yugoslavia.

(7) The Committee recomended that the delegations of the above-mentioned States be allowed to take part in the eighth session of the General Conference. Credentials were submitted by the representatives of the States listed hereunder in the form of letters, telegrams or other instruments issued by a Minister of

the State they represented other than the Minister of Foreign Affairs and not duly authorized by the latter, or by heads of diplomatic missions or by senior officials of the Ministry of Foreign Affairs: Argentina, Belgium, Brazil, Chile, Colombia, Ecuador, Honduras, Iraq, Korea, Lebanon, Liberia, Mexico, Netherlands, Pakistan, Philippines, Turkey.

(8) The Committee suggested that these instruments be accepted as provisional credentials from the above-mentioned States, subject to the later submission of credentials in due form, and that meanwhile the said delegations be admitted to take part in the eighth session of the General Conference.

(9) The Committee noted that some Member States had not furnished their delegations with credentials. The Committee decided to authorize its Chairman to report direct to the General Conference on any credentials that might be received from those Member States before the next meeting of the Committee.

(10) The Committee then considered the credentials of observers representing the following States not Members of Unesco: Bulgaria, Holy See, Portugal and Rumania.

(11) The Committee also examined the documents accrediting the representative of the Saar as observer.

(12) The Committee then examined the credentials of the observers from the Gold Coast, Sierra Leone, the British Caribbean Group and the Malaya-British Borneo Group.

(13) Lastly, the Committee examined the credentials of the representatives of the following international organizations: International Labour Organization, World Health Organization. The Committee recommended the General Conference to admit the above-mentioned observers and representatives.

(14) The delegate of the USSR called for a separate vote on the inclusion of China in the list of Member States whose delegations had submitted their credentials in accordance with Rule 22 of the Rules of Procedure of the General Conference. The following States voted in favour of the inclusion of China in that part of the report: Egypt, France, Philippines, United Kingdom, United States of America and Uruguay. Against: USSR. Abstention: Indonesia.

(15) The following States voted in favour of adopting the whole of the report: Egypt, France, Indonesia, Philippines, United Kingdom, United States of America and Uruguay. Against: USSR.

(16) The PRESIDENT: I call upon the delegate of USSR.

(17) Mr. STOLETOV (Union of Soviet Socialist Republics) (Translation from the Russian): The delegation of the Soviet Union has already drawn the attention of the General Conference to the abnormal situation which has arisen with regard to the representation of the Chinese People's Republic in Unesco and its organs.

(18) The position is that the great Chinese People's Republic, which has an ancient culture and plays an outstanding rôle alongside the other Great Powers in the settlement of international issues, is up to the present not represented in Unesco, while the seats of the lawful representatives of China in Unesco are occupied by people from the Kuomintang Chiang Kai-shek group, which the Chinese people have long since disavowed once and for all. The only lawful Government of China, representing the interests of the 600 million Chinese people, is the Government of the Chinese People's Republic, and only this Government can authorize its spokesmen on behalf of China to participate in the work of the United Nations Educational, Scientific and Cultural Organization. Accordingly, the Soviet delegation submitted a proposal to the Credentials Committee concerning non-recognition of the credentials of the representatives of the Kuomintang Chiang Kai-shek group. The adoption of this proposal would meet the interests of peace-loving peoples. It would conform to the principles and standards of international law and promote the development of all-round co-operation among peoples in the field of culture and science. Since this proposal has not received the requisite majority of votes in the Credentials Committee, the Soviet delegation, for the sake of developing cultural relations between peoples that will conduce to international peace and security, deems it necessary to submit this question for the consideration of the Plenary Conference. The delegation of the USSR submits the following draft resolution for consideration by the Conference:

"The General Conference,

In view of the proposal of the delegation of the USSR concerning non-recognition of the credentials of the representatives of the Kuomintang Chiang Kai-shek group at the eighth session of the Unesco General Conference,

Decides to consider invalid the credentials of the representatives of the Kuomintang Chiang Kai-shek group."

(19) Mr. BERREDO CARNEIRO (Brazil) (Translation from the French): Mr. President, ladies and gentlemen, I wish to make a small factual amendment regarding the credentials of the Brazilian delegation. The decree appointing the delegation was signed by the Head of the State on 22 October last. It was notified by the Minister of Foreign Affairs to the Brazilian Ambassador in Uruguay. The Brazilian Ambassador in Uruguay is the personal representative of the President of the Republic of Brazil. The Ambassador transmitted this communication to the Director-General of Unesco. We therefore consider that our situation vis-à-vis the Organization is in complete conformity with the existing rules of procedure.

(20) The DIRECTOR-GENERAL: I am informed that, while a decree signed by the President, mentioned by the Brazilian delegate, has been received, there is a minor point in the Rules which has not been observed, namely, that powers must also be signed and transmitted to the Director-General.

(21) The PRESIDENT: Does any other member wish to speak on this? I call upon the representative of China.

(22) Mr. HU CHING YU (China): The Soviet delegation has just proposed to have my delegation ousted and to have its seat given to the people's régime. That is nothing new. As you will recall, they or their satellites have tried more than a hundred times and have failed more than a hundred times at international

conferences both within and without the framework of the United Nations. I am confident that this time they will fail again. The Soviet Union has been hostile towards Unesco ever since its foundation. It was the Soviet Union which tried to postpone the Conference of Unesco until the Economic and Social Council had been established. It was the Soviet Union which objected to the transfer to Unesco of the property formerly belonging to the International Institute of Intellectual Co-operation of the League of Nations. It was the Soviet Union which took strong exception to the admission of the German Federal Republic, Japan, Viet-Nam, Cambodia and Laos when their applications for admission were supported by the Economic and Social Council. Three of their satellites even went so far as to announce their withdrawal from Unesco in protest against the admission of Spain, after that admission had been duly approved by the General Conference of Unesco. The Soviet Press and Soviet publications have at times accused Unesco of "serving the interest of war-mongers" and of "defending the policy of American aspirants to world dominion". In short, the Soviet Union has been boycotting, discrediting, sneering at and obstructing the good work of Unesco for almost nine years. Now they have decided to join the Organization and have already become a member of it. Does this mean a change of mind? A change of policy? Or merely a change of tactics? For us this question is not difficult to answer. I am sure that they will continue to pursue the same policy, but this time with new tactics and as a full member. Their attempt to get my delegation ousted is but one of many steps that they have mapped out in order to harm Unesco, in pursuance of the same old policy. As for the Soviet proposal, I have much to say, but at the present stage of the Conference I shall put it as briefly as I can, lest I play into the hands of the Soviet delegation, one of whose aims in introducing such proposals is apparently to waste the invaluable time of the Conference.

(23) I shall confine myself to two of the most important points. Firstly, the position of the Government I represent is unchallengeable. It is the same Government which, in 1945, co-sponsored the San Francisco Conference leading to the foundation of the United Nations, and the same Government which caused China to become one of the members of Unesco. It is the only Chinese Government which enjoys the support of the Chinese people. This is evident from the fact that more than 80 per cent of the so-called Korean prisoners of war have chosen Free China as the land of their repatriation, and that more than 90 per cent of overseas Chinese have demonstrated their loyalty to my Government. The status of its delegations has been repeatedly upheld by all international conferences and organizations. I feel strongly that, as Unesco is an organization of a non-political nature, here is not the proper place to fight out the issues involved in the Soviet proposal. I further maintain that it is for the Economic and Social Council to look to the General Assembly, and for Unesco to look to the Economic and Social Council, for guidance on this issue. Now that both the General Assembly and the Economic and Social Council are in session with the delegations sent by my Government in full participation, why should we waste our time in discussing the Soviet proposal? Under these circumstances, the best course that this Conference can follow is, I suggest, to dismiss this proposal summarily without discussion.

(24) In the second place, what the Soviet proposal seeks to achieve is not only the ousting of my delegation but also the admission of the Peiping régime. In this connexion, I must tell you that that régime is a purely Soviet creation. It was created and is maintained, controlled and directed by the Soviet Union. Since its inception it has been employed by the Soviet Union as an instrument of aggression, and has been declared such by the United Nations. For these and other reasons none of the international organizations has seen fit to grant it a seat. As one of the objectives of Unesco is to promote cultural co-operation, it naturally has further cause to deny that régime the right of participation. Basically, the Peiping régime is un-Chinese in origin, in character and in purpose. They see no good in what is known to us as Chinese culture, and in fact are trying in every way to destroy it. They are busy re-writing Chinese history to their liking, burning books not in line with their ideology, purging the minds of all who see China in the true light and, above all, killing all intellectuals who fail to respond to their indoctrination. In a word, they are bent upon nothing short of the total enslavement of our whole people. Not even the right of silence is to be tolerated. If such a régime were allowed to represent China in Unesco, it would be an insult to Chinese culture, to the Chinese as a nation and to this Organization itself. I appeal to you, Mr. President and fellow delegates, to have the Soviet proposal voted out without discussion.

(25) The PRESIDENT: I call upon the delegate of the United States of America.

(26) Mr. NUFER (United States of America): In the Credentials Committee the United States delegation presented the following motion:

"That the General Conference decides to postpone consideration at its eighth session of any proposals to exclude the repreresentatives of the Government of the Republic of China or to seat representatives of the Central People's Government of the People's Republic of China."

(27) This motion was approved democratically by a vote of 6 to 1 and the United States delegation is surprised that the matter has been raised again. The motion of the United States delegation has now become a resolution of the Credentials Committee and as such is before the Conference. It is a procedural resolution and therefore under Rules 75 and 77 has priority over the proposal of the Soviet Union and must be voted on first.

(28) The PRESIDENT: I call upon the delegate of the United Kingdom.

(29) Sir Charles WEBSTER (United Kingdom): The British delegation is exceedingly anxious that the careful consideration which has been given to this motion by the Credentials Committee shall not be disturbed. Her Majesty's Government in the United Kingdom have made it clear on numerous occasions that they regard the Central People's Government as the Government of China. Nevertheless, they believe

that there are still many disadvantages in a debate on the question at the present time, and consequently think it appropriate, as has been suggested by the delegate of the United States of America, that the question now raised should be postponed for the present conference.

(30) The PRESIDENT: I call upon the delegate of Poland.

(31) Mr. MICHALOWSKI (Poland): The problem of the representation of China in our Organization is of great importance and may affect all the future work of Unesco. We are facing an absurd situation and the great Chinese nation of 600 millions is prevented from participating in the work of Unesco and cannot join in our efforts to strengthen and broaden international co-operation in the field of education, science and culture. For five years we have been facing this abnormal situation. During this time the Central People's Government has strengthened its authority within the country and has carried out a number of major social and educational reforms. On the basis of its ancient culture, the Chinese nation is developing new cultural values, spreading education among the people and promoting science and art.
(32) The continuance of this fiction by which the seat of China in our Organization is occupied by the Kuomintang delegation is a paradox. This group represents a set of political bankrupts dependent only on the support of the armed forces of the United States of America; it does not in any way represent either the Chinese people or Chinese culture and science. Nor can it contribute to the development of our work. You all know the principle of the Constitution of Unesco which claims that: "Since wars begin in the minds of men, it is in the minds of men that the defences of peace must be constructed". The whole record of the Kuomintang indicates that they place all their hopes in war, they aim at increasing tension in international relations. It has been proved by their piratical activity, to which, among others, two Polish ships recently fell victims. On the other hand, we know of the peaceful efforts of the Chinese People's Government, recently proved by the liquidation of the conflict in Indo-China. China is developing good neighbourly relations with other nations, for example, with India. The People's China demonstrates its readiness to enter into and strengthen cultural relations on the basis of respect for other cultures and for other political systems. Under these conditions, the further barring of China from participation in the work of Unesco is misguided; it is also harmful to our Organization and detrimental to the development and strengthening of international co-operation in the field of culture, a co-operation which is our most important aim and should be the goal of all who really seek peace and the peaceful development of civilization. The argument brought up before this Conference that it is for the United Nations to decide the problem of China's representation, we consider irrelevant. Unesco is a sovereign body and may decide this problem for itself. Finally, there is the motion of the United States of America. In our opinion, this is a resolution of substance and the Soviet resolution, which we support, should be voted upon first.

(33) The PRESIDENT: We have before us an amendment to the report of the Credentials Committee by USSR which says:

"The General Conference,

In view of the proposal by the delegation of the USSR concerning non-recognition of the credentials of the Kuomintang representatives of the Chiang Kai-shek group at the eighth session of the Unesco General Conference, decides to consider invalid the credentials of the Kuomintang representatives of the Chiang Kai-shek group at the eighth session of the General Conference of Unesco."

(34) On this amendment the United States of America has proposed that the discussion of this question be postponed under Article 75. That proposal has priority and I am therefore putting to the vote the United States amendment that the question of non-recognition be postponed.

(35) (The motion for postponement was carried by 41 votes to 6.)

(36) We will now vote on the Credentials Committee's report.

(37) (The report was carried by 43 votes to 4.)

### ADOPTION OF THE REVISED AGENDA

(38) The PRESIDENT: I call on the Chairman of the Executive Board.

(39) Sir Ronald ADAM (Chairman of the Executive Board): In accordance with Rules 9 to 12 of the Rules of Procedure, the Executive Board has drawn up the revised agenda of the General Conference which you have in front of you in document 8C/1 (Rev.). This revised agenda contains the items listed in the provisional agenda and supplementary items proposed, in accordance with the Rules of Procedure, No. 9, by Member States, the Executive Board and the Director-General.
(40) On behalf of the Executive Board I propose the adoption of the revised agenda.

(41) The PRESIDENT: Your attention is called to Corrigendum 1, 8C/1 (Rev.) dated 9 November 1954. Any observations? Those for adopting the agenda?...

(42) (The revised agenda is adopted unanimously.)

### ESTABLISHMENT OF THE NOMINATIONS COMMITTEE

(43) The Nominations Committee will consist of the Heads of all delegations entitled to vote at the Conference. The Head of a delegation may delegate another member of the delegation to attend meetings and vote in his place. The representative of each delegation in the Committee may be assisted by another member. This Committee will elect its own chairman. It has to suggest the names of the President and the 10 Vice-Presidents of the General Conference. The Nominations Committee will meet immediately in Room 3. The Plenary meeting is suspended till the Nominations Committee submits its report.

The meeting was adjourned at 4.35 p.m.

The meeting was resumed at 6.05 p.m.

**REPORT OF THE NOMINATIONS COMMITTEE AND ELECTION OF THE PRESIDENT AND TEN VICE-PRESIDENTS OF THE GENERAL CONFERENCE**

(44) The PRESIDENT: The Chairman of the Nominations Committee will present his report.

(45) Mr. KABIR (India) (Chairman of the Nominations Committee): On behalf of the Nominations Committee I have the honour to present the following names for the various officers of this Conference.

For the President: the delegate of Uruguay;

for the ten Vice-Presidents: the delegates of Brazil, France, Italy, Japan, Pakistan, Spain, Thailand, United Kingdom, United States of America, Union of Soviet Socialist Republics;

for the Programme Commission: the delegate of Switzerland;

for the Administrative Commission: the delegate of New Zealand;

for the Legal Committee: the delegate of Egypt;

for the Nominations Committee: the delegate of India;

for the Credentials Committee: the delegate of Colombia;

for the Advisory Committee on Programme and Budget: the delegate of Australia;

for the Committee on Reports of Member States: the delegate of Iraq;

for the Headquarters Committee: the delegate of Venezuela.

(46) In presenting this report, may I, on behalf of the delegation of India, and on my own behalf, support the proposal made for electing the Minister of Education of Uruguay as the President of this Conference. I am sure you will all agree that this country has a small population but a great heart, about which we heard this morning. It has opened its doors to people of all races and to ideals of all kinds, and it is the right and fitting place for holding the session of Unesco. I think we are very fortunate in having the Minister of Education of Uruguay as the President of this Conference.

(47) The PRESIDENT: Your applause indicates that you approve the nomination of this delegate of Uruguay to preside over the Conference. I will now request him to come forward and take the Presidential Chair.

(Mr. Zavala Muniz, Uruguayan Minister of Education and Social Welfare, took the Chair.)

(48) The PRESIDENT (Translation from the Spanish): Ladies and gentlemen, it is with profound feelings of gratitude and emotion that I accept the honour which has just been conferred, not on my person, but on my country. I am sure that Uruguay, when it learns of the vote you have taken, will regard it as one of the highest honours in the whole of its history. For my part, I can only promise to do my duty with the utmost conscientiousness and to conduct your proceedings to the best of my ability.

(49) The applause of the Assembly leads me to believe that the proposal for nominating the ten Vice-Presidents has been approved by acclamation. This being the case, I will ask the delegations of the ten States elected to indicate the names of their representatives.

(50) The names submitted were as follows:

| | | |
|---|---|---|
| Brazil | : | Mr. Berredo Carneiro |
| France | : | Mr. Berthoin |
| Italy | : | Mr. Badini Confalonieri |
| Japan | : | Mr. Sawada |
| Pakistan | : | Mr. Husain Qureshi |
| Spain | : | Mr. Ruiz Gimenez |
| Thailand | : | Mom Luang Pin Malakul |
| United Kingdom | : | Sir Ben Bowen Thomas |
| United States of America | : | Mr. Nufer |
| USSR | : | Mr. Stoletov |

(51) The PRESIDENT (Translation from the Spanish): We shall now proceed to appoint the Programme and Budget Commission and the Administrative Commission, and elect their Chairmen. As you are aware, the General Committee of the Conference will meet tomorrow at 9 a.m. in Room 4 and, in order that this body may be at full strength the Chairmen of these Commissions should be appointed as early as possible. The Nominations Committee met this afternoon in accordance with its terms of reference. Following a precedent set by several General Conferences, I propose that, instead of calling meetings of the two Commissions in different rooms in order to elect their Chairmen, we should meet here together after hearing the Nominations Committee's report and noting the proposals. I will therefore ask delegates to remain in their seats and we will first call a meeting of the Programme and Budget Commission, with myself in the Chair, and invite it to elect its Chairman. We shall next close the meeting of the Programme and Budget Commission, and in the same way convene the Administrative Commission so that it may in its turn elect its Chairman.

(52) Once this second election is completed, we shall again meet in plenary session and return to the agenda of the General Conference. This procedure has the advantage of securing the speedy election of the two Chairmen of commissions, so that, when these bodies meet for the first time, their Chairmen will already be in office and able to start their work.

(53) I would further remind delegations that tomorrow, Saturday, 13 November, we are due to begin the general debate on the report of the Director-General and that delegations should inform the Secretariat of the meeting at which they desire to speak in the general discussion.

The meeting rose at 6.25 p.m.

# THIRD PLENARY MEETING

*13 November 1954 at 11 a.m.*

*President:* Mr. ZAVALA MUNIZ (Uruguay)

CONTENTS

Communications by the President . . . . . 46
Admission of new Member States and of Associate Members 46

**COMMUNICATIONS BY THE PRESIDENT**

(1) The PRESIDENT (Translation from the Spanish): May I, as President, in opening the work of this Conference, be permitted to propose that, as a tribute to the efficiency with which he carried out his task as President, and in gratitude for his work at the General Conference, we should pass a vote of thanks by acclamation to the outgoing President, our illustrous colleague, Dr. Radhakrishnan. (Applause)
(2) The General Committee, at its meeting this morning, decided to recommend the adoption of the proposed organization of work of the eighth session (document 8C/BUR/1). May I draw the attention of the Conference to the draft resolutions which appear on the second and third pages of this document; and especially to the recommendation that the number of plenary meetings devoted to the discussion of the Director-General's report be limited to six; that those meetings are to last a maximum of three hours each; and that, to this end, the time allowed to each speaker will, in accordance with Rule 71 of the Rules of Procedure, be limited to a quarter of an hour. The plan of organization further proposes that the discussion be organized in the following manner: delegates will be asked to inform the General Conference Secretariat, not later than the end of the first day of the session, whether they wish to speak in the debate, and, if so, to indicate the meeting at which they would like to speak and the probable length of their speech. The Secretariat will then draw up for the General Committee a draft list of speakers for each of the six meetings. After revision by the General Committee, the list will be submitted by the President to the General Conference for approval. No change may be made in the list except by the General Committee itself on receipt of a request, giving reasons, from any delegation which desires that the time allotted to it be changed.
(3) Does the Conference approve this resolution?

(4) Adopted.

(5) The General Committee also approved the following draft resolution:

"The General Conference approves the decision of the Executive Board (document 39 EX/DIV/2) regarding partial use of the Russian language at the eighth session".
(6) If no one wishes to speak, it will be taken as approved.

(7) Approved.

(8) The General Committee likewise decided to refer to the Administrative Commission the applications for the right to vote, submitted by countries in arrears with payment of their contributions (documents 8C/9, 8C/10, 8C/ADM/8 part 3, Add. I and II).
(9) The General Committee decided, as an exceptional measure, to recommend the acceptance of draft resolutions 8C/DR/63 and 64, which involved the suspension of Rule 78 of the Rules of Procedure of the General Conference, in accordance with Rule 108, which states that this may be done if the motion for suspension is adopted by a two-thirds majority.
(10) If no one wishes to speak, it will be taken as approved.

(11) Approved.

**ADMISSION OF NEW MEMBER STATES AND ASSOCIATE MEMBERS**

(12) The PRESIDENT (Translation from the Spanish): I call upon the Chairman of the Executive Board.

(13) Sir Ronald ADAM (Chairman of the Executive Board): On behalf of the Executive Board, which has the duty of recommending the admission or non-admission of new Members, I will read out the resolution adopted by the Executive Board at its thirty-eighth session.
"The Executive Board,
Considering that the Government of the People's Republic of Rumania applied for membership of Unesco on 13 May 1954; that, in accordance with Article II of the Agreement between Unesco and the United Nations, the Director-General forwarded the

application to the Economic and Social Council of the United Nations; that the Economic and Social Council, at its eighteenth session, decided to inform Unesco that it had no objection to the admission of the People's Republic of Rumania to membership of the Organization,

Decides, in accordance with paragraph 2 of Article II of Unesco's Constitution, to recommend to the General Conference at its eighth session that the People's Republic of Rumania be admitted to membership of Unesco."

(14) The PRESIDENT (Translation from the Spanish): We turn now to the application of the Republic of Rumania for admission to membership of Unesco. I call upon the United States delegate.

(15) Mr. NUFER (United States of America): We have before us the request of the Government of the Rumanian People's Republic for admission to membership of the United Nations Educational, Scientific and Cultural Organization. We are aware that some countries are prepared to endorse this application on the grounds that Unesco should apply the principle of universality and that it should be a global Organization. The United States of America supports this principle, but believes that it must be subject to the demonstrated capacity of an applicant for membership to comply with the obligations of the Unesco Constitution and the rudimentary rules of international law. Unless this principle is qualified in this way we run the risk of undermining the very purposes for which this Organization was created. Viewed in this light, what is the record of Rumania?

(16) Paragraph 1 of Article I of the Unesco Constitution sets forth the purpose of the Organization as follows:

"... to contribute to peace and security by promoting collaboration among the nations through education, science and culture in order to further universal respect for justice, for the rule of law and for the human rights and fundamental freedoms which are affirmed for the peoples of the world, without distinction of race, sex, language or religion, by the Charter of the United Nations."

(17) It is common knowledge that Rumania's record is one of constant violation of its international obligations in respect of human rights and fundamental freedoms, of freedom of expression, press, religion and political opinion. Rumania's violations of human rights and fundamental freedoms have been so widespread and so callously indifferent to the inherent dignity of man that its record was considered in the United Nations General Assembly in 1949 and again in 1950. The continued refusal of Rumania to comply with its Peace Treaty obligations was referred to the International Court of Justice, and the Court sharply pointed to its obligations under the Peace Treaty. Rumania, however, continued to ignore those obligations. The United Nations General Assembly consequently adopted a resolution in 1950 condemning the wilful refusal of the Government of Rumania to fulfil its obligations under the provisions of its Treaty of Peace, pointing out that those obligations had been confirmed by the International Court of Justice. The United Nations General Assembly furthermore observed in its resolution that the conduct of the Government of Rumania indicated that it was aware of breaches by it of its obligations under the Treaty of Peace, and that it was callously indifferent to the sentiments of the world community. In addition, the General Assembly voted that this Government had made no satisfactory refutation of accusations against it concerning its continued violations of its Treaty obligations. Rumania's record speaks for itself, it ignores its obligations under a Treaty which it has already signed to respect human rights and fundamental freedoms. It ignores the advisory opinion of the International Court of Justice. It stands condemned by the United Nations for wilful violation of its treaty obligations. Such a country should not be admitted to Unesco. We are faced with a choice here, and in our opinion this Organization should reject Rumania's application. We should not turn membership of this Organization into an empty gesture. The Constitution and the obligations of Unesco should remain clear-cut and firm. For these reasons, and in the belief that membership of this Organization calls for compliance with its obligations, the United States of America will vote against the admission of Rumania to Unesco.

(18) The PRESIDENT (Translation from the Spanish): I call on the delegate of Czechoslovakia.

(19) Mr. HAYEK (Czechoslovakia) (Translation from the French): The Czechoslovak delegation did not intend to take part in the discussions at this stage of the General Conference. But the speech which has just been made by the United States delegation - a speech designed to upset the atmosphere of understanding and co-operation - forces us to intervene in a matter which is absolutely clear-cut and irrefutable. Both the Economic and Social Council of the United Nations and the Executive Board of Unesco recommend this General Conference to admit the People's Republic of Rumania to membership of Unesco. Rumania has for long past - prior to this recommendation - given striking proof that its cultural policy is in conformity with the aims proclaimed in Unesco's Constitution. This is common knowledge.

(20) After its liberation in 1944 Rumania had to cope with the heritage of centuries of tyranny, foreign oppression, poverty, ignorance and a backwardness artificially prolonged by previous régimes. Added to all this were the ravages of the Second World War and the fascist occupation. The Rumanian people, with admirable self-sacrifice and heroism, have in a short space of time overcome these obstacles. They have brought literacy to millions of Rumanian citizens. They have instituted a system of free and compulsory education, built hundreds, thousands of primary and secondary schools, and dozens of higher educational establishments. They have given workers free access to education and culture. They have systematically encouraged the creative abilities of people belonging to all strata of the population, and helped the universities, research institutes and science foundations established since the liberation. We are witnessing a flowering of science - both natural and humanistic - the fruits of which are manifest in the expansion of industry and agriculture and in the rising cultural level of the entire population. Scholars, writers, artists and popular cultural groups have established close and fruitful contacts with many other countries.

There are, in the opinion of the Czechoslovak delegation, few other nations which could have obtained such striking results in conditions as adverse as those that faced the Republic of Rumania after the war.
(21) It is only natural that we should hail this country's co-operation with Unesco, thus facilitating the latter's approach to true universality, the importance of which has been emphatically stressed on many occasions, and at this very conference. Despite all this, we have just heard objections raised. Nothing could be more contrary to reason than to invoke human rights in the present case. It might be asked whether those who have raised these objections have, in their own countries, in fact introduced the right to education, and freedom of access to all the heritage of national and world culture; whether they have abolished all inequality between the sexes, all national, religious and racial discrimination as completely as the Rumanian people have. It is only just that the Rumanian people should defend its rights against all attacks, from whatever quarter they may come. The objections which have been raised are directed not against the Rumanian people alone, but also against the universality of Unesco, against the very aims of our Constitution, against peaceful coexistence, against international understanding between the peoples in all spheres, and in the sphere of culture in particular. That is why the Czechoslovak delegation invites the Conference to reject these objections, and to vote for the admission of the People's Republic of Rumania to membership of Unesco.

(22) The PRESIDENT (Translation from the Spanish): I call on the delegate of the USSR.

(23) Mr. SOLDATOV (Union of Soviet Socialist Republics) (Translation from the Russian): The delegation of the Soviet Union supports the decision of the Economic and Social Council of the United Nations and the decision of the Executive Board of our Organization on the admission of the People's Republic of Rumania to the United Nations Educational, Scientific and Cultural Organization. The delegation of the Soviet Union considers that the development of cultural co-operation among all States, and active participation in the work of Unesco by all the countries which manifest a desire to be members of Unesco, would create a better atmosphere in the world, and help to establish a situation which would work for the maintenance of peace and friendly relations among the nations of the world. The delegation of the Soviet Union thinks that this is the desire of all the peoples whom we have the honour to represent here at the General Conference of Unesco. For that reason the delegation of the Soviet Union thinks that the admission of the People's Republic of Rumania to the United Nations Educational, Scientific and Cultural Organization would work for the further development of co-operation between the peoples of the world in the maintenance of better relations between those peoples and for world peace and tranquillity.
(24) As far as the record of Rumania is concerned in the field of culture, science and education, I think all the delegates to this Conference know very well that the Rumanian people played a conspicuous part in the development of European culture in the past, and is playing a great rôle in the development of European culture today. We believe that the contribution of any country in the world to the development of world culture is a great thing and it does not matter whether this contribution is big or small; any such contribution will enrich world culture and encourage the peoples in their desire to develop better relations one with another. The People's Republic of Rumania has made great strides in its development in recent years, after the ravages of the war had been repaired. The representative of the People's Republic of Czechoslovakia has drawn our attention to the achievement of the People's Republic of Rumania in the field of education and culture and I will not lose time in developing this theme further. I would only stress one point, which is, that in Rumania there is a fundamental and organic law of the country stating clearly that the citizens of the Rumanian People's Republic, irrespective of nationality or race, are ensured full equality and rights in all spheres of economic, political and cultural activities. Any direct or indirect restriction of the rights of the citizens of the Rumanian People's Republic, the establishment of any direct or indirect privileges for citizens on account of their race or nationality, as well as any manifestation of chauvinism, race hatred, national hate, or nationalistic or chauvinistic propaganda, is punishable by law. I do not need to refer to a number of other Articles in the Constitution of the Rumanian People's Republic which ensure the right of the citizens to develop culture, science and education so that these benefits may become benefits for all the peoples of the Republic. It is a great pity that a reference was made here to past discussions in the United Nations on the question of alleged violations of the rights of citizens in Rumania. That is a thing of the past, and I would like to say that the charges made were not confirmed by any facts produced at the United Nations. All the allegations against the government and people of the People's Republic of Rumania were refuted. I would remind the members of this assembly that the United Nations has long since dropped this matter, convinced that the issue was not one which deserved further consideration and because the rights granted to the people and the development of culture and science in Rumania proved that all those allegations were false.
(25) Mr. President, allow me to request all the members of our high assembly to support the decision of the Economic and Social Council of the United Nations and of our Executive Board and decide to admit the People's Republic of Rumania to our Organization. The delegation of the Soviet Union earnestly hopes that this decision will be unanimously accepted.

(26) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Israel.

(27) Mr. KUBOVY (Israel): Article 1 of the Unesco Constitution states that the final aim of this Organization, as also of the United Nations, is to further universal respect for justice, for the rule of law and for human rights and fundamental freedoms for all. Now the Rumanian Government has kept imprisoned for nearly four years, and without any kind of trial, a large number of men and women who formed the élite of the former leaders of the Jewish communities of Rumania. In the past year, Rumanian courts, sitting for the most part in secret, have sentenced some

hundred of these people to very long terms of imprisonment. The crime of which they were accused was that they had been in favour of the establishment of the State of Israel and maintained contact with Jewish organizations in other countries. They were condemned for activities which, at the time, were not only legal but were exercised openly, and with the consent of the Rumanian Government. This action on the part of the People's Republic of Rumania reflects a policy which is incompatible with the principles of Unesco, and in flagrant contradiction with its aims, which are to further the unrestricted pursuit of objective truth and the free exchange of ideas and knowledge. For these reasons the Israeli delegation will have to vote against the admission of the People's Republic of Rumania.

(28) The PRESIDENT (Translation from the Spanish): I call upon the delegate of the United Kingdom.

(29) Sir Ben BOWEN THOMAS (United Kingdom): The United Kingdom approaches this important and difficult matter with four major considerations in mind.
(30) The first is that this Organization should strive for and attain universality, and no delegation is more eager than ours to see that ideal realized in practice in the life and work of this Organization. The second consideration is that Unesco is an autonomous body. It is not the Education Department of a super-State and it reaches its decision in the light of its own consideration of the evidence before it. The third consideration is that of timing. There is a time when a decision should be reached and there is a time frequently when it is unwise that a decision should be reached, which leads me to the fourth consideration - that our decisions should always be based on what we regard as the conclusiveness and the adequacy of the evidence. Now, it is certain that in the speeches so far delivered from this rostrum there is conflicting evidence before us and it is extremely difficult for us who are attending this session quickly to appraise this evidence and to reach a decision upon it.
(31) It therefore seems to the United Kingdom to be most desirable to oppose the admission of Rumania at this particular session, on the grounds that I have already indicated and to say that we shall be very glad indeed to see this application re-examined in two years' time, when this Conference assembles again. For that reason, I would like to propose an amendment, that a decision on the admission of Rumania be postponed for two years and that we would welcome the application at that time.

(32) The PRESIDENT (Translation from the Spanish): I call on the delegate of Canada.

(33) Mr. PIERCE (Canada): I speak to support the proposal of the United Kingdom delegation. Our aim in Unesco is not to have a specific number of members, say 73 or 72. I think our colleague from the Soviet Union, when he spoke a moment ago, put our aim more correctly. He said that our aim was to create better feelings and relations. To add a new member in face of the strong objections of members of long standing, who have been the [illegible] Organization, is not, I suggest, a step in that direction. With time, attitudes will modify and feelings may subside. It is for these reasons that the Canadian delegation supports the amendment of the United Kingdom.

(34) The PRESIDENT (Translation from the Spanish): I call on the delegate of Brazil.

(35) Mr. BERREDO CARNEIRO (Brazil) (Translation from the French): The Government of Brazil regrets very keenly that it is unable, at the moment, to support the application of Rumania. In making this statement I wish to stress that it is not to be regarded as even a temporary refusal or as expressing reserve or hostility towards the Rumanian people and the struggle it is waging to secure the conquests of which Unesco is the champion.
(36) We therefore request the Director-General to approach the Rumanian authorities without delay and to draw up for our next General Conference a report designed to inform all Member States and delegates of the real atmosphere in Rumania, and that country's accomplishments, so that we may all, with one accord, recognize its right to participate in our work. This is therefore not a refusal but merely a postponement; and we support the British proposal to this effect.

(37) The PRESIDENT (Translation from the Spanish): I call on the delegate of Poland.

(38) Mr. MICHALOWSKI (Poland): The Polish delegation supports the proposal of the Executive Board and the recommendation of the Economic and Social Council concerning the admission of the People's Republic of Rumania to membership of Unesco. We should admit Rumania to our Organization, because that country is acting, in the field of culture and in its international relations, in the spirit and in accordance with the principles of true progress. These are the principles which are the basis of the Constitution of Unesco. In our opinion, the principle of universality which underlies Unesco's Constitution is a pre-requisite of success in its work on a general and on a national scale. In our opinion, there is no conflicting evidence about Rumania, as has been said at this Conference, because no evidence against Rumania nor evidence barring Rumania from membership of Unesco has been presented here. The facts submitted by the representative of Israel are not facts but a repetition of political propaganda disseminated in the world in order to embitter the political situation. We are, for this reason, opposing the amendment of the United Kingdom representative. In our opinion it is our duty to admit Rumania to Unesco. It is a duty to give it the possibility to take part in our work and to enrich the work of our Organization. The Polish delegation therefore appeals for the rejection of the amendment of the United Kingdom delegation and for the admission of Rumania as a member of Unesco.

(39) The PRESIDENT (Translation from the Spanish): I call on the delegate of Denmark.

(40) Mr. NIELSEN (Denmark): We are here faced with the different views of different delegations. Those who oppose the admission of Rumania are accusing them on grounds which it is very difficult for the

different nations to verify. We have known of these accusations for long, and I shall take no stand and pass no judgment on this point. On the other hand, we are faced with a proposal to defer the decision of this Conference, for reasons given by the delegate of the United Kingdom. Our delegation takes the view that it is desirable that the representatives of all nations should come together irrespective of the different views they hold in political or ideological matters. We deem it necessary to produce conditions in which the members of our human community can exchange their views, however different, in a spirit of co-operation, each endeavouring to make its views comprehensible to the others. On these grounds, we feel that we should not defer a decision, but should accept those who indicate their wish to co-operate with us. Even if our ways of life and our fundamental ideals differ, it is better to sit together in the same room and speak to each other than to insult and attack each other across frontiers. We are therefore in favour of taking a decision at once and our delegation is prepared to vote for the admission of Rumania.

(41) The PRESIDENT (Translation from the Spanish): I call on the delegate of Belgium.

(42) Baron van der STRATEN WAILLET (Belgium) (Translation from the French): I wish to give the reasons why the Belgian delegation intends to support the proposal of the United Kingdom delegation.
(43) We regard the problem from two different angles: firstly, from that of the global character of the Organization - from this point of view it is clearly desirable that the greatest possible number of States should participate in the work of this Specialized Agency; secondly, from the point of view of respect for human rights and respect for the international obligations of the members of this Organization; and from this latter point of view, we cannot be deaf to the arguments which have been adduced by the various members of this Organization. We therefore consider it expedient to postpone taking a decision so that States which have applied for admission to Unesco - and Rumania in particular - can adapt their policy to conform to the requirements of members of this Specialized Agency. Accordingly, we support the motion to this effect submitted by the United Kingdom delegation.

(44) The PRESIDENT (Translation from the Spanish): I call on the delegate of Yugoslavia.

(45) Mr. VLAHOVIC (Yugoslavia) (Translation from the Spanish): The delegate of the United Kingdom made four comments on the problem before us. The Yugoslav delegation wishes briefly to add a few more.
(46) We in Yugoslavia have had very bitter and cruel experiences during the past five years; but let that pass - we will overlook it in the hope that the international situation will improve and because we believe that the principle of universality should be introduced into international organizations, Unesco as well as the United Nations. Our country is a member of the Economic and Social Council of the United Nations, which approved the application of the People's Republic of Rumania - and, in view of this, the Yugoslav delegation will endeavour to think not of the past but of the future, believing that, if the delegations of those countries which are applying for admission to Unesco come here, we shall be better able to perceive what they think and desire; and also because they will here assume further obligations which they will have to discharge by working hand in hand with us. For these reasons we Yugoslavs, looking to the future rather than dwelling on the past, will vote in favour of the admission of Rumania.

(47) The PRESIDENT (Translation from the Spanish): We have three countries, Colombia, Lebanon and Italy, which have announced their intention to speak. If there are no objections, the list of speakers will then be closed. I call on the delegate of Colombia.

(48) Mr. BERNAL JIMENEZ (Colombia) (Translation from the Spanish): I must begin by declaring, on behalf of my country's delegation, that we support the principle of universality; that we cherish the desire to see all the peoples of the world, some time, assembled at this great Conference of the United Nations Specialized Agency for Education, Science and Culture; and that we hope, in the end, to see the ideal of friendship and universal peace realized in these lofty realms of thought. This is also the desire, this cannot but be the desire, of all men of imagination and courage.
(49) The wars of the past have been vast hecatombs which have scourged mankind and from which, we may aver, no nation has escaped. They are tragic memories which we cannot forget but it is the idea of universality which should always inform our aspirations. It is my hope that this day may not be far off, the day when all the peoples of the world will meet together in an atmosphere of mutual understanding and genuine solidarity. It is precisely because this is our hope that we deem it essential to prepare the way for it.
(50) It is natural and logical that the present members of Unesco should demand a minimum guarantee of human rights, a minimum sphere for free development in all States which are to become members of the Organization. Accordingly, it is logical also that, before the admission of a new Member State, there should be those minimum guarantees to reassure us regarding the actual fulfilment of the obligations assumed by this new State on entering the community of Unesco.
(51) Does this full guarantee exist in the case of the Republic of Rumania? Is it really certain that, at the present juncture, Rumania is in a position to fulfil the obligations it will be undertaking? Are we fully convinced that there really is a free exchange of ideas in that State, and that freedom of thought and movement is guaranteed there? If our delegation were convinced of this, we should have no hesitation about voting in favour. And we should be especially pleased to do so in view of our deep regard for that great people, to which we are bound by racial affinities.
(52) But since there exists no such conviction, since, on the contrary, there does exist a certain concrete fact, the fact mentioned by the United States delegate, who cited the case of the International Court of Justice, which has just completed its investigation of violations of human rights committed in the country now applying for admission to this Organization, we are unable to approve the admission of Rumania to

the new community of the United Nations. That is the opinion of the Colombian delegation.

(53) The PRESIDENT (Translation from the Spanish): I call on the delegate of the Lebanon.

(54) Mr. AMMOUN (Lebanon) (Translation from the French): In the opinion of the Lebanese delegation, it is not for us here to pronounce judgment on States applying for admission: we are not awarding good conduct certificates. In principle, we must assume that the very fact of a State knocking at our door indicates its acceptance of all the principles to which we subscribe, and its intention to model both its domestic and its foreign policy on the principles governing our Organization. But since this interpretation does not seem to be general, and since, in spite of our wish to encourage the expression of differing opinions in this assembly and so promoting discussion, which constitutes the essence of life, we must avoid prolonging a debate which embitters the atmosphere of our discussion and impart to this vote the character of approval or of censure, we should do well, I think, to support the United Kingdom proposal. In so doing, however, we should make it quite clear that, in the interests of expediency, and in order to facilitate understanding between States which are or may become members of this Organization, we are postponing the consideration of this matter until the general circumstances indicate that, as we hope, the Rumanian application will be unanimously accepted. For the specific reasons stated we support the United Kingdom proposal.

(55) The PRESIDENT (Translation from the Spanish): I call on the delegate of Italy.

(56) Mr. BADINI CONFALONIERI (Italy) (Translation from the French): The Italian delegation attaches very great importance to the principle of universality, but considers that it can only be extended in practice to States which provide serious and convincing proofs that they cherish sufficient respect for the fundamental rights of cultural freedom to be qualified to enter the international community. In the trial which has been instituted here, it appears to me premature to take up any stand, since it is meet and necessary that the allegations made by the opposing sides be examined. We accept the United Kingdom proposal for the reason so clearly stated by the delegate of Belgium. I should like to add that there is, I think, a question of procedure involved here: the United Kingdom proposal should be voted on first of all; and I request that the vote be taken by roll-call.

(57) The PRESIDENT (Translation from the Spanish): The debate is now closed. We are going to vote on the draft amendment submitted by the United Kingdom delegation and seconded by several other delegations. The amendment is that the General Conference should postpone a decision on the application of the People's Republic of Rumania until the next session of the Conference two years hence. The vote will be taken by roll-call.

(58) Mr. MONTAGNIER (Secretary of the Conference) took the vote by roll-call.

In favour: Belgium, Brazil, Cambodia, Canada, Chile, Colombia, France, German Federal Republic, Greece, Guatemala, Haiti, Israel, Italy, Japan, Korea, Lebanon, Liberia, Mexico, Netherlands, Nicaragua, Panama, Salvador, Spain, Thailand, Union of South Africa, United Kingdom, United States of America, Uruguay.

Against: Argentina, Burma, Byelorussian Soviet Socialist Republic, Denmark, India, Indonesia, Norway, Sweden, Switzerland, Ukrainian Soviet Socialist Republic, USSR, Yugoslavia.

Abstained: Australia, Austria, Ceylon, Costa Rica, Ecuador, Egypt, Iran, Iraq, Jordan, Laos, Libya, New Zealand, Pakistan, Philippines, Viet-Nam.

Absent: Afghanistan, Dominican Republic, Honduras, Luxembourg, Monaco, Nepal, Peru, Saudi-Arabia, Syria, Turkey, Venezuela.

(59) The PRESIDENT (Translation from the Spanish): The amendment submitted by the United Kingdom delegate is adopted by 28 votes in favour, 12 against, with 15 abstentions and 11 absent.

(60) The final consideration of this question will therefore be postponed until the next General Conference in two years' time.

(61) We will now consider the application for admission to Unesco of the People's Republic of Bulgaria (8C/10). I call on the Chairman of the Executive Board.

(62) Sir Ronald ADAM (Chairman of the Executive Board): The Executive Board at its thirty-ninth session adopted the following resolution on 11 November last:

"The Executive Board,

Considering that the Government of the People's Republic of Bulgaria applied for membership of Unesco on 21 July 1954, that, in accordance with Article II of the Agreement between Unesco and the United Nations, the Director-General forwarded the application to the Economic and Social Council of the United Nations, and that the Economic and Social Council, at its resumed eighteenth session, decided to inform Unesco that it had no objection to the admission of the People's Republic of Bulgaria to membership of the Organization;

Decides, in accordance with paragraph 2 of Article II of Unesco's Constitution, to recommend to the General Conference at its eighth session that the People's Republic of Bulgaria be admitted to membership of Unesco."

(63) The PRESIDENT (Translation from the Spanish): We will now consider the recommendation of the Executive Board that the application for admission to membership of Unesco of the People's Republic of Bulgaria be accepted. I call on the United Kingdom delegate.

(64) Sir Ben BOWEN THOMAS (United Kingdom): I have no wish to repeat the remarks I made in proposing the amendment when we were considering the admission of Rumania. I would merely say that my delegation is animated by the same considerations in approaching this important and difficult question, too. And we would like to propose as an amendment to the

motion brought forward by the Executive Board that we postpone consideration of the application for the admission of Bulgaria to this Organization for a period of two years, and we look forward to receiving a similar application and considering it at the end of that time. I beg to move that amendment.

(65) The PRESIDENT (Translation from the Spanish): I open the discussion on the proposal of the United Kingdom delegate to the effect that a decision on this question also should be postponed for two years, in the same way as the question on which we have just voted. I call on the delegate of France.

(66) Mr. MAYER (France) (Translation from the French): France will vote on this second question, concerning the admission of Bulgaria, in the same way as it has just voted on the admission of Rumania - in other words, it will vote in favour of the proposal put forward by the United Kingdom delegate. We would like to mention some of our reasons, which will explain the vote we have just given and the vote we are about to give. Without accepting any of the arguments of the delegate of Czechoslovakia, we would - if we were thinking only of Unesco as a world-wide body - be tempted to agree with his favourable conclusions. On the other hand, if we consider the speech of the United States representative, it would appear to be a detailed and exact description of what is going on and of the real situation inside Rumania, and now again in Bulgaria. But we do not consider that it is for Unesco to deal with political problems. And it is precisely in order to ensure that such problems are considered before Unesco examines requests for the admission of new Member States that the regulations provide for the United Nations to be consulted. The United Nations has been consulted: the Economic and Social Council recommended the admission of these States, and, as we see it, the proposal for postponement, which the United Kingdom proposed, and we approved, is perhaps, fundamentally - let us hope so, at least - tantamount to agreeing to admission at a future date when Unesco will consider the question not from the political aspect, but simply and solely from the standpoint of cultural relations or the need for universality in intellectual co-operation in the fields of education, science and culture. It is a pity that we did not, in previous years, adopt exactly the same attitude as is being adopted now. Nevertheless, the case of Bulgaria cannot be dissociated from that of Rumania. In our opinion, therefore, it is not a question either of rejecting or of accepting the admission of these States, but simply of considering the matter objectively in the light of the actual principles on which Unesco is based, and from which we hope, the General Conference will not deviate.

(67) The PRESIDENT (Translation from the Spanish): I call on the delegate of the USSR.

(68) Mr. SOLDATOV (Union of Soviet Socialist Republics) (Translation from the Russian): The delegation of the Soviet Union, as in the case previously discussed, supports the recommendation of the Economic and Social Council of the United Nations and the decision of the Executive Board of Unesco on the question of the admission of the People's Republic of Bulgaria to Unesco.
(69) The delegation of the Soviet Union considers, as I have had the pleasure of stating already, that, in the development of cultural co-operation among States, active participation in the work of Unesco by all countries which desire to be members of the Organization would create the atmosphere, a much desired atmosphere, for the maintenance of international peace, in which, we are sure, all people in the world are vitally interested.
(70) The participation of the People's Republic of Bulgaria in the work of Unesco would certainly help in this direction. The delegation of the Soviet Union cannot share the view expressed here by the representative of France and certainly cannot support the proposal of the representative of the United Kingdom. The delegation of the Soviet Union sees no reason whatsoever, in the case of the People's Republic of Rumania as in the case of the People's Republic of Bulgaria, not to admit this State to Unesco. Accordingly the delegation of the Soviet Union supports the decision already taken by the Executive Board and the recommendation of the United Nations Economic and Social Council and would earnestly ask this assembly to admit the People's Republic of Bulgaria to Unesco.

(71) The PRESIDENT (Translation from the Spanish): I call on the delegate of Poland.

(72) Mr. MICHALOWSKI (Poland): I already invoked the great principle of the universality of our Organization when I supported the admission of Rumania, which most unfortunately was rejected. And I wish now to reassert the same principle of universality, when I speak on the application of Bulgaria to join our Organization. In our opinion we should admit that country not only in accordance with that principle, but in order to enrich the spirit of Unesco in the field of the dissemination and development of culture. On the other hand, we should enable Bulgaria to develop still further its valuable cultural relations with other countries. Bulgaria has proved that it is worthy to become a member of an international organization the aim of which is to promote progress and the development of friendly cultural relations amongst all nations.
(73) Bulgaria, under its Constitution, guarantees to its citizens the right to education and culture and to active participation in the maintenance of the national culture. These rights are consistently observed. Bulgaria spends a considerable part of its national budget on Education, Culture and Public Health. It can boast of great achievements in the combating of illiteracy, in the raising of the cultural level of the masses, and in the promotion of art and science. Bulgaria cherishes its national culture and at the same time teaches its citizens respect for and understanding of the culture of other nations. Bulgaria develops too, to a great extent, friendly and peaceful cultural relations with other nations, relations which are of value to all of us.
(74) We should therefore oppose changing Unesco into an organization of countries with one and the same political system, or one and the same kind of government. It would be contrary to the principles

of peaceful and amicable co-existence between countries to disregard their political or economic systems. This great principle of coexistence is now prevailing in the minds of all humanity over ideas of cold war, political discrimination and political manoeuvre.
(75) For these reasons we are against the amendment of the United Kingdom, an amendment which in our opinion is harmful to our Organization and may cloud the atmosphere in which we are starting our work. The Polish delegation therefore supports the admission of Bulgaria and asks this Conference to reject the United Kingdom's amendment.

(76) The PRESIDENT (Translation from the Spanish): I call on the delegate of the United States of America.

(77) Mr. NUFER (United States of America): In the view of the delegation of the United States of America, Bulgaria is not qualified for membership of Unesco. Bulgaria has a well-known record of constant violation of human rights and fundamental freedoms and disregard of its international obligations. The record of its Government speaks for itself. It, too, ignores its obligations under a Treaty it has signed to respect rights and fundamental freedoms. It, too, ignores the advisory opinion of the International Court of Justice. It, too, stands condemned by the United Nations for wilful violation of its Treaty obligations. In addition, the United Nations' Committee of Experts on Forced Labour, in its recent report, pointed to the widespread practice of forced labour in Bulgaria. Bulgaria claims that forced labour is necessary for purposes of "re-education". I submit that re-education through forced labour is not the kind of education contemplated by the authors of the Unesco Constitution as a contribution to world peace and freedom, nor does it fit into Unesco's unremitting pursuit of objective truth. In our opinion, a Government that callously and wilfully contests human rights and fundamental freedoms and ignores its international obligations, should not be admitted to Unesco. These are not political considerations, but considerations and facts of paramount concern to Unesco. The record of Bulgaria has demonstrated incapacity to comply with the obligations of Unesco. Nevertheless, the delegation of the United States of America supports the proposal of the United Kingdom to adjourn consideration of the application of Bulgaria to membership of Unesco.

(78) The PRESIDENT (Translation from the Spanish): I call on the delegate of Czechoslovakia.

(79) Mr. HAYEK (Czechoslovakia) (Translation from the French): The last speech by the United States delegate makes it clear beyond any shadow of doubt, I think, what the issue here is. We are faced with a situation, with tendencies which, in the opinion of the Czechoslovak delegation, threaten both the atmosphere of this Conference and the future work of Unesco. A State or, rather, a group of States, is trying to exclude from this Organization - whose universal character most of the speakers have emphasized - certain other States on the grounds that they have an economic and social system which differs from their own. It is clear from the voting and from the speeches we have listened to that the so-called Human Rights are merely a pretext, for on what are the accusations against the People's Republic of Rumania and the People's Republic of Bulgaria based? On a few slanderous statements forming the political propaganda arsenal of the "cold war", which most of mankind condemns. A fact which becomes particularly striking when we see, posing here as judges the delegates of certain States whose record in this matter is anything but exemplary - States which are, on the contrary, notorious for their flagrant violations of those rights. In the face of this threat we are very sorry to see the delegates of the United Kingdom and of certain other countries succumbing to this slander-campaign and proposing compromises which - the delegates will, I hope, excuse me for saying so - represent not so much an effort to find a solution worthy of our Organization as the reflection of a bad conscience. These are the reasons why the Czechoslovak delegation is opposed to the solution recommended. We believe that it is a solution unworthy of Unesco, that it is seriously prejudicial to the atmosphere of this Conference, the attainment of its aims and to the very principles of our Constitution; and that it is calculated to introduce international tension into this Organization, which should strive for peaceful co-existence and co-operation between peoples, regardless of their economic and social structure.
(80) We therefore appeal to our esteemed colleagues to reject the United Kingdom proposal and to vote for the admission of the People's Republic of Bulgaria.

(81) The PRESIDENT (Translation from the Spanish): If no one else wishes to speak, we shall now take a vote on the proposed amendment. In the view of the Chair the amendment under discussion, like that concerning Rumania on which a vote has just been taken, does not amount to rejection of the application for admission. On the contrary, it means that the matter will automatically be brought up at the next Conference, two years hence, without any fresh proposal being necessary. If there is no opposition, a roll-call vote will be taken.

(82) Mr. MONTAGNIER (Secretary of the Conference) took the vote by roll-call.

In favour: Belgium, Brazil, Cambodia, Canada, Chile, Colombia, Dominican Republic, France, German Federal Republic, Greece, Guatemala, Haiti, Italy, Japan, Korea, Lebanon, Liberia, Mexico, Monaco, Netherlands, Nicaragua, Panama, Salvador, Spain, Thailand, Union of South Africa, United Kingdom, United States of America, Uruguay.

Against: Argentina, Byelorussian Soviet Socialist Republic, Denmark, India, Indonesia, Norway, Sweden, Switzerland, Ukrainian Soviet Socialist Republic, USSR, Yugoslavia.

Abstentions: Australia, Austria, Burma, Ceylon, Costa Rica, Ecuador, Egypt, Iran, Iraq, Jordan, Laos, Libya, New Zealand, Pakistan, Philippines, Viet-Nam.

Absent: Afghanistan, Honduras, Israel, Luxembourg, Nepal, Peru, Saudi-Arabia, Syria, Turkey, Venezuela.

(83) The PRESIDENT (Translation from the Spanish): The result of the roll-call vote which has just been taken is as follows: 29 votes in favour, 11 against, with 16 abstentions, 10 absent. The United Kingdom proposal has therefore been approved.
(84) The next item on the agenda is the application by by the United Kingdom for the admission of certain territories and groups of territories as Associate Members of Unesco.
(85) Document 8C/7 and Article II of the Constitution of Unesco define the rights and duties of Associate Members. The Associate Members to be admitted on these terms would be: Gold Coast, Sierra Leone, Sarawak, North Borneo, Brunei, Singapore and the Federation of Malaya, as one group; and Jamaica, Trinidad, Grenada, Dominica and Barbados as another group.
(86) The General Conference has to decide whether these States are to be admitted as Associate Members. If there are no objections, I take the proposal to be approved and propose that the General Conference should acclaim these Associate Members which have just been admitted to Unesco. (Acclamations)
(87) I would be glad to give any of the delegates of the States which have just been admitted to Unesco as Associate Members an opportunity to speak, should they so wish. I call on Mr. Joseph of the Group of British Caribbean Territories.

(88) Mr. JOSEPH (British Caribbean Group): As I sat at the back of the hall and heard the discussion relating to the applications of Rumania and Bulgaria, I remained there in fear and trembling, for I realized that the fate of the application of my territories for associate membership hung in the balance; but your ready response to the application, presented by the United Kingdom delegation for the admission of the territories I have the honour to represent has inspired in me a desire to express, on behalf of the people of my country, our grateful thanks to this General Conference for admitting us, and to assure you that we are prepared to give every assistance possible in carrying out the high ideals for which Unesco stands.
(89) The territories I have the honour to represent lie in the Caribbean area stretching from the south of Florida to the north-east corner of Venezuela. The largest of them is Jamaica, with a population of a little over two millions, and from that territory my adviser, Mr. Houghton, Director of Education and Permanent Secretary in the Ministry of Education and Social Welfare, hails. The second largest territory is the one from which I come myself and is the most southerly of the Caribbean Territories, Trinidad. In all, we represent about four million people. We are a young people, anxious and willing to take our place in the scheme of things. These islands were discovered, a little under 500 years ago, by an illustrious son of Italy, who embarked on voyages sponsored by the Queen of Spain, and some of them were discovered in the name of that country. We have changed hands since then, several times, passing from Spanish to French, and most of us are now British, some still being French, some Dutch, some American. We are willing and anxious to give every assistance possible to Unesco in its labours, to help educate the peoples of the world, to improve world conditions, and to make the people a happier people.
(90) I would like here to express my thanks to the United Kingdom delegation for sponsoring us, and to you, the delegates of the various nations, for so readily supporting our application.
(91) In our territory free primary education is compulsory by law. We have secondary education, and a recently erected University College. We have the one and only Imperial College of Tropical Agriculture, from which sons and daughters from many parts of the world come to us to increase their knowledge of agriculture. We cover a wide area, and we are confident that Unesco and its officials will find ample opportunity in our territory to practise the work for which this Organization was founded. I can say on behalf of my people that we are prepared to give all support to any measure, brought forward by any territory, which will assist in achieving the aim for which this institution stands.

(92) The PRESIDENT (Translation from the Spanish): I call upon the representative of the Gold Coast.

(93) Mr. ERZUAH (Gold Coast): It was with a deep sense of gratification that I heard that, on the motion of the United Kingdom, the Gold Coast had been accepted as an Associate Member of Unesco. I am proud to be my country's first delegate and to have the honour of expressing to this assembly the gratitude of my Government and the people of the Gold Coast on an occasion to which we have been keenly looking forward.
(94) The aims of Unesco, which we have shared since its inception, are well known and sincerely cherished by us, and I am grateful for this opportunity of saying how glad we are that we have been able both to contribute to and to receive from Unesco. The people of my country can be depended on to play their part to an ever-increasing extent in promoting the advancement of knowledge and mutual understanding for the cause of peace and the common welfare of mankind.
(95) The Gold Coast is not a large country and its population of about four and a half millions is chiefly concerned with agriculture and the natural products of the earth, but everywhere throughout the length and breadth of the land there is a burning zeal to increase and diffuse knowledge and thereby to create a fuller and richer community life. The whole system of formal education, which comprises the free primary schools and the middle schools, with a combined enrolment of half a million boys and girls, the commercial schools, the secondary grammar and technical schools, the teacher training colleges and, at the apex, the College of Technology, Arts and Science and the University College, is being expanded as fast as building capacity and the supply of teachers, both local and from abroad, permit. In this system equality of educational opportunity and insistence on the highest international standards of learning are paramount factors. The University College of the Gold Coast, which, like most of the secondary institutions and the College of Technology, Arts and Science, has complete academic independence, is a symbol of our determination to prepare our people for the responsibilities of independence.
(96) I should like to draw attention to the success

which our efforts in fundamental education have achieved. Already by this means close on fifty thousand people have obtained certificates of literacy in accordance with the recommendations of Unesco experts; also a strong nation-wide movement of community development has been launched for the promotion of all forms of betterment - in agriculture, health, communications, village improvement and the joy of living. The success of the Mass Education Teams throughout the country has lead to the provision of an extension service for the Departments of Government operating in rural areas, whereby the purposes of those departments can be the sooner achieved, whether they be improved methods of housing or agriculture or sanitation, better water supplies, roads, or any other of the many services provided for rural development by the Government. All this is already known to Unesco. In fact the fundamental education work of the Mass Education Teams has been included in Unesco's Associated Projects Scheme for the last three years.

(97) In the sphere of adult education, the needs of both urban and rural areas are being progressively met. We are proud of our national library system, which, I think, may claim to be one of the best in all Africa. The Extra-Mural Studies Department of the University College of the Gold Coast, through tutorial classes in liberal studies and also, in co-operation with the People's Educational Association, a national independent and voluntary body, through seminars and short courses in a wide range of subjects, provides opportunities for the spread of culture and learning throughout the country.

(98) Shortly before I left the Gold Coast to come here, an inaugural meeting was held of the National Commission, which will now become the co-ordinating body to direct the energies of the Gold Coast into the service of Unesco. I do not wish to take up too much of your time, but I should like to say - as an earnest of my country's determination to propagate Unesco's aims for the good of its people and of all other peoples - that the supporting bodies, which are for the most part independent of Government and which consist very largely of unofficial members, represent the diversified educational, scientific and cultural life of the country that the new Government of the Gold Coast is so keen to foster. We have supporting bodies for Social Sciences, Philosophy and Humanistic Studies, Arts and Letters, Museums, Monuments and Relics, and Natural Sciences, apart from those for Fundamental Education, formal education and libraries, which subjects I have already briefly touched upon. I do not wish to create an impression of complacency. We are far from complacent and are only too anxious to learn and to have the advice and aid of experts, but we can and shall co-operate to the full extent of our ability and, by so doing, I believe we may - in humble measure - be able to assist others not so fortunately placed as ourselves.

(99) On behalf of my country and people, I express to this assembly my sincere gratitude and I promise our full co-operation in the furtherance of the great ideals of Unesco.

(100) The PRESIDENT (Translation from the Spanish): I call on the delegate of Sierra Leone.

(101) Mr. BLYDEN (Sierra Leone): Mr. President, ladies and gentlemen, I stand here filled with a sense of pride and satisfaction, of humility and gratitude, the first duly accredited representative of my Government and people to one of the principal international agencies of our times concerned with the educational, scientific and cultural advancement of mankind.

(102) As a student of history, and political history at that, particulary the history of dependent peoples in the modern world, I cannot but be deeply moved at finding myself in an assembly of world leaders on a basis of full-fledged equality with sovereign independent nations, excepting only as regards the privilege of the vote, a matter which we know, in the years ahead, will receive the desired corrective. Nevertheless, on behalf of the Government and people of Sierra Leone whom I represent, I deem it a great honour to be the one chosen to convey to you our most cordial thanks and felicitations at this meeting of the eighth session of the General Conference of Unesco in the city of Montevideo. There is, in my judgment, honourable delegates and ladies and gentlemen, a threefold significance in this meeting.

(103) First, I personally, as a student of contemporary international relations, view it as more than a mere accident of history that this great nation of Uruguay, with its past and present history largely saturated with the literary ideas and influence of such illustrious names as those of Francisco Suarez, Francisco de Vitoria, Jean de Brie and others of the Spanish School of International Law and Jurisprudence, who first enunciated the idea of incorporating within the family of nations both sovereign and dependent peoples alike - that this great nation of Uruguay should be the nation to play host to a gathering of sovereign and non-sovereign peoples, close on four centuries after the theory was first enunciated.

(104) Secondly, it may not be known that the country known as Sierra Leone, lying 7 to 10 degrees north latitude, with a population of 2 million people, is the country of the African continent which enjoyed the earliest contact with the outside world. The records of antiquity, notably the Periplus of Hanno, afford us our earliest source of documentary reference regarding the country I here represent. We are told that about the year 500 B.C., under the direction of Hanno, the great Carthaginian, an expedition visited the coast of Africa on the Guinea Coast and reached the land which was later to be rediscovered by Pedro de Cintra in 1462, and named by him Sierra Leone or the "Lion Mountains". From that moment, by a paradox of human history, the current of history unleashed its rage upon a people whose only ineptitude and deficiency - if so it is - lie in their conservatism and over-developed sense of respect for law and order, in their strong affinity for causes not unrelated to the universal search for a world constitutional régime, in which all shall live in amicable coexistence - nations and peoples striving together in peace and freedom as brothers of the human race. And, if you will permit a diversion, I think our admittance to this august body without a single negative vote from any of the delegations (a fact for which I am grateful) is indeed indicative of the trend of the human mind and spirit, a sign that the world is moving towards a universal order in which nations shall not quarrel to prove which is the stronger.

Indeed, lest this equally significant fact go unrecorded, let me again remind you that Sierra Leone, having served as one of the principal stampeding grounds for the nefarious traffic in slaves, was later, under the aegis of Great Britain, to become the rehabilitation centre for those of our ancestors to whom the famous Mansfield Decision of 1772 and the indefatigable efforts of 18th Century abolitionists in England were to bring liberation and ultimate emancipation. Thus, Sierra Leone became the experimental station, as it were, in which the principle which has now become an accepted doctrine of international relations, namely, the doctrine of Trusteeship, enunciated by Edmund Burke, was to be practised. It is generally forgotten, too, that, fully 24 hours before the great Convention was to sit in Philadelphia on 10 May 1787, fully twenty-four months before the revolutionary cries of Liberté, Egalité, Fraternité were to be heard in the blood-strewn streets of Paris, Sierra Leone, conceived in the minds of its founders as "a free Negro State, a free Commonwealth", was already practising the art of self-government with a franchise enjoyed by all, "black and white alike, on the basis of full equality". The circumstances leading to our long-delayed entrance into formal membership of the family of nations are too well-known to bear recounting. And, even were it not so, it would ill become the representative of a people who make a boast of their loyalty to the cause of peace and harmony to indulge in recriminations over events which, measured by this grand event we are now witnessing, would appear but just another in the long series of human indiscretions and human follies. Let me invoke the authority of the ancient classicists who remind us throughout the years, "Tempora mutantur et nos mutamur in illis"; and today I stand here the freely chosen representative of my Government and people to participate in the deliberations of this assembly.

(105) A last aspect of this historic meeting lies, I think, in the fact that the region of the African Continent which is here represented by the Gold Coast and Sierra Leone (the region loosely described as West Africa) is what may be termed, in my judgment, a veritable United Nations in miniature. Here in West Africa is to be found every known type of political organization in the modern world, and for all of which I am happy to note there is ample provision in the Charter of the United Nations, with more and better provisions to come, we hope.

(106) First, there is the sovereign Republic of Liberia, which has wrestled with the wind for upwards of a century and more and is one of the original signatories of the Charter. Then there are the Trust Territories of Togoland and the Cameroons, provided for in Chapters 12 and 13 of the Charter, and lastly, there are the traditional political subdivisions of Colonies and Protectorates, one of which I represent, whose interests are safeguarded by the provisions of Chapter 11 of the Charter - the Declaration regarding non-self-governing peoples. Finally, this region is also that particular segment of the Atlantic coast which, in better and more harmonious days, when the champions of democracy stood together during World War II - the USSR, the United States of America, Great Britain, their European and Commonwealth allies - this is the region which these allies in the cause of democracy were so eager to defend against the onslaught of the enemy, recognizing as they did the rôle of West Africa as one of the physical and natural bastions of the twentieth-century democratic world.

(107) Speaking therefore, on behalf of my Government and people, let me say, now that we have been made fully accredited Associate Members of Unesco, that we shall construe our rôle in this Organization to be, not one of mere observers or silent partners, but of participants, dynamic actors in the great drama of helping to eradicate, not only from backward and undeveloped territories but even from some of the more advanced nations, those proverbial ills of illiteracy, disease, poverty, inequalities of various kinds, and, finally, enslavement of the mind and body which have plagued mankind throughout the ages. We shall, wherever possible, make available to Unesco our special African talents and skills in the employment of tools and techniques which, in our own social and cultural backgrounds, have been proven useful and effective in the harmonization of local conflicts between tribes, as well as in the furtherance of the principles of mediation, conciliation and arbitration for which the United Nations stand. Let us look forward to the day when the mind of man shall no longer be shackled and we shall live, in the language of the great Indian Nobel prize winner, Rabindranath Tagore, in an atmosphere "where the mind of man is without fear, and knowledge is free, and men are no longer divided by narrow domestic walls". If we succeed in bringing to the world community, from the once Dark Continent of Africa, our own peculiar share of insight and experience into the work of this great Organization, you will have yourselves to thank and to congratulate, ladies and gentlemen of this assembly, for having participated in one of the noblest gestures of the international community.

The meeting rose at 1.30 p.m.

# FOURTH PLENARY MEETING

*13 November 1954 at 3.45 p.m.*

*President:* Mr. ZAVALA MUNIZ (Uruguay)

CONTENTS

Speech by the delegate of the Malaya-British Borneo Group 57
Admission of observers from international non-governmental organizations . . . . . 57
Submission by the Chairman of the Executive Board of the Report by the Director-General . . . . . 58
Speech by the Director-General . . . . . 59
General discussion of the Report by the Director-General: Speeches by the delegates of Greece, Sweden, Iran and Haiti 62

**SPEECH BY THE DELEGATE OF THE MALAYA-BRITISH BORNEO GROUP**

(1) The PRESIDENT (Translation from the Spanish): I call upon the delegate of the Federation of Malaya.

(2) DATO NIK AHMAD KAMIL (Malaya-British Borneo Group): Mr. President, ladies and gentlemen, the General Conference of Unesco assembled at this session has done great honour to the Government and people of the territories of Sarawak, North Borneo, Brunei, Singapore and the Federation of Malaya, known as the Malaya-British Borneo Group, by admitting them as a group to Associate Membership of this great Organization. It is my pleasure and privilege today to express on their behalf their deep sense of gratitude and sincere appreciation of the consideration you have shown.

(3) May I also avail myself of this opportunity of saying how grateful we are to Her Majesty's Government in the United Kingdom for sponsoring our admission as a group Associate Member. By our admission to the Organization and in assuming the privileges and obligations of Associate Membership, we are proudly conscious of the fact that we are now privileged to participate within such limits as are set by the General Conference in the deliberations of this Conference and to take an active part from time to time in the monumental task of the Organization. If we are permitted to devote our efforts and energies in some small measure to realization of the noble aims and objectives of Unesco then I can assure you that the people and governments of the territories of the group can be relied on to play their modest part and to give of their best.

(4) The territories comprised in the group are situated at the heart, as it were, of South East Asia, a region which is playing a bigger part than ever before in the promotion of peace and goodwill amongst the nations of the world. Political progress is being accelerated in our territories, but the happiness and welfare of the people are not to be measured in terms of political maturity alone. Side by side with this progress, we must also hasten the advancement of knowledge and understanding. The hearts and minds of the masses must be attuned to a fuller and better realization and acceptance of the obligations that go with wisdom, knowledge and truth.

(5) We have in the last few years set our hand to a vast programme of social reforms, and we must maintain that programme to the best of our abilities. But there is much more that we want to do. I should be failing in my duty if I did not here and now acknowledge with gratitude the benefits and assistance we have had in the past from Unesco through the good offices of Her Majesty's Government in the United Kingdom. I feel confident that we can continue to look to Unesco for further aid to enable us to continue our work. We are planting for the future, and not for ourselves. We may be impatient at times, but future generations will not bless us if we plant without due care. We must plant deep and firm. I take my seat as the accredited representative of the Group, with the firm conviction that, through Unesco, the people of our territory will be sharing fully in the common cultural heritage of mankind.

**ADMISSION OF OBSERVERS FROM INTERNATIONAL NON-GOVERNMENTAL ORGANIZATIONS**

(6) The PRESIDENT (Translation from the Spanish): We will now consider item 12 of the agenda. I call upon the Chairman of the Executive Board.

(7) Sir Ronald ADAM (Chairman of the Executive Board): The recommendations of the Executive Board on this matter are set out in documents 8C/2 and

8C/2 Add. In application of Article IV, paragraph 13, of the Constitution, and Rule 7 of the Rules of Procedure, the Executive Board recommends that the Conference admit as observers at the present session representatives of the following non-governmental organizations. This, of course, is in addition to the 105 organizations which have consultative status with us and which automatically have the right to be represented. The first group consists of the Carnegie Foundation for International Peace, the Rockefeller Foundation and the Ford Foundation. The activities of these three organizations are international in scope and they have attended a number of our previous conferences as observers.

(8) Next is the Union of the Latin American Universities, and we consider that that organization has a special interest for us as we are meeting in Latin America. Finally, there are the International Association of Plastic Arts, the Universal Esperanto Association, l'Académie Internationale de la Céramique, the International Union of Students and the World Federation of Democratic Youth. These last four organizations have applied to be admitted to consultative arrangements, and their applications will be considered by the Conference later. Meanwhile the Board recommends that they be allowed to be represented by observers, in order that they can state their case when it comes up, if they are invited to do so.

(9) On behalf of the Executive Board, I recommend the admission of observers from the nine organizations I have mentioned.

(10) The PRESIDENT (Translation from the Spanish): If there is no objection to the proposal made, on behalf of the Board, by its Chairman, it will be considered to be approved.

(11) Approved.

**SUBMISSION BY THE CHAIRMAN OF THE EXECUTIVE BOARD OF THE REPORT BY THE DIRECTOR-GENERAL**

(12) The PRESIDENT (Translation from the Spanish): We now come to item 13 and I call again upon the Chairman of the Board.

(13) Sir Ronald ADAM (Chairman of the Executive Board): In accordance with the Constitution, it is my duty to present to you today, on behalf of the Executive Board, the report of the Director-General and the Executive Board on the activities of the Organization during the year 1953 (document 8C/3) and the supplementary report of the Director-General on the activities of the Organization from 1 January to 30 June 1954 (document 8C/3 Add.). In the case of the 1953 report, the first report communicated to Member States under the amended text of Article V (9) of the Constitution, which we adopted at our last session, we have included in the printed document, for the first time, the comments of the Board (pp. 7 and 8 in the English text) and the Board's report on its own activities, which you will find on pp. 25 and 26.

(14) As you can read it yourselves, I will only call your attention to certain points of the Report. The Board has pointed out that Article V (9), which asks the Director-General to present the report for 1953, for instance, in the year 1953, is quite impossible to carry out. With the best will in the world, the earliest date by which we could get the 1953 Report published was May 1954, and the Director-General has put a proposal in front of you for an amendment to dispose of this difficulty.

(15) When examining the Report, the Board suggested that in the future there should be an introduction highlighting the major events of the year or illustrating the carrying into effect of one or more major themes. The Reports of the Director-General are an account of the Organization's work, and are essential for the archives, but we felt that a short beginning to that Report highlighting things would be very valuable to members who are talking about Unesco in their own countries or to the Press. There were also suggestions that a conclusion be added about the work which has been accomplished, an assessment of the importance of the results and a statement of what remained to be done. That, I think, requires more consideration, for we do not want to add to the length of the reports if we can possibly help it. The Board also reports with satisfaction the visits the Director-General has paid to Member States. The Board felt it was most important for the Director-General, as soon as possible, to see Member States and where the work is really being carried on.

(16) During 1953, the Board was obliged to hold four sessions. Two were almost entirely taken up with the election of a new Director-General. One session was held, as usual, during the extraordinary session of the Conference which elected the Director-General. There was a meeting at the end of the year called for in order to take account of changes necessitated in the next year's programme, and to make the budgetary transfers which are always necessary at the end of the year.

(17) Early in the year, the Board made a study of the matters before it, hoping that we might be able to leave a number of items to the Director-General, and lessen the very heavy load of our administrative programme. With the help of the Legal Adviser, we studied this and we found, with one or two very minor exceptions, that everything we were doing was ordered either by the Constitution or by the Rules of Procedure or by resolutions of General Conferences, and that we could not legitimately reduce any of that load of work.

(18) The most interesting innovation of the year, which we owe to Dr. Veronese of Italy, a member of the Board, and for which we have been grateful ever since, was the suggestion that we should have informal meetings without an agenda or numerous working papers and, if possible, away from Unesco House. The first of these was held at Gif-sur-Yvette on 26, 27 and 28 November on a general appreciation of the Organization's position in the world today, and it was the starting point of the paper you have in front of you, or will have, on Remodelling the Future Programme .

(19) We felt that there were a number of other subjects we should like to discuss at length - methods of work, National Commissions and other matters - and we hope that it will be the practice of the Board in future years to take two or three days in which they can get down, with the minimum of documentary

material, to the discussion of the principles or work of Unesco.

(20) I will turn now to the second report. It has been quite impossible within the time available for the Executive Board to print anything on this report. It came up for our consideration just before the present session and I will only bring out one or two points that struck us in reading it. We particularly noticed the lack of concordance between the report of Unesco and the Reports of Member States, although one would have thought that the report of Unesco, which relates what is going on in most of our Member States, might find some echo in the reports of those Member States, which probably are in a much better position to assess the results of their own points of view than any one else. It has also been suggested that these reports might usefully contain an account of the implementation of the Conventions that Unesco has drawn up, this, partly for information and partly to stimulate signature by States that have not signed them.

(21) A further suggestion, which we did not have time to go into in detail, was that there should be some attempt at co-ordination between the various parts; the introduction to the chapters of the programme, the Report by the Director-General and the Reports by Member States. This is a difficult question and would have to be considered at some length. We all, I know, want to save paper, members of the Board before all others.

(22) An interesting point on technical assistance was raised, although it is a matter for the Technical Assistance Board and not for Unesco. You will see in the report on Technical Assistance that experts are to advise States, at their request, on subjects such as science teaching. Now their reports are confidential, coming direct from the expert who is serving the Member State; yet those reports would be of great value to other Member States and to other experts. It is not an easy question and it is not for Unesco to solve it but I know that the Director-General is considering approaching the Technical Board on the matter.

(23) I turn now to the Board's own work during 1954. It held three sessions. The first (No. 37), a long one, met in Paris from 10 March to 9 April. It was necessarily long because the Director-General, who is now responsible under the Constitution for both programme and budget, wanted our advice and we had to go through the programme in detail, and the Director-General in his final programme accepted a number of our suggestions. I believe that that was a very important meeting. We also had to prepare the comments on the report for 1953 which I mentioned.

(24) Our second session met in Venice from 14 to 28 July. The Board expressed both in writing and orally in Venice its gratitude to the Italian Government, the city of Venice and Dr. Veronese, but I should like to do so publicly here. We worked longer hours and got through more work even than in Paris, partly due to the delightful monastery on the Isle San Giorgio, which we were allowed to use by courtesy of the Foundation, and we have a great deal for which to thank Dr. Veronese and our old friend Mr. Branca, the Director of the Institute. We had opportunities to see something of Venice, mostly in the evenings and also of attending the Biennale and the Film Festival, which I believe was valuable to all of us. The Board continued its work in private meetings and studied the problem of the remodelling of the programme, afterwards turned over to a committee, and problems of decentralization and National Commissions, which we had not time to finish. I hope, before this Board disappears, we may have a chance of finishing that subject.

(25) Finally, I should like to report briefly on new journeys that I made in company with the Director-General and another member of the Board, one in Asia, and another, before this meeting, in some of the countries of Latin America. I am very grateful to the Director-General for his invitation, and to the Board for making it possible for me to go. On the visit to Asia, Professor Oscar Secco Ellauri, the member of the Board who comes from Uruguay, and on the second journey Mr. Sharif from Pakistan accompanied me and Dr. Luther Evans. The value of those journeys - to see in the field the actual work of Unesco, to attend the meetings of National Commissions, which we normally only read about, and to hear direct from Member States what they want from Unesco - was inestimable. We saw amongst other things the very interesting Latin American centre for Fundamental Education at Patzcuaro, the school project in a province of Thailand, the Japanese National Commission at work and a great many other things, and I should like to say how grateful we are to the governments - I speak now for the Board members and myself - for their hospitality and kindness to us. Lastly, I should like to thank the Government of Brazil and Professor de Berredo Carneiro for two delightful days we spent in Rio on our way here, days which I think were valuable in allowing Board members coming from Asia and other countries to see another Latin American State.

**SPEECH BY THE DIRECTOR-GENERAL**

(26) The PRESIDENT (Translation from the Spanish): I call upon the Director-General.

(27) The DIRECTOR-GENERAL: Mr. President and honourable delegates, I wish to make a few brief remarks supplementing the lengthy account you will find in these two documents.

(28) First let me join you in thanking the Vice-President of India for his fine work as President at the last two Conferences and at the beginning of this one. It was he who administered to me the Oath of Office and signed with me my contract of employment, so that I shall continue to think of him in a way as your agent in giving me employment. I wish certainly to express my thanks to the Executive Board, which has worked with me in a wonderful spirit in the period since July of last year, and to the Chairman and those members of the Board who have journeyed with me on some of my visits to Member States. Their counsel to me in the course of our travels was indeed helpful and had a great deal to do with my thinking about the future programme of the Organization, including the proposals now before the Conference.

(29) I should like of course to take this opportunity also to thank the Government of Uruguay for all it has

done to make this Conference the success which I am sure it is going to be. I came here a little over a year ago to talk to the Government about arrangements for the Conference and I found the officers of the Government, and also of the city of Montevideo, most co-operative and helpful. I wish also to thank all the Member States, more than 30 of them, who were so kind to me on the occasion of my visits, and I thank all the other people and organizations who have co-operated so wonderfully with the Secretariat during the past sixteen months.

(30) The most important thing that I have tried to do in these sixteen months has been to increase the existing confidence in the Organization among all of the parties with whom it deals. I have wanted to increase the confidence of Member States in the Organization, to increase the confidence of the members of the United Nations family in the Organization, to increase the confidence of other intergovernmental organizations in us and in our work, and also to improve the relations of confidence that exist between us and the non-governmental organizations.

(31) In my travels and in the contacts I have had with representatives of governments who have visited me in Paris, or who are themselves in Paris, I have tried to speak frankly; I have solicited views on the welfare of the Organization and I have expressed my own views so that we might have a free and full exchange. The most important thing for the future of Unesco seems to me to be the attitude which our Member Governments, the international organizations, the non-governmental organizations and the peoples of the Member States take towards it. I felt that it was for the Secretariat to take the initiative in changing those attitudes where they were not favourable, and to discover the true views of all these partners of ours in the work in which we are engaged. My travels have taken me away from the office a good deal and I have sometimes been worried by the problem of how exactly I should apportion my time. The balance, I believe, will be about right if the Conference should choose to approve the budgetary implications involved in my having two Assistant Directors-General.

(32) One great effort of the year has been to give the programme now in course of execution and the draft programme for 1955-56 something of a new orientation. That orientation seemed, both to me and to the Board, to be necessary in order to make our programme correspond more precisely with the views of Member Governments. I think it is impossible for the views of Member Governments to be adequately expressed solely at a General Conference, for the procedural reason that, once the draft programme is prepared, you cannot change it as much as many of you would like to: there is simply not the time to think out new proposals and for the governments represented here to adjust their own thinking to the new ideas. The Secretariat and the Board have inevitably to face the Conference with something of a fait accompli. That is not altogether desirable, and I believe that there should be more consultation with Member States in the formative stage of the programme. That is one of the outstanding lessons I have learnt in the past sixteen months. I shall not discuss the programme at this time, but I wish to emphasize that its tendency to give more practical aid, establish more practical projects in Member States, is something which I regard as being in accord with the wishes of the governments and the peoples whom you represent. In this work I have relied heavily upon the views of the Executive Board, and the redrafted programme which is before you is based in considerable measure on the conclusions the Board arrived at in its session of last March/April.

(33) The Secretariat has made certain adjustments within the present programme in the light of this new trend. The Board has been glad to approve such transfers as required its approval. In connexion with the reorganization of the programme, the Board has asked me to call attention to one slight misuse of terminology in our Report for 1953, in which we referred to the "decentralizing" of the programme. That word is not very well chosen, but what we meant by it was not regionalization, but rather spending more of our money on practical projects in individual Member States and in groups of Member States which are co-operating in some kind of a common project. I have already referred to the fact that one of the corner-stones of our policies this year has been an effort to be frank with Member Governments; another has been our effort to be as responsive as possible to the wishes and needs of Member States. I have been able to clear up many misunderstandings, to improve many of our procedural routines, for Member States have been frank with me in telling me of things which appear to me to be wrong or not quite as well as they might be. We are trying also to devise better means of executing our work plans, to use our travel money to the best advantage, including the use of staff on home leave to do work for the Organization en route. We are trying hard to integrate the ideas of Member States at all stages in the programme development and in the execution of the work plans of the Organization. I can report with pride that in our co-operation with the United Nations and the United Nations family of organizations, and in our relations with other intergovernmental organizations, particularly the Organization of American States, and with the Council of Europe, and also in informal conversations with the Arab League, we have arrived in a number of instances at a better understanding and more fruitful measures of co-operation. I recently signed, and the Board has approved, a new agreement with the Organization of American States concerning Patzcuaro, the Fundamental Education Centre for Latin America. I have recently signed an informal understanding with the Director of the International Labour Organization concerning a problem of technical education that has plagued the two Organizations for years. I believe that the spirit of co-operation is bearing good fruit for us and, I hope, for the other organizations, and I must report to you that I found a wonderful spirit of co-operation in every one of them without exception.

(34) I should like to report also that, in my opinion, the non-governmental organizations are a tremendous source of support for the work of Unesco. I have had very frank and friendly meetings with groups of representatives of non-governmental organizations. I have discussed the project for the draft programme at various stages with them and I found them immensely co-operative. They do not use these opportunities to exert pressure on the Secretariat for individual

and specialized interests, they use them as genuine opportunities to help the Organization think out its programme, think out its problems of improving its programme and of getting that programme understood.

(35) Another important objective of the past year, in the pursuit of which I am glad to report considerable progress, is the development of the group spirit - a spirit of unity and co-ordination within the Secretariat itself. Certain controversies between myself and the Staff Association of the Organization may have obscured the fact that very fine and fruitful developments are going forward in two important particulars. One of these is what I would call the democratic management of the Secretariat with its many meetings of Department Directors and Chiefs of Services and Bureaux, to discuss the common problems facing the Organization. These discussions include administrative matters, questions of diplomacy, problems of the programme, questions of relations with National Commissions and so forth. I have found the Directors and Chiefs eager to expand and develop this method of running the Secretariat. I do not mean that we have developed a system by which the Director-General gets rid of his responsibilities, I mean that in the exercise of his responsibilities the Director-General is getting advice from his colleagues, and cases are fewer in which the Director-General has to take a decision that does not reflect the feeling of his colleagues. The second aspect is the development of good relations with the Staff Association, and I can report progress in that regard also, although, as I say, that progress is somewhat obscured by controversy over matters which have attracted a good deal of public interest.

(36) This leads me to a discussion of one other problem before I close this speech, the problem of the staff, the Staff Regulations and the relations of the Organization with persons of American nationality. I wish to explain this to you quite candidly, because there is much too much misunderstanding of the facts. The facts, briefly stated, are these: Unesco's Executive Board in 1947 adopted a resolution to the effect that the Director-General should not appoint members of the international staff without previously securing the views of the applicant's Member Government. There have been a few, but only a few, instances in which the Director-General has not carried out this mandate of the Executive Board. In implementation of this mandate the Organization agreed in 1953 to consider reports from the United States Government concerning present employees and new applicants for positions. The question was debated at the extraordinary session of the General Conference and the Conference took no exception to the arrangements made. Unesco has lived up to its side of these arrangements and what the United States Government has done is in full accord with them. Before I received reports on certain individuals who are present employees, I found that these employees did not enjoy my full confidence because they had refused to co-operate with the United States Government in the execution of the arrangements which Unesco had made with that Government. And the reasons they gave me in writing for not doing so were not deemed by me to be adequate and convincing. That posed the problem for me as to what I should do in regard to these individuals. I found that I had the power, under the Staff Regulations, to refuse to renew contracts when they expired, without giving any reason whatsoever. I therefore announced to these staff members (four of them, whose contracts are due to expire soon) that I did not have confidence in them of the sort that is required by the Constitution of the Organization and the Staff Regulations for renewal of contracts, and hence that I did not intend to renew their individual contracts. This notice was given at the same time that notice was given to other staff members that their contracts would be renewed. In other words, the notice was a matter of routine. I did not have to give any reason at all. However, I do not think that the Director-General ought to exercise that power, but should give reasons why he does not renew a contract, and I, personally, shall always be willing to do so. The four cases were referred to the Appeals Board of Unesco, which has no power to give a final decision in these matters, but only an advisory opinion, and the Appeals Board, I have been notified in the last few days, has advised that the reasons which I gave, being subject to scrutiny when actually given, were inadequate. I have not yet dealt with that opinion because I have not yet had the time to read it. There are three other persons in the same category as these four, except that they have indeterminate contracts; that means that they are permanent employees of the Organization. The question then arises: is the reason "loss of confidence in integrity" a sufficient ground for dismissal? I have decided that it is not. Under the Staff Regulations, the relevant power would be the power to find the individuals guilty of misconduct or, rather, of unsatisfactory conduct, which in the United Nations is interpreted (the same terms being used as are in the Regulations) as not including unsatisfactory service, but only misconduct. Unsatisfactory service is another concept irrelevant to the facts of this situation, for all these people have given satisfactory service, that is, the work they do is said by their supervisors to be satisfactory or better than satisfactory.

(37) Now here is where I come into conflict with the United States of America. The United States of America interprets the Staff Regulations to mean that I do have the power in the given circumstances to dismiss the three persons. This is a question of law, a question of interpretation of the Staff Regulations. I myself think that there is a case to be made out for the United States' position, and I hope this Conference will carefully consider the merits of these two points of view in a spirit of amity, and will recognize the fact that on both sides we are trying to be reasonable and we are trying to do what is right. I have had many discussions with the United States Government on this question and I am sure that the issue is simply one of what powers the Director-General has. In case of doubt, doubt in my own mind as to my powers in dealing with staff members, I would much rather decide the matter in favour of the staff member, because, unless we can create a feeling of confidence that the Director-General is not going to act illegally and is not going to act in a way that is legally questionable, it will be impossible to develop the kind of spirit, the kind of loyalty, the kind of international civil service concept which I

think must be one of our first duties to develop.
(38) I have taken the time to state this problem because I have talked to a number of delegations and I find that they have become confused regarding it. I have proposed amendments to the Staff Regulations which will go before the Administrative Commission and serve either to clarify the legal situation, or to change it if it is found that I have no power to act in cases when I have lost confidence in an employee's integrity. My proposal to amend the Staff Regulations was not conceived for the purpose of dealing with the American cases. I was of opinion before these cases arose that the Staff Regulations needed amendment and I should be in favour of the amendment even if these cases did not exist. I have proposed this and other amendments, which are contained in two papers before you, in order to bring our Staff Regulations into line with those of the United Nations and, if you should approve these amendments, they would be in line with the Staff Regulations of the United Nations except in one or two particulars that are a special problem of our own and are unrelated to the problem of the United States personnel.
(39) I refer now to the last question that I am going to mention, the problem of geographical distribution. I mention that subject although I do not wish to go into it at this time. In this case I do recommend action which is not in accord with the United Nations Regulations.
(40) I am making this report to you with a perfectly clear conscience. I have no scruples of conscience about anything I have done in regard to our employees. There has been no pressure from a Member State, nor have I taken any action for political reasons. I have acted solely on the basis of an unclouded view of what the Regulations provide and of what under the Regulations is in the interest of the Organization.
(41) One last word. The Report is planned on lines which I would propose, generally, to follow in the future. Hence I would welcome the comments of delegations on the plan of the Report. I shall try to carry out in future Reports the recommendations that Sir Ronald has reported on behalf of the Executive Board.
(42) In concluding, I wish to offer thanks to my staff. They have worked with me in the past year in a wonderful spirit of harmony and co-operation. The work recorded here is mostly their work rather than my own. I should also like to say that the Secretariat from top to bottom is here at this Conference to give you honest answers to your questions, to take no part in political combinations, in lobbying, or in efforts to thwart your wishes. If you find any of them doing that, I shall consider that they not only have lacked integrity, but that they have been guilty of misconduct.

**GENERAL DISCUSSION OF THE REPORT BY THE DIRECTOR-GENERAL**

(43) The PRESIDENT (Translation from the Spanish): I call upon Professor Photiades, the delegate of Greece.

(44) Mr. PHOTIADES (Greece) (Translation from the French): Mr. President, ladies and gentlemen, as we pay our tribute to the memory of José Artigas, we are glad to see for ourselves, in this place, that the wishes of the illustrious founder of Uruguay, who recommended to his compatriots "the union of great courage with intellectual progress", are being fulfilled in enterprises as noble as they are successful. The kind invitation we have received has more than earned the greetings which it is my pleasant and my bounden duty to convey, on behalf of my country and my delegation, to the Government and the people of Uruguay.
(45) The choice of Montevideo as the headquarters of the Science Co-operation Office for the Western Hemisphere, the generous part this fine capital has played, among other things, in the advancement of primary education; and the fact that we are meeting in this Parliament building to strengthen the intellectual bonds uniting our company - all these are tokens of a whole-hearted co-operated which quickens our sense of gratitude. What an advance this eighth session of the Conference marks over previous years! I remember the efforts we all made at Mexico City in 1947 on behalf of the Spanish language, without which, we said, there could be no true intellectual co-operation, and the progress we have made in this matter gives us hope of wider understanding at this eighth session of our General Conference.
(46) Commonsense, that estimable quality which so strongly marks the views expressed by our Latin American colleagues, will be a constant guide to all of us who are slowly but surely rising above purely political controversies and are advancing steadily towards a deeper universal understanding of the real interests of man and his society. Tolerance should surely encourage us to consider the opinions of others without prejudice or bias, for to do so is surely to obey the essential principles of the Constitution. May the progress already achieved be thus continued and consolidated. There are good auguries that the delegations we are welcoming in our midst on this occasion for the first time are inspired by the same desire for sincere co-operation and the same readiness for mutual understanding.
(47) Speaking now to you, Dr. Evans, my old colleague and friend, whose efforts I have followed during your travels, I wish to thank you and congratulate you, together with your colleagues and all the members of the Executive Board - and first and foremost its Chairman, Sir Ronald Adam - for preparing the new two-year programme, for the way it is set out, for its clarity, and for the co-ordination it betokens of Unesco's efforts with those of the sister organizations in the United Nations family. These achievements have certainly given us a clearer picture of the aims we are pursuing together. But we feel, none the less, that further efforts must be made to follow up those which were first made in Florence.
(48) We are particularly pleased with the idea of more liberal assistance to students, and with the decision to include education for living in a world community among the main fields of activity of our Organization. We hope that the report on education for living in a world community will be studied by the Programme Commission with all the attention it deserves. At three sessions of the General Conference, we have pleaded for young people and we are particularly pleased therefore to note that, barely a week

ago, the head of the Government of the French Republic, speaking at Lille, referred to eminently wise measures for the assistance of these young people, who have been so ill served for nearly 40 years past. We believe that, in this part of the programme, we are complying with ideas which have been expressed at many conferences, ideas which were voiced by Mr. Attlee and by representatives of the 200 universities which took part in the celebration of the fifth centenary of Glasgow University in 1951, and were referred to by Her Majesty Queen Elizabeth the Queen Mother, at Columbia University, during the ceremonies this year in commemoration of its second centenary. We are convinced that we are thus helping to build defences of peace in the minds and hearts of the young.

(49) We shall give the fullest support to the development of fundamental education. We have seen for ourselves in Egypt how great has been the encouragement in this field provided by our previous General Conferences.

(50) The development of research in the natural sciences, the establishment of science co-operation offices in Asia, and the work planned in connexion with the applied social sciences, foreshadow a time of hope which should give us extensive opportunities for subsequent development. We trust that the International Council of Scientific Unions, which is one of the mainstays of Unesco, will be allotted a larger share of the budget. Again, my country is very well satisfied with the work of the Department of Cultural Activities, which has given us such an impressive outline of what it intends to do; but we would also like another of the mainstays of the Organization - the International Council for Philosophy and Humanistic Studies - to receive yet more assistance. The activities of this Department and the steps it has taken, particularly this year, for promoting the use of museums for educational purposes, will be of increasing interest to our compatriots. While, in the cultural field, in the broadest sense of the term, it is still difficult to achieve agreement on certain matters bilaterally, the procedure that we follow, and which we consider to be the best, will naturally be to seek understanding on a multilateral basis in order to safeguard those cultural freedoms which after the passage of centuries still illumine a civilization which succeeding ages have recognized as having been the first.

(51) Finally, I believe that some of the meetings in which we were kindly invited to take part by the Chairman of the Executive Board have produced good practical results. I have in mind the experimental study of the preparation and execution of the programme with special reference to the use of the time of Unesco officials. Even if, statistically speaking, this experiment produces only approximate results, we shall be more than satisfied. Expenditure can in fact be justified to the man in the street by showing the time spent on particular activities meeting the real and varied needs of our Member States. Moreover, the allocation of Unesco's benefits cannot be made contingent upon the contributions of the individual Members but should be determined by the fundamental needs of the great company we constitute in educational, scientific and cultural matters.

(52) Our goal is the attainment of peace by a more effective union among our Member States based upon the spirit of good, the spirit of which Dr. Radhakrishnan spoke to us in the inspiring address he gave at the opening of this Conference. We would thank him once again for watching over Unesco so untiringly - as untiringly as that other great labourer of our early days whose loss has affected us so deeply, the first Chairman of our Executive Board, that great Canadian Victor Doré.

(53) We are glad to find that, after the concentration of the programme which was begun in Florence in 1950, more practical methods are enabling us, for the future, to determine more accurately the level of the budget which the two responsible organs - the Executive Board and the Secretariat - anticipate will be necessary. It is to be hoped that confidence of our respective peoples in Unesco will assert itself in future by its being made possible for the results of the Organization's activities to be appreciated by the humblest of our citizens as well as by our press and information services.

(54) May the immediate future fulfil the hopes we cherished in 1942 at the Conference of Allied Ministers of Education, and may our 72 Member States be able to celebrate the tenth birthday of this Organization with enthusiasm, and with good grounds for satisfaction. May we at this time keep in our hearts the spirit and the hopes which inspired our General Conference in London in 1945, and also be comforted by the realization that we are now nearer the goal we set ourselves on behalf of our peoples.

(55) It is our hope that this Amphictyony - this Conference - may lead us all towards a Peace more worthy of us, a Peace for civilized men and women.

(56) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Sweden.

(57) Mr. DUERING (Sweden) (Translation from the Spanish): Mr. President, ladies and gentlemen, may I begin by conveying the cordial greetings of my country to the Government and people of Uruguay, who have given us such a friendly welcome, and by saying how delighted we are that this session of the General Conference is taking place in this beautiful city by the sea.

(58) The Swedish Government has followed the progress of Unesco over the past years with some concern. The Report, submitted jointly for the first time this year by the Director-General and the Exetive Board, shows, however, that the Organization has gone steadily forward and that very useful work has been done. The programme outlined in the budget document for 1955-56 is, in general, a good programme, based on sound principles. As regards its general trend, we are pleased to see that some of the desires previously expressed have now been carried out. It would perhaps not be true to say that it is, in substance, a new programme, since more than 90 per cent of the projects are already familiar to us, but its presentation is new and, in this respect, very considerable progress has certainly been made.

(59) The programme has been divided into a programme of general, continuing activities and a special programme

of projects which are to be limited in duration. In general, we approve the principles on which the division has been made, but we think that a number of questions still need further consideration before a fair and perfectly satisfactory balance can be achieved between the two divisions. There seems to be some danger that the division into two parts may lead to a reduction in the established service activities of the Organization. In the introduction to the programme, which is based on the report of the Executive Board on the remodelling of the future programme, we think we discern a tendency to undervalue Unesco's activities in connexion with international co-operation, which are, so to speak, the foundation of the whole building.

(60) While the international organizations of specialists in various fields have increased in numbers, partly as a result of Unesco's own work, and, at the same time, have come to take a more and more important part in the Organization's activities, the appropriations for these organizations in the present proposed programme and budget seem somewhat parsimonious. One matter calling for immediate attention, for instance, is the fact that the subvention to the World Confederation of Organizations of the Teaching Profession, an organization which is really extremely important to Unesco, has been cut to a third of the amount that the Confederation is at present receiving.

(61) It must be made clear that aid to international scientific co-operation, which is the main feature of the general programme, is one of the fundamental conditions for enabling Unesco to carry out the programme of special activities. That aid therefore cannot be reduced without harm to Unesco itself. It may be true that this part of Unesco's programme is chiefly of interest, for the moment, to a comparatively small group of Member States, but we must not forget that today the development of science and technology is going forward at an increasing rate throughout the world and that therefore co-operation among scientific organizations will, in the long run, be extremely important even to the Member States which are now more interested in Unesco's special activities. Moreover, the number of Member States is growing, with a consequent extension of the opportunities for joint action. Even though some arguments can be advanced for stabilizing aid to international organizations at the level of the present budget, it will be necessary, in the long run, to reckon on quite considerable increases in the appropriations even in this part of the budget. It is therefore necessary that at the next session of the General Conference, at latest, there should be a discussion of the principles governing subventions to international non-governmental organizations.

(62) Owing to the admission of new Member States, we are now in the happy position of being able, without increasing the present annual contributions of the other Member States, to command resources approximately twenty per cent larger than in the current two-year period. There are very cogent reasons for accepting the higher budgetary level proposed by the Director-General. The rise in the number of Member States is extending Unesco's field of activity very materially and entails greater expenditure. As things are, it seems reasonable that Unesco should gradually adopt the United Nations practice with regard to working languages. This, too, implies increasing costs. But the main reason is that the more costly alternative will enable Unesco to achieve much more through the action programme with the same administrative divisions and staff. We also believe that the staff of the Secretariat has now gained so much experience that it may be said to be ready to undertake a bigger programme.

(63) We are fully aware that, if the alternative of the "higher budgetary level" is supported at this juncture, we shall in fact be committed for four years to come. We note that the Director-General has, very wisely, set aside such considerable sums for the 1957-58 budget, by cautious calculation of the annual contributions, that, until 1958, Unesco will be able gradually to extend its programme activities without needing to make larger demands on the governments of Member States. We suppose that, before the end of this four-year period, the programme of Unesco will be generally reviewed so that Member States can make up their minds about the question of the future budget of the Organization. We are convinced that some such system will, in the long run, be not only desirable but necessary.

(64) If, therefore, we approve this increase in the total budget figure, we have to consider the question of how the money is to be used. Thus the question is bound up with the remodelling of the programme.

(65) We consider that the programme now proposed meets three long-standing desires of Member States. An attempt has obviously been made to secure greater concentration, and it is stated that the projects are carefully planned and prepared. I am very glad to express my satisfaction with this statement of principles and I hope that it will serve as a guiding star and rule of conduct to the Secretariat in all its work.

(66) Moreover, the Secretariat has adopted as a principle the oft-repeated demand that projects should be planned in relation to present needs and should meet the desires actually expressed by the Member States. This, too, is very satisfactory and it is to be hoped that these principles are strictly observed in the present programme. There are still many allocations of funds which are not based on the real wishes of Member States.

(67) Speaking generally, it must be said that there are still a number of small extravagances or items of expenditure in the programme left over from the time when we were trying to do everything. If there is one chapter of the budget in which this is particularly remarkable, it is the Mass Communication chapter. It would seem that the General Conference should devote special attention to the question of the organization, programme and objects of that Department.

(68) In the present programme, there are allocations in each Department for purposes which are no doubt excellent in themselves, but, in each particular case, the amounts allotted are quite inadequate for the aims in view. If we have to choose between ten projects in which we can achieve half of what we set out to do, and five projects for which adequate appropriations can be made if the remaining projects are struck out completely, I shall have no hesitation in recommending the second alternative.

(69) I wish to lay special emphasis on the need for

Unesco to exercise the closest control over the publications brought out by the Organization in its name. Unesco is represented to the world at large by its publications, and readers, who are often experts in the matters discussed, naturally judge the standard of Unesco's work by the quality of its publications. In all Unesco publications, and particularly in those of a scientific character, the Organization must retain the right to insist on the highest standards.

(70) This means, among other things, that all the reports submitted must be most carefully checked. I am very pleased to congratulate the Executive Board on its recommendation to the Director-General that the Publications Committee of the Secretariat be given greater powers in regard to the review of publications plans and the revision of manuscripts before these are approved for publication.

(71) I now come to the question of the direction in which Unesco's programme should be expanded. Many good ideas are set forth in the excellent report of the Executive Board, to which I have just referred, and I hope that we shall have an opportunity of discussing them in greater detail. On this occasion, I shall simply suggest certain major considerations. In one respect the report is a little disappointing. Although there are certain statements of principle, there is no firm declaration of the overriding importance of the activities designed to further international understanding. Too little importance also seems to me to be accorded to the part played by the international exchange of information. The definition given by the Executive Board seems to me to be very narrow. An Organization such as Unesco ought not to limit the scope of its own activities in this way.

(72) We hope most earnestly that any increase in Unesco's financial resources will not be used to add still more to the number of projects but will be devoted to a few undertakings truly related to the needs of the time.

(73) In the opinion of the Swedish Government, Unesco's most important function is to assist, by fostering co-operation, in raising the standard of education, science and culture throughout the world. In the present state of the world, the Swedish Government thinks it fitting that such co-operation should be largely directed to carrying out work undertaken in agreement with the so-called underdeveloped countries. This does not mean that Unesco should give an entirely new direction to its programme of technical assistance. The Swedish Government certainly considers that the United Nations Expanded Programme of Technical Assistance, in which Unesco also has a very important part to play, is making a very much greater moral contribution to international fellowship than could be guessed from the financial amount of the aid supplied. This programme and similar endeavours to raise standards throughout the world and, in general, the broad and soundly conceived co-operation now established between the industrialized countries and the underdeveloped territories seem to us to be the most promising road to peaceful coexistence and lasting peace. My country considers that increased aid and technical development - taking this term in its broadest connotation - are the most urgent requirements in the present state of the world. As an indication of the importance it attaches to the principles on which this attitude is based, Sweden, which last year increased its contribution to technical assistance by 25 per cent, has just made a further 25 per cent increase in its contribution, bringing it to a total of three million Swedish crowns. This is not a very large sum in itself but, considering the size of our population, it represents a contribution, by way of taxes from the Swedish people, which is fully equivalent, as regards purchasing power, to the contribution that the allocation of 18 million dollars asked for by President Eisenhower would have represented for the taxpayers of the United States of America. Apart from this, we, like many other countries, have bilateral programmes, to finance which we are now launching an appeal covering the whole country.

(74) But it is extremely important to maintain a reasonably clear line of demarcation between the expanded programme and Unesco's own programme. Unesco should not on any account become merely a branch of the Technical Assistance Board. Unesco's own budget should be kept for its own basic work, without which the United Nations programme cannot be accomplished. First priority should be given to those projects which are designed to provide the basis for an enduring improvement of the standard of culture. I will only mention, as examples, Unesco's fundamental education centres and the projects for the production of reading materials for people who have just learnt to read. But in school teaching, popular education, higher education and the promotion of scientific research, as well, Unesco has the very important task of organizing and encouraging co-operation and guiding endeavours, with a full understanding of the aim in view, towards the solution of urgent problems in the underdeveloped countries. It is important to emphasize the principle that all countries should have exactly the same opportunities of receiving aid. When the question of whether or not aid should be granted is being considered, the deciding criterion must be evidence of need and not arguments suggested by the political considerations prevailing in any particular body of opinion. In this co-operation with the underdeveloped countries, Unesco should act, first and foremost, as a mediator and a clearing house of information and advice; it should establish contacts and foster the development of new and better working methods. I have often compared Unesco to a factory in which the tools of international cultural co-operation are produced, and this, I believe, gives a true idea of Unesco's most important mission.

(75) A very large number of the items appearing in the proposed programme and budget under the heading of Technical aid to Member States , and amounting in all to over fifty per cent of the higher budgetary level, relate to the activities I have just mentioned. In point of fact, they are concerned more with laying the foundations for future concerted action than with aid as such, and it would have been better if this had been made clear in the programme by some other heading or title, such as "Co-operation with Member States for special purposes" or something of that sort.

(76) One matter which the Swedes consider to be urgent, and in which we are fully prepared to co-operate, is Unesco's programme of adult education. This is naturally connected with the fact that in Sweden we have had wide experience of the importance of adult education in developing a society truly

imbued with democratic principles. We note that Unesco, with the assistance of a number of distinguished experts, has now given a new trend to its adult education programme, and we are prepared to co-operate in every possible way in this programme. Next summer, Denmark, Norway and Sweden are jointly to organize an international seminar, with Unesco's assistance, and we very much hope that this seminar will help to develop interest in adult education and in the Scandinavian Folk High Schools as a most useful instrument for the development of the people and society.

(77) I should also like to say a few words about a matter referred to in the Introduction to the proposed programme and budget. The programme of Unesco is always based on what the Director-General has called the diversity of disciplines, and the Secretariat is organized on much the same lines. There are also divisions in the Secretariat which are organized according to the nature of the work being done, such as the Exchange of Persons Service and various other units. As we stated in the discussion of this topic two years ago, the Swedish delegation considers that there would be great advantages in organizing the whole Secretariat so that the structure of the departments is determined by the type of work to be done. Since the Director-General calls this programme a transitional programme, it seems probable that he has considered the possibility of a more radical reorganization. The preparation of the programme and the organization of the Secretariat are closely inter-connected, so that it is difficult to achieve a more rational programme structure without a fundamental reorganization of the Secretariat. The Swedish delegation still thinks that such a reorganization would increase efficiency and make it easier to co-ordinate and concentrate more or less parallel projects. This would give Unesco what we called two years ago better aerodynamic lines.

(78) This programme is the fruit of a happy co-operation between the Director-General and the Executive Board and, from the reports of the meetings with the Executive Board, it seems that the work was very difficult. We therefore have the best of reasons for offering our sincere congratulations both to the Director-General and to the Executive Board on the results achieved. We also find a new note, both in the introduction to the proposed programme and budget and in the reports of the Director-General, which we think reflects a determination to build up a truly co-operative spirit and a co-operative approach in the Secretariat. We wish to state our confidence in the Director-General's personnel policy and we consider that the accepted principles applying to the staff of the United Nations should also apply to the Unesco Secretariat. We hope that the same spirit of co-operation will inform the relations between the Secretariat and the representatives of the governments of the Member States, because, when all is said and done, the Secretariat is the servant of some 70 Member States; we are delighted to acknowledge the inspired effort and the wealth of constructive new ideas it supplies - though it sometimes gives us some cause for uneasiness - but its main object is, nevertheless, to serve the Member States and to carry out the resolutions of the General Conference.

(79) May I, in conclusion, as a representative of a small nation standing midway between the great powers and whose only desire is to further a "good neighbour" policy, make a modest appeal for goodwill.

(80) Unesco is a governmental organization and it is pointless to close our eyes to the fact that the attitudes we adopt and the decisions we take are sometimes influenced by political considerations and arguments. We have come to this hospitable and highly civilized country from the four corners of the world, from different climates, with different backgrounds and mentalities, laden with preconceived ideas and prejudices of various sorts. We have great difficulties to overcome, and principally that of reaching agreement. Let us remember as often as possible that we have come together to carry out a great task which is of interest to us all - the fostering of understanding among the peoples of the world and the promotion of culture.

(81) Let us, as Unesco delegates, set an example of enlightened thought of the way to live in a world community, seeking wherever possible to lay aside political rivalries and considerations of national prestige, and let us seek, realistically and practically, to solve our problems in friendship, brotherhood and harmony.

(82) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Iran.

(83) Mr. RAADI (Iran) (Translation from the French): Mr. President, the distinguished colleagues who have already spoken have paid an enthusiastic tribute and expressed their warm gratitude to the Government and people of the Republic of Uruguay. May I take this opportunity of endorsing their expressions of gratitude on behalf of the delegation of Iran? I would add that, although we have come from a far distant country, we feel at home in this great and splendid land. A Persian poet has said: "My friend is very close to me despite the strange fact that I am so far from him". Indeed, though oceans seem to divide the countries of the East from South America, there are many similarities and affinities in their ways of life and aspirations.

(84) I venture now to put forward certain comments on the Report of the Director-General and on the proposed programme and budget.

(85) You undertook a heavy task, Sir, when our Organization was passing through one of the most critical periods of its life. You have made a beginning in the execution of that task with the calm and caution which are essential in such circumstances.

(86) Your Report shows that the change in the occupant of the post of Director-General has not affected the implementation of the programme adopted by the General Conference at its seventh session. We are as pleased as you are at this fact, which we attribute to your personal qualities, the loyalty of your colleagues, and the influence of your distinguished predecessors, who laid a sound foundation for ensuring continuity in the work undertaken since 1945.

(87) As you were elected in the period between two sessions of the Conference, you have had to carry out a programme which was not your own without being able to give it the stamp of your own ideas. On the other hand, those same circumstances have helped

you, to some extent, by giving you considerable time to make a thorough study of the many problems of the Organization which call for resolute, effective and urgent treatment. The time has now come for you to move on to the execution of projects and reforms which you yourself have advocated and to take your own measures, whose results will be assessed and judged by future conferences. We shall judge you by your deeds and we wish you every success.

(88) Secondly, we note with satisfaction that, from the time you took up your duties, you have travelled widely to all parts of the world in order to see local conditions for yourself. You returned from your travels with the firm conviction that a new emphasis was needed in future Unesco programmes, an emphasis which, while allowing Unesco's continuing activities of universal interest to develop in the normal way, would do more than has been done in the past to solve the special problems of various regions and to meet the immediate needs of certain groups of Member States.

(89) The Executive Board supported you in your endeavours, and indeed urged you to revise the first draft of the programme as a preliminary to the proposed reforms, because its consideration of the past history and future course of the Organization had almost inevitably led it to the same conclusions.

(90) This transitional programme has the advantage of following the basic principle of the remodelled programme - the division of activities into two groups - without breaking sharply with the past.

(91) The delegation of Iran considers that the excellent introduction to the proposed programme and budget shows a sound and realistic approach which is in line with the fundamental aims of Unesco. We are, of course, in favour of this approach but we have the following observations to make.

(92) The division of the programme into two distinct parts is undoubtedly an ingenious expedient, a necessary preliminary step, but, for the moment, it simply gives us a frame, whose usefulness will ultimately depend upon the value of its content. We hope that the content will improve quickly enough, as the result of your endeavours, to give us, in 1957 and 1958, a well-balanced whole, reflecting the aspirations of education, science and culture both at the universal level and at the level of the actual needs of Member States.

(93) Moreover, the division of the programme cannot produce good results unless the machinery for relations between the Organization and Member States, and the structure and working methods of the Secretariat, are reformed; this work of reform is difficult but absolutely necessary.

(94) The criteria at present applying to Unesco's relations with governments and National Commissions are unfortunately, in most cases, the product of hasty generalizations which do not always reflect the facts of the situation. The same comment applies to the definitions and standards adopted for determining how regional activities are to be organized and carried out. It is obvious that, as regards the activities of worldwide interest included in the programme, Unesco must, in general, follow a pre-established - and almost a Cartesian - policy. On the other hand, as regards relations with Member States and national co-operating bodies, Unesco ought, we consider, to use every means of exploring the ground and, at least for a time, to adopt a flexible, clear-sighted, empirical policy.

(95) Needless to say, such a task can be carried out only by a Secretariat consisting of two types of specialists in proper proportions - those working, as in the past, on continuing activities of universal interest, and a larger group of specialists who, besides having a sound educational, scientific or cultural background, must be adequately informed about the social situation and administrative and psychological conditions in the country or countries to which Unesco may wish to give effective aid. If a country is to be given really useful help, it is first necessary to know and understand it, to know its needs and how urgent they are in relation to one another; and sometimes to help it to realize its immediate needs or to encourage it to make them known so that they can be suitably met. All this, though necessary, is not easy. It is a bold undertaking and it is like a two-edged sword, which we must be very careful to use wisely.

(96) Another very important step which should be instituted as soon as possible is the alteration or, rather, the improvement of the present system for discussing and voting on the programme and budget.

(97) Experience has made it abundantly clear that the long discussions at the General Conference on the minor details of the budget, and the heated and often confused debates on the budget estimates, item by item and dollar by dollar, have not so far resulted in any great saving to the Organization, nor in a sounder policy nor in an appreciable prestige. Moreover, this method, when carried to the lengths with which you are all familiar, does not appear to be entirely in line with the spirit of Articles IV and IX of the Constitution, even if it fulfils the letter of the law. It is high time for the General Conference to concern itself, first and foremost, with the basic problems of education, science and culture, making it its first duty, in accordance with the terms of Article IV of the Constitution, to determine the policies and the main lines of work of the Organization and to take decisions, after a thorough study, on the intrinsic merits of the proposed projects. With regard to the budget, we consider that, in future, the General Conference should determine the general structure, chapters and major items, leaving the Director-General and the Executive Board fairly free to act and take decisions on the best methods to employ and the best use of appropriations.

(98) We are firmly convinced that the best guarantee that Unesco's resources will be wisely used lies not in rigid budgetary regulations or the introduction of new budget headings, but in the sense of responsibility, the professional integrity and the administrative and organizing ability of the team of international officials forming the Secretariat of Unesco.

(99) As regards future activities, we recommend, for cogent reasons that we propose to explain later, that an institute be set up under Unesco's auspices to provide a basic training for people in all countries who intend to enter the international civil service.

(100) One advantage of this measure is that it would achieve a rational union of the two criteria which ought to govern the recruitment of staff for the United Nations and its Specialized Agencies - geographical distribution and professional competence.

(101) We are also most anxious that an international centre should be set up for the training of fundamental education specialists. Far from duplicating the work of the regional fundamental education centres already in existence or which are to be established, such a centre would remedy a serious shortcoming which arises from the fact that, in spite of their urgent needs in this matter, many countries are unable, for linguistic, geographical or other reasons, to take advantage of the work of the regional centres.
(102) Unesco will soon be ten years old, I am proud and grateful that it was my lot to be present at the birth of this Organization in 1945 and that I have had the honour of serving it as the permanent delegate of Iran and, since 1952, as a member of the Executive Board. When I look back on the past, it seems to me that the history of the successes and difficulties of our Organization can be summed up in a few words. The enthusiasm, the faith and the devoted service of those who set up the Organization or who have worked with it have enabled it to establish itself in international life. But, in the past years, there have been three major factors thwarting its efforts and hindering its full development. These factors are inexperience, which is inseparable from youth; failure to cover the whole world; and, finally, a political atmosphere which has not been conducive to international co-operation. Now, however, these obstacles and difficulties are happily being removed. The experience Unesco has acquired in the last nine years has brought it far on the way to maturity; the admission of new members has just prepared the ground for worldwide co-operation; and, lastly, the signs of a slackening of tension which are to be seen on the political horizon are strengthening the hope and the possibility of a lasting peace. Unesco's time has therefore come.
(103) As this Conference opens, circumstances are favourable to a vigorous campaign against ignorance and misunderstanding, a campaign which can no longer be postponed, for our excuses, though justified in the past, will no longer carry weight. Let us bear this fact in mind. Let us realize the scope of our new opportunities and the range of our increased responsibilities. Let us rise above our political prejudices in our search for a sound basis of understanding in intellectual and cultural affairs. Let us forget the differences dividing us, for there are many values, many aims, aspirations and hopes in which we are united.

(104) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Haiti.

(105) Mr. LALEAU (Haiti) (Translation from the French): Mr. President, ladies and gentlemen, the history of the human race, from our prehistoric ancestor, at the mercy of forces which crushed him, to the specialist on atomic fission, who can explain and control those same forces, has been a ceaseless process of creation. The greatness of an agency concerned with the fate of man is directly proportional not only to the quality of its programme and the way it carries it out but also to the balance which it succeeds in establishing between the demands of reality and the commands of the ideal.
(106) Unesco is great because its subject-matter is Man and Man's growth. Across the frontiers, beyond the different races and diverse civilizations, with their frequently conflicting customs, amid the storms unleashed by nature and our passions, there is gradually emerging the concept of a being that is evolving towards perfection. Valéry has said that "L'Homme est en project" - "Man is still but a ketch of what he might be" - and Francis Ponge repeats and emphasizes "L'Homme est l'avenir de l'Homme" - "Man is the future of Man".
(107) It is a slow process of evolution, going on through the centuries as thought is formed, hearts are moulded, and conscience emerges from a complex of different factors - conscience which, slaying the wolf in Man, will turn him from a predatory animal, to whom physical strength is the greatest good, into a being ready to co-operate with all those who, like himself, yearn for freedom and justice.
(108) That is our purpose: to strive for this ideal, and to begin the ascent by making understanding easier, through the improvement of material conditions, between peoples who comprehend their interests, who have broken free of hampering superstitions and have attained the certitude that the true fulfilment of the individual and the community consists not in the mad, sadistic exploitation of one by another but rather in increased human solidarity.
(109) As I speak of this development, I am irresistibly reminded of a small nation which has issued heroically from slavery, and, through indescribable sufferings, amid what was at first general hostility, has painfully attained its present status, to which it owes the honour of sitting in this illustrious company and of having stood sponsor - in my own person - to our Organization in London, one November morning in 1945. And it was natural that this small nation should have been among the first to respond to that stirring appeal, for the principles of the infant Organization were the very foundation of its own political ethics.
(110) I need not remind the pioneers of Unesco of the unceasing efforts to achieve the liberation of man; nor of the results gained despite opposition, nor of the hopes which those victories over day-to-day hostility justify.
(111) At these meetings, once annual and now biennial, we measure the progress made and draw each time fresh strength to continue our march.
(112) May our work at this eighth session of the General Conference be inspired by an irradiating vision, the vision of mankind set free for ever from distress and crime and reconciled at last beneath the twofold sway of Justice and Peace.
(113) For one day, there must be, here below, a little less misunderstanding and much more charity; children and women must cease to weep, and the young must no more shed their blood for causes whose inner significance often escapes them and which almost always come down to barren conflicts between ideologies, stupid frontier incidents or futile questions of prestige. We shall extinguish war in the heart of man, and compel man's actions to march in step with his dreams.
(114) Our delegation, following its own inclinations no less than the instructions of its Government, whose Head daily gives proof of his sense of solidarity, is determined, so far as its modest resources

permit, to work for the coming of those times so longed for by men of goodwill all the world over.
(115) I have been commissioned to bring you this solemn assurance, strong in the conviction that the policy pursued by our Organization in the things of the mind and heart is the only possible one at the present stage of civilization, and that it enables us to hand on to our impatient followers the torch which was once passed to us by other hands, now fumbling with age or from which life has departed...
(116) In conclusion, I am glad to state that my delegation accepts the Report of the Director-General and congratulates him on it most heartily.

The meeting rose at 6 p. m.

# FIFTH PLENARY MEETING

*15 November 1954 at 10.30 a.m.*

*President:* Mr. ZAVALA MUNIZ (Uruguay)

CONTENTS

Communication by the President . . . . . 69
Discussion of the Director-General's Report (continued) :
Speeches by the delegates of Italy, Argentina, Japan, Chile, Poland, Norway, Thailand, Korea and the USSR . . . . . 69

## COMMUNICATION BY THE PRESIDENT

(1) The PRESIDENT (Translation from the Spanish): The General Committee held a meeting this morning and adopted the following decisions.
(2) As the Government of Venezuela has officially announced that it will not be represented at the present session of the General Conference, and as that country held the chairmanship of the Headquarters Committee, the General Committee has invited the Nominations Committee to elect a new chairman.
(3) The General Committee has taken into account the wide experience of Brazil in matters connected with the Headquarters Committee, and would suggest to the Nominations Committee that advantage be taken of that delegation's special experience to appoint it to the chairmanship of the Headquarters Committee. In that case Brazil's seat as vice-president of the Conference would become vacant. The General Committee suggests to the Nominations Committee that another Latin American State might appropriately be placed on the list of vice-presidents. The Nominations Committee will meet at 1.30 this afternoon; the Headquarters Committee will meet after the meeting of the Nominations Committee and will later report to the Plenary Conference.
(4) The Secretariat informs me that it has received from the Government of Cuba payment of the amount of its contribution required to entitle Cuba to vote at the present session of the Conference. From this moment, therefore, the delegation of Cuba enjoys full voting rights.
(5) In accordance with the decision adopted by the General Conference at the plenary meeting on Saturday morning, when reference was made to the partial use of Russian as a working language at the present session of the General Conference, the Secretariat has made arrangements, starting today, for simultaneous interpretation from and into Russian in this hall. Interpretation into Russian will be supplied by the technical staff of the Soviet delegation until such time as the Secretariat engages the rest of the staff required in Montevideo. During the next few days it is hoped to begin Russian interpretation in the other rooms where the simultaneous system operates.
(6) The Chairman of the Administrative Commission has announced that, beginning tomorrow (Tuesday) morning, his Commission will examine item 9.31 of the agenda: Draft Amendments to Article V of the Constitution (Composition of the Executive Board).The Commission will also consider the financing of the budget and the report by the Contributions Committee, starting on Wednesday next.

## DISCUSSION OF THE DIRECTOR-GENERAL'S REPORT (continued)

(7) I now call upon the representative of Italy.

(8) Mr. BADINI CONFALONIERI (Italy) (Translation from the French): ladies and gentlemen, it is difficult for me, as Head of the Italian delegation, when rising to speak in Montevideo, and in this Palace, to suppress the emotion I feel at the welcome which has been given us by the Uruguayan people. There are indissoluble links of blood and culture uniting my own country with this nation, where one of the most famous heroes of Italian unity won his spurs in the struggle for freedom. Relatively small in numbers, but great in spirit and in its love of democracy, the Uruguayan nation seems to embody the ideals of Unesco in its own civilization, of which it is rightly proud and which it has built up in the greatest freedom and with the generous help of other nations. May I be allowed, Mr. President, though I may seem to you to be departing from the agenda and perhaps causing some embarrassment to you personally, to express here once again the gratitude of the Italian delegation.
(9) Unesco has been passing through a crisis. Two years ago this crisis reached a dramatic stage which is still graven on the hearts and minds of most of you - a stage when serious fears were entertained for its future.
(10) It may be that Unesco has weathered the storm, as some authorities have claimed. But, though we are

now sailing the high seas, there are many unknown dangers ahead and we can barely glimpse the course we are to set.

(11) Out of this crisis, after six months of uncertainty, there has come a new Director-General who has been at pains to establish contacts with the Member States. As Mr. Evans was himself happy to acknowledge at this very rostrum the day before yesterday, the Member States have been extremely frank with him - and we intend to continue to be so: for instance, the President of the Italian National Commission gave him a much fuller account of the Italian attitude to Unesco than would be possible during these debates.

(12) As regards the planned activities for 1955-56, we could - and indeed we should - be more critical if we confined ourselves to examining them intrinsically; we should find among them many activities and methods which have already been the source of futile disputes, in particular those two budgetary levels, the higher and the lower, which in Paris gave rise to such acrimonious argument. But we prefer to regard them as transitional activities leading up to the remodelled programme we all wish to see. It is in this future programme, this plan for remodelling as laid before us by the Executive Board, that our interest and our hopes are centred - not unmixed, it must be said, with some degree of optimism.

(13) But let us be under no illusion: although the proposed remodelling puts forward structural and substantive reforms which are more far-reaching than might at first sight appear, its main purpose is to form, for the time being only, an effective framework, and a useful and more flexible instrument. It is we, the Member States, who must fill in the canvas within that framework and, if Unesco is to succeed, it will be our duty during the coming two years, while the ordinary programme is being carried out, to determine the special activities in which we are interested and to review the activities of a permanent nature.

(14) To this end, by concentrating our efforts upon obtaining increased efficiency and a programme more directly corresponding to the needs of Member States, we propose at this Conference to urge that the rôle of the National Commissions be strengthened and better defined by more closely associating them with the framing of the programme. It is not that we wish to reduce the function of the Secretariat to that of a passive catalyst. We have too high a regard for its experience and its sense of mission not to accord it a leading part in choosing the objectives, and indeed in stimulating national activities. It has, moreover, proved its worth under difficult circumstances which are not yet such ancient history that we could forget them. The National Commissions, though, are the roots that feed Unesco with its life-blood, which they draw from the living tissue of the nations; it is they who can prevent the Organization from working in a dry and sterile vacuum by linking it with concrete achievements. As a member of the Government myself, and as a liberal politician, I would like to acknowledge the valuable work accomplished by the National Commissions and pay tribute - independently of the State's efforts - to the free expression of culture.

(15) We consider also that by calling periodic meetings of several National Commissions, without forming permanent groupings, we should arrive at a system of variable and elastic regionalism based on problems of common interest and not at all on political considerations, which should not cloud the field of culture. Regionalism of this kind, in our view, would be by far the healthiest solution and would help to prevent that decentralization which would gravely jeopardize the unity and universality of the Unesco spirit.

(16) There is another extremely important problem which demands special attention. What proportion should be kept between the more strictly scientific and cultural activities and those which concern education alone? The former are directed towards more highly advanced States, while the latter more often than not take the form of technical assistance to countries which, for historical and geographical reasons, are only now beginning to gain access to technical progress.

(17) Let it be clearly understood that we recognize the principal purpose of the Organization to be that of emphasizing all those activities which seek to raise the living standards of peoples not yet fully developed, and above all, of helping East and West to obtain wider knowledge of each other's civilizations. This is one way of serving the cause of peace, and thus of pursuing the fundamental aims of the Organization.

(18) But we also firmly believe that any educational activity, even the most elementary, would speedily be doomed to sterility, to stagnation in stereotyped and outworn teachings and even to complete failure, if the Organization lost contact with culture and science at the highest level.

(19) Far be it from us to wish to turn Unesco into a super-academy or international ministry of the Ministries of Education; we even see in that a very real danger. Believing as we do that art, science and culture are the free flowering of the spirit and that they cannot bring forth good fruit at the behest either of the State or of some super-State institution, there is nothing we fear so much as the creation of a special and exclusive Unesco doctrine which we should feel bound to disseminate or to impose.

(20) Among scientific and cultural activities there is, however, a vast field in which the Organization can exert itself by successfully concentrating its efforts, even saving money for the national budgets, and achieving more effective results through the reciprocal enrichment of national cultures. I should like to make it clear that in the Italian delegation's view such activities might well be included not only among those of a permanent nature, but also among the "special activities".

(21) There is one more point in the Director-General's report which the Italian delegation has found of special interest. I refer to the efforts directed at establishing and protecting human rights in general, and particularly the rights to education and culture. I should like to congratulate the Director-General on the course of action he has followed and to assert that the solution of the many outstanding difficulties does not merely depend on his goodwill. I am also anxious to assure him that in this question, which we hold to be one of the fundamental tasks of Unesco, the Italian delegation will give him every support. We are particularly interested in those rights which guarantee the free flow of culture, the verbal and written expression of thought, and the free movement of the men and women who are the bearers of that thought and culture. What we desire, however, are rights which are

not merely inscribed in the tables of the law (a relatively easy matter, but one which may prove disappointing), but rights which are translated into practical reality.

(22) I said just now that in the next two years we shall be engaged on a work of revision and selection in order to fill in the framework provided for us by the proposed programme in its revised form. On that selection depends in great measure the fate of Unesco. Too much stress cannot be laid upon its importance or upon the responsibility of those who will be called upon to make that selection or on the sense of proportion and realism they will have to display in carrying out a task which will entail the sometimes bitter renunciation of national prerogatives, consented to in favour of a higher interest and in a truly universal spirit.

(23) We still hear the echo of the splendid words spoken here in this connexion by the retiring President, Dr. Sarvepalli Radhakrishnan. The favourable atmosphere in which this Conference has begun its labours is a proof that his words were needed. In that spirit I should like to feel that we could undertake, as I do here and now on behalf of my own country, to work hard and unceasingly during the next two years so that the gap between our hopes of today and the realities of tomorrow may gradually be reduced.

(24) By the time the next General Conference meets Unesco will have reached its tenth anniversary. What finer, nobler celebration could be wished for than the continuing intellectual co-operation of men of goodwill?

(25) We were deeply moved three days ago by what we witnessed on the steps outside this Parliament House at the inauguration of Unesco's eighth General Conference. After the proud and moving strains of your National Anthem, Mr. President, had risen towards the blue sky above, the flags of all the nations were raised around those of Uruguay and the United Nations, and then it was that we heard the Canticle of Hope, creating the perfect atmosphere for the opening of our work. Traditional values and new forms, national elements and the universality of the spirit blended harmoniously in the lofty symbolism of this act, in which we took part with joy and gratitude; and it all found expression in the pure voices of the young people of that rising generation for whom it is so well worth while, ladies and gentlemen, to labour and to struggle.

(26) The PRESIDENT (Translation from the Spanish): I call upon the representative of the Argentine Republic.

(27) Mr. COLOMBO (Argentina) (Translation from the Spanish): Mr. President, ladies and gentlemen, the Argentine Republic has studied the report of the Executive Board and of the Director-General with keen attention, and feels it an honour to endorse the conclusions reached therein. While it is true that these suggest many ideas and a number of questions, they may be regarded as a direct result of the work which has been achieved or which still remains to be done, and also of the deep feeling of international co-operation which inspired the decisions of the members of this United Nations organization. Perhaps it may be asserted that everything is still in its early stages and that little has yet been done for the good of the peoples and the human race. This apparent paradox is perhaps the clue to the force which animates and impels us in the great work which has been started in the fields of science, culture and education. The primary objectives of science, culture and education are to kindle in the minds of men the light of peace and progress, to contribute to the brotherhood of man and to establish enduring links between the nations, free of prejudices and intrigues, so that there may be imperishable confirmation, not merely American but world-wide in its application, of the words of one of my country's statesmen: "Everything unites us and naught shall divide us".

(28) The report before us, which by its very importance deserves to be discussed and assessed by this august Assembly, contains in its introduction the crucial point around which is to revolve the future activity of the Organization which has drawn it up; for undoubtedly it is the projects already completed which will, by the eloquence of facts, drown the abuse and frustrate the manoeuvres of those who see in obscurantism a suitable way of distorting good intentions and sowing hatred and discord. Among those projects, may I be allowed, whether from a professional impulse or following the intimate promptings of my conscience, to draw your attention to those connected with the teaching of the social sciences and jurisprudence. Those in the former group, with their manifold branches and nuances, seek to guarantee the general well-being of the community, while those in the latter, in their dual aspects - the normative and the functional - are seeking the most suitable means whereby the community can guide its development within that order which is indispensable to its very survival.

(29) It is pointless, ladies and gentlemen, to go on piling up plans unless they are translated into realities. If it is true that dreams are a form of ideals and that ideals ennoble mankind and strengthen the greatness of nations, it is no less true that they should serve as a powerful lever to satisfy the immediate desires of the dreamers. Only if they do is it possible to eliminate confusion and destroy the spurious plans underlying certain types of claims that run counter to the equilibrium essential to the peaceful coexistence of the nations. Only thus, through powerful and continuous action, penetrating deeply into minds and feelings, convincing by its own force of attraction and by its irresistible example, shall we succeed in abolishing futile struggles and bringing about that state of happiness which mankind has been seeking in vain throughout the centuries.

(30) At the Tenth Inter-American Conference, held in Caracas a few months ago, the Foreign Minister of my country uttered words which, because of their special significance, may fittingly be repeated here, since they show very clearly the attitude of the Argentine Republic to so important a matter: "Since poverty must disappear", he said, "and capitalism must become humanized and place itself in the service of society, our peoples aspire to reach degrees of culture, humanistic in dimensions, in the three aspects which may be classified as the formation and development of the intelligence, the ethical sense and the aesthetic impulse. The community, without distinction of class, religion or sex, has the right of access to the sources of a common culture, and it is the duty of

governments to guarantee this, if they are seeking to form a genuine national feeling. A nation, when it is genuinely a nation, is not expressed in terms of kilometres of territory, in its national product, or in the strength of its armies, but in the consciousness which nations have of themselves when they go forth in search of their destiny".

(31) It is that culture which, pulsing through the heads and hearts of our brothers throughout the world, will lead them to understand what a great power is theirs and what magnificent weapons they possess to help them perfect their thinking, teach them honesty of conduct and bring their noblest hopes to fruition. It is that culture which, through proper educational systems - the fruits of a slowly developing knowledge - will enable the mind to look beyond the shadows and to glimpse whatsoever things are noble and pure, far beyond the primaeval instincts of the race.

(32) Thus it is that among the basic precepts justifying the creation of Unesco, which are summed up in its Constitution, we find one which recognizes as the determining cause of the most appalling war of all times, the negation of democratic principles, of the dignity and equality of man and of respect for his personality, as well as the deliberate desire to exploit prejudice and ignorance. For such an attitude there is but one remedy, namely the joint efforts of all to understand the malign influence of unbridled materialism, and but one solution, namely the clear expression of the brotherhood of man, so that it may no longer be true to say with the philosopher that man is his own worst enemy.

(33) But it is not enough that there should be international activity, unless it is accompanied by activity in each and all of our States. Major undertakings should be initiated at national level so that help to the needy, progressive improvements in the life of the working classes, the adaptation of laws to aspects of modern life, and the raising of the general economic and cultural level prepare the ground for transition from the local to that wider field which presupposes the co-operation on equal terms of several, many or all the nations. And where the internal impulsions are weak or the essential conditions for achieving desirable aims are lacking, help will be given, as it must be given, if a good harvest is desired; and so, behind the outstretched hand, eager to give, we find the loving heart.

(34) The considerable task which this Organization - whose assizes we are now again attending - has accomplished so far, is a real augury of what it can do in the future. The secret of its success lies in the fact that it is a spiritual community. There must be no relaxation of effort, no faltering in the enterprise, if its future development is to be assured. Young though it still is in years, it has already made an indelible mark on history; it is like a banner flying over the scene of battle, like a symbol of continuous rebirth, of a yearning to improve all those things which can be improved for the benefit of ourselves and of generations to come.

(35) The President of my country, in opening the first National Philosophical Congress in the city of Mendoza, said: "From an educational point of view, if we consider the possibility of providing the peoples with good living conditions, the problem ceases to be abstract and becomes an urgent reality. The man who is to be invested with dignity and started on the road to well-being, must first and foremost be trained and made aware of himself". These are ideas which admirably complement the words spoken by the Vice-President of India, Dr. Radhakrishnan, at the seventh General Conference, when he said, among other things: "The cure is to restore the truths of the spirit to the central place in the minds of men. The truths of the spirit are liberality, understanding, freedom. Let us therefore send out from this Conference a message to this groping, uncertain, discontented world: that love and not hatred, that freedom and not fear, that faith and not doubt, have in themselves the healing of the nations".

(36) In praying as representative of the Argentine Republic for the success of this great World Assembly, I express the hope that these lofty ideals, unsmirched by any petty interests, may govern our deliberations and guide them firmly along their proper path.

(37) The PRESIDENT (Translation from the Spanish): I call upon the representative of Japan.

(38) Mr. SAWADA (Japan): Mr. President, ladies and gentlemen, it is with genuine pleasure that the Japanese delegation has come to participate in this memorable Conference. We are glad that it is being held on the friendly soil of Uruguay and on behalf of the Japanese delegation, let me express our appreciation of the courtesy and goodwill of the Government of Uruguay in inviting Unesco to hold it in this hospitable city of Montevideo.

(39) May I also take this occasion to express our sincere thanks to the Executive Board and to the Secretariat for the strenuous efforts they have made in the last two years in carrying out our programmes and in drawing up new ones together with the compiling of the draft budget. For these accomplishments, the Executive Board and the Secretariat deserve the profound gratitude of all Member States.

(40) The Japanese delegation has carefully reviewed the new draft programme. It is a matter of great significance that Unesco, now approaching its tenth year, is trying at this juncture to give a new direction to its programme. It appears that, in prosecuting its activities, Unesco will take into consideration, more than in the past, the particular circumstances of different regions of the world, as well as the aspirations of its Member States. Of all the activities of Unesco, I understand that special importance is attached to education for international understanding and co-operation, and also to the further promotion of technical assistance. The Japanese delegation desires to see Unesco put more emphasis on these questions.

(41) Last Saturday, we listened to very illuminating reports from the Chairman of the Executive Board and the Director-General. Reference was made in their reports to their two trips undertaken in the course of the last year. You will remember that one of these was a visit to the Member States in Asia. The party included Mr. Oscar Secco Ellauri, Uruguayan member of the Executive Board. They had free and frank talks with competent authorities inside and outside the governments of the countries they visited. In the course of their tour, they were good enough to visit my country, where we were most happy to welcome them. Our National Commission and people interested

in Unesco's work did what little they could do to make their stay with us interesting and fruitful. Their sincerity of purpose, their enthusiastic belief in the ideals of this world-wide movement, left a deep impression on us. In this manner they gave great encouragement to us in the development of Unesco activities in our country. We understand that, as the result of their visit to Asia, the Executive Board and the Secretariat have come to recognize more need of expanding the Organization's work in that part of the world. It is earnestly hoped that the present Conference will share their point of view. In this connexion I may say that Unesco attaches great importance to the promotion of fundamental education in Asia and elsewhere. In this matter, Japan, with her long and rich experience in the advancement of education, is ready to give full co-operation to the Organization to the best of her ability whenever required.

(42) We also take a keen interest in the progress of science, contributing as it does to the raising of the standard of living and the promotion of the welfare of millions. In this belief, the Japanese delegation proposed at the seventh General Conference the study of oceanography in the Indian and Pacific region, and the proposal was adopted by that Conference. It is a matter of great satisfaction to us that a project for giving a more definite shape to this work during the coming two years is included in the programme for 1955-56.

(43) Latin American countries, we are aware, are deeply concerned with this matter, and we have learned recently that the International Union of Geodesy and Geophysics is also desirous of establishing an international organization for oceanographic study. Accordingly, the Japanese delegation has presented a proposal to the present Conference for the establishment of an Advisory Committee on Oceanographic Research, covering Indo-Pacific and Latin American regions. It is hoped that the Conference will adopt it with the ultimate aim of setting up a permanent and independent body responsible for the development of oceanographic research. This is our Proposal No. 1.

(44) The Japanese delegation is also deeply preoccupied by the question of atomic energy. To us it is a matter of the first importance to study from all possible angles the technological, economic and social effects of the use of atomic energy. We know, however, that the necessary materials are still lacking for the effective prosecution of these complex studies. It may therefore be difficult to lay down at present a definite programme for this purpose. We understand that the United Nations is now considering this and similar questions, but we hope that Unesco will seize every opportunity that may arise for such studies.

(45) In the meanwhile, we cannot ignore the inimical effects of radio-activity, even when atomic energy is used for peaceful purposes. We Japanese have witnessed with our own eyes the injuries and harm it has caused. For this reason, the Japanese delegation has submitted a proposal to the present Conference that Unesco shall initiate medical and biological studies of the physical injuries and damage caused by radio-activity. In the interests of human welfare a definite programme should be formulated as soon as possible to find ways and means to avoid such injuries and to provide suitable remedies for them. In spite, however, of the urgency of the problem, the studies we recommend would demand the close co-operation of the competent scientists and, with this end in view, the Japanese delegation wishes Unesco to encourage and facilitate joint study of this important problem by world experts. This is our Proposal No. 2.

(46) As regards Unesco's activities in Japan, a full report has already been presented to Unesco headquarters. As pointed out in that report, these activities are steadily growing, but I must confess at the same time that, in spite of our efforts, we have not yet been able to rally round us as much public energy and goodwill as we would like. Owing perhaps to the recent trend of the international situation, over which we have no control, we find it difficult to make the masses understand the aims and activities of Unesco as well as they should do.

(47) I may be wrong, but we are afraid that the case may be the same in other countries. In these circumstances, we feel it most desirable that Member States and Unesco headquarters should put forth further endeavours to make Unesco more popular among the masses of the people. According to our short experience, the establishment in Member States of Friends of Unesco Clubs or similar institutions is of great help in accomplishing this purpose. Consequently, the Japanese delegation has made a proposal to the present Conference to the effect that Member States shall, acting through their National Commissions, encourage the establishment of Unesco Friends Clubs or similar institutions to publicize and popularize the work of Unesco, United Nations and the Specialized Agencies. This is our Proposal No. 3.

(48) The armed conflicts which had broken out in one part of the world or another in the past few years have fortunately ceased and Unesco should seize the opportunity to redouble its efforts to contribute to the maintenance of world peace and security. The future of Unesco rests upon a decision to reorientate its activities, and I hope that that decision will be taken at this session of the General Conference. It is strongly desired that Unesco remodel its activities and concentrate upon major projects of first importance.

(49) At this session, the Organization has been joined by new members. It is hoped that, as a result, genuine co-operation will be established at this Conference on new foundations in order that Unesco may contribute more and more to international peace and security by promoting universal respect for justice, for the rule of the law and for human rights and fundamental freedoms.

(50) The PRESIDENT (Translation from the Spanish): I call upon the representative of Chile.

(51) Mr. VASALLO (Chile) (Translation from the Spanish): Mr. President, ladies and gentlemen, it is only recently that the present Government of Chile decided to join this Organization, which aims at fostering increased solidarity between the peoples. It gives us great satisfaction to declare that the objectives pursued by Unesco and the ideals and values from which it draws its inspiration are by no means foreign to the basic principles underlying the civic and cultural history of our Republic. But, before voicing a few reflections on this subject, may I express to the Government and people of Uruguay our gratitude for the magnificent welcome accorded to Unesco on the occasion

of this eighth General Conference. Such an attitude is one more example of the nobility and vigour of the cultural and democratic life of this country.

(52) We are gathered together here because we feel Unesco to be a great international experiment for enhancing the highest values of the human spirit. We would not underrate any of its fine achievements. We have commended them unreservedly; I am thinking, in particular, of the Regional Centre of Fundamental Education for Latin America at Patzcuaro, in Mexico. Similarly, we believe that the contribution of a Member State should also take the form of a keenly vigilant attitude to ensure that the projects of this Organization are inspired by no consideration other than that of strengthening the understanding and friendship which bind the peoples together at this stormy period in the history of mankind.

(53) Chile desires to be a democracy in the fullest sense of the term. That is the course it has followed through more than a century of independent existence. In the formation of that democracy our aboriginal groups and men from all parts of the globe have played their part. Our country, which borders so largely on the ocean, has developed a special psychological attitude of always remaining open to the world and to the free circulation of ideas. That is why our national thought is characterized by a lively awareness of international affairs. Traditionally, at all times in its history, Chile has been the refuge of thinkers and men of action who have come to her shores to seek peace and serenity for their minds. Andrés Bello, that great American figure, was for over 20 years rector of our centenary University without on that account ceasing to be a Venezuelan. The Argentinian Domingo Faustino Sarmiento and his compatriot Alberdi made a joint contribution to Chile's nascent civilization. We are linked with Spain by bonds of race and language. France has nourished us with her great literary and artistic achievements. It was Germans who founded the Department of Education attached to the University of Chile, the oldest of its kind in this part of the continent and the one where most of the staffs of secondary schools and teachers training colleges in Latin America have been trained. In other fields of national activity we are indebted to immigrants from Italy, Yugoslavia and other parts of the world.

(54) Chile's contribution to the cultural and educational accomplishments of the Latin American peoples repays in some measure the great debt we owe to the rest of the world. Chilean teachers have had a decisive influence on the educational reforms carried out in various countries of Central and South America. The faculties, schools and institutes of the University of Chile open their doors to thousands of students who enjoy privileges equal or superior to those enjoyed by Chilean students. If I refer to these activities, it is not in order to evoke feelings of chauvinism but to draw the attention of this Conference to the special significance that is being assumed on a world-wide scale by the cultural contribution and outlook of this America of ours, which nowadays it would be an intolerable injustice to call the "continent of savages".

(55) Our six universities, three of which have their full complement of faculties, enjoy a wide degree of self-government, on both the teaching and the administrative sides, the University of Chile retaining only the right to control the conferring of certain academic titles particularly connected with public health and education. As long ago as 1833 our Constitution laid down the maxim that "education must be the special care of the State", and this is reflected in the constant efforts which have led to the development of teacher training colleges and the various branches and grades of general and technical education.

(56) Notwithstanding this general trend and the fact that primary instruction has been compulsory for more than 25 years, Chile has not succeeded in abolishing the illiteracy which is its regrettable blemish. We must therefore take advantage of the experiences of Unesco in fundamental education, a field in which we have none the less made some progress, as a result of our teachers' having long since become familiar with the dynamic, comprehensive conception of an education suited to the exigencies of community life and its many demands for increased technical progress.

(57) In other ways Chile has also fostered and practised the essential principles of Unesco on the free change of ideas and knowledge with a view to achieving greater moral and intellectual solidarity between the peoples. Since 1930 we have had a Chilean Commission for Intellectual Co-operation, which was for years a branch of the relevant organization of the former League of Nations. Throughout the country there are about 40 affiliated institutes functioning on a bi-national basis, and students and eminent research workers benefit by a system of fellowships which are granted under the best conditions consistent with our limited financial resources. The Commission in question has organized exhibitions of Chilean books abroad; it sponsored an American Conference on Intellectual Co-operation held in Chile in 1939, and has acted as the co-ordinating body for various cultural activities both at home and abroad. An important element in the expansion of education and culture has been provided by the University of Chile with its vacation courses and the growing popularity of the national symphony orchestra, the University ballet and choir, and the experimental theatre - all of them organizations created by the State.

(58) I should like to describe for you the broad lines of our policy at this General Conference and the course of our future action. We have studied the 'Proposed Programme and Budget for 1955-56 and have been able to study the Director-General's Report on the work accomplished in the period now drawing to a close. In its broad lines this report seems to us a fitting exposé of work efficiently performed and holding out obvious prospects for the future. We are unable, however, to give an exact statement of our views, although we think that the task discharged by the Director-General and the Executive Board is praiseworthy and deserves to be endorsed by this Conference. We approve the idea that priority should be given to the tasks of fundamental education and to every form of technical assistance which will contribute to raising the capacity of the underdeveloped countries. We also think that the subsidies to certain international organizations should be closely scrutinized to ensure that these bodies are in fact engaged in activities consonant with the spirit of our Constitution. Let us hope that from now on, the Member States, in view of the special and generous aims of Unesco, will authorize budgets which will enable

its sphere of action to be widened and made more universal in all the three fields of education, science and culture. We would like, too, to see Unesco eliminating as far as possible every internal tendency to bureaucracy, which might upset its natural rate of growth. May its efforts conduce to the appointment of more experts, the granting of scholarships, gifts of books, and the organization of exhibitions and enquiries, and, in general, to the direction of an effective technical assistance. Perhaps a close study of the administrative machinery would help to give effect to these aspirations, which are not formulated with any idea of causing trouble or voicing baseless criticism. It may be, of course, that this is a mistaken impression; anyhow it is better to say things at the right time and in the right place.

(59) During the Conference we shall have our observations to make about possible corrections to the programme and budget for the two years 1955-56. On some points we have already put forward definite amendments. For the time being we wish to express our support for the draft resolution submitted by the delegation of Honduras to secure your approval for setting up in Latin America an Institute for Vocational and Professional Training and a Higher Teacher Training College, an identical motion on which was put forward by Chile. We are confident that with the goodwill of this Assembly we shall be able to realize a scheme of incalculable importance for the future of secondary education and teacher training in this part of the continent.

(60) It is our hope that Unesco may day by day make more and more progress in the greatest possible number of concrete and practical projects. May the atmosphere of its researches, deliberations and agreements reflect a lofty spirit of universality! May a broad democratic sentiment govern its organization and operation! Chile's sole desire is to contribute to the spread of sincerity, trust and friendship between peoples and governments, as the cornerstones of all healthy and creative international coexistence; and we pray that the symbolic banner of Unesco may give fresh impetus to the expansion of culture, the basic condition for which is a climate of unrestricted freedom. Without that climate culture is doomed to extinction or death, and must surrender to the blind reign of instinctive forces, ever hostile to the uplifting of human dignity.

(61) Lastly, we should like to express our hope that at the next Conference we shall be able to proclaim that we have received from Unesco the attention demanded by the urgent educational and cultural needs of our Latin American continent.

(62) The PRESIDENT (Translation from the Spanish): I call upon the representative of Poland.

(63) Mr. MICHALOWSKY (Poland): Mr. President, fellow delegates, please allow me at the beginning of my speech to express on behalf of the Polish Government its thanks to the Government of Uruguay and to the town of Montevideo for the hospitality extended to us and to convey my country's best greetings to the Uruguayan people, to whom we wish the best of success, prosperity and progress.

(64) The present session has started in a somewhat different atmosphere from that in which previous sessions were held. We observe symptoms of diminished tension in the international situation; the threat of a new war has receded, a war which would bring about the sure destruction of our whole civilization. At present, for the first time in many years, no major armed conflict is being waged anywhere in the world. The armistice in Korea and in Indo-China, the Conferences of the great powers in Berlin and in Geneva and the unanimous decision of the United Nations on disarmament - these are essential elements in the new situation. A number of other problems and international disagreements have recently found their solution and the view that no controversial issue exists that cannot be solved through negotiations is gaining ever-increasing understanding and support. This new situation imposes upon all States and upon all international organizations the greater duty to make the maximum effort to speed up the process of easing international tension. All the peoples of the world are longing for it. This duty also lies at the basis of the existence and purpose of our Organization.

(65) Unesco came into being immediately after the victory over fascism and Hitlerism. When the Constitution of Unesco was being laid down, when the first plans for its activity were being worked out, nobody expected that the forces of evil would revive and would so quickly find a voice. In 1945 "re-education" was the point of issue, now, alas, it is "rearmament".

(66) The Constitution of Unesco says that wars begin in the minds of men. But the idea of war does not come of itself. The presumption that armed conflicts are necessary and inevitable is artificially created by a large-scale and lavishly equipped war propaganda. That is why under these conditions Unesco should develop intensified peace activity; it should the more become the ground for intensive and friendly co-operation.

(67) Unfortunately, we observe with anxiety in Unesco, as well as in the United Nations and in some other organizations, signs that there still exists a dangerous tendency to disturb international coexistence. Only a few days ago, here in this hall, we witnessed such symptoms. I have in mind, first of all, the refusal to admit to Unesco the rightful representatives of the 600 millions of the Chinese people, a people with an ancient and splendid culture which is now recording new achievements and creating new values of worth to the whole world.

(68) The principle of the universality of Unesco, which lies at its basis, was flouted by the postponement of the admission of Bulgaria and Rumania - two countries which are developing their culture in the true spirit of democracy, in the spirit of peace, international co-operation and understanding. Both these facts are alien to the spirit and the letter of the Constitution of Unesco and are evidence of political manoeuvres which should find no place here and which are harmful to our Organization. The Polish delegation hopes that these mistakes will shortly be corrected.

(69) Resuming its co-operation with Unesco, Poland brings with it significant achievements in the field of culture and education, the fruit of tremendous efforts by the entire nation in the course of the ten post-war years.

(70) Following the war and Nazi occupation which had inflicted painful losses amounting to 20 per cent of the population and 40 per cent of its scientific

manpower and cultural assets, Poland has within a few years abolished illiteracy as a mass phenomenon in our country.

(71) We had in Poland before the war 2,350 seven-class elementary schools; now 11,000 schools cover nearly 100 per cent of our children. Before the war, we had 28 universities for a population of 35 millions - now we have 82 universities for the 26 millions of present-day Poland. The number of students per 10,000 of the population was 14 before the war - now it is 47, more than three times the pre-war figure.

(72) Our country is now covered by a network of schools, community halls and cultural clubs, museums, theatres, cinemas and professional and amateur art groups. We publish over 100 million copies of books yearly including 25 million textbooks.

(73) Before the war Poland had 15 scientific institutes with approximately 2,000 scientific workers - now there are 92 scientific institutes of different kinds employing 12,000 scientific workers.

(74) Our country aims at the development of a culture that shall be truly national in its essence and, at the same time, it teaches the people to respect and to understand the cultural values of other nations and promotes international co-operation in the field of culture.

(75) While developing its education, science and art, our country encourages large-scale cultural exchange with other countries. In the current year only, more than 40 cultural, social and political delegations have visited our country. Artists from Berlin and Peiping and theatrical companies from Paris and Moscow gave performances in Poland. Scientists and artists from Great Britain, France, Italy, India, the USSR, the people's democracies and many other countries have lectured or performed in our country.

(76) Polish scientists and artists frequently visit other countries. The Polish theatre played last year in Paris and in Moscow, and Polish dancers and singers have given performances in a number of towns from Shanghai to Paris.

(77) We constantly take part in international gatherings of exponents of music, fine arts and the cinema. We have participated in numerous festivals - Venice, Carlsbad, Cannes, Rio and Mar del Plata. We have attended PEN Club and ICOM conferences and many others.

(78) At home we organize numerous international competitions in the arts, for example, the Chopin and Wieniawski International Competition, and a number of exhibitions of the science, art and culture of other countries.

(79) We have come to this session of Unesco after a few years of absence with a positive balance of cultural achievement and a positive balance in our contribution to cultural international exchange.

(80) It is our intention to support in Unesco all valuable and concrete undertakings which tend, in practice, to increase international understanding. In particular we shall support every endeavour to raise the level of fundamental education and to spread culture in Member States.

(81) We have signed the Convention for the protection of cultural property in the event of armed conflict. We shall further the exchange of theatrical and ballet companies and of exhibitions between museums.

(82) We shall back the proposals of the delegation of India to strengthen and develop the peaceful coexistence of different political systems and of co-operation among all nations. We shall also support the proposals of India on the utilization of atomic energy for peaceful purposes only, in the interest of mankind, and not as a threat to annihilate our culture and our existence. We shall also give our support to a campaign for teaching equality of and respect for all races and all nations.

(83) Similarly, we shall support here, as we do at UN, proposals for technical assistance to economically underdeveloped countries, animated by respect for the national culture and sovereign rights of those countries, by the spirit of peace and sincere peaceful international co-operation on the basis of equality and mutual benefits.

(84) We shall support increased exchange of scientific publications and the promotion of activities which will contribute to the better dissemination of scientific achievements among the broad masses of the peoples.

(85) We shall also support the idea of commemorating great thinkers whose works have essentially contributed to the cultural progress of humanity, an idea which has already been given practical shape by Unesco in the case of Goethe and Leonardo da Vinci. In this same spirit we submitted, on the occasion of the centenary of the death of Adam Mickiewicz, a proposal to commemorate this great Polish poet, who from Poland, Moscow, Paris, Lausanne and Rome preached the gospel of progress and of the brotherhood of man.

(86) Finally, our delegation intends to support all activity in the field of press, radio and film which aims at putting an end to war propaganda and aggression, to hostile propaganda against other States and nations and which will help to develop information in the spirit of international understanding, in the spirit of collective security, in the spirit of broad culture and economic exchange among all nations.

(87) We cannot turn a blind eye to the fact that in some countries a propaganda of revenge and hatred is being spread and supported, finding its way into textbooks and permeating literature, art, press and radio. Dangerous militarist slogans are being revived, and find their way into schools and scientific institutions. We cannot watch this with indifference just as we cannot but oppose racial discrimination and national and racial persecution.

(88) I have had to mention here today certain facts, among others, which lead to the weakening of our Organization. There are however other positive symptoms which testify to the growing strength of Unesco. The joining of our Organization by the nations of the Soviet Union, with which Poland is united by indissoluble ties of friendship, a great power not only from the political and economic points of view, but also a great cultural power, opens up new and broad horizons for the development of international co-operation in the field of culture.

(89) The eighth session of the General Conference of Unesco may be of great importance in the history of our Organization if we grasp the new possibilities offered by the improvement in the international situation and if we take advantage of the outward expansion and the inner reinforcement of Unesco. Let us seek in our everyday work understanding, solutions based upon mutual agreement; let us find a common language and communicate on friendly terms,

irrespective of differences in our political structures.
(90) The last fifty years have brought greater changes than past millenniums. Distance has been abolished. In the days of Caesar a messenger despatched to Gaul had to travel as long as, but no longer than a messenger sent by Napoleon from Italy to France. Uruguay was a very long way from Poland. Today the distance between us has been reduced to 30 hours of flight. But although the physical distances between nations have been eliminated, many prejudices still divide the peoples of the world. The banner of the United Nations has, alas, already been unfurled on the battlefield. May that banner flutter only over the seat of conferences devoted to the achievement of friendly co-operation between the nations in the cause of peace, culture and human welfare.

(91) The PRESIDENT (Translation from the Spanish): I call upon Mr. Sommerfelt, Head of the delegation of Norway.

(92) Mr. SOMMERFELT (Norway): Mr. President, fellow delegates, it is a great experience for a citizen of a northern State to visit this country, which is so distant from his own geographically, but which is akin to it in democratic spirit. Our stay in Montevideo will remain a memorable event in the life of each one of us and also in the history of Unesco.
(93) Unesco is now holding the eighth session of its General Conference. For one who has taken part in its activities from the beginning, it is a satisfaction to see how the work has been gradually getting into shape. On the whole, the Norwegian Government has no serious criticism of the programme for 1955-56. There may, of course, be items on the importance of which we are of a different opinion from that of the programme and budget document, and others which we think might be dropped altogether. But such items are few. The number of Member States having increased, the Norwegian Government thinks that a cautious expansion of the programme is justified. We are whole-heartedly behind the help to the so-called underdeveloped countries and we are of the opinion that the programme of fundamental education is of particular moment in that respect. But we must not forget that Unesco has also other tasks, the task of promoting collaboration between the creative forces in education, science and culture. Unesco must draw these forces into its orbit to a greater extent than hitherto.
(94) I am thinking especially of the great international non-governmental organizations like ICSU, CIPSH, the Theatre Institute, the International Association of Plastic Arts, and others. These institutions, which are planned by experts, must be called upon to do all such work as Unesco's Secretariat can only do less well and more expensively. Unesco's policy of subventions and contracts is therefore, in the view of the Norwegian Government, of very great importance. Both subventions and contracts should be used freely, but only for well specified purposes and under strict control.
(95) As regards staffing policy, the Norwegian Government has followed recent developments with some concern. In our country we have strong traditions of individual liberty, and our civil servants are protected by law against undue influence. It seems to us that freedom of conscience must be safeguarded at all costs, and we hope that an arrangement will be found by which this freedom, which is one of Unesco's ruling concepts, will not be endangered.
(96) Unesco must not become a political organization. It was never conceived as such when we prepared for it in London and drew up its Constitution. Unesco has to work for peace in the realm of the spirit.

(97) The PRESIDENT (Translation from the Spanish): I call upon the representative of Thailand.

(98) Mrs. Pin MALAKUL (Thailand): Mr. President, I am very pleased to be at a Unesco General Conference once again, and it is a great honour to have the opportunity to address this distinguished gathering. My first thoughts go to the Uruguayan Government who kindly invited us to this wonderful city, and allowed us meet in this splendid palace. In the name of the Thai delegation, I should like to express our thanks. Apart from that, I have to thank my fellow delegates for doing us the great honour of nominating Thailand a Vice-President of the Conference.
(99) As far as I know, our delegation will have made the longest journey to Montevideo, covering a distance of approximately fifteen thousand miles. During that long journey, we visited the countries of many Member States of Unesco, and we learned a great deal from them. To Thailand, Latin American countries are practically at the opposite end of the world, yet we have many problems in common - similar problems in different settings.
(100) On our way, we saw a number of Unesco projects in operation - the most exciting of which was that at Patzcuaro. Talking about fundamental education, I am pleased to note that, during the period under review in the Director-General's Report a Second Regional Centre was opened in Egypt, and that it is doing well. I am happy to report, too, that under the Expanded Programme of Technical Assistance, Thailand has opened a Fundamental Education Centre at Ubol. The Thai Government has spent no less than half a million dollars on the project.
(101) I would like to thank Unesco for the assistance given to Thailand, especially on two major projects - the fundamental education project at Ubol just mentioned and the Chachoengsao project, where we are attempting to improve the standard of education at all levels within a limited area. As you know, this Chachoengsao project is now approaching its fifth year. But, as the Director-General himself has said in the report, in the spheres which are the particular concern of Unesco, nothing is ever completed. I hope that this Chachoengsao project is a particular concern of Unesco, and that Unesco will continue to give it assistance. That is to say, I hope that assistance from Unesco will not cease at the end of 1955, as stated in a chapter in the proposed Programme and Budget of Technical Assistance.
(102) Now, I should like to say a few words about the experts sent to work on projects. We cannot complain when you sent us such eminent persons as Sir Charles Darwin and Dr. Huxley. But experts often get short-term contracts, too short to be of real service to the projects. I happen to be on our National Commission and, every time we meet,

there are reports of experts going and coming. I expect this is the case in many countries. I really hope that, in the future, experts will be given more time to do their work.

(103) Referring to the report of the Director-General now before us, I should like to congratulate Dr. Evans on this his first report to the General Conference. It is in a form easy to read and will be very useful as a reference document. Its substance shows, in a few words, that Unesco is driving towards concentration of effort on work already started. This is also our policy in carrying out Unesco projects in Thailand.

(104) I am pleased to notice that under Cultural Activities, there are continuing efforts in the fields of libraries, museums and fine arts. I was much interested in reading the chapter about the Brussels Conference on the Rôle and Place of Music in Education, and look forward to reading its proceedings when they are published. This, because at the present time we in Thailand are trying to introduce music into schools more seriously than before. As you know, the Brussels Conference was crowned by the "Canticle of Hope", specially composed for the occasion. I was pleased to hear that symphonic work in Montevideo, sung so beautifully at the opening of our Conference last Friday.

(105) Before concluding, I should like to express my thanks, on behalf of Thailand, to the Director-General and the Chairman of the Executive Board for their visit to my country early this year, as mentioned in the supplementary report. During their visit they spent half an hour at our new Broadcasting Station, which is devoted entirely to education, science and culture. Since their visit, this Broadcasting Station has been giving Unesco news very regularly, with the result that teachers, students and the public in general are becoming more Unesco-minded. The Director-General said on Saturday that he was trying to create confidence, so important was the attitude of the world towards Unesco. I am pleased to inform him that, in my opinion, his task in Thailand is no longer a difficult one.

(106) That our people are taking greater interest in Unesco is obvious from the fact that they are more and more joining our United Nations Association. This Association, with a woman as its President, celebrated United Nations Day in Bangkok, last month, by giving a performance illustrating the work of the United Nations and the Specialized Agencies. Residents of many nationalities in Bangkok took part in this programme, which, I have just heard from home, was a great success.

(107) The PRESIDENT (Translation from the Spanish): I call upon Mr. Paik, Head of the delegation of Korea.

(108) Mr. PAIK (Korea): Mr. President, ladies and gentlemen, the Korean delegation, at the outset, wishes to thank the Uruguayan Government and people for their hospitality in receiving the Conference in their beautiful country and also for their generous participation in the emergency relief programme in Korea. We are grateful, too, to the Executive Board, to our wise Director-General and his colleagues for their successful conduct of the work of the Organization since the last Conference.

(109) The Korean delegation wishes also to express to the distinguished members of this Conference its profound appreciation of the constructive efforts made to rehabilitate our war-devastated country. We have seen, during the past two years, the completion of the textbook printing plant with the timely assistance of $100,000 from this august body and $140,000 from the United Nations Korean Reconstruction Agency. This printing plant, with its up-to-date equipment, stands as a landmark in the progress of the permanent rehabilitation of Korea, concrete evidence of the collective system for world progress. We have also been placed under a great debt of gratitude by the steps taken to implement the fundamental education recommendations of the 1953 Unesco-UNKRA Education Planning Mission to Korea, by the flow of goodwill from all parts of the world to our schools through gift coupons, by the continuation of the technical assistance programme - its amount reduced but its quality improved - and by the opportunity given for the training of the Secretary of our National Commission at Unesco headquarters in Paris.

(110) The National Commission of Korea was finally inaugurated in January 1954, and its headquarters established and staffed for the more vigorous prosecution of the multiple activities of Unesco. We have found, like other Member States of the Organization, that, through the work of the National Commission and the assistance given to our rehabilitation programme, the aims and ideals of Unesco are becoming better known to increasing numbers of our people. But there is much room for further development. We cannot afford to disappoint people who are expecting much from the programme of this Organization. In this connexion, we hope that the time will soon come when our National Commission will be given the benefit of the wisdom and experience of a headquarters staff member, for our Unesco work in Korea.

(111) In Unesco documents, a programme for rebuilding the Korean educational system figures under the head of emergency assistance. An emergency should be a case which requires immediate remedial action. If collective efforts are delayed, the case will become a chronic one. The time has now come for immediate action for rehabilitation in all phases of work that is to ensure freedom and progress. Our Government wishes further and wider implementation of the Five Year Plan recommended by the Educational Planning Mission. It will be recalled that the Mission devoted most of its attention to a reorientation of the content and methods of education. We believe the content of the new education and the methods of teaching in our schools would be very greatly improved if more were known about curricula and teaching methods abroad. Fellowships for foreign study should be provided to established teachers and administrators who have proved their capacity for leadership in education. Technical assistance for scientific and technical teaching and research is greatly needed in Korea for improving the conditions of life. We cannot and must not deny to the war-torn people of Korea the blessings that modern inventions in science and technology have brought to human well-being and happiness. In a less industrialized country, like Korea, a programme for mass communication provides important educational media. Instructional films, audio-visual and technical

aids in development of mass communication, are eagerly sought in order to increase international contacts and the discovery of fresh knowledge. Cultural relics and the works of art created in the course of our long history have been found and preserved. But the same systematic collection, careful preservation and widespread use must be extended to our national treasures in the field of education. Creative writers, artists, playwrights and other cultural groups must enjoy conditions conducive to the production of works of beauty and truth. The recent organization of the Korean Branch of the International PEN Club should receive the attention of similar bodies in other Member States, both for its own sake and for the sake of the exchange of ideas.

(112) I should be guilty of concealing the truth if I refrained from reiterating the need of the physical rehabilitation of our school buildings and equipment. This need has received priority attention from Member States and several United Nations agencies and organizations have done much to meet it. But when we compare the extent of those needs with the actual work done, we must confess that we are still at the beginning. Tens of thousands of classrooms have yet to be provided, if possible with a modern type of architecture better adapted to the Korean setting and natural environment. Teaching materials, laboratory instruments, apparatus, supplies and extra-curricula equipment must be brought in from abroad not only to restore the original conditions, but to meet increasing needs due to the natural growth of the school population. Thus, we should mobilize all resources to restore the educational, scientific and cultural institutions devastated by the war. At the same time we must not lose sight of the long-term objectives of Unesco, the establishment of world peace through the meeting of minds.

(113) The war in Korea has stopped. But it has stopped, only to legalize and perpetuate the most unnatural division of the country. Power politics have disregarded the fact of the unity of the Korean people. A divided Korea is a sorry symbol of the failure of the United Nations thus far to fulfil the requirements of its Charter and the hopes of mankind. Korea is the touchstone of the ability of nations to solve their problems without committing mass suicide. From the point of view of world peace and security, the reunification and independence of Korea are indispensable. We, the Korean people, north and south, confidently and impatiently demand that the free will of the people be allowed expression in an election controlled by the United Nations.

(114) We of this age are eagerly seeking peace and security, but we know that peace and security will not come through denial of the sanctity of the human personality and disregard of human rights. These human ideals can only be realized through devotion to the concept and activation of collective security and through our determination to preserve the peace and honour of all nations, small or large, over-industrialized or less industrialized. Conflicts and tensions in the present-day world are only outward manifestations of man's inner conflict and anguish. Unesco is the moral and spiritual expression of the United Nations. May the work of this year's great Assembly chart a new road towards the fuller realization of justice and freedom.

(115) Before I close, I wish to make a remark or two on the Director-General's Report. I wish that there could have been more frequent and closer contacts between Unesco and the United Nations Korean Reconstruction Agency in the implementation of the Five Year Plan. Such co-ordination between the two bodies and constant consultation with our Government would have enabled these agencies to accomplish more. I also note with regret that the small subvention to the World Confederation of Organizations of the Teaching Profession has been reduced in the proposed budget. We who are engaged in teaching cannot but feel that the subvention to that world confederation should be restored to its previous amount at least. In closing, I wish to congratulate Dr. Luther Evans, our eminent Director-General, on the magnitude of his accomplishments within the time allowed him.

(116) The PRESIDENT (Translation from the Spanish): I call upon the delegate of the Union of Soviet Socialist Republics.

(117, Mr. STOLETOV (Union of Soviet Socialist Republics) (Translation from the Russian): Mr. President, ladies and gentlemen, the delegation of the Soviet Union has asked me to greet the delegates and guests at the eighth General Conference of Unesco and to express the hope that all the participants of the Conference will direct their efforts to making the work of our session constructive and in the highest degree conducive to the fulfilment of the tasks with which workers in the spheres of culture and science have to cope in serving the cause of peace and strengthening cooperation between the peoples.

(118) Among the questions on the agenda of the General Conference there is the question of preparing a history of mankind in the field of science and culture. Soviet scientists are prepared to take an active part in this important, interesting and valuable undertaking of Unesco.

(119) The history of mankind in the field of science and culture is an inexhaustible source of wisdom and knowledge. It is a generally recognized conclusion of history that, if science, culture and education are to be successfully and thoroughly developed, care must be taken constantly and persistently to see that the peaceful development of the human intellect is not interrupted by such odious episodes as wars waged for the sake of profit or for the enslavement of one people by another.

(120) The history of mankind has no record of scientists deeply concerned for the future of science who would at the same time advocate the idea of war. History proves the contrary. Eminent figures in the fields of science, literature and art everywhere were humanists because of their scientific studies and of their works, which have become part and parcel of the heritage of the civilized world. They called men and women to follow the path of freedom, peace and peaceful constructive work. Such leaders of science and culture, whatever their nationality, are immensely respected and beloved by the Soviet people. All men of learning who advance the cause of science have always been united by the great humanitarian purpose of serving their people and by working for the welfare of humanity.

(121) Contemporary workers in the spheres of science and culture in all countries and among all peoples,

correctly reflecting the aspirations of their peoples, are also active supporters of the ideas of peace. It is for them an indisputable fact that the idea of the peaceful coexistence of countries with different social systems is historically justified and should be a guiding principle in relations between peoples. Anyone who nowadays asserts that the difference in social systems is a cause of present international tension and a potential cause of a new world war is, intentionally or otherwise, defying the lessons of history and playing into the hands of the warmongers. Scientific and cultural workers in the Soviet Union are convinced that, if the principle of the equality of all peoples is honestly and consistently obeyed, if attempts to impose decisions in international relations are completely abandoned, if national sovereignty is mutually respected and if countries refrain from interfering in the affairs of other countries, it is quite possible in present-day international affairs to achieve a further relaxation of international tensions and preserve peace on earth.

(122) The solution of the controversial or outstanding issues in international life by means of negotiation is, in our opinion, the most humanitarian of all the ideals which were ever developed and defended by great humanists throughout the history of mankind.

(123) The aim of the United Nations Educational, Scientific and Cultural Organization, as stated in its Constitution, is to contribute to the diffusion of science, culture and education, to contribute to the strengthening of cultural ties between the nations and in this way to work for peace. Surely, the work of our Organization can only be successful if it uses all the means at its disposal to popularize the idea of a peaceful settlement of all controversial issues in international life.

(124) The seventh session of the General Conference of Unesco adopted a resolution calling upon all Member States to further the objectives of international peace, mutual understanding and the common welfare of mankind. We readily join in this appeal. But every appeal calls for concrete action. If the proclamation of a particular idea is not followed by deeds, practical actions, then the idea may become an empty sham. An idea that is not backed by practical deeds is dead.

(125) If we want to give effect to this decision, we must take practical action against disseminating the ideas of war. Propaganda in favour of the ideas of war, ideas of enmity between peoples is utterly inconsistent with the principles proclaimed in the Constitution of our Organization. In this connexion the Soviet delegation attaches great importance to steps being taken to prevent the utilization of mass communication for the propaganda of war and all other propaganda which tends to sow enmity and hatred among the peoples. Books, songs, films, pictures and radio - all these forms of culture should serve the aims of strengthening cultural ties between the peoples, and of spreading the idea of friendship between peoples, the ideas of peace.

(126) As far as the Soviet Union is concerned, the idea of war as a means of settling controversies or differences between peoples is utterly rejected by our people. As an expression of our people's inflexible resolve for peace the Soviet Government has enacted legislation condemning all kinds of war propaganda as a heinous crime. In the Soviet newspapers and books, on film screens and in radio broadcasts, in our songs and on the stage, nowhere will you find a call to war, or a glorification of the forces of death and destruction. The intelligentsia of the Soviet Union is the foremost, unbending adversary of war and thus the foremost, irreconcilable adversary of using cultural resources for propaganda in favour of war. This is the spirit in which Soviet intellectuals are bringing up the younger generation in the Soviet Union.

(127) The great October Socialist Revolution brought about radical social changes in our country. These changes formed the basis on which the Soviet people have achieved successes in the development of science, culture and education. The October Revolution liberated the manual and scientific workers, ensured the full development of the creative forces and abilities of all the people. As a result, science, culture and education are developing in our country with ever greater rapidity.

(128) The Soviet Government is constantly devoting all its attention to the development of science, culture and education. This year, more than one-fourth of the enormous State budget of the Soviet Union has been appropriated for education and for satisfying the social and cultural needs of the population. Our country has for a long time past had universal compulsory and free education covering seven years. At the present time the task of introducing a universal ten-year course of education is being successfully accomplished. In the USSR today more than 57 million people are catered for by the various systems of education. This means that one-fourth of all Soviet citizens are at school. They have more than 380,000 public libraries at their disposal.

(129) In pre-revolutionary Russia there were only 92 higher educational institutions with 112,000 students. Today the USSR has about 900 higher educational institutions. In 1954, 1,706,000 students were studying in them. In 1953 about 90,000 scientific workers - professors, lecturers and assistants - were employed in the Soviet higher educational system.

(130) Access to the universities and high schools of our country is freely available to all young people without distinction of sex, nationality, race, religious beliefs or property. Personal ability and personal skill - these are the only criteria applied in selecting young people for higher education.

(131) The development of higher education and education at all other levels exercises an extremely favourable influence on the development of all the national cultures of the peoples of the Soviet Union. The Soviet peoples, by fostering the best traditions established in the literature and art of the Russian nation and of the other nations of former Russia, have created their own new literature, new theatre, music, cinema, painting, architecture and sculpture.

(132) The various forms of culture in the Soviet Union, including education, are being developed in each Republic in the specific forms peculiar to the national character of each people. Quite naturally, therefore, the Soviet Union has a very great variety of cultural activities. This variety, as our experience proves, not only enriches the culture but also contributes to its successful development. Thus, the talents of each nationality are afforded the fullest opportunities for expansion in every direction.

(133) The further development of our Soviet society towards progress, towards the comprehensive and

complete satisfaction of the material and cultural needs of everyone, demands the all-round development of its every nation, every people, and every single individual. We would consider any social system that existed in our country to be pointless and retrograde if it did not offer a solution of these tasks. That is why our State is constantly striving to ensure the all-round development of the abilities, talents and personal qualities of every individual.

(134) The national cultures of the Soviet Union, varied though they are, have something in common. This is the fact that all our various cultures are bringing people up in a spirit of love for peace, love for peaceful, creative labour, in a spirit of friendship and co-operation among the peoples of one and the same nation, in a spirit of friendship and co-operation between all nations. Such an upbringing, such an education moulds optimists out of people, who look towards their future boldly and confidently.

(135) In this great era of the discovery of atomic energy, feelings of pessimism have sprung up and are becoming widespread in certain sections of representatives of intellectual workers in the West: why, they wonder, has science discovered nuclear energy, which can be used as a monstrous weapon for the mass annihilation of peoples? Such pessimism is alien to the Soviet people, to the Soviet intelligentsia. The Soviet peoples rejoice at every conquest achieved by science, including the discovery of nuclear energy. They rejoice because their Government is steadily fighting for the unconditional prohibition of atomic and hydrogen weapons. The Soviet people, too, are confident that nuclear energy will be used only in the service of peace. The Soviet delegation considers that our Organization - Unesco - has every chance of playing a great and noble rôle in the solution of this humanitarian problem.

(136) The Soviet Union has acquired great experience in the development of science, culture and education in the service of the peace and prosperity of its 200 million multi-national inhabitants. Soviet men of science, culture and education are willing to share their experience with those nations who desire it. With this aim in view we are prepared to take an active part in the series of international meetings and conferences suggested in the proposed programme of Unesco.

(137) The high level of university education in the Soviet Union enables us to lend assistance in this field to those countries which request it. A considerable number of students and graduates from several countries are being taught in our higher educational institutions. The Soviet Government is prepared to give favourable consideration to the question of awarding university scholarships in institutions of higher education to students from underdeveloped countries out of the Soviet contributions to the UN Technical Assistance Fund.

(138) Soviet workers in science, culture and education have never confined their activities within the boundaries of their own country. They have always sought to assimilate the valuable experience of other nations and States and to put it at the service of their people. USSR publishing houses are doing a very extensive and comprehensive job in creating the necessary conditions for enabling the Soviet people to become acquainted with the achievements of world science and culture. In this connexion I would like to cite some figures. For the period from 1918 to 1954, USSR publishing houses translated into Russian and the other national languages of the USSR the works of 1,658 foreign authors. The total number of books by these authors which have been translated in our country during this period amounts to 13,500. Not only are the works of European and American authors widely published in the Soviet Union, but also those of authors from other parts of the world. In particular, books by Chinese, Indian, Persian, Korean, Japanese authors, as well as authors of other Asian countries, are being more and more widely published. The situation is similar as regards books on science, philosophy and current affairs. The Soviet Union daily receives a great number of foreign publications. Thus, in 1954, the Soviet higher educational institutions alone acquired 2,500 scientific magazines of various kinds.

(139) The Soviet people are greatly interested in the development of the national cultures of the countries of Asia. Some time ago a Festival of Indian films was held in all the cities of the USSR with great success. The Soviet people gave a warm welcome to the performances of artists from India. The recent visit to our country of Indian university professors and students aroused great interest amongst the professors and students of our universities. Comprehensive cultural co-operation between the Soviet Union and the Chinese People's Republic is growing stronger from year to year. And the Soviet people view with great satisfaction China's enormous progress in the development of science, culture and education. The Soviet people are greatly interested in and sympathetic towards the development of the culture of all the Asian peoples, and are prepared to render them every possible assistance in this great cause.

(140) The Soviet Union displays an unfailing and comprehensive interest in the development of the culture of other regions of the world, as is proved by the expansion and consolidation of its cultural relations with other countries. During the first nine months of 1954 alone, over 300 delegations of Soviet scientific, cultural and educational workers paid visits to other countries. In the same period we welcomed in the Soviet Union delegations of scientific, cultural and educational workers from 72 countries.

(141) The Soviet delegation is confident that the all-round expansion of cultural bonds between nations will contribute to the improvement of mutual understanding between the peoples and to the consolidation of universal peace, which in its turn corresponds to the fundamental interests of all nations.

(142) The Soviet Union is prepared to make its own contribution towards the further consolidation and broadening of the cultural ties between peoples, and trusts that all participants in the General Conference will make every effort to the same end, so that Unesco may be enabled successfully to fulfil the tasks laid down in its Constitution.

(143) In conclusion, Mr. President, allow me to express our gratitude to the Government of Uruguay for the great trouble it has taken in organizing and holding the present session of the General Conference of Unesco in the city of Montevideo.

The meeting rose at 12.50 p.m.

# SIXTH PLENARY MEETING

*15 November 1954 at 4.30 p.m.*

*President* Mr. ZAVALA MUNIZ (Uruguay)

CONTENTS

Discussion of the Director-General's Report (continued) : Speeches by the delegates of Pakistan, Ceylon, Byelorussia, Canada, Switzerland, Australia, Indonesia, Egypt, Uruguay and the representative of the Organization of American States . . . . . 82

**DISCUSSION OF THE DIRECTOR-GENERAL'S REPORT**
(continued)

(1) The PRESIDENT (Translation from the Spanish): I call on the delegate of Pakistan.

(2) Mr. HUSAIN QURESHI (Pakistan). Mr. President, ladies and gentlemen, my delegation fully shares the feelings of gratitude expressed by other delegations to the Government and people of Uruguay for having invited Unesco to hold its eighth session of the General Conference in this beautiful city of Montevideo. It is a source of inspiration to be in the capital of a country which, during the short period of its existence, has succeeded in laying the foundations of a welfare State whose social legislation and liberal traditions have earned admiration, whose educational and social programme is a remarkable testimony to the patriotism of its administrators and where the motto of the Government is that in the advancement and progress of the entire population lies the greatness of the country. In this progress, Mr. President, you have cause for personal pride, since, as Minister for Education, you are responsible for the cultural progress of your country. We are, therefore, proud to have you as our President this term, and we are also grateful to you for what your Ministry and Government have done to make a success of this session. I would also like to express my delegation's appreciation of the part played by Professor Secco Ellauri in having invited the General Conference to Montevideo.

(3) The progress which has been outlined in the Report of the Director-General and the programme contained in it have the fullest support of my delegation. It is gratifying to see that the needs of Member States are being taken into consideration. The Director-General's tour of various countries has been of great importance. We welcomed the visit by the Chairman of the Executive Board, the Director-General and Professor Secco Ellauri to my country, where we had an opportunity of discussing our needs with the team and explaining to them our problems. It gave an opportunity, not only to the members of the Government and the officials concerned, but also to our intellectuals to get acquainted with the programme of Unesco and to have a better understanding of the means by which we can get the utmost benefit from it. I very much hope that such tours will be a regular feature of the activities of this Organization, the more so because the new programme is based upon the idea of greater service to the member nations.

(4) As was pointed out by the retiring President of the General Conference, the emergence of the Asiatic nations as free and independent members of a world community is the outstanding result of the last world war. These nations possess great potential power for good and evil; it is in the interests of the world community that their problems should be properly understood. They should be helped to direct their exuberant energy into constructive channels and to contribute to the welfare of man. In many respects they have to catch up with the progress made by more advanced countries and unless they are able to do so they will not be able to make a beneficial contribution to the progress of humanity. More than anything else these nations need technical advice and help to utilize their resources for raising the deplorably low standard of living of their vast populations and to remove the terrible burden of ignorance and illiteracy. These nations are inheritors of great cultures, the traditions of their civilization often fade into the immemorial past. Those traditions are still alive and potent; they have given a wealth of latent wisdom and philosophy to these peoples. My own country attained a high level of civilization 5,000 years before Christ, the remains of which, revealed by the spade of the archaeologists at Mohenjodaro and elsewhere, astonish the modern historian and layman alike. Still older sites await excavation. The fertile valley of the Indus has witnessed many a flourishing culture, the achievements of which are woven into the texture of the consciousness of our people. Through another source - Islam - we are inheritors of a long tradition created by cultures

which throve in the lands of Iran, Arabia, Asia Minor, Greece and Rome. The complexity of these sources has given the culture of my country a depth and a catholicity of which any people can be proud; and yet, when I look upon the large number of men and women who have to be rescued from illiteracy, I share the impatience of my people who yearn to recover their ancient and glorious tradition. I believe that such must be the feelings of other Asiatic nations as well, who are proud of their cultural traditions, and who, today, find themselves lagging behind younger nations in educational and scientific progress.

(5) But impatience can be a blessing or a curse. It is a blessing if it inspires the people to greater effort, it is a curse if it leads to frustration. At present the Asiatic nations are buoyant and hopeful; it would be a tragedy of the first magnitude if their hopes were to be shattered by their lack of material resources in spite of their great reservoirs of spiritual strength. This may happen if they do not get help and advice from the world community. It will be disastrous if they lose heart and if their buoyancy is turned into frustration; for there is no greater ally of the Devil than the curse of frustration.

(6) I should, however, sound a note of warning. It would be a mistake to think that the vast millions living in Asia are a single mass of people; their cultures, their outlooks on life, the stages of their development all vary and, therefore, their needs and requirements differ widely. An assembly of intellectuals like this needs no reminding that the population of single countries in Asia sometimes outnumbers the entire population of other continents. Asiatic nations should be treated singly. It would be a fallacy to think in terms of regionalism where such masses of people with such vast differences are concentrated. The central source of the idealism of Unesco is universality, and any decentralization of its organization on a regional basis will injure the very purpose of its existence. It is the firm conviction of my Government, fully shared by my people, that there should be no concentration of Unesco agencies away from headquarters, even though they may be merely the instruments for the dissemination of information, in any single country. Unesco deals with various disciplines; an agency which disseminates information regarding a particular discipline could be located in a single country and thus various agencies of information could be equitably distributed over an entire region. This will keep many countries actively interested in the activities of the Organization and the benefits from its various programmes will be distributed more widely.

(7) My delegation attaches the greatest importance to projecting the salient features of different cultures to the entire world. I am aware of the work that has already been done in this connexion, but may I submit that this aspect of the programme needs strengthening? A great deal of misunderstanding, fear and hostility have arisen in the course of history from prejudice and ignorance. Today, when closer communications have made the world so small, it is necessary for the creation of world-mindedness that we should understand the cultures we have hitherto treated not only as foreign to our ideas but also sometimes with hostility. Many an erroneous idea propagated by interested parties has tended to divide the world and to create division and hatred, where nothing but amity and co-operation should have existed. I will take one example: the issues raised by the Crusades and the conflicts between Muslim and Christian powers are no longer live issues. In the world of today, there is no strife between Christians and Muslims as such, but the misunderstandings continue to be as strong and potent as ever. If the peace of the world depends upon the mental attitude of peoples, is it not necessary that Unesco should try, without, of course, going into questions of religious dogma and beliefs, to bring about a better cultural understanding between the followers of all faiths? Such an endeavour will do more than merely create a friendly atmosphere, though that in itself would be no mean achievement. Cultures were created by the efforts of many a great mind, whose contributions should not be lost to the rest of the world, especially when science has brought humanity into such close proximity. More effort should be directed towards the translation of the classics of various countries and the interpretation of their cultural achievements, so that the entire world may be the beneficiary.

(8) Underdeveloped countries are finding it more and more difficult to meet the ever-growing demand for education. Countries like Pakistan which have fast-developing economies can look forward to a future when these demands will be fully met, but, during the period of transition, the shortage of material resources tends to hamper the expansion of educational facilities even to the barest minimum requirements. It would be a fruitful source of investigation to find out if the expenditure on education in economically poorer countries can be reduced without materially affecting its efficiency. This is a problem of the first importance to most of the Asiatic and African countries, and I suggest that it engage the attention of the experts of the world under Unesco's auspices.

(9) My country has taken the fullest advantage of such facilities as have been extended to us. With the help of Unesco we established a training and research centre for geophysics at Quetta. This centre, I am glad to report, has made such satisfactory progress that today we are able to receive trainees from other countries and give them excellent training. In the realm of fundamental education we have started to implement some of the recommendations made by a team of experts sent us by Unesco. Our Village Aid Programme is a major experiment in fundamental education and it has now been extended to the greater part of our country. In addition to personnel trained in Pakistan, a team of ten teachers is now in training at the Unesco Centre for Fundamental Education in Mexico. When it returns, more trainees will be sent. These persons will work at our own training centres. Another team has done excellent work in the suburbs of Karachi and is now extending its activities to the city itself. We have a large population of uprooted refugees, whose physical rehabilitation is to be followed by educational and social resuscitation. The extension of this programme to the refugees, who form a substantial proportion of the population, will be a great help in the arduous task of rehabilitation.

(10) The PRESIDENT (Translation from the Spanish): I call on the delegate of Ceylon.

(11) Mr. MENDIS (Ceylon): Mr. President, ladies and gentlemen, I should like to preface my remarks by

associating my delegation with the numerous tributes that have been paid to the Government of Uruguay for the arrangements made for our reception and for the hospitality that has been shown to us. The impressive ceremony at the opening of the General Conference and the warm welcome we received from the citizens of this town, in particular from the thousands of schoolchildren who were assembled on this occasion, have touched our hearts. Wherever we have been - in the streets, in shops and restaurants - we have met with the same cordiality.

(12) I should like, first of all, to congratulate the Director-General, both on the form and the content of his report. It has been extremely helpful to my Ministry - the Ministry of Education - in the study of the Proposed Programme and Budget for 1955-56 and in the briefing of the delegation from Ceylon.

(13) Any assessment of the work of Unesco, should, in my opinion, be viewed from two aspects. In the first place, it is very necessary, particularly at a time when the work of Unesco is expanding, when more and more new projects are being included in the programme, to see how far the aims and ideals of Unesco and its purposes and functions as laid down in the Preamble and in Article I of its Constitution are reflected in the actual execution of its programme. It is possible that after such an examination we may find that a complete reorientation of the programme, perhaps a greater emphasis on certain aspects of work and less emphasis on other aspects, will be necessary.

(14) In the second place, the work that has been achieved, as indicated in the Director-General's Report, can represent only a part of the activities of Unesco. The work done by the governments of Member States and the National Commissions is of equal importance, and, as the Chairman of the Executive Board rightly pointed out, there cannot be a true evaluation of the work of Unesco without considering the work done by and through the Member States. I propose therefore in my brief remarks to deal with the report from these two aspects, with special reference to my own country. Owing to limitations of time, I can only touch on some of the more important projects that are of special concern to Ceylon.

(15) The programme of education for living in a world community, with its emphasis on the promotion of teaching about the United Nations and human rights, and the improvement of curricula, textbooks and methods with a view to the development of international understanding, is undoubtedly of very great importance. Extremely useful documents have been published embodying the results of careful study by specialists or the findings of seminars. This work is certainly in full accord with the oft-quoted words in the Preamble of the Constitution that: "since wars begin in the minds of men, it is in the minds of men that the defences of peace must be constructed", and that consequently there should be "free exchange of ideas and knowledge", that we should "increase the means of communication" between the peoples of the world and "employ these means for the purposes of mutual understanding".

(16) If the influence of Unesco is to permeate the masses, the mere publication of texts in the three official languages of Unesco will not help us to achieve our aims and ideals - certainly so far as the peoples of Asia are concerned. This, I think, is a matter that has not been fully appreciated. Take my own country. Only some 20% of the pupils in schools have, in the past, received what one might call an English education, and in recent years the national languages, i.e. Sinhalese and Tamil, have been the media of instruction in all schools. From next year, all pupils up to and inclusive of the ninth year of schooling will receive their education through the medium of the national languages, with English as a compulsory second language from the fourth year. At the present time, 71% of the pupils of school age, viz. from five to fourteen, are at school. Our total enrolment is nearly one-and-a-half millions. But, and the fact is often forgotten, the vast majority of the pupils receive their education entirely through the medium of the national languages. I do not wish to be misunderstood. I am not for one moment suggesting that Unesco should publish its documents in the national languages of Ceylon. The reason why I referred to the need for the publication of at least a few of the documents of Unesco in the national languages is because there is already a project whereby the Director-General is authorized to arrange for the translation and adaptation into languages other than the official languages of Unesco, of reports and documents which the National Commission wishes to be published. The reference is on page 29, paragraph 4 of Chapter I - "Relations with Member States". The Report goes on to say: "The credits allotted to this resolution have not made it possible to meet all these requests which have reached the Secretariat".

(17) That is rather disappointing. Ceylon itself has been extremely modest in its requirements. The reference to our request will be found on page 57 of the Reports of Member States. We asked for the translation of two documents which we thought would be very useful to teachers of national language schools because of the important decision taken by Ceylon to include teaching about the United Nations in the curriculum of all our schools. I would therefore, on this occasion, strongly urge that more funds be provided for this project, and as early as possible.

(18) In the Reports of Member States, page 56, there is a reference to what we are attempting to do ourselves in the matter of teaching about the United Nations and the observance of Human Rights Week in all our schools.

(19) As you are aware, Ceylon is not yet a member of the United Nations. We have been kept out of this Organization for reasons we do not quite understand, but let me assure you that we are in full accord with the aims and ideals of the United Nations and, through our association with Unesco and other Specialized Agencies, we are, I submit, in all humility striving to do what we can to foster international understanding and friendship, and we feel that it is in our schools that education for living in a world community should begin. I should like at this point to supplement what appears in the Reports of Member States. There has been a further development of International Relations Clubs in Ceylon. We have started such clubs as an experiment in nine of our more important schools of collegiate status, mainly for the benefit of students in University Entrance Classes.

(20) I referred a little while ago to the fact that Ceylon has recently made English a compulsory second language in all our schools. We were therefore

naturally interested in the Seminar on the Teaching of Modern Languages and we are grateful that Unesco held this Seminar in Ceylon. An account of it appears on page 80 of the Director-General's Report. I should like to congratulate the Education Department of Unesco on the excellent planning of this Seminar and the valuable working papers that were prepared. I should also like to pay a tribute to Professor Andersson of Yale University, who was the Director of the Seminar, and to Mr. Felix Walter of the Unesco Secretariat. This Seminar pin-pointed specific language problems of the Asian Member States and the need for follow-up work. We therefore welcome the provision made in the programme for 1955-56 for the establishment of an information and research centre in Asia. I submit that it is in the interests of Unesco itself to encourage development in the teaching of a modern language such as English or French in Asian countries; it means that in years to come there will be far less need for translation of documents into languages other than the official languages of Unesco.

(21) Another important Unesco seminar to which I should like to refer was the one on the teaching of social sciences held in New Delhi early this year. A reference to this seminar will be found in the Supplementary Report of the Director-General. Its findings will be of great value to Ceylon at a time when we are engaged in the revision of our curricula and syllabuses. A Committee has been recently appointed by the Minister of Education to investigate the curricula of schools both at primary and secondary level. We are also glad to find that provision has been made in the draft programme and budget for the establishment of an International Advisory Committee on school curricula. The findings of our National Committee, which is expected to complete its task in the course of next year, would, we trust, be of some value to the International Advisory Committee.

(22) I should like to invite the attention of the Conference to the cultural activities referred to in the Ceylon Report on pages 56 and 57 of the Reports of Member States. Two noteworthy activities undertaken by the National Commission are: the annual and island-wide competition in folk songs and dances for schools and the International Exhibition of Child Art, at which we had exhibits from seven countries. We have also sent a number of exhibits of child art to other Member States such as Australia, Italy, Japan and the United States of America. We would greatly welcome exhibits of child art from other countries so that an International Section might form a regular feature of the Annual Exhibitions of Child Art in Ceylon.

(23) My comments on the Director-General's Report will not be complete without a reference to the fundamental education project at Minneriya, which will be taken over by the Government of Ceylon in the course of next year. I should like to record our appreciation of the good work done by Dr. Hatch and his team of experts. There is not the least doubt that this centre will play a very important part in the rural development of Ceylon. The adult education centres will serve as models to the numerous centres of a similar nature that have been started by the Education Department, and also to the Community Centres organized by the Local Government Department.

(24) There is a reference in the Report to the delay in the appointment of Sinhalese officers to the centre. This delay is no doubt unfortunate, but unavoidable. It was found necessary that, for a project which would ultimately concern several Ministries and Government Departments, the machinery for ensuring close liaison and co-ordination between the centre as such and the various Departments of Education, Health, Agriculture and so on should first be established, and this matter had naturally to be considered at Cabinet level. A co-ordinating committee consisting of Permanent Secretaries has been formed, and is now functioning. The actual project will be under the general control of the Director of Rural Development. The necessary staff has been appointed with the exception of the officer in charge of the project, who will rank as an Assistant Director in the Department of Rural Development. It is expected that this appointment too will be made before the year is out. Furthermore, my Government is anxious that the correct type of officer shall be appointed, and this factor too has contributed to the delay.

(25) Now that Unesco's participation in the project is coming to a close, I should like to make two comments, not in a spirit of criticism but rather as observations which should be valuable to the Technical Assistance Department of Unesco when similar projects are started in other countries. It is essential that, when experts or specialists are sent on projects of this nature, they shall know the language of the people with whom they have to work. The method of working with the aid of interpreters, in undeveloped rural areas, is not always very satisfactory, particularly when one has first to win the confidence of the people with whom one has to work. This lesson has, I think, been brought out very clearly in the experiment in Ceylon. The only officer who was able to secure quick results was the one who succeeded in acquiring a good knowledge of Sinhalese within eleven months of his arrival in Ceylon, a highly creditable achievement. It may be that, in future projects, the field work will have to be done through nationals of the country who have first received a course of training.

(26) The second point I wish to stress is that experts and specialists must make useful contacts with officers in the national governments, particularly with those who are engaged in similar work. Such contacts and exchanges of views between experts and specialists can be of benefit to both parties and would certainly secure a larger measure of co-operation and assistance in the work of the project itself.

(27) I have attempted, within the short time at my disposal, to deal with some of the main features in the Report. There are many problems, particularly in regard to the development of the work of our National Commission, which need closer investigation, and therefore, in conclusion, I should like to express the hope that the Director-General may find it possible to pay a visit to Ceylon in the very near future.

(28) The PRESIDENT (Translation from the Spanish): I call on the delegate of the Byelorussian Soviet Socialist Republic.

(29) Mr. UMREIKO (Byelorussian Soviet Socialist Republic) (Translation from the Russian): Mr. President, gentlemen, allow me first of all, on behalf of my

country's delegation, to thank the Government of Uruguay for its hospitality, and for affording us all the opportunity of assembling in this beautiful city to discuss and settle problems connected with the development of international co-operation in the realm of education, science and culture.

(30) The aim of the Byelorussian Soviet Socialist Republic in joining Unesco was to contribute in every possible way to the fulfilment of the noble aims of this Organization, as proclaimed in Article I, 1 of the Constitution.

(31) We believe that Unesco's work in strengthening international co-operation in the realm of education, science and culture will be more effective if all States, regardless of their social structure, adhere to lofty principles and strive for the adoption of concerted decisions designed to consolidate peace, develop international relations, strengthen friendship and mutual understanding and carry out practical measures for improving the situation in the three fields.

(32) The delegation of the Byelorussian Soviet Socialist Republic believes that all Unesco's practical activities should contribute towards the solution of problems affecting the vital interests of all States - such as questions of international security, of improving economic conditions, of developing culture and education. This aim can be achieved if the basic material resources of all States are devoted not to the production of armaments and the forging of military blocs, but to education, science and culture. Unesco's activities in this field will help to relax international tension and strengthen peace and friendship between the peoples and will create in all States favourable conditions for carrying out an extensive programme of educational, scientific and cultural development. Of course, these vital tasks can only be successfully achieved provided all countries intensify their co-operation with Unesco. In this connexion it is essential to the success of Unesco's work that the People's Republic of China, that great peace-loving power with a rich, centuries-old culture, should participate in that work.

(33) It must be pointed out also that the adoption of such unjust decisions as the decision to postpone consideration of the question of admitting Rumania and Bulgaria to membership of Unesco is prejudicial to the Organization's prestige.

(34) The Director-General, in his Report, has rightly stressed the importance of Unesco's relations with other international organizations, and of associating them with Unesco's work. Nevertheless, we should like to draw attention to the fact that Unesco should not disregard but should associate in its work and extend and strengthen her ties with certain truly democratic international organizations which are working for the defence of peace and for educational progress.

(35) As regards the practical aspect of Unesco's work, the delegation of the Byelorussian Soviet Socialist Republic considers that Unesco should pay attention to the question of giving assistance to economically underdeveloped countries, which are experiencing great difficulties. In extending such assistance, it is essential to adhere strictly to the principle that economic aid to underdeveloped countries should never be made dependent on a demand for privileges for the countries and organizations granting such assistance.

(36) Unesco must, in expending its budget funds, strive to reduce administrative expenditure to the minimum and so increase the sums available for direct expenditure on progress in the fields of education, science and culture.

(37) The delegation of the Byelorussian Soviet Socialist Republic considers that attention should also be drawn to the need for more purposeful and concentrated utilization of funds for the direct fulfilment of first priority needs, such as the elimination of illiteracy by organizing teaching in the vernacular, the development of national cultures, and the exchange of experience, steps being taken to spread a knowledge of the favourable results achieved in those countries which have already made marked progress in this domain.

(38) I would like to dwell for a moment on the progress achieved by the people of my Republic in the matter of education and culture. A comparatively short time ago, some forty years or so, our country was culturally backward; education was the prerogative of the wealthy; 80% of the population were illiterate, and there was not a single higher educational institution throughout the whole of Byelorussia. Today Byelorussia has changed, culturally speaking, out of all recognition. To give an idea of the extent of our country's cultural progress, it is enough to mention that there are operating in Byelorussia, in the 1954-55 educational year, 11,600 ordinary schools, including 1,350 secondary schools, and that the total number of pupils attending these schools alone is over 1,300,000, whereas, before the October Revolution of 1917, there were only 250,000 pupils attending all the schools in the Republic. We have had to expend a considerable amount of money and effort on rebuilding our network of schools and educational establishments, a large proportion of which were destroyed by the Hitlerite invaders during the second world war.

(39) We are at present carrying through a programme of transition from universal seven-year primary schooling to universal secondary schooling in regional centres and large industrial towns; and we are laying the foundations for completing the transition during the next five-year plan to universal secondary schooling in all districts as well. In the Republic as a whole, 85% of young people, after completing the seven-year school course, go on to study at ordinary secondary and technical secondary schools. For the benefit of young people who were prevented by the war from completing a seven-year or secondary school course, 1,266 evening seven-year and secondary schools have been set up.

(40) The Byelorussian Soviet Socialist Republic has a broad network of scientific research establishments. The centre of activity is the Byelorussian Academy of Science. There are at present in operation in the Republic 27 higher educational establishments, including the University, 9 scientific research institutes, and a whole series of experimental and selection stations and other research establishments.

(41) Byelorussian scientists are concentrating on studying and exploiting the country's natural resources and expanding productivity with a view to continuing to improve the economic situation of the Byelrussian Soviet Socialist Republic and satisfying more fully the ever-growing material and cultural needs of our people. Byelorussian scientists have also achieved

significant progress in the social sciences. 1954, for example, saw the publication of the standard work "The History of the Byelorussian Soviet Socialist Republic", the outcome of years of painstaking preparation on the part of Byelorussian historians.
(42) There have also been great successes in Byelorussian literature. The works of Byelorussian writers and poets such as Yanka Kupala, Yakub Kolas, Krapiva, Kuleshov, etc. have received wide recognition not only in Byelorussia and the other Republics of the Soviet Union but in foreign countries as well. At the same time, a whole series of outstanding works by writers both of the other Republics of the Soviet Union and of foreign countries have been translated into the Byelorussian language. The work of Cervantes, Molière, Schiller, Shakespeare, Byron, Mark Twain, Maupassant etc. are being studied in the schools. Our literary scholars have carried out research into the history of Byelorussian literature. The publishing of books is developing successfully. In 1953 alone the Byelorussian State Publishing House published 639 different books totalling 17 million copies in all, or more than 80 times the number of books published in 1913.
(43) The culture of the Byelorussian people is rich and diverse. Opera and ballet with a repertory including Russian and world classics as well as Byelorussian operas and ballets, enjoy great popularity in the Republic. There are also a large number of playhouses, a State philharmonic society, a music-hall, several choirs and dance troupes and a wide network of amateur entertainment companies. For the training of professionals there is a college of dramatic art, a musical academy, and a number of other colleges and schools. The Republic is working actively on expanding the network of public libraries, museums and clubs. We now have 7,552 public libraries, containing a total of over 12 million volumes and about 4,500 cultural-educational establishments.
(44) The entire cultural-educational system in our Republic, as well as all the teaching and scientific establishments, propagate peace and friendship between peoples. These ideas correspond to the vital interests of our people, who bore the brunt of the recent war and made an important contribution to the destruction of the Hitlerite invaders.
(45) The year 1954 has been marked by the extension of international cultural ties. There is no doubt that the extension of cultural ties between the peoples contributes to mutual understanding and the strengthening of peaceful neighbourly relations between the nations of the world.
(46) We hope that our joint efforts at this Conference will lead to the consolidation and development of cultural ties and will constitute an important contribution to the struggle of the peoples to reduce international tension and consolidate peace throughout the world.

(47) The PRESIDENT (Translation from the Spanish): I call on the delegate of Canada.

(48) Mr. PIERCE (Canada) (Translation from the French): Mr. President, ladies and gentlemen, no better site could have been chosen for our Conference than the splendid city of Montevideo. The Canadian Government, which I have the honour to represent, wishes to express its heartiest thanks to the Government of Uruguay for its kind hospitality. We are all keenly appreciative of the innumerable kindnesses and delicate attentions shown us. In this great city of Montevideo, we have everything we need - a warm-hearted and generous people who are living exemplars of a magnificent spirit of co-operation, sunshine and a healthy climate which are a helpful stimulus to our deliberations. Nor is inspiration lacking, and that is an essential element for our task of directing the powerful forces of education, science and culture towards true international understanding.
(49) Mr. President, I have opened my address in French in recognition of the fact that Canada's two official languages and two cultures - French and English - are part of the essence of our country and our national heritage. Allow me now to continue my remarks in English.
(50) During the two years since the last Unesco General Conference the international climate has improved considerably. Some of the storms have subsided and the clouds on the horizon are not quite so dark or foreboding. There has been a lessening of the suspicions that contribute to world tension. We have removed or surmounted a few of the barriers to the dissemination of culture and knowledge conducive to better understanding and mutual respect.
(51) It is a better climate than we have known for years for the fruitful pursuit of our principles. New members and associate members have swollen our ranks and, if all of us, old and new, discharge the duty laid upon us by the Constitution in the spirit required of us by the Constitution, we shall be stronger in achievement as well as in numbers.
(52) This Conference has another special feature: we are holding it when Unesco is eight years old. Eight years is a sufficiently long period in the history of an international organization in which to build up a measure of experience which can serve as some guide to the future. From here, from a review of our past activities, we can envisage the form if not the features of our future. We can now say with better justification than ever before that it is promising; and we have it in our hands, to an extent never before possible, to shape our destiny. This is perhaps the first Unesco Conference at which we can call upon the facts of our past to give substance to the visions of our future.
(53) It is well that the climate is better and that we have experience to draw on and new additions to our strength, because in the next few weeks we shall have to decide upon the fundamental structure of Unesco. We approach our task with the help of the Director, members of the Executive Board and of the Secretariat, who have recognized and analysed our most serious problems and have laid down the lines for their solution.
(54) They will excuse me, I hope, if I say that we were disappointed in a matter of presentation. The inclusion of many urgent and important activities - notably technical aid to the underdeveloped countries - in the "higher budgetary level" created an unfortunate impression that, unless the budget were increased, the programme could not be remodelled and we could not concentrate on tasks of major importance. Happily, we have been assured that such an impression is inaccurate.
(55) After that aside, I emphasize that our delegation thinks the work of the Director-General, the Board and

the Secretariat was, on the whole, soundly based and ably executed. We appreciate in particular their help in indicating solutions to our problems that will allow us not only to achieve our aims but which hold promise of new usefulness for Unesco in the service of mankind.

(56) The most critical of these problems is, we believe, the remodelling of the programme. We hope that from the report before us will emerge a resolution which will incorporate the main proposals of the report and, better, that it will restate them in even stronger and more positive terms.

(57) We consider it essential that the programme be remodelled in such a way as to ensure that we devote our resources intensively to the most pressing international problems and to the most urgent needs of underdeveloped countries. That will require us to answer not only the question: What problems are the most pressing and what needs the most urgent? but also this: What projects can we abandon if there is not room enough for all of them?

(58) And when we succeed, as I am sure we shall, in charting our course, it would be wise for us to lay down at least some general lines of guidance to those who will have to hold Unesco to its new course. We must hope that the guidance would urge the inclusion, whenever possible, of time-tables for stages of execution; the adoption of procedures for appraising projects, for their selection, and for their evaluation. In appraisal and evaluation, we think it would be of great value to strive for an objective viewpoint, to strive to bring to bear a judgment not necessarily independent of the Organization but independent of sponsor and executor.

(59) We would hope, too, that we could provide the Director-General and the Secretariat between conferences with the best available financial guidance and advice on programme activities. Such help could best come, we believe, from representatives who are not only competent in their own fields but who are responsible to their governments.

(60) Somewhere along this road we may, if we follow it, come to a point where we need no longer plead for the support and confidence of governments and peoples. We shall have earned them. I am optimistic enough to expect, too, that a time may come when we need not plead for bigger budgets - at least not as persistently and as plaintively. I think we can hasten that day if we rely less on promises or forecasts of what we could do if we had more money, and if we rely more on the record of what we have done with the resources and responsibilities entrusted to us.

(61) The expansion of Unesco can and should be the consequence of effective achievement. We had this heartening experience in Canada: we found that, if an international organization demonstrates that it can do effective work, the public demands that it receive the support it needs. Last year, Canada nearly doubled her contribution to the United Nations Expanded Programme of Technical Assistance; and it did so in direct response to public sympathy and public support. Unesco, too, will advance best and fastest not on prophecy but on performance.

(62) We have one month in which to determine the course Unesco is to follow during the next two years. Our delegation feels that we at this Conference have an opportunity, if we make good use of the experience of the past eight years and of the help offered us by those devoted to the Organization and dedicated to the cause, to strengthen Unesco beyond effective challenge and enable it to contribute fully to the welfare of man.

(63) The PRESIDENT (Translation from the Spanish): I call on the delegate of Switzerland.

(64) Mr. BOURGEOIS (Switzerland) (Translation from the French): Mr. President, ladies and gentlemen, on behalf of the Swiss delegation I have some remarks to make about the Director-General's Report and his programme for 1955-56. May I say first of all that the presentation of these documents strikes me as well conceived. The general introduction and the individual introductions to the chapters devoted to each department provide us this year with a general perspective which was sometimes lacking in earlier reports; and the budget estimates are clear and well arranged.

(65) The main improvement, however, is a satisfactory staggering of all work. This is the first time, since we adopted the two-year work period, that it has been possible really to design and present the programme on that basis. The present document is not simply two annual programmes strung together: while retaining the valuable heritage of the past, it opens up new short- and long-term prospects.

(66) Last, but not least, on the initiative of the Executive Board, the Director-General is putting before the Conference, concurrently with his Report and programme, the principles which he suggests should be followed in the planning of future programmes: I refer to document PRG/13, which introduces a logical and constructive distinction between general and continuing activities on the one hand and special activities on the other. If I may be permitted a metaphor borrowed from motoring, while so far we have been driving with sidelights we are now switching on powerful fog-piercing headlights, lighting up the road well beyond the stretch immediately ahead, right up to the distant bends of the hill we have to climb.

(67) These well-assorted documents are a happy and significant indication of the close co-operation between the Director-General and the Executive Board under the "sound constitution" the latter has so far enjoyed and, we hope, will continue to enjoy in future.

(68) The Swiss delegation considers that the true solution lies, not in compromise, but in balance: the great permanent general services started by Unesco - from which we are gathering or are about to gather the first harvest - must be maintained as our Constitution requires. But at the same time we must continue to be ready, alertly and realistically, to apply our Organization's efforts at the new points and unforeseen stages where they may be needed.

(69) To put it another way, simultaneously with serving the values of a civilization which is our glory, the programme must leave room for remedying evils which are the all too grave and frequent "accidents", the scourge and, on occasion, the shame of our age.

(70) The so-called "developed" countries must consider what they, too, need in the way of education and the wider spreading of knowledge, in spite or because of the qualities we readily concede them, in spite or because of their privileges or their luck. And I mean education in its most advanced and modern forms, for instance, education for living in a world community;

it must begin in the schools, be carried on in the universities and flourish for and with the help of the whole adult population.

(71) Without anticipating the discussions of the Programme Commission, the Swiss delegation thinks that they will be less restricted and more fruitful if what is called the higher budgetary level is accepted as the ideal target from the beginning.

(72) Among the reasons why the programme we are considering must commend itself to us are certain new projects of which the importance and immediacy have been recognized in good time. I will give only one example, leaving it to my delegation to deal with other problems at the appropriate juncture. The example I have in mind is this: the Director-General, on the initiative of the Executive Board, is proposing to seek the best means of co-ordinating and promoting the research being undertaken by scientists throughout the world in order to combat the scourge of cancer. Some projects launched by Unesco - for instance the European Centre for Nuclear Research - have been realized in a remarkably short time. But these projects were limited in scope. Here, however, is a project - dealing with cancer - of concern to the whole world, to every people, to leaders and masses alike, to developed and underdeveloped countries, whatever the hemisphere in which they lie and whatever the ideology they profess; and this project would not have the fullest chances of success on any narrower basis than that which our Organization provides.

(73) May I also draw your attention to the wise way in which this project is presented: if we agree that scientific research in general is within Unesco's terms of reference, and that the practical application of such research is the province of other Specialized Agencies, we see and applaud in this Unesco project the determination to co-operate, from the earliest stage of the research, with the World Health Organization. All countries rightly concerned for the development of closer co-operation between world organizations of experts will rejoice with us and - my delegation hopes - will support an enterprise of such great humanitarian significance, which will show the peoples of the world that the will to co-operate is not an empty phrase.

(74) This programme must also commend itself to us inasmuch as it proves that the Director-General has borne in mind certain lessons of the past. Here again I will confine myself to stressing one point, among many, by way of example. The Director-General has grasped that "mass communication" is a complex concept and that it should be made up of two related but distinct parts.

(75) It means, firstly, developing all the media available to men, States, institutions and associations for the exchange of information and news among themselves. That is mass communication as a programme auxiliary.

(76) Secondly, on pain of having its noblest intentions and finest endeavours overlooked, misjudged and stultified - as happens all too often - our Organization, backed by governments and National Commissions, must make its aims, methods, plans and hopes - and of course the successes it has already achieved - better known throughout the world. That is mass communication in the other sense; the sense of intelligent propaganda.

(77) My delegation is glad to acknowledge the considerable services rendered by the Secretariat, which, if I may be pardoned another motoring metaphor, is always getting better run in. Among other things, we are pleased with a recent promotion giving formal recognition to the work of a high official of Unesco as an authority on the co-ordination of programme activities. This step will undoubtedly help the Director-General to carry out his policy of making personal contacts, which are as necessary in the Secretariat at the Paris headquarters as in the Member States to which he has paid and will continue to pay his much appreciated visits.

(78) In conclusion, the Swiss delegation would ask the Director-General and the Secretariat to find the best way of informing Member States more systematically about the implementation of certain measures. Cases in point are the great international conventions, such as that on the free flow of cultural materials, now signed and ratified by a number of governments and parliaments. If there are any shortcomings in the implementation of these agreements, if there is any delay, let us be told: let us be given the reasons and shown how the situation can be remedied. I wonder if there are many Member States whose consciences are absolutely clear in this respect, who have nothing with which to reproach their governments. Which of us would dare to make that claim? Let the Director-General have no fear of telling us what he knows and what he feels. We are not asking him to accuse anyone, but simply to give us advice which we feel sure will be constructive and tactful.

(79) Mr. President, ladies and gentlemen, I have given you a few of the considerations and ideas to which the Swiss delegation attaches importance. Before leaving this rostrum I should like to pay tribute, first and foremost to the Government and people of Uruguay whose welcome has been a happy augury. A mass demonstration such as we saw last Friday, at once planned and spontaneous, the masterly expression of a lofty culture, enabled us to sense the heartbeat of a people, a people with faith in Unesco. We shall never forget it. Next, I should like to pay tribute to the nobly inspired utterance of Dr. Sarvepalli Radhakrishnan in his presidential address and of the charges he laid upon us. We of the Swiss delegation find in his words a source of strength and confidence in our present and future labours. Those labours will be the more fruitful in that we have here an unmatched opportunity to tackle them together, as part of an enlarged team and in a world spirit which must remain free from any tincture of politics.

(80) The PRESIDENT (Translation from the Spanish): I call on the delegate of Australia.

(81) Mr. PRATT (Australia): Mr. President, ladies and gentlemen, I should like, on behalf of the Australian Government, and of my colleagues who represent that Government at this Conference, to express to the Director-General and his colleagues our appreciation of his Report on the activities of the Organization. The Report is a comprehensive one, and reflects the very wide range of activities stimulated and brought about by the existence of Unesco. The Director-General touches also on a number of problems vital to the future of Unesco, as well as on potential fields for future action.

(82) Our view is that Unesco will make a significant contribution to the promotion of peace and international co-operation by doing a limited number of really important things and doing them well. It is generally agreed that the programme of the United Nations and the individual programmes of the Specialized Agencies should be stabilized. By this my delegation understands that it is not reasonable to expect the Director-General and his staff to cope with more than a given volume of work in a year or in two years. This is not merely a matter of money. It is a matter, also, of other resources, of planning, of organization and of the availability of men and women. I do not think this point of view is inconsistent with the notion of decentralization which the Director-General referred to very briefly on Saturday afternoon last.

(83) So our programme should be limited. We should try to do the most important things, and to do them well. To our tests of importance must be added tests of practicability and of appropriateness. Let us profit from experience in applying these tests. After more than eight years of operation we have found that some things, though undoubtedly important, are not at present practicable for an Organization such as ours. Some years ago a session of the General Conference adopted a programme including a project of very great importance - the development of the Hylean Amazon. Little progress was made. The project, in the form adopted, was important, but it was not practicable. It may not have been appropriate. With this experience behind us our approach to another important problem - that of the arid zones - has been different. But we must always watch, with a project such as the arid zone one, that its development by Unesco is appropriate to Unesco's interest; that, for example, we do not attempt developments which are really matters for the World Health Organization or for the Food and Agriculture Organization.

(84) Importance, practicability and appropriateness. Each one of these limits the range of acceptable projects. Let us consider practicability. To be successfully developed a project must, in our opinion, not only have the support of the General Conference and the hard work of the Director-General and his staff, but also the active co-operation of those Member States that will be most closely concerned. We appreciate the work of the Director-General and his staff as reflected in his Report, and we appreciate their efforts to carry out whatever programme is approved by the Conference. But we realize that on occasions, although the Director-General and his colleagues do all they can to launch and foster a project, there may be little support for it from Member States. In our opinion, the Director-General, after consultation with the Executive Board, should be encouraged to abandon such projects. We believe that the only successful Unesco projects are those which influence, and change in a favourable way, conditions in Member States.

(85) We go further: we believe that the really important activities for Unesco are not only those which influence Member States, but those which will secure active co-operation in Member States. This oversimplifies the matter and I do not overlook the importance of international non-governmental organizations and of the many devoted and distinguished persons who have contributed to Unesco's programme.

(86) Nor for one moment do I wish to detract from the key position which the Director-General and his staff occupy. All I would do is to urge that this General Conference encourage the Director-General and his colleagues so to act that they will, by their organization and planning and by their approach to the items in the programme, use these items to evoke in Member States action which will achieve Unesco's objects.

(87) I said at the beginning that it has been generally agreed that the programme of the United Nations and of the Specialized Agencies should be stabilized. This does not mean that we believe Unesco's programme should be frozen. Far from it. But in our view Unesco's programme is not what the Secretariat does - that is only a part of it. The important part is what is done in and by Member States. And by Member States I mean governments. If Unesco is to lead to developments in education, science and culture, developments which will promote peace and international understanding and will enhance for men and women the quality and joy of living, then this will not be done by a few people in Paris, nor yet by international or national non-governmental organizations, important though they be. Let us take the field of education. In this, the Director-General has a staff of about a hundred in addition to another hundred technical assistant experts - altogether about the staff of two large teachers colleges in Australia. The Director-General's educational staff can only be effective if they can influence the government authorities (national, provincial or local) who determine educational policies and carry those policies out. This is a slow and strenuous business. It is a job that needs the support of teachers organizations - national and international - and of universities and of interested groups of parents and citizens. But let us make no mistake: Unesco's work has hardly started when we adopt a programme. It only starts when that programme is accepted by Member States and begins to influence educational policy and practices. Real progress comes when it affects pupils!

(88) It is of great interest to us that the Director-General and the Executive Board have, during the past year, devoted special attention to the reorganization of Unesco's programme. The Australian Government believes that the programme should be re-examined. We believe that too much has been said about what Unesco is doing and that relatively too little has been done. We believe that too little has been done because too much has been attempted and limited resources have been overstrained. We hope, therefore, that this General Conference will encourage the Director-General and the Executive Board to continue to concentrate the programme of the Organization so that we shall attempt fewer things, and only things that we can do well and that are best worth doing. We hope that the Director-General and his staff will carefully review their permanent services, not only in preparation for a conference, but week by week during the year. We hope they will be prepared to say to some requests that these are beyond their resources.

(89) Finally, to return to the most difficult problem of all, I mentioned in my opening words that it is easy for any delegation to list items for a Unesco programme. What is difficult for us is to agree on a few items which are important, practicable and appropriate. Yet this is what we must do if Unesco is to succeed. Look

around our meeting, and see our differences - of physique, of colour, of customs, of languages, of ideas. But let us look again, not at the differences, but at the common features. These are far greater than our differences. For we are all men, sharing for a time life on this planet, enjoying literature, music and the pursuit of intellectual life in the company of our fellows. Surely as men we can agree on a programme which will let us together do a few things well and in doing them show that Unesco does mean international co-operation and does promote peace.

(90) This session has started well. Our host country has provided excellent facilities. Our Director-General has provided a clear Report and first-class working documents. Ours is the responsibility to see that this Conference leads to sound decisions and effective action.

(91) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Indonesia.

(92) Mr. SUDJONO (Indonesia): Mr. President and fellow delegates, first of all, on behalf of my delegation and in the name of the Government of Indonesia, I should like to express our gratitude to the Government of Uruguay for extending to all of us warm hospitality and a cordial welcome to their great country and to this beautiful city of Montevideo. Coming from a distant part of another continent, the Indonesian delegation feels especially pleased and privileged to be in a country which can feel rightly proud of its culture and of its civilized way of life.

93) The Government and people of Indonesia have always had the highest regard for the principles of peace, freedom and mutual understanding, for which Unesco stands. Indeed, we regard Unesco as the most vital and basic organization for building up all systems and habits of co-operation between nations. In the things of the mind and spirit we can all share in abundance, and in the field of education, science and culture there should be no prejudices to divide man from man. For this reason we welcome new Member States to this family of nations; the more universal the membership of Unesco, the greater are the chances of lessening tensions and for the growth of tolerance and goodwill in the world of today. We fervently hope that our deliberations will not be marred by political dissensions and by all the ill will and ugliness which such conflicts breed.

(94) The Indonesian delegation is pleased with the achievements of Unesco as described in the Report of the Director-General. After eight years, Unesco has erected an impressive structure of international co-operation, upon which greater achievements can be built quickly and confidently. The Government of Indonesia is grateful to Unesco for valuable assistance received in the fields of primary education, library development, science teaching, audio-visual aids and textbook production. During the coming years we hope to receive its assistance in various fields, among which the most important are the teaching of natural and social sciences at university level, the establishment of a Terminological Bureau, preservation of cultural property, development of museums, education through arts and crafts, and the award of fellowships and scholarships. In the field of technical assistance, we should like to receive experts for longer terms than is the practice at present; unless an expert has at least two years in a specific job, his usefulness is limited, and there is a certain amount of waste.

(95) There is another question to which I refer somewhat reluctantly. This is the better geographical distribution of posts in the Secretaria.. It is a pity that, with its population of eighty millions and its rich and unique cultural heritage, Indonesia has never been represented on the professional staff of Unesco. Such representation is essential, not so much for the sake of Indonesia, which can ill spare its qualified personnel, but for the sake of Unesco, which should have a Secretariat fully representative of the main geographical and cultural areas of the world. In the case of Asian and African candidates, who have no roots in European culture, the language qualification for recruitment should be relaxed. Europeans and North Americans, especially those whose mother tongue is English or French, have a special advantage over the others, especially over Asians or Africans, who have to learn their own languages and among whom there are very few possessing a knowledge of the working languages of Unesco. We feel that the work of the Secretariat could be so organized as to utilize the services of persons who have a first-hand knowledge of educational and cultural conditions in a particular region, without necessarily possessing the highest linguistic qualifications. I hope that the Director-General will consider my suggestion, even if it implies a slight increase of staff. Unesco service rightly demands the highest standards of efficiency, but efficiency does not mean linguistic proficiency alone, or conformity to the administrative methods or standards of the West; more important than these factors are first-hand knowledge of an important culture, personal integrity, complete freedom from prejudice or partiality, and a burning faith in internationalism.

(96) The Indonesian delegation will comment on the draft programme and budget for 1955-56 when this document is examined by the appropriate bodies. At present, I only wish to congratulate the Director-General and the Executive Board on having prepared an excellent programme, which is a very great improvement on the past. The increased provision of assistance to Member States, especially in the field of culture, which was sadly neglected by the United Nations Programme of Technical Assistance, is most commendable. Member States in the economically less developed countries require assistance in establishing and developing libraries and museums, preserving and protecting cultural property, improving education through the arts and the crafts, and producing cultural material like books, art reproductions and films. The dissemination of culture is, indeed, as important as formal education in school, and we hope that Unesco will increase its programme in this field, which is also the best way of increasing international understanding.

(97) My delegation is especially pleased with the project for the production of reading material for new literates and for the study of traditional culture in communities of South East Asia undergoing rapid technological changes; both these projects are of the greatest significance to Indonesia, indeed to all Asian and African countries. Larger resources are needed for these and other items of the programme, if even a

fraction of the needs is to be met. If the seventy-two Member States of Unesco have a strong enough faith in the ideals of peace and the brotherhood of man, these needs can surely be satisfied by diverting sterile and wasteful expenditure on armaments to constructive tasks in the service of humanity.

(98) Unesco can contribute immensely to the improvement of international understanding by an effective programme of cultural understanding, and especially by making the East and the West better known to each other. We must also find a place for the spread of moral and spiritual values, of tolerance, goodwill and humanism through the programme of Unesco. In our obsession with material comfort through science and technology, we must not forget the education of the heart - the inculcation of a belief in the Supreme Being - which is the true culture of the individual and of society - and which is also the highest aim of Unesco.

(99) The PRESIDENT (Translation from the Spanish): I call on the delegate of Egypt.

(100) Mr. AWAD (Egypt): Mr. President and fellow delegates, although this discussion is concerned with the Report of the Director-General of Unesco, it is not inappropriate that I should begin by expressing my gratitude at this, my second visit to the South American continent. My first was in 1936. My mission at that time was a Unesco-like assignment; I was representing Egypt at a congress of PEN Clubs, at Buenos Aires. I travelled then by steamer. This time I travelled by air, for some 42 hours, to enjoy again the hospitality of the great "República Oriental del Uruguay", the great welfare State, which in many respects reflects our conception of a true modern democracy. I have the pleasure and the honour to bring to this great and young democracy the greetings and the most cordial wishes of the ancient, though perhaps still quite young people of Egypt.

(101) The people of Egypt as well as those of all Arabic-speaking countries feel a strong affinity with the peoples of the Iberian peninsula and of Latin America, and we feel a certain amount of pride in their great achievements, and to wish them continuing success, not only in their national undertakings but also in their international activities; for it is gratifying to see the young democracies of the Western Hemisphere playing a leading rôle in international relations, and helping to demonstrate the essential unity of mankind. The Atlantic is fast becoming a narrow ditch. Soon the Pacific will go the same way.

(102) I must now turn to the Report of our Director-General. It is a good document, consisting of two parts, both full of clear and lucid information. I do not intend in this brief commentary to criticize or even to refer to any individual project except by way of illustration. My desire is simply to make a few observations of a general nature, concerning the major aspects of Unesco's work.

(103) My first remark concerns the multiplicity of our activities. The sole object of Unesco is to work for peace among the nations through collaboration and mutual assistance in the fields of education, science and culture. It may safely be said that all aspects of cultural co-operation are bound in some measure to promote peace. Some activities, however, are more directly concerned with the promotion of peace than others. In our enthusiasm for some pet project, we are liable to forget this important criterion. The problem of peace is the greatest problem the world is facing and Unesco should be one of the most effective instruments for tackling it. The point cannot be overemphasized, and I feel sure that it will always be borne in mind by our Executive Board in guiding and planning our activities.

(104) Unesco is said in some quarters to be trying to carry out projects which fall within the domain of other organizations or Specialized Agencies of the United Nations. It might, of course, be the other way round: other organizations may be engaging in what are legitimate Unesco activities. If such is the case, Unesco might well allow this task to rest on the shoulders of some sister organization. I am sure that our Executive Board will see to it that we do not tread upon the tender feet of other agencies, and we shall always wish them every success in their endeavours.

(105) I wish also to refer to an aspect of our programme which I should like to see maintained. It seems that there is a tendency at this stage to confer upon the programme of Unesco a certain fixity or rigidity. I can well imagine this to be possible or even desirable in some other organizations. But Unesco is concerned with the "Mind of Man", whose broad horizon and wide scope are not compatible with limitations or restrictions, especially at the present stage, when Unesco is still very young and in process of development. It is quite possible that mistakes will be made. But no blame can be attached to Unesco on their account, for only those who do nothing at all can avoid mistakes.

(106) The Egyptian delegation feels that much has to be done to make the world Unesco-conscious. This applies not only to all countries, but also to the different sections of the population of each country. The need, we feel, is equally great in the advanced and in the underdeveloped countries. The technique to be employed in making the world more Unesco-conscious will probably differ in different countries. For certain advanced countries films and publications may prove effective. In my own country nothing has proved so effective in educating the general public concerning Unesco as the establishment of the Arab States Fundamental Education Centre. This centre, which began to function about two years ago, is the ideal Unesco project from many points of view. Its cost to Unesco is not large, it brings Unesco into direct and intimate contact with the people. The host country bears a large share of the expense. The project serves a group of countries with identical cultural backgrounds. Its programme of work represents an attempt to meet all the conditions of fundamental education as set out on pages 41 and 42 of the Director-General's Report. I had the good fortune when I was Minister of Education to preside at the first graduation ceremony towards the end of August, and to hand their diplomas to the first group of young men and women graduates from the different Arab countries. I also paid visits, after the ceremony, to two of the villages where the students were doing their practical work, or rather where they were inducing the villagers to do the work themselves. This work covered such a wide range of activities as sanitation, agriculture, domestic economy, health, as well as the usual literacy campaign. The centre continues to develop and to progress, and its new dormitory for 150 persons will permit other

parts of the older building to be used for other activities. We were fortunate in having the new building inaugurated last September by our Director-General himself, who managed to pay a flying visit for the purpose in spite of the pressure of work at headquarters and elsewhere. We cannot thank him enough for this visit, though it was far too short to enable him to look properly at other activities of great interest to Unesco, such as educational work for the Arab refugees and the interesting archaeological activities, in which Unesco takes a special interest.

(107) Egypt continues to be an almost inexhaustible treasure ground for records of ancient times; and the zeal of the archaeologist continues to uncover unexpected relics of the past. Only last spring, great interest was aroused by the discovery, near the southern side of the Great Pyramid, of what seemed to be two funerary boats, apparently intact, which have been lying there for some 48 centuries. The universal interest aroused in this find is an indication of the human value of all relics of the past, which are not merely a legacy of the country where they are found but of the entire world. Surely, then, Unesco is justified in sending a special expert to assist in photographing and cataloguing pictures and drawings and bas-reliefs, which are in danger of being destroyed by the perennial irrigation of modern times and other factors.

(108) Egypt is a country which lies at the junction of the continents, and at the cross-roads of all the routes and highways of the world. It is perhaps the least isolated country in the world. This is probably best reflected in its activities in the field of cultural interchange. We have hundreds of Egyptian students studying abroad. We have over 5,000 foreign students from 35 countries studying in Egypt. Some 1,500 Egyptian teachers are now teaching in neighbouring countries and, as regards foreign teachers working in Egypt, we cannot get as many as we would like because the rate of pay in Egypt is not as high as it should be. Thus in cultural exchange the position of Egypt is quite satisfactory; its development is limited only by the financial resources of the country.

(109) The Egyptian delegation was greatly gratified at the admission as Associate Members of several countries from the Eastern and Western Hemispheres, and particularly from Africa. It is a most welcome development, indicating Unesco's interest in the liquidation of colonialism, a most worthy objective. There are many ways in which countries can learn to be independent; the best of these perhaps is the practice of independence itself.

(110) I must conclude by expressing the pleasure that we all felt in Egypt at the appointment of our new Director-General. He and I have worked together as delegates at several conferences and I have had ample occasion to admire his wisdom and integrity. Recently, however, I have had reason to bear him a grudge. In his travels he has been crossing the Atlantic too often, the Mediterranean very little. This course must now be reversed. After all, the Mediterranean is the father of the Atlantic Ocean.

(111) The PRESIDENT (Translation from the Spanish): I call on the representative of the Organization of American States.

(112) Mr. NANNETTI (Representative of the Organization of American States) (Translation from the Spanish): Mr. President, Mr. Director-General, ladies and gentlemen, before discussing the Director-General's Report I should like to bring you another report - from a village schoolmaster in the Republic of Panama. What I am going to read to you is of great significance for Unesco. Unesco, as its Constitution proclaims, is to construct the defences of peace in the minds of men. But how is it to get its ideal into those minds if there are millions who cannot read and millions with nothing to read? How are we to convert Unesco's ideals into convictions, standards of conduct and ways of behaviour? What I am going to read to you lights up one path whereby those ideals of Unesco can reach the minds, not of the men of the cities, who have at their disposal modern means for exchanging ideas, but the men of the countryside, who have not received their portion of our cultural heritage.

(113) This is one of thousands of communications reaching the Latin American Fundamental Education Press set up by the Organization of American States and Unesco to produce reading material for Latin America. The writer is the schoolmaster at Macaracas, the very type of all the "forgotten villages" of Latin America. His letter reads as follows: "So far the booklets from which we have got the best results are 'La Casa Rural' (Country Housing), 'Ayuda a tu Pueblo' (Help your Village) and those on co-operatives. With 'La Casa Rural' for guide, the villagers are making notable improvements in their dwellings and 'Ayuda a tu Pueblo' has got the peasants working in teams to improve the roads and the school. What is more, another booklet, 'Crédito Agrícola' (Agricultural Credit Systems) has lately led us to establish a credit co-operative which so far as we know is the first of its kind to be opened in the Isthmus".

(114) This letter from a village schoolmaster is of profound significance. Firstly, it shows up the value of books in the spreading of ideas. Again, the United Nations, Unesco and the Organization of American States are preaching a gospel of peace and human dignity; the letter shows that this gospel has found missionaries and won converts. It mentions only a few out of a million booklets on fundamental education distributed by the Organization of American States among the villages of America.

(115) The letter points a way for Unesco to get its ideal into the minds of men. It shows, too, the possibilities of the popular libraries established by the Organization of American States, of which it is intended to set up a hundred thousand in Latin America on the same lines as the one started in our "forgotten village" in Panama.

(116) We sometimes hear of the hundred essential books which everyone should read. On similar lines the Organization of American States is compiling the hundred essential booklets for the village dweller. These booklets bring the villager the elementary knowledge offered in the primary school: his mother tongue, the rudiments of arithmetic and of natural and social science. In them he will also find something about civics, health, agriculture, work, economics, social questions and leisure reading. The reading material is graded for new literates, as a result of a painstaking investigation into content, vocabulary, syntax, format and presentation.

(117) Every month, with each new booklet, a new message comes to the Popular Library - from an educator, from a writer or poet, from a scientist or doctor from an agricultural expert or an economist. Thus, the Popular Library keeps the village audience constantly in touch with science, literature and technology. This movement throws light on another unexplored point - the place of reading in fundamental education.

(118) It has been said, with truth, that educating people is not merely teaching them to read. It is equally true, however, that people cannot be educated unless they are taught to read. This means that reading must occupy a strategic place in fundamental education. Nothing can improve on the silent dialogue between books and men. All other means of communication are ephemeral: only books have the virtue of permanence.

(119) In fundamental education, reading must be functionally related to daily life. Books must give the answer to the spiritual and practical problems of life both in the higher sense and in that of everyday existence. This is the work to which the Popular Libraries, whose task it is to carry out the idea of functional reading in relation to the immediate problems of the community and the individual, are giving priority.

(120) Let me repeat: the Organization of American States plans to open one hundred thousand Popular Libraries, supplied with fundamental educational material, in rural communities, trade union premises, co-operatives, country schools and other centres where support should be sought for the education of the masses

(121) I want to draw the special attention of the Conference to this achievement in the sphere of Latin American fundamental education because it is directly due to co-operation between the Organization of American States and Unesco.

(122) Another sector in which they co-operate is in the training of teachers for fundamental education; the Regional Fundamental Education Centre for Latin America has been able to count on the financial support of the Organization of American States.

(123) The present task of fundamental education is to seek principles and specific objectives as a basis for promoting definite plans of action. Fundamental education should be a medium whereby the social services of the State reach the local communities. The local community is where the State comes into direct contact with the people and is also the first school of democracy.

(124) Democracy is ever improving its methods for assessing public needs and analysing public affairs. In that analysis, the people must be informed, and they must be given a hearing. Thus, fundamental education is the basis for a new method of democratic government. State undertakings for social improvement should be discussed and analysed in fundamental education centres. The work of persuasion should be headed by the teachers, backed by the citizens and by government experts. In this way, mere demagogic discussion is replaced by honest, intelligent and informed examination of common problems, with persuasion instead of blind submission or blind revolt. Hence, in Latin America, governing means educating.

(125) The teacher must call in the help of State experts, particularly health and agricultural experts. Unless education, health and agriculture form the three sides of the triangle, no enduring work can be done in the rural areas. Only the school, as the centre of the community, can give organic unity to these activities of the State. The problems of the community are interrelated, being all different aspects of life as a whole. The problem of economics cannot be kept apart from the problem of education, nor can either be divorced from the problem of public health, and all three must be taken in conjunction with problems of citizenship and of home life.

(126) If fundamental education is to succeed, specialists and social workers, who have hitherto worked in watertight compartments, must realize that the community's problems form a single whole, and must be prepared to work together to find a solution. That should be the task of fundamental education centres.

(127) Up to now, the centres founded by Unesco in Mexico and Egypt have drawn their students from the education services. But fundamental education transcends the official province of Ministries of Education and the students sent to the training centres should also be drawn from all the various bodies, such as the Ministries of Agriculture, Labour and Social Welfare, which are equally fitted to carry on fundamental education work.

(128) In Latin America, fundamental education needs, moreover, a base of operations, and this is to be found in the rural school, which is the nerve centre of the local community. What is needed is to draw one hundred thousand rural school teachers into the movement and thereby mobilize legions of agents for the spread of sound practices in health and agriculture and the extension of social welfare. All this demands revision of the existing plans and the conclusion of new agreements between Unesco and countries interested in the development of fundamental education.

(129) Hence the importance of the recent agreement between the Organization of American States and Unesco, under which a Joint Commission is to be set up for the promotion of fundamental education in America. I venture to suggest that the Conference give the widest possible directives, to enable the Joint Commission on Fundamental Education to work effectively. There is much that we must reconsider, much that we must rectify and much that we need to do.

(130) The significance of this Conference must be measured against the aims which the Constitution lays down for Unesco and against the scale of the crisis through which mankind is passing today. Unesco is one expression of the moral conscience of mankind. To Unesco has been entrusted the task of building peace in the minds and hearts of men. Twentieth-century man is athirst for moral principles which will enable him to live as an individual and with his fellows.

(131) The doctrines profferred for man's acceptance today echo through the world as never before. Arguments on either side flash in seconds across continents and seas. Man listens to the voices calling him from the opposing camps and looks for light.

(132) The Universal Declaration of Human Rights is the banner set up to rally humanity today in one brotherhood. Individual and collective effort to make that Declaration a reality will establish justice and freedom for all and thereby ensure world peace.

(133) To the crusade for peace, Unesco must summon all the spiritual forces of mankind. One of the great

forces for peace is the Organization of American States, the legal and corporate expression of America's solidarity. The Constitution of the Organization of American States, like that of Unesco, is based on a humanist concept: namely, that "the historic mission of America is to offer man a land of freedom". Our Constitution also defines American solidarity and a good-neighbour policy as meaning the establishment in this continent and in a framework of democratic institutions a régime of personal liberty and social justice based on respect for the essential rights of man. The American nations thereby adopted a Charter of the human rights by which the Universal Declaration is inspired.

(134) Unesco can rest assured that its work for peace is already accomplished in the American continent and that, with peace secured, the way is opened for men to rise through culture. The identity of aims between Unesco and the Organization of American States makes them natural allies. Their work together has begun with fundamental education. That is logical because fundamental education is the cement of human rights; it is an act of faith in man. The Organization of American States is prepared to co-operate yet more fully with Unesco in other sectors of education, science and culture.

(135) As representative of the Organization of American States I deem it an honour to confirm the will to co-operate, here in this land of Uruguay, which, as the Charter of the Organization of American States requires, respects the dignity of man and offers him a land of freedom.

(136) The PRESIDENT (Translation from the Spanish): I call on the delegate of Uruguay.

(137) Mr. SECCO ELLAURI (Uruguay) (Translation from the Spanish): Ladies and gentlemen, the present duty of our delegation, as of those which have already spoken, is to comment on the general tenor of the Report submitted by the Director-General on Unesco's activities to date.

(138) Of course our judgment on the Report cannot be based on ideal standards but must be by reference to the immediate antecedents, that is, to the 1952 Conference. The form Unesco's activities should take in 1953 and 1954 was fixed by the seventh General Conference of our Organization, held in Paris in 1952. At that time, Unesco was faced with something of a crisis and the Organization then underwent a process of revision which affected it deeply. The crisis consisted essentially in the imposition of a standstill on financial contributions to Unesco; and it will be clear, on reflection, that, with a programme geared for a high speed advance, putting a financial brake on its execution meant, in fact, not simply marking time but losing ground.

(139) The effects of this crisis or semi-crisis were aggravated on the administrative side by the resignation of the then Director-General and the unavoidable slowness, caused by innumerable difficulties, with which we had to proceed over the appointment of his successor. As a result Unesco's activities inevitably took the form of readaptation and readjustment. The process of readjustment was accomplished by the simultaneous and convergent action of Unesco's three essential organs - the Executive Board, the Secretariat and the Director-General. I call them essential in the sense that in the two-year interval between Conferences it is they who act. I am happy to say that in our view the results of the readaptation are excellent and it is a pleasure to convey our congratulations on them to the Director-General. The readjustment is apparent in many features of the Report, of which I will single out a few. It is to be seen, for instance, in the case of subventions. Here the situation has been regulated in accordance with the principle that there must be a contractual element, i.e. that a subvention, generally speaking, must be justified, to the extent that the organization receiving the subvention is carrying out a function which Unesco itself could not carry out so well nor so cheaply.

(140) Moreover - but here we are only at the beginning - there is a careful check, as may be seen from the Report, to make sure that the organization receiving the subvention is genuinely international not only in its aims but also in its structure and membership; it is not enough for it to be, say, a European or other "continental" organization serving the world as a whole; it must consist of people from all over the world, and its representation must be world wide. Another respect in which things have appreciably improved is in Unesco's relations with Member States, where contacts have been increased both with governments and with the National Commissions. The question of the National Commissions is one of Unesco's tender spots. The Constitution regards the National Commissions as one of Unesco's essential organs. In practice, however, we can all see that in our respective countries, with the exception of those blessed with considerable means and resources, the National Commissions - and we must admit it with regret - have not yet achieved the results which the founders of Unesco expected of them. The reason may be lack of money, or that the idea of working through National Commissions has not yet been assimilated in all countries, or that, in several, there is no adequate secretariat, or that the question of relations with the Organization's headquarters in Paris has not yet been satisfactorily solved. Or it may be, in many cases, a combination of all these things.

(141) Another notable point in the Report, to which only brief reference is made, but which nevertheless I feel to be of great importance, is the practice begun by the Executive Board eighteen months ago of setting aside one of its meetings, not for working through an agenda dealing mainly with administrative matters, but for the general discussion of the broad permanent problems with which the Organization as a whole is faced. This practice began at Gif-sur-Yvette near Paris at the suggestion of Mr. Veronese, a member of the Executive Board. The idea was enthusiastically accepted by the other members and in this way has begun what in my view is a most useful practice. Without it, the Board, which meets only three or four times a year, might fall into a mechanical routine of attending only to the problems put before it, and never have time to get to the bottom of permanent problems which are not questions of the day or hour but ones with which the Organization is always at grips.

(142) The Report also informs us - and this seems to me a matter of vital importance - that the Courier has been reprieved. The Courier is one of Unesco's essential publications. It has been of outstanding

importance and is destined to give a rich return. At one point it was on the brink of extinction, that would have been unmerited and would have deprived Unesco of one of its most effective organs of publicity and of an excellent instrument for acting on the minds of men.
(143) To sum up, the readjustment effected has conformed to two principles concentration of action and the establishment of priorities. This raises in my mind certain reflections and doubts which I would like to share with you. When we speak of "concentration" and "priorities", we may be running into danger; we may be on the verge of falling into mortal sin, of committing the grave mistake of thinking that one activity should take absolute precedence over others - of thinking, for instance - and I have heard it said on occasion - that the essential, the really important thing for Unesco is fundamental education and technical aid.
(144) No one can ignore the importance of that obligation. As we were eloquently reminded here the other day, we have to fight against the tyranny of ignorance. This my country has done, we think, successfully, and we take pride in it. Here the principle of free education at all levels, primary, secondary technical and higher, is embodied in the Constitution. The university capitation fee has vanished; examination entrance fees are no more. Here education is absolutely free. You will have seen the other day, at the opening of the Conference that the files of boys and girls marching past the Palace were all dressed alike in white overalls, for we have the excellent practice of dressing schoolchildren so that their minds will not be scarred with a sense of poverty and inferiority because of differences in their attire. We have built up a good all round primary school system; we have fought illiteracy to such effect that today illiterates represent no more than about 6% of the population. We have also introduced an extremely interesting practice into the schools: every Uruguayan school can and should be named after a foreign country. All the countries in the world have a school named after them in Uruguay and this is more than a formal compliment because it produces in each school a special admiration and feeling for the friendly nation which acts as godmother; its anthems are sung, its literature studied, its customs are made known and the citizens who come from its distant shores are honoured as representatives of that fatherland. All this started many years ago and I would ask you if that is not Unesco in action. It is in the very spirit of Unesco to begin the pursuit of sympathy and understanding on the benches of the primary schools. We are therefore bound to feel the importance of that cause.
(145) *It is vital that there should be a world-wide campaign against basic ignorance and the disease it* inevitably brings in its train. But that is not the only enemy. Downright ignorance is not the only breeding ground of hates and rancours and passions. The fruits of intolerance, hatred, incomprehension and fanaticism are not found among the ignorant alone, but among the cultured too, and sometimes culture serves only to strengthen them - then they are felt with a force and power of conviction which today are usually alien to the uncultured. Hence, combating ignorance is in itself no antidote to rancour and intolerance. We must maintain the pursuit of a free culture in which all truths have their place, following the precept: seek "the truth that shall make you free" - and I would add "even if you do not find it".
(146) To put it briefly, if we are to cultivate freedom, we must fight for freedom to cultivate our minds and we must uphold the principle of the free exchange of ideas, which includes thought, books, information, and the results of congresses. In other words, we must never let the mind of man grow torpid; we must keep it constantly on the alert with a ceaseless challenge to examine and re-examine its own ideas, not becoming the slave of any single doctrine or dogma but acquainted with them all. At bottom, tolerance is our power to shift to other points of view, to avoid becoming fossilized in any attitude, on occasion, to doubt. That is the spiritual tonic which Unesco must put into its message to the world and to do that it cannot dissociate itself from concern with other things beyond the primary school. It must cherish the principle of the free circulation of ideas, books and persons, all of which are trammelled in our days.
(147) To conclude: Unesco is perhaps the most hopeful phenomenon which has emerged in our troubled world. That is why, when this session of the General Conference was opened the other day, we did not turn to the traditional procedure of falling back on the Ninth Symphony. We could have greeted you with the strains of Schiller's chorus with its invitation to human brotherhood. Instead we chose the Canticle of Hope as a symbol - because Unesco is hope, a great hope, rich in ideals. The debate on a report is not the right moment to enlarge on those ideals. Thinking too much about ideals may even, sometimes, be a little barren.
(148) See how the countryman goes about his business: when his fields are ripe for the harvent, he sets to work without raising his eyes to the horizon, looking only at the corn under his sickle. That is how we must work. We have before us now a series of detailed problems relating to the programmes for 1955-56. We are ready to tackle them with enthusiasm, from the viewpoint of our individual ideals and hopes.

The meeting rose at 7.15 p.m.

# SEVENTH PLENARY MEETING

*16 November 1954 at 10.30 a.m.*

*President:* Mr. ZAVALA MUNIZ (Uruguay)

CONTENTS

Appointment of Chairman of Headquarters Committee and his replacement as Vice-President of the Conference . . . . . 97
Discussion of the Director-General's Report (continued): Speeches by the delegates of Ecuador, Belgium, Hungary, Spain, India, Netherlands, United States of America, Denmark, Guatemala, Yugoslavia . . . . . 97

**APPOINTMENT OF CHAIRMAN OF HEADQUARTERS COMMITTEE AND HIS REPLACEMENT AS VICE-PRESIDENT OF THE CONFERENCE**

(1) The PRESIDENT (Translation from the Spanish): I have to inform delegates that it is not going to be possible to conclude the discussion of the Director-General's Report today; there are still 30 speakers on the paper, so we shall have to devote another meeting to this item. Even so the General Committee asks delegates to keep strictly to the time-limit for speeches and so enable us to bring the debate to a conclusion.
(2) I call on the Chairman of the Nominations Committee to present the report he was asked to produce by the plenary meeting.

(3) Mr. KABIR (India) (Chairman of the Nominations Committee): Mr. President and fellow delegates, as the delegation of Venezuela is not present, there is a vacancy for the post of Chairman of the Headquarters Committee. On the suggestion of the Nominations Committee, the Headquarters Committee elected yesterday the delegate of Brazil, who will act as Chairman of the Headquarters Committee for the duration of this Conference. The delegate of Brazil accordingly resigned from his office of Vice-President of the General Conference and the Nominations Comittee suggests for your consideration the election of the delegate of Chile as one of the Vice-Presidents of the General Conference in place of the delegate of Brazil. (Applause.)

(4) The PRESIDENT (Translation from the Spanish): In view of the obvious sense of the Conference, the Chair deems the delegate of Brazil to have been elected to the Headquarters Committee and the delegate of Chile to the Vice-Presidency of the General Conference by acclamation.

**DISCUSSION OF THE DIRECTOR-GENERAL'S REPORT (continued)**

(5) I now call on the delegate of Ecuador.

(6) Mr. MARTINEZ COBO (Ecuador) (Translation from the Spanish): Mr. President, ladies and gentlemen, in this world of unleashed passions, apparently dominated by a mystique of violence and a gospel of hate, where selfish forces seek to endanger the lofty moral values which ennoble the soul and are the true essence of human personality, where the possibilities of scientific progress - for good or perhaps for evil - wrack us with anxiety, this summons to men of culture to meet in Uruguay, this noble country which is an ornament and a source of pride to our continent, to talk over matters and achieve better mutual comprehension and to feel their common brotherhood in the quest for truth or the solution of common problems, is of extraordinary significance.
(7) Situated on the earth's equator, my country of plains and mountains, continually battling with geography to exploit its natural resources, is an impassioned devotee of culture and of freedom. It elects to office its finest thinkers; it reveres its writers and artists; it sets aside great sums to support a House of Culture - that institution so well known throughout the American continent - and for years past it has lived its life in an atmosphere of unrestricted freedom, opening its frontiers to all ideas and all peoples with no discrimination, political, racial or religious.
(8) For that reason, because we have dedicated our lives to peace and culture and because nothing and nobody can deflect us from that glorious course, we feel ourselves at one with Unesco; we regard it as the spiritual nexus of the whole juridical machinery devised in the post-war period. In our view peace must be worked for and pursued patiently in schools and centres of culture rather than in the Chancelleries if it

is to become an endur ng thing, for we all know that political understandings secure no more than a precarious balance.

(9) Reading the Reports of the Director-General and the Executive Board, we have rejoiced to observe the gradual headway made by Unesco as it assembles the diverse and potent forces of our times. A distinguished English thinker, Huxley, first erected a fine juridical framework; next an eminent Mexican, Jaime Torres Bodet, brought dedicated vision and today, as a sign of our age's co-operation, an element of friendliness and human warmth is injected by one of our own continent's educators, Dr. Luther Evans, a man of action and achievement.

(10) The international bodies working with governments for the be.ter exploitation of the natural resources of their countries are many; only one is concerned with the greatest capital asset any country can have, its human capital. Hence the urgent need for Unesco, without neglecting its lofty charge as the vigilant guardian of unending intellectual progress and of the universal heritage of culture, to keep its feet planted firmly on the ground and continue as an Organization soundly administered, ever preoccupied with the problem of man, the synthesis of all creation.

(11) We have viewed with approval Dr. Evans' visits to various Member States: personal contact will have enabled him to acquaint himself with those countries' cultural needs. We unreservedly applaud his concern that Unesco's already inadequate resources should not be reduced and we feel that the Organization should be strengthened by financial aid from all countries according to their abilities, considering that this can be the most constructive of all investments; for cultivating the minds of this generation and of the generations to come may well show us the sure path to peace and human brotherhood.

(12) Because we believe that Unesco should be world wide, we have welcomed the admission here, with the unanimous approval of our Conference, of countries not as yet fully self-governing.

(13) We have been glad to see the tightening of Unesco's relations with the United Nations and the other Specialized Agencies. In the Economic and Social Council this country warmly defends the policy of concerted action, of closer co-operation between all the agencies of the United Nations; in this working together lies our hope of achieving efficiency and co-ordination of effort.

(14) We believe that Unesco's essential task should be to co-operate with governments in the noble work of shaping men. In his last message to our Congress, the President of my country, himself a distinguished university teacher, said: "The basic concern of the State should be the expansion of culture in towns and in the countryside, which means deepening the personality, heightening the awareness and increasing the mental powers, moral sense and working capacity of every individual".

(15) As long as the possibility of attending school is not open to every individual, as long as there remain some who cannot even write the name of their own mother or their own country and who have never been given the rudiments of all-round education, the most grievous of the problems afflicting half the human race will remain unsolved. We therefore support enthusiastically the proposal of the delegation of Uruguay for a campaign for compulsory free education.

(16) In the last few years we ourselves have accomplished a gigantic effort to bring the alphabet to thousands. In the most isolated and inhospitable spots in our mountain lands or backwoods we have built small schools and left a teacher to train the children to think more of their communities than of themselves. Hundreds of schools have been built with every educational facility, airy and sunny, so that our children can be educated in cheerful and healthy surroundings. We have raised the status of the schoolmaster, improving his situation in every respect and providing him with proper training for the prosecution of his great calling.

(17) Today, we are getting ready to explore the divers paths of fundamental education. We are glad to observe how the regional centres, particularly that at Patzcuaro, are training teachers for community education. We should like to see others added to those which already exist. My country deems it a privilege to offer Unesco every possible facility to enable it to include work in fundamental education, in a centre which could perhaps be opened in Ecuador, in the combined project for the rehabilitation of the Indian to be undertaken in the Andes area by a number of Specialized Agencies.

(18) As the journalists in Ecuador have the best means of mass communication at their disposal and as it is their task to bring culture and truth to the minds of all, it is to them that we have entrusted the campaign against adult illiteracy, providing them with the necessary resources for the execution of their task. The results have been satisfactory and the index of illiteracy has fallen markedly. It would be a great satisfaction to us to have Unesco participate in this campaign.

(19) As regards the Expanded Technical Assistance Programme, my country has observed with approval the steps taken for greater correlation of the ordinary programme and this expanded programme. In the Economic and Social Council, Ecuador has argued that the planning of technical assistance should be the commitment of the governments concerned. We judge that technical assistance is the most practical and effective action so far launched by the international agencies and we therefore feel that all countries, large and small, are under a moral obligation to co-operate in it. Ecuador earnestly trusts that national contributions for 1955 will be greater and that, in general, the expanded programme will acquire the features of progressive evolution and continuity required to make it more nearly commensurate with the magnitude of the task ahead. Our understanding is that the reduction in the numbers of experts and of fellowships over the last two years has been the result of financial limitations. This is a situation which we must make a joint effort to remedy.

(20) We are also anxious that, in the selection of the Organization's officials and technicians, due attention be given to geographical distribution and that all the countries in the world be enabled to arrange for their finest intellectual representatives to collaborate in achieving the lofty objectives of Unesco. We suggest to those in charge in Unesco that, in the selection of experts, consideration be given to the degree of affinity which should obtain between the expert and the human milieu in which he is to work and we have noted

with satisfaction the unreserved praise bestowed by the Assistant Director-General of Unesco on the work of the Latin American technicians working in this continent.

(21) We share the desire of other delegations that Unesco's programme shall concentrate on a few essential items. It is better to do little and do it well than try to do much and do it sketchily.

(22) We cherish the hope that the Ecuadorean motion for the adoption of Spanish as a working language of the Executive Board, which is supported by the Board itself, may be approved by this General Conference. The tongue in which the discovery of a new continent was universally proclaimed and in which Don Quixote was given to the world deserves that honour - the more so in that Spanish America, whose influence in the international order is beneficent, nourishes no ambitions to anyone's despite and aspires only to establish more firmly its own well-being and to play its part in raising the standard of life throughout the world.

(23) Montevideo is holy ground for the men of America. Hither we come ever and again as pilgrims of culture to strengthen our souls with the teaching of one of the Olympians of American thought - Rodó. Today we come here to declare from this rostrum - where the ideas and aspirations of all the peoples of the earth can be proclaimed in freedom and democracy, Ecuador's belief that these crusades of culture are the only means whereby true international solidarity can be established on unshakable foundations, and to pledge our faith in the future of Unesco.

(24) The PRESIDENT (Translation from the Spanish): I call on the delegate of Belgium.

(25) Baron van der STRATEN WAILLET (Belgium) (Translation from the French): As my first words in this debate may I re-echo the remarks of Mr. Andres Martinez Trueba, President of the National Council of Government of Uruguay, in his address of welcome to us. We have been touched by the singular warmth of our reception by the Government and people of Uruguay, struck by their deep interest in all the things of the mind and deeply moved by the lovely Canticle of Hope sung by the young people of your schools. May that Canticle, sung first at Brussels two years ago, drown the war songs and start the great dance of peace in which the peoples of all the world will join hands together.

(26) The Director-General's Report will certainly impress any unprejudiced person who takes the trouble to read it, and I want to pay tribute to the conscientiousness and intelligence of its author, who has been so ably seconded by the staff of the Secretariat.

(27) The Belgian delegation is glad to note the progress made in concentrating activities and improving methods, since it attaches the utmost importance to continued efforts to avoid dispersion of energy and make the best use of resources.

(28) It is particularly gratified by the Director-General's tribute of thanks to the Executive Board for the help rendered and the invaluable counsel given. This tribute deserves emphasis at the very moment when the Commissions are starting to study a number of proposals for drastic changes in the Board's membership. In this connexion, Belgium attaches the utmost importance to full respect for the basic principle enshrined in Article V of the Constitution, which stipulates that the members of the Board shall exercise the powers delegated to them by the General Conference on behalf of the Conference as a whole and not as representatives of their respective governments. What this implies is that, just like the General Conference, of which it is an emanation, the Board represents primarily the people in every country who are professionally concerned with education, science and culture, as well as the institutions set up on their initiative and the National Commissions they have helped to establish.

(29) Now these champions of the mind, more than other men, are worried about the danger of which Dr. Radhakrishnan warned us so eloquently in his opening speech. I hope I do not misrepresent his views in saying that, briefly, he maintains that even democratic governments are becoming daily more centralist, more interfering, more authoritarian and more intrusive in their control of thought and opinion. It is from fear of this danger that the Belgium delegation attaches such great importance to the members of the Executive Board being independent.

(30) In Part IV of the Report, Chapters II and III engrossed our attention most.

(31) We particularly appreciate what has been done in the sphere of international scientific co-operation and of international co-operation between social scientists.

(32) We must, however, insist once more on the absolute necessity of action by Unesco continuing to be supplementary to national action. Article I of the Constitution names among the chief purposes and functions of Unesco the promotion of collaboration among the nations and lays it down that Unesco shall collaborate, provide an impulse, and maintain, increase and diffuse knowledge, without putting itself in the place of national governments. Article XI, on relations with governmental and non-governmental organizations and institutions, is drafted on similar lines.

(33) Any attempt to do direct what States and private organizations are doing just as well, runs counter to Unesco's mission and alienates the sympathies and cuts off the aid of which Unesco stands most in need.

(34) We hope it will be possible for Unesco to continue its financial help to the non-governmental institutions and organizations doing its work and theirs in such a variety of fields and that it will continue to encourage the foundation of organizations which, like those that already owe their existence to it, will play their part in carrying out its programme.

(35) With no less interest we have perused the chapters on such forms of practical help as fundamental and adult education, assistance in general education and the dissemination of science and culture and lastly, the Expanded Technical Assistance Programme. The progress achieved in these various spheres shows that Unesco is fully conscious of the crying urgency of spreading knowledge in a world where millions of men are still sunk in ignorance.

(36) The interest Belgium attaches to this practical work is eloquently proved by the report of the Belgian National Commission on the vast effort put forth in this domain in Belgium and the Belgian Congo.

(37) To conclude my remarks on the Reports of the Director-General and the Executive Board, my delegation wishes to record its satisfaction with the

progress made and to recall that the success of the work undertaken depends not only on observance of the principles to which I earlier drew attention but, just as much, on the maintenance of a correct balance between the objectives concerned with research and those concerned with the dissemination of knowledge. To spread the life-giving waters of science, education and culture more abundantly through the channels of technical assistance, we must at the same time increase the flow from the source, the work of scientists, educators and artists. The two objectives are but parts of a single whole and inflation is no less harmful in the sphere of knowledge than in that of currencies. May Unesco never yield to the temptation to dissipate its "gold reserve" for, if it does, sooner or later the result will be a debasement of the values of the mind.

(38) The PRESIDENT (Translation from the Spanish): I call on the delegate of Hungary.

(39) Mrs. JOBORU (Hungary): Mr. President, fellow delegates, may I first of all be permitted to extend on behalf of the Hungarian delegation our sincere greetings to Uruguay and her beautiful capital and express our gratitude for the magnificent spirit of hospitality which, manifested on our arrival, has been attending us ever since. We are very glad indeed that through Unesco we have the privilege of getting acquainted with Uruguay, whose people share with us many happy pursuits and noble endeavours.
(40) The Hungarian Government, animated by the principle of peaceful coexistence and collaboration of countries with different systems of government, attributes great importance to the development of cultural contacts between the nations. We are sure that nations that have imbibed each other's culture find it easier to foster mutual understanding and peaceful coexistence in all matters.
(41) The Hungarian Government has amply demonstrated the importance it attaches to the strengthening of international cultural relations, to the meetings and international conferences of representatives of science, education, literature and arts. In the first ten months of this year alone, we took part in 60 scientific conferences, among them the Paris-Nice Botanical Congress and the meeting of the World Power Conference in Brazil.
(42) Unesco, as an intergovernmental body, has an especially important part to play in organizing closer co-operation among nations and in encouraging the forging of cultural links in the interest of peaceful coexistence. The Hungarian Government is fully aware of this commitment. The Minister of Foreign Affairs of the Hungarian People's Republic, in June this year, advised the Director-General of Unesco that the Hungarian Government, accepting the invitation of the General Conference, wished to return to active participation within the Organization. Its decision was prompted by the hope that in this period of international détente Unesco would come closer to its original objectives as laid down in the Constitution, working with genuine devotion in the service of peace and progress. We appreciate the reference in the Report of the Director-General to Hungary's step, ranking it among the factors that contribute effectively to the achievement of Unesco's objectives.
(43) Hungary was already participating in the more important of Unesco's recent conferences. We sent a delegation to the Hague Conference, resulting in an international agreement for the protection of cultural values in war time, which was among others signed by the representative of the Hungarian Government. We also took part in the International Educational Conference in Geneva organized by Unesco and IBE.
(44) We have studied with great interest the material prepared for the present Conference, especially the Report of the Director-General, and came to this Conference with high expectations. The Report, which we consider a thorough and excellent one, acquaints us with many aspects of Unesco's achievements and fields of activity, which meet with the fullest approval of our Government and people. The fight against illiteracy, facilities for education in the native language, extension of primary education, admission of women to all levels of education in many countries, provisions for adult education, imbuing young people with the spirit of international understanding, the international discussion of all kinds of scientific and artistic questions - these are all tasks of the greatest importance. The facilities of the coupon system, to which we wholeheartedly adhere, is to our mind, a very suitable medium for the exchange of various cultural products.
(45) An important part of the task of the Hungarian Government is to continue to raise the cultural level of the people. Education, literature, arts and science have progressed tremendously in the past eight or nine years and are about to embark on a still more promising period. School attendance is free and compulsory up to the age of 14 and secondary schools and institutes of higher education, museums, theatres and concert halls are wide open to all.
(46) In the field of culture, prime importance is attached to fostering the spirit of international co-operation. In the schools the pupils, besides studying extensively the culture of their homeland, are made acquainted with the classics of other nations. (Shakespeare, Cervantes and living authors are studied along with the works of Bach, Mozart, Mussorgski, Leonardo da Vinci, Velasquez etc.)
(47) In order to appreciate the culture of other nations more directly, students are studying foreign languages, Russian, French, German, English, Italian and Latin languages especially.
(48) Our theatres play to packed houses the works of the great classical authors - Shakespeare, Gogol, Molière, Schiller, Gorki, Shaw, Lope de Vega - as well as plays by Turkish, Chinese and French writers.
(49) Publications include the masterpieces of world literature as well as contemporary works. The books of such Spanish-American authors as Pablo Neruda, Revueltas, Jorge Amado, Jorge Icaza are known all over the country. Books reach their readers even in the remotest villages through the facilities of the well-stocked people's libraries. A number of world classics have been sold in several hundred thousand copies.
(50) Cinemas are to be found in the smallest places, showing the best films produced in the Soviet Union, France, China, Italy and Mexico, and I have special pleasure in referring to a film acquired recently from Uruguay (A Thief of Dreams), which figures in the programme of the largest Budapest cinema.

(51) Our actors and film directors have attended international festivals at Carlsbad, Cannes, Mar del Plata, New Delhi, etc. We have organized art and folklore exhibitions in Paris, Peking, Berlin, Moscow, London, and next year we are planning an exhibition in India. Recently we have had exhibitions in Budapest of Soviet, Chinese and Bulgarian folk art, and of French and Italian painting.

(52) We need not dwell upon our international record in sport, for this aspect has been sedulously cared for by the press.

(53) Through all these activities, the Hungarian Government has given, I think, clear indication of the importance it attaches to encouraging international cultural relations, a better understanding among nations and the peaceful coexistence of different social systems. For this reason we welcome and wholeheartedly support all Unesco activity which aims at this end.

(54) We have to place on record, however, that to our mind the work of Unesco reveals certain important defects. We believe that Unesco should utilize, to a much greater extent, the possibilities at its command for mutual understanding among the nations. We think that we may state, without fear of contradiction, that counter-forces are at work against this better understanding. There is an armaments race in many countries, racial hatred is being stirred up by venomous propaganda. We hold that Unesco is in a unique position to establish contacts between nations on more normal lines.

(55) The Hungarian delegation wholeheartedly supports the proposal brought forward by the Indian delegation inviting Unesco to make its full contribution towards securing peaceful coexistence among nations with different political or social systems, to raise its voice in the cause of the peaceful utilization of atomic energy and to take its stand against racial discrimination.

(56) We cannot, however, pass over without comment the bad impression created in our delegation by the events of the first days of the Conference - the refusal to admit the representatives of 600 million Chinese with their rich cultural heritage and the postponed admission of Rumania and Bulgaria to Unesco, two good friends of Hungary, each with a flourishing culture and marching in the vanguard of progress.

(57) Allow me to express the hope that the work of Unesco, which has contributed so much towards strengthening mutual understanding between nations, shall in the future expand and, through the active participation of its Member States, assure the triumph of a cause so important to all humanity.

(58) In this great endeavour Unesco can always rely on the active participation of the Hungarian Government and people.

(59) The PRESIDENT (Translation from the Spanish): I call on the delegate of Spain.

(60) Mr. RUIZ JIMENEZ (Spain) (Translation from the Spanish): Mr. President, ladies and gentlemen, this is the first time that Spain has taken part as a full member in an ordinary General Conference of the United Nations Educational, Scientific and Cultural Organization. It was about two years ago that, at another session like this, in Paris, a clear-cut majority of Member States, following the promptings of justice, admitted my country's right to become a member of this body and invited us to place our energies at the service of the lofty aims enshrined in the Constitution.

(61) Those same aims have ever been the star which has guided our path through history. Only a few hours ago, in this very hall, we of the Spanish delegation were thrilled by a passage in the virile greeting addressed by the delegate of Sierra Leone to this august Conference. In it he paid a glowing tribute to the memory of two of our greatest theologians, Vitoria and Suarez, who, on the threshold of the modern age, planted the seed from which has sprung the true law of nations. This they did by enunciating the principle that all men and all peoples are fundamentally equal, whatever their race or social rank, because they share a common origin and the same immortal destiny, so that all the nations are bound together in a great community which is more than the mere sum of them and links them as it were in a mystical body whose life is the conjoined lives of all its members.

(62) The reason why we appreciate the aptness of the adhesion to what is finest in our doctrinal tradition made by the delegate of Sierra Leone is that today we realize we are marching steadily along the self-same road; it is because we still believe, with those great thinkers, in the "natural amity" between all peoples and we feel as irrevocably ours - bone of our bone - the ambition to work without respite for the establishment of peace in justice. In contrast to the old aphorism "si vis pacem para bellum", we of Spain - who have no fear of war, when there is a need to defend our liberties or the liberties of other peoples - would fain proclaim to all the world a nobler and more urgent challenge, "Si vis pacem para jus gentium", or better still, if we truly and honestly want peace, let us together prepare the way for the rule of those lofty values of the spirit which are the most potent levers to uplift the soul of nations and secure for them a peaceful destiny.

(63) To help towards the triumph of these ideals throughout the world, one effective way is that opened up by Unesco. Accordingly, Spain cannot but express her joy at being now within that brotherhood nor do other than apply all her energies to co-operating in Unesco's undertakings. May I take this opportunity to repeat that my country, prompt to forget offences when the claim of a higher cause commands or counsels it, but is ever mindful of kindnesses received, wishes through my intermediary to renew its thanks to all the nations scattered over the five continents, which on the former occasion honoured us by casting their votes for our admission, and more particularly to the peoples of the great Arab family with whom we are linked by many centuries of cultural exchange, a recurring motif as it were in the tapestry of a chivalrous and almost legendary past. We wish also specially to thank the peoples of the vast and close-knit family of Spanish America where men speak and pray in Spanish, where love, labour and death reflect the vigorous impulse derived from one and the same stock, springing up again, as though by a miracle of the spirit, thousands of miles away on the eastern confines of the Pacific and on the rude but kindly soil of the Philippine Islands.

(64) And while I am speaking of the sister peoples of Spanish America, it is but simple justice that I - like other delegates before me - should have a special word for the member of that vigorous family on whose fruitful soil we stand today - Uruguay, youthful and adventurous, which offers us the dazzling spectacle of its wide expanse of sky and sea expressive, as it were, of a yearning for universality, a country which will make all of us here realize the nobility of its descent by offering every delegate to this Conference, regardless of political ideologies or the whims of circumstance, not only the gracious hospitality which is customary and appropriate in cultured nations but also the warm-hearted friendship of peoples of Castilian stock.

(65) And now that I have expressed the natural affection of our hearts to all these nations of our own blood, it behoves me to extend a cordial greeting to all the representatives of the other peoples met together here. With them - transcending differences of ideology - we have to share the labours and toils of a weary road towards those difficult but necessary goals, the cultural uplift of all sections of society, the surmounting of misunderstanding, hates and egoisms and the tightening of the links of understanding and friendship between all mankind. These are quests not unworthy of that wandering knight of La Mancha whose revolt against all error, all excess, against all meanness of spirit and all injustice might well typify the inner flame of this Organization, which seeks to bring a little light and harmony to the tortured humanity of our age.

(66) Precisely because we of present-day Spain feel the glow of that flame in our own hearts, we have engaged ourselves in Unesco's spiritual war, fully conscious of our responsibilities. In submitting his Report on the Organization's activities, the Director-General, whom we also wish to congratulate on the success and impartiality of his work - asked for a spirit of pure loyalty to prevail in the Organization. It was in that spirit that we crossed Unesco's threshold with the honest aim of giving rather than receiving. Now we are of the household and in it we will fight at Unesco's side for the full achievement of its aims.

(67) May I for the sake of brevity take it that this spirit of loyalty and service can be regarded under three main aspects: firstly, the aspect of our relations with the Organization as such; secondly, the aspect of our dealings with other Member States and thirdly, the aspect of our fundamental beliefs.

(68) As to our attitude to Unesco itself and to its specific work, I need only say that Spain, in the very short interval that has elapsed since she was admitted to this Organization has gone a long way to bringing herself up to date in the matter of administrative organization and in this respect recover all the time lost against her will.

(69) The most eminent figures in science, education and culture - the historian Don Ramon Menéndez y Pidal, Professor Gregorio Marañón, Don Julio Palacios, Don Julio Rey Pastor and Don José María Otero, famous in research and teaching, Father Ramírez, the great theologian, and other men of eminence have agreed to join our National Commission for co-operation with Unesco; which, thus reinforced, completed a substantial volume of work. In the light of its guidance and with the effective co-operation of the Directors and the members of the Secretariat, the Executive Committee of the National Commission under the chairmanship of Dr. Laín Entralgo, Rector of the University of Madrid, has contrived in a few months' time to arouse an interest in Unesco's aims among the Spanish public and set the requisite services in motion. In this first year even the specialized working parties for the several sections of Unesco's programme have gone into action: exhibitions have been arranged with material from Unesco; its publications have been widely distributed; and on Human Rights Day lectures and ceremonies were held in all cultural and teaching centres, for which we drew on the rich treasure of Spanish philosophical, legal and general literature, classical and modern; for Spanish thought has ever been hostile to the slightest suggestion of human servitude and sees man - as it ever has - as the focus of social and political life in virtue of his being the vehicle of eternal values and the possessor of a soul free to choose damnation or salvation.

(70) The Spanish National Commission has likewise managed to contribute effectively towards the most characteristic of Unesco's immediate and material objectives, for which purpose a large increase is being made in the number of fellowships and scholarships open to foreign teachers and students in Spain and to Spaniards abroad - of the latter a number were specially commissioned to study questions falling within Unesco's particular province at its headquarters and regional offices. There has also been a sharp rise in the number of visits by members of our National Commission Secretariat to Unesco meetings and of highly esteemed visitors from Unesco to Spain, such as Dr. Evans, whose keen understanding and sound decisions deeply impressed us.

(71) Further, Spain has taken steps to speed up her ratification of all the conventions promoted by Unesco, more particularly the Universal Copyright Convention and the Agreement on the free circulation of educational, scientific and cultural materials; and our publishing facilities have been put at Unesco's disposal for the easier and more economical production of the Spanish versions of the Organization's official publications, a step which should have the further effect of enabling us to make fuller use of the book coupon system as desired by our universities, academies and senior cultural institutions.

(72) The experience of the first months of our active membership and a careful and constructive perusal of the future programme and budget, the general lines of which we regard as satisfactory in principle, have led us to certain conclusions which we will submit to the Commissions and Committees of this General Conference. For the time being I shall merely indicate in broad outline that our own aspirations and objectives are the following:

(73) First, we want the Organization's energies concentrated on a limited number of tasks, graded according to importance and urgency, and all possible simplification of the administrative machinery, not merely to reduce the proportion of common service costs but also to speed up the handling of business and reduce to the simplest possible form the complex system of questionnaires and consultations which pour down on Member States. Consideration should be given to the problem of how Member States could be given greater assistance for their National Commissions,

so that the latter could organize more efficiently services of their own. This would undoubtedly relieve headquarters of some of the routine work and enable National Commissions to take a more effective part in the work of the Organization. Unesco's future is largely bound up with the degree of interest taken in its activities by public opinion in the Member States, and there is no better way of achieving this than by having National Commissions, with increased resources and prestige, play an effective part in the practical execution of the directives issued by the central authorities of the Organization.

(74) Secondly - and still with the same object of increasing efficiency - the Spanish delegation wishes to indicate its support of the tendency already apparent among other delegations to follow a policy of cautious redeployment, a logical delegation of functions to groups of countries linked by language and cultural affinity. Unesco cannot renounce its quality of an organization for all the peoples, wherever they dwell, whatever their language and whatever their type of culture, but it will only succeed in drawing its members together more effectively if, in the first place, it increases co-operation, mutual understanding and exchanges of educational information among those families of nations between which there already exist natural affinities either through a common language or through the identity of the fundamental beliefs which shape their cultural personality.

(75) The Director-General of Unesco, with the assistance of a Deputy or Assistant Director to take charge of each of the main linguistic and cultural sectors, would be able to maintain the universality of Unesco and at the same time by working through decentralized organs to secure greater concentration of effort in an atmosphere of greater institutional and psychological homogeneity.

(76) My third point is closely linked with what I have just said and involves the principles of fair shares and of recognition of the inherent equality of all Member States: it is important that the number of nationalities represented both in the senior posts and the administrative personnel of Unesco should be related to the number of countries belonging to the Organization. This proportional redistribution of policy-making and administrative posts and the observance of norms which will ensure that complete impartiality and loyalty prevail among all members of Unesco staff will create the atmosphere of mutual confidence between all Member States necessary for the most effective achievement of Unesco's basic aims.

(77) So much for our views, in brief outline, about the structure of the Organization. I should now like to say a few words about our relations with the other countries which are our fellow members in Unesco and more particularly about the concrete achievements in teaching and scientific research which Spain can proffer for their consideration.

(78) I am not proposing here to cite statistics to illustrate the greatly increased efforts made in Spain, both by the population and by the State, for the promotion of culture. I could have done this by comparing the figures of the budget of the Ministry of Education, which were 345 million pesetas in 1935 and amount to 2,400 million pesetas in 1954, an enormous increase even if allowance is made for the difference in the purchasing power of the peseta. Or again I could have taken the falling curve of illiteracy, which went down from about 26% in 1930 to 14.24% in 1950, with an appreciable further reduction in the last four years as the result of a strictly enforced scheme of adult education and a large-scale programme for building modern schools with all the requisite amenities and educational facilities. Or again I could have instanced the efforts made to modernize our universities, institutes and technical schools, the increase in the number of libraries, etc.

(79) However, we prefer to have the visitors who honour us with their presence in Spain note these facts for themselves. More than 2 million foreigners have crossed our frontiers and travelled all over our country since 1 January last. They included a large number of scientists attending international congresses of every type. Spain has made a special point in the last ten years of opening her doors to intellectuals, scientists and teachers from all kinds of countries, without distinction of race or creed, wishing to visit us or give us valuable lessons in the field of scientific or technical research or new methods of vocational and pedagogic training. Let them testify to what they have seen. We are also glad to extend similar invitations to all the distinguished delegates here present who decide on returning home to visit us, that they may without any interference, and in full knowledge of the facts, judge for themselves the real extent of the effort in the sphere of education, science and culture which is being made in Spain today.

(80) The same spirit of loyalty moves us to the view that Unesco should be broad-minded in accepting the co-operation of other peoples. Like the founder of the Uruguayan nation, that great gentleman José Artigas, we should proclaim that we regard as our enemies only those who are the enemies of the community's well-being. Let us set no bounds to co-operation with other States save the condition that they respect our independence and our inalienable spiritual convictions.

(81) This could be the appropriate time, before concluding my remarks, to voice Spain's earnest hope that the time may not be far off when certain nations not now members of Unesco will be able and eager to join, as, for instance, the only Spanish-American nation not yet a member, Paraguay, or Portugal and Ireland in Europe, whose great services to universal culture would make them excellent and distinguished partners in this Organization.

(82) My last general remark would be to say that, while a "spirit of loyalty" should prevail within Unesco - in the Organization itself and in its member countries individually - there must also be a loyal belief that the fundamental convictions of the several groups of peoples making up the Organization will be respected. This should be reflected more particularly by the way in which we lay stress on one or other of the Organization's activities.

(83) I would like simply to make special mention of the three following points: firstly, the social uplift of the classes in all countries which are economically most under-privileged. If we really wish for peace, we must deliver the millions still living in oppressive darkness from serfdom and ignorance. Our own Saavedra Fajardo has said that there are some people who fear virtues in men because it makes them kings and prefer vice because it makes them slaves. Our

hope is that Unesco may contribute to the growth of a genuine spiritual noblesse among all peoples by the enthronement of virtue in their minds and hearts.
(84) Secondly, we look for a strengthening of the natural links between the peoples, and nothing is better calculated to achieve that purpose than mutual acquaintanceship between intellectuals. We are therefore glad to see that in the proposed programme and budget there is an increase in the total appropriations for fellowships, scholarships and exchanges of books and publications.
(85) Lastly, we should like Unesco to contribute even more towards the moral and spiritual training of the peoples. While naturally respecting the consciences of others, we must harness the spiritual energies of all our peoples for the ends of peace and justice for which Unesco was created. The people in whose name I speak is one which hold God to be the author and the supreme guarantor of human freedom and free will, which believes in the primacy of spirit over matter, which believes that service for the well-being of the community can smooth man's path to his immortal destiny. And we are confident that Unesco will play its part in seeing that the requisite conditions obtain which will enable this moral training to be given to men all over the world, more particularly in those countries where there are traditionally large communities loyal to these supreme beliefs.
(86) If we hold firmly to this policy of loyal co-operation between us; if we promote, within this Organization, the improvement of its organs, and above all, if we acquire the inner conviction that it is in our hearts and minds that we must build peace between the peoples, we shall not fail of victory. In the same Spanish classic that I quoted earlier there is a passage to the effect that battles fought with the sword alone are doubtful but that victory is certain in those fought with the head. Let us win the battle of peace with the weapons of our minds, for it is a war against error, ignorance and incomprehension. For this war of peace which will bring light to the mind, solace to the heart and justice to all peoples inside and outside Unesco we, the people of Spain, stand armed and ready.

(87) The PRESIDENT (Translation from the Spanish): I call on the delegate of India.

(88) Mr. KABIR (India): Mr. President and fellow delegates, I have great pleasure in adding the voice of India to the felicitations offered to the Oriental Republic of Uruguay on the generous hospitality with which this country, small in population but great in heart, has welcomed delegates from all corners of the globe to this eighth General Conference of Unesco. We were particularly happy to learn from you, Mr. President, that Uruguay imposes no barriers to thought and extends an equally warm welcome to men and women of all races, colours and creeds. Toleration of differences and charity towards all have also been characteristic of the country to which I have the honour to belong, and we are particularly happy that this session - when we have for the first time members representing the rival world outlooks which claim the allegiance of modern man - meets in the friendly and tolerant atmosphere of this beautiful land.
(89) I would also like to congratulate Dr. Evans on his first Report as Director-General of Unesco. I agree with the delegate who said that Unesco is not the Ministry of Education of a super-State, but we may rightly claim that it should be the keeper of the enlightened conscience of the world. The work of education, science and culture must no doubt be carried out by the Member States themselves, but Unesco should offer them the opportunity of co-operation and collaboration in a task which concerns each as much as it concerns all. It must be one of the chief aims of Unesco to make all members realize that each is responsible to and for the rest, that human welfare is an indissoluble whole and that no State, however powerful or prosperous, can maintain its achievements unless it shares them with the rest of the world.
(90) I am glad to find that the Director-General and the Executive Board have taken note of the friendly suggestions from Member States and are taking steps to concentrate and simplify the programme of Unesco. The less fortunate areas of the world want education for the masses, want technical assistance, and I think you will all agree that these two should be first priorities in the programme. It is India's desire that Unesco should direct all its energy to the task of eradicating illiteracy from among half the population of mankind. These are points which India has pressed time and again, and we are happy to find that Unesco proposes to launch a world-wide campaign of publicity for an International Educational Development Fund. Such a reorientation of its programme will win for Unesco the support of intellectuals as well as of the masses in all countries.
(91) Talking of the need for concentration and simplification, may I suggest that the process start with the documentation provided us by the Secretariat? I am sure all delegates are duly impressed by the quality as well as the quantity of the papers that come to us, but may not their purpose be defeated by their very volume? When papers are too many and the time is all too brief, they may not be read. Also, I have at times wondered if all this volume of paper is really necessary. I am reminded of a story, so true in spirit, if not in fact, that I cannot resist the temptation of repeating it. It is said that President Roosevelt, when asked to make a five-minute speech, declined on the ground that it would take too long to prepare. Asked again how then he could find time to prepare addresses running to two hours or more, the President is reported to have said that he was ready to deliver a two-hour speech on any subject right away.
(92) I also warmly support the proposal of the Director-General that the programme of Unesco shall conform more and more to the views of Member States. The Chairman of the Executive Board also referred to the need for closer consultation with National Commissions and governments. I earnestly hope that this will be done on an increasing scale, for, in the past, this salutary principle has not always been observed. To take only one example. In the draft programme before us, there is a proposal to close down or reduce the scale of the Science Co-operation Office at New Delhi and to transfer some of its functions elsewhere. May I ask if there was any previous consultation with the National Commission or the Government concerned? At the first conference of the permanent Indian National Commission, fraternal delegates from neighbouring countries expressed the wish that this office might develop into a centre to provide enlarged services

to all the countries of this region. I hope that there will be no repetition of such a lapse, and I am happy to say that, as a result of our discussions with the National Commission and the Government of Indonesia, we have, with their support, given notice of a resolution for the establishment of a Nucleus Office which may provide fuller and more satisfactory service to all the countries of South East Asia. I will not discuss this point in further detail, as my distinguished colleague and friend, Dr. Mudaliar, will be placing a resolution on this subject before the Conference.

(93) I would here like to dwell for a moment on a point which is at times not fully appreciated. We talk of developed and undeveloped countries and sometimes think of the relation between them as a one-way traffic, in which the so-called developed countries are the donors and the so-called undeveloped countries the recipients. Can we, however, be sure that the categories apply generally? Should we not confine them to a specific aspect of human development? There is no question that, in industrial progress, in the application of science to crafts, and in the standard of material civilization, countries of Europe and America are far more advanced than those of Asia and Africa, but can it be said with equal confidence that they are more developed spiritually and morally? Simplicity, contentment and goodwill are values which do not necessarily accompany material progress. Happiness is an elusive thing, but can one equate it with comfort and luxury? Can we even be sure that countries and peoples which use the gadgets of science are necessarily more scientific in their attitude and outlook?

(94) I would not be misunderstood. We are entirely in favour of using science for raising the standard of life of the people. Material comforts are necessary to liberate the spirit from over-much concern with material things. That is why India and other countries of the East are today engaged in a gigantic effort to reconstruct the economic bases of life, to make education universal and free, and to transform our existing economy of poverty and want into an economy of wealth and plenty. Simultaneously, we are striving to preserve the spiritual values which we consider to be man's most cherished heritage and are ready and indeed anxious to share them with all. We therefore feel that Unesco should in its programme place a special emphasis on the exchange of the different gifts which different peoples have to offer. While some regions, and I am thinking primarily of Asia and Africa, can benefit by the techniques and the crafts, the spirit of enquiry and the spirit of adventure of others, these others, and I am thinking primarily of Europe and America, can with equal profit imbibe some of the spiritual values developed in other regions of the world. Unesco's programme of translation of the classics of different lands is a welcome step in this direction.

(95) It is because of our recognition of the need for greater co-operation and exchange between peoples and countries that we wish to place before this Conference two related resolutions on universality of membership and decentralization of Unesco's programmes. We are in favour of making the Organization truly global, for we believe that the modern world, knit into one compact unit by science and technology, must be united in thought and spirit if it is to survive. Further, we believe that each region has something of value to contribute to the rest. Some people may be lacking in material goods, some in individual liberty and personal freedom, others in social security and still others in a sense of human brotherhood, but the only way of making good the deficiency of each is to bring it into contact with another which may be rich in a particular element while lacking some other element of equal value. In this way alone can each gain by learning from others for our common human good. We are therefore sorry that this Conference did not extend a warm and cordial welcome to Bulgaria and Rumania, which sought to join the brotherhood of Unesco. We would go further and say that Unesco should open its doors to any country which wants to come regardless of its political or economic attitudes. We are sorrier still that the Executive Board which sponsored their application did not act more vigorously in their behalf.

(96) Global membership carries with it one other implication. The Director-General has rightly stressed the need of co-operation in different fields through the machinery of specialized international agencies. We would only add that it is necessary to ensure that these agencies are truly universal and representative of the main regions of the world. At present many of them are concentrated in Europe and America. I would urge that at least the organizations set up under Unesco's auspices or with contributions granted by Unesco should be located in different areas of the world so that they are more representative of the world as a whole and so that the claims and needs of Asia and Africa may not be overlooked.

(97) Global membership of Unesco and decentralization of the programme are, as I have said, closely linked in our minds. As the Organization becomes more and more widely spread, it will become increasingly difficult for a central Secretariat to frame programmes to suit the needs of all. I am therefore happy to learn that the Director-General himself is anxious to discuss with Member States programmes at the formative stage. Two points, I think, must be kept in mind in all such discussions. The first I have already mentioned in some detail: there must be no sense of superiority or spirit of condescension but a recognition that we are all fellow workers in a common task. The second point arises out of this. It is that the regions themselves must be able to decide what shape the programme shall take. There is often a temptation - fortunately Unesco has been largely free from it - for a central organization to try to decide what is good for its members. The real needs of a region can, however, be best solved if the programmes for that region are framed in the region itself, by people with intimate knowledge of and feeling for the locality. I have used the term "feeling" deliberately, for knowledge is not always enough and without feeling, without a sense of identification with the people and the country, it is almost impossible to frame a programme that will best serve their interests. This is also the essence of democracy, for democracy is not merely a political concept, but a way of life, where every individual and every people have a right to determine their destiny for themselves.

(98) I would like very briefly to inform fellow delegates of what we are trying to do to expand the work of education, science and culture in India. Ours is a

vast country. The number of children between 6 and 11 is over fifty million, much larger than the population of France. In the last seven years, the number of those in this age group who go to school has risen from less than fifteen to over twenty millions. An increase of over five million in elementary schools alone in seven years is, you will agree, no small achievement. The number of high schools has increased from less than four thousand in 1947 to about ten thousand in 1953-54 and the number of secondary school pupils from less than three millions to about six millions, again, perhaps more than the population of certain countries from which we have very distinguished colleagues at this Conference. Our governmental expenditure on education has been raised from less than 45 million dollars in 1947 to over 200 million dollars in 1953 and the figure for 1954 will be considerably higher. Taking the Central Ministry of Education alone, it has increased almost tenfold in the last seven years. The total national expenditure on education increased from about 100 million in 1947-48 to over 300 million in 1953. This progress has been achieved in spite of natural calamities, partition of the country, the movement of population on an unprecedented scale and all the aftermath of war and famine. Nevertheless our achievement is still far short of our aspirations and of what we must provide for the people of our country.

(99) I would have liked to discuss other aspects of the programme and especially to acknowledge with thanks the services received by us under the various programmes of Unesco. Time does not permit me to dwell on all of them, but I would like to refer to the Delhi Public Library and to the generous help we have received under the various technical assistance programmes. If, at times, my remarks have been critical, it is because India is and will always be the friend of Unesco. A friend criticizes and warns, while an enemy strikes. We shall always criticize and warn, but our hands will be the first to be raised in defence of Unesco whenever an enemy seeks to strike at it. As one of the founder members of the Organization, we expect much from it, for we believe that human welfare can be realized only when the minds and hearts of men are attuned to the Unesco cause.

(100) Before I conclude, it is my pleasant duty to repeat, on behalf of my country, our cordial invitation to hold the ninth General Conference of Unesco in India. In my letter to the Director-General, I have mentioned some of the reasons why the next Conference should be held in India and I do not wish to repeat the arguments, but I would like to place special stress on one point. No conference of Unesco has yet been held in this part of the world, though Eastern and Southern Asia contain more than half the entire population of the world. It is an area which, for historical and other reasons, is in the greatest need of education and science. It is also a region which has newly awakened from the torpor of centuries. The masses are stirring and a new world is taking shape before our eyes. This ancient arena of the world is again the battleground of conflicting ideas, ideals and world outlooks. On the outcome of this battle depends the future of the world. If this region, where more than half of mankind live, decides to follow the path of militarism, aggrandizement and exploitation, the fate of Homo Sapiens is sealed. If, on the other hand, it remains true to its ancient tradition and adopts the way of democracy and peace, we can look forward to an era when the ideals of Unesco will be realized. It is therefore Unesco's duty at this critical juncture to bring as vividly as possible to all peoples of this region the ideals inscribed in its Constitution: the ideal of liberty, equality, dignity and social justice for all, realized through a programme of free exchange of ideas and knowledge which will remove the basic causes of misunderstanding and distrust among all peoples and countries of the world. And what more vivid way of doing so than to hold the next Conference in the region itself?

(101) The PRESIDENT (Translation from the Spanish): I call on the delegate of the Netherlands.

(102) Mr. KRUYT (Netherlands) (Translation from the French): Mr. President, I should like to begin by thanking the Government of the Republic of Uruguay for the warm-hearted hospitality we are receiving in this fascinating city of Montevideo.

(103) In the address I had the honour to deliver at the opening of the last General Conference in Paris in 1952, I was able to say that the Netherlands delegation recognized with gratitude that Unesco's programme for the year 1951-52 had done most beneficial service to educational, scientific and cultural life in the Netherlands. No one could have thought then that only a few months later the same services were to be renewed on an even greater scale, but in circumstances a thousand times more tragic. You remember, I am sure, that in the night of 31 January/1 February 1953, the raging waters of the North Sea broke through and flooded part of our country. The outburst of practical compassion which this catastrophe produced throughout the world could not, of course, undo the tragedy which had struck at what so many families held most dear, but it produced immediate and abundant material help and, above all, it gave the Netherlands people the psychological tonic they so badly needed. I account it not only a debt of honour but a true pleasure to express from this rostrum the deep and enduring gratitude of the Netherlands people towards everyone - governments, private bodies and ordinary individuals - who gave proof of their practical goodwill to us in that tragic hour. A point worth stressing is the great part played by educational circles in that assistance. From all over the world we received funds and material expressly earmarked for the reconstruction of damaged schools and youth centres. Here I am glad to offer our most heartfelt thanks, firstly to the individual members of the Unesco Secretariat who set aside a proportion of their own salaries to aid us, but also to the Unesco authorities - and I would specially name Dr. John Taylor, the then Deputy Director-General - who used the system of Unesco gift coupons to singularly good effect to facilitate the despatch of immediate help even from the most distant countries. We are also most deeply grateful to all the Member States who so generously responded to Unesco's appeal. This concrete and tangible expression of the international understanding and co-operation about which we talk so much at our meetings has given us further proof - if proof were needed - of the usefulness and worth of our Organization

and has powerfully encouraged our whole country to strengthen its co-operation with Unesco.

(104) Without going into details of the part played by the Kingdom of the Netherlands in the execution of Unesco's programme during the two years since the last General Conference, and without enlarging on the undoubted benefits this programme has conferred on education, science and culture in my country, I should like to single out as the most striking, and probably also the most important item in our work with Unesco, the joint organization by Unesco and the Netherlands Government of an intergovernmental conference for the drafting and signature of an International Convention for the Protection of Cultural Property in the Event of Armed Conflict. The present General Conference will have before it a report drawn up by the Secretariat on the meeting. On our side I should like to stress the Netherlands Government's satisfaction that the conference, held in the Peace Palace at The Hague, achieved such positive and encouraging success. I should also like to mention the effective and cordial co-operation achieved in this connexion between the Unesco officials concerned and the Netherlands Government. The conference itself, and the Director-General's visit to our country in connexion with it, have undoubtedly done a great service to Unesco's cause in the Netherlands.

(105) The Hague conference was marked by another event which may have consequences much more important and, we sincerely hope, much more positive for the achievement of our Organization's aims than the signature of the Convention then adopted. This conference was, actually, the first occasion when the Union of Soviet Socialist Republics and a number of other States of Eastern Europe showed a desire to co-operate with our Organization, and in their presence at this General Conference we see evidence of their wish to establish that co-operation on a permanent and positive basis. We rejoice at their decision, not merely because it gives our Organization the universality we have wanted for it since its foundation, but also because it is a step towards expanding international co-operation in education, science and culture with countries which have themselves a centuries-old scientific and cultural tradition. A free exchange of ideas and publications and free personal contacts with the men of science and culture in those countries, if it could be effected, would be an important step towards the establishment of an enduring peace and of fruitful international co-operation. We await with eagerness, and will study with the liveliest interest, the measures which the new Member States propose to adopt for putting into effect the lofty principles incorporated in the Constitution which is the basis of Unesco's activities.

(106) I shall not take up the time of the Conference at this stage with the comments my delegation would like to make on certain items of the programme before us for the years 1955-56. I should simply like to say that we whole-heartedly approve the general lines of the programme and that we are grateful to the Executive Board, the Director-General and his colleagues for producing a proposed programme centring more or less on a limited number of activities which are genuinely within the Organization's province. This Conference will, of course, have to take decisions on certain changes of structure but, important though these may be, we should not like the discussion to be so concentrated on technical and administrative matters that the actual programme items, which have a great importance of their own, are overlooked.

(107) The programme for 1955-56 and the general line proposed for the development of the activities to be pursued in 1957-58 are evidence of a remarkable effort of creative imagination by the Executive Board, the Director-General and the Secretariat. The result of these efforts is to be found in certain paragraphs of the Director-General's introduction to the proposed programme and budget, in the Executive Board's introduction to the same document and in the document on the remodelling of future Unesco programmes. In our view these documents contain suggestions of the greatest interest and we hope that the Programme and Budget Commission will be able to carry out a really comprehensive exchange of views on the various proposals.

(108) Nevertheless, we think it absolutely necessary to ask for a further explanation of the general sense of the document on the remodelling of future Unesco programmes. It might be thought that the large proportion of the available funds to be set aside for what the document calls "special activities" means that an increasingly large proportion of the Organization's activities will, in future, be directed to providing technical assistance for underdeveloped Member States. The distinctions made in the document between technical assistance proper and special activities undertaken at the request of a Member State have not succeeded in allaying this fear. Our own belief is that the passage in question seeks only to distinguish between "general activities", i.e. without fixed limits in time and space, and "special activities" i.e. activities of limited duration and involving only one Member State or group of Member States. If our interpretation is incorrect and the former interpretation the right one, we should not be prepared to accept this passage. While we recognize the absolute necessity in the world of today for a wide programme of technical assistance to underdeveloped States - and the relatively very large contribution of the Netherlands to the Technical Assistance Programme of the United Nations proves that we pay more than lip service to the idea - we are strongly of the opinion that assistance proper is one thing, but that world-wide intellectual co-operation between the competent individuals and organizations in the sphere of education, science and culture is quite another and it was for the latter purpose that Unesco was primarily set up. We hope that the General Conference now meeting will succeed in reaching an absolutely clear-cut ruling on this point.

(109) Another subject which warrants a full-scale discussion is the composition of the Executive Board. We believe that the lines of reasoning leading to the two competing propositions are not basically different; they simply represent different points of approach. Actually, one party holds strictly to the meaning of the term "Executive Board" and of its functions as given in Article V, paragraph B, of the present Constitution. They lay special emphasis on the fact that the Executive Board, acting under authority from the General Conference, is responsible to the Conference for the execution of the programme adopted by the

latter and that, accordingly, these supervisory functions, exercised on behalf of the Member States, can be better carried out by persons expressly delegated by them. The other party, while not denying or seeking to lessen the importance of this duty of the Executive Board, would prefer the Board to consist of individuals representing the world's various cultures and to be the adviser par excellence of the Director-General, with the task of working out with him the general lines on which international co-operation is to be developed in the spheres of education, science and culture - and I feel I am not misrepresenting the views of the first group in pointing out that they too admit that this is one aspect of the Executive Board's task. At the last General Conference, where this question was previously discussed, my delegation did not dissemble its opinion that, from the point of view of the needs incidental to the Organization's own work, the governments of Member States already had adequate powers, in the shape of representation at the General Conference, to maintain their control of the Organization's activities and that the Executive Board would therefore do well to concentrate on the positive aspects of its task. The views both of my delegation and of the Netherlands National Commission for Unesco have certainly not changed. We are, however, forced to admit that circumstances external to the Organization and arising rather out of current political developments in the world make it desirable that, in the immediate future at any rate, the Executive Board should be made up of representatives of governments. We should, however, like to draw most emphatic attention to paragraph 2 of Article V, Section A, which, incidentally, has not been changed by draft amendments. This paragraph provides that the General Conference shall take special care to include in the Executive Board distinguished figures of special authority in the spheres of art, letters, science, education and communication of thought. We are confident that all Member States will make a point of bearing this specific provision of the Constitution in mind so that, while securing the advantages of having accredited representatives of States on the Executive Board, we may still have the advantage of the collaboration in education, science and culture, of people who are pre-eminently qualified to give a lead in these fields.

(110) The present General Conference is undoubtedly of special importance for the future of our Organization. My delegation, which has the honour to represent here the Netherlands, Surinam and the Netherlands West Indies, the three autonomous divisions of the Kingdom, has every confidence in that future.

(111) The PRESIDENT (Translation from the Spanish): I call on the delegate of the United States of America.

(112) Mr. NUFER (United States of America): Mr. President, fellow delegates, the selection by Unesco of Montevideo as the seat of the eighth session of the General Conference constitutes an appropriate recognition of the contribution Latin America has made to the ideals and objectives of the Organization. Uruguay has been a pioneer in cultural, political and social development. It has traced bold new patterns which have aroused the interest of the entire world. These patterns, moreover, have been conceived in a framework of freedom and liberty. The generous welcome Uruguay has extended to the peoples of all nations who have come here to enjoy the climate of peace, equality of opportunity, and racial and religious freedom, is one more indication of its devotion to the principle of the fundamental dignity of man.

(113) Before presenting the views of the United States delegation to the Conference, I should like to refer briefly to what in our opinion is the most significant development in Unesco since the seventh Conference. This is the proposal to remodel the programme. We believe that this eighth Conference will go down in Unesco annals as an historic one if it accepts and implements the proposal.

(114) The Executive Board has rendered a great service in its development of this basic idea, including the division of the programme into general and special activities. These special activities afford great promise for the future in that they would take advantage of the lessons of the past and would envisage major projects which will clearly show Unesco to be a progressive and dynamic force in the world.

(115) In this spirit the Secretariat, acting at the suggestion of the Executive Board, has proceeded to revise the 1955-56 programme. The Director-General and the staff have demonstrated a sound understanding of the concept set forth for their guidance.

(116) The tenth anniversary of Unesco in 1956 will be an appropriate time for celebration. It would be fitting to observe that notable occasion by charting a course whose new bearing would reflect the cumulative experience of the past and a clear and realistic vision of the future.

(117) In order to be prepared for a new orientation in 1956, it is important that we give careful thought at this eighth Conference to ways and means of planning the remodelled programme. We must be certain that the ideas of all of the Member States as well as those of the Secretariat are pooled in order that there may be evolved a group of practical and sound projects which will be readily understood by all and which will reflect Unesco ideals in being.

(118) In moving towards such goals, we must retain as our guide and compass the Constitution of Unesco. We must constantly remember the ends for which the programme is but a means. Education for all, the growth and appreciation of knowledge, the diffusion of science and culture, the advancement of respect for human rights, the increase of understanding and co-operation among peoples - these are the great purposes to which specific activities and projects must be related. These purposes advance the prospect of well-being and peace to the extent that they are shared by all.

(119) We, in the United States, are vitally interested in these peaceful purposes. To promote complete freedom of exchange of ideas and information is to make available to all peoples the knowledge that their fellow-men share with them the common desire for a peaceful world. To achieve a better mutual understanding, it is essential that the man-made barriers to communication between peoples be progressively reduced. The very fact that representatives of so many peoples here take counsel together is in itself a contribution to peace. Think, then, of how this contribution will multiply and grow as mutual confidence and the interchange of

ideas flourish through the world-wide activities of Unesco.

(120) The principal recommendations of the United States National Commission for Unesco, which I now wish to lay before you, are in accord with what I have said about the remodelling of the programme.

(121) First, we believe that sustained effort should be directed toward strengthening important and permanent services, such as intellectual co-operation, clearing house activities and the exchange of information and materials in the fields of Unesco's competence. The Organization has a unique responsibility for linking those who are active, the creative workers, in the various fields of knowledge. To these ends more effective use should be made of selected responsible non-governmental agencies. This will avoid spreading Unesco's funds too thinly and should develop greater self-support in these agencies.

(122) Second, Unesco must concentrate its resources on a limited number of major projects. The United States has pressed for this policy at several previous conferences. We have thought that there should be fewer undertakings and that more resources should be devoted to each, so that really significant results could be achieved. We are gratified that the 1955-56 programme represents a forward step in this direction.

(123) Third, we believe that the Unesco programme should reflect, even more clearly than it now does, a concern for the promotion of international understanding and co-operation. We urged at the seventh conference and we urge again that a strong interdepartmental committee be set up in the Secretariat to plan and co-ordinate the activities and projects which bear on this important subject.

(124) Fourth, priority should continue to be given among the major projects to those for fundamental education and the extension of education, particularly elementary education. Each session of the General Conference has recognized the challenging problem presented by the continued existence of mass illiteracy, poverty, hunger and disease. Unesco has a great responsibility, along with such sister agencies as the Food and Agriculture Organization, the International Labour Organization and the World Health Organization, for tackling these problems. The need for training in literacy, in health, in improvement of agricultural methods, in crafts, in home economics, in community development and civic education is undisputed. In view of this need, much more of Unesco's resources should be devoted to the programme of fundamental education.

(125) Fifth, the United States believes that Unesco should make a greater effort to assess the success or failure of its projects. Considering the complexity of the unexplored field in which Unesco is working, it is only common sense to take frequent bearings in order to determine whether the course of action is effective. We therefore believe that, in the future, major projects should be so planned as to incorporate programmes of evaluation. Thus each stage of the project will proceed with full knowledge of what has been successful, as well as a clear recognition of what has not worked well at a preceding stage.

(126) Another question to which the United States delegation attaches prime importance is the joint proposal sponsored by the Governments of Australia, Brazil, the United Kingdom and the United States to amend Article V of the Unesco Constitution. The object of this proposal is to make members of the Executive Board responsible representatives of their governments. At the same time, of course, they will continue to be responsible to the General Conference and to defer to its wishes. At the seventh General Conference a similar proposal was put forward, but action was postponed until this session. Some objections to this concept have been expressed on the ground that its adoption might lead to a frustration of the ideals which inspired the creation of Unesco and to the destruction of vision and imagination in its leaders. It is our conviction, however, that the future of Unesco and its activities lies in the hands of the governments which comprise it, that its potentialities can be developed only to the extent that its direction inspires the confidence of Member States, and that the first step toward that goal is the assurance that members of the Executive Board are in fact responsive to the views of their governments. It follows also that the decisions of an Executive Board so constituted would carry much greater weight with member governments than is the case at present. It would be the moral responsibility of governments to appoint as their representatives persons of outstanding achievement in the fields of education, science and culture, in full consultation with their National Commissions.

(127) The founding of Unesco was an act of faith - faith in man's ability to recognize truth through the free interchange of information, faith in his ability to improve his lot through common effort. We in the United States have not lost that faith.

(128) The years of Unesco's life have been troubled ones, and many difficulties are still unresolved. Yet we believe that the prospects for peace have recently improved. The United States Government has taken the initiative in submitting to the United Nations, President Eisenhower's imaginative and constructive plan for the peaceful use of atomic energy which will enable all peoples to share its benefits. The partnership of free nations has begun to show positive results. Peace has been restored and old disputes settled in several parts of the world. Every man who truly longs for peace can derive hope from the progress which has been made. Once again it has been demonstrated that men working together in an atmosphere of goodwill, intelligence and perseverance can overcome serious obstacles and achieve substantial results.

(129) These developments encourage and strengthen us in our aspiration for a world of free men, where the will of the people is fully recognized, a world where barriers of fear and prejudice will be replaced by ties of friendship and mutual understanding.

(130) (Translation from the Spanish): Mr. President, I shall ask your leave to add a few words in Spanish - a few words to express the heartfelt thanks of all my colleagues in the United States delegation and of myself for the innumerable attentions we have received from the Government and the people of this country. Uruguayan hospitality is, of course, proverbial, but even so we had expected nothing so kindly and so generous. For us of the United States delegation it is a matter of singular satisfaction that this session of Unesco's General Conference should be held in a country of the Americas. The spiritual, cultural and historic links binding the American Republics together

have made this hemisphere a region of peace and calm with an ever more marked atmosphere of friendship and mutual understanding. May God grant that in the near future this same atmosphere of friendship and understanding may prevail, with Unesco's aid, among all the nations of the world.

(131) The PRESIDENT (Translation from the Spanish): I call on the delegate of Denmark.

(132) Mrs. KOCH (Denmark): Mr President, the Danish delegation associates itself with the expressions of thanks to the Uruguayan Government and people for their very kind and extremely sympathetic hospitality.

(133) Some days ago, as I listened to the noble and inspiring words of the delegate of the Gold Coast, I tore up most of the speech I had meant to make. What does that matter? Most of the problems I had thought to deal with have already been mentioned - and they will be dealt with more profoundly in the respective committees of this Conference. We Danish delegates - few as we are - will do our best to advance our points of view in the appropriate places. Three of us have been at Unesco work from the beginning; I alone am here for the first time. Allow me to talk to you with the freshness of a first meeting with Unesco upon my lips.

(134) I was deeply impressed by the words of the Gold Coast delegate. He told us of the great endeavour of his people, of the many useful things the Government of the Gold Coast intends to teach the population, and, among those things, he mentioned the joy of living.

(135) I have been reading over and over again during the last year some modern African poems in Danish translation, and I saw in a glimpse the wide and wonderful perspective of the work of Unesco.

(136) What have we not to learn from each other? The old, experienced and somewhat weary democracies have much to give, but surely we have still more to learn, as true as we are living democracies. Denmark, now a very small country, but in days long ago a colonial power, treated the Gold Coast in a manner that we prefer not to remember. All of us here are linked together in the process of history. History must take its course. We cannot weaken the sway of power-politics from one day to another, nor from one year to another. That is a long-term task of wise and patient statesmanship.

(137) But here, on the platform of Unesco, we are not bound to schemes of political thinking, if we crave freedom in our hearts. Let me be open with you. When this august assembly refused by a large majority to deal with the problem of Peking China and evaded the question of accepting Rumania and Bulgaria to membership, I felt sad. The act seemed to betoken the lassitude of the old world. Where is the sense of not receiving New China among us in Unesco? New China, with her roots deeper in the ancient history of human civilization than most of our countries, has chosen her own way. It is not our democratic way. We may regret that, but perhaps in a sense we of the Western world are responsible for it. When you meet with a rebuff, your heart hardens. That is a psychological law of human nature, the same in the nurseries as at conference tables.

(138) Let us learn to analyse our own behaviour and to revise some of our conventional ideas. We have a duty to do so, here in Unesco, in the name of truth and the freedom of mankind. We have hitherto acted on the assumption that by far the larger part of our work lies outside the political sphere and is concerned with the needs, hopes and aspirations of all humanity. We want to enlist the forces of science and culture for the founding of a lasting peace on the common heritage of mankind, safe from the uncertainties and vicissitudes of everyday political life.

(139) But enough of this. The Director-General allowed us to talk of the principles of Unesco while debating his Report and my remarks had that purpose only in mind.

(140) As to the Report itself, the Danish delegation finds that that document - as well as the programme and budget - reflects the readiness of the Director-General, his Secretariat and the Executive Board to pay attention to justified and constructive criticism, and to utilize it in a persistent effort to improve Unesco's programme and activities.

(141) Denmark has repeatedly supported the efforts to concentrate Unesco's resources on essential and well-defined tasks, its main effort to be directed towards improving education and science in parts of the world which are economically and socially underdeveloped. I wish to reaffirm our support for such efforts, but at the same time I have to emphasize that a suitable equilibrium must be maintained between such activities and the support to be given to international scientific and cultural co-operation through non-governmental professional organizations.

(142) The work of the international institutes in Germany has been followed with great interest in Denmark. We hope that the Organization may succeed in carrying on and developing these institutes and, as a token of our interest in these problems, the Danish Parliament has appropriated contributions of 35,000 Danish kroner for each of the years 1955 and 1956.

(143) We have noted with satisfaction that valuable work has been carried out on the special problem of women. We should welcome it if substantially more weight were given to the education of women to take their share of responsibility for social development; it is important not only for women, but for the sound growth of democracy itself.

(144) If Unesco is to live and grow in the way that it deserves to, we must reach the broad masses of the people. It is therefore a good thing, we think, that Unesco's programme includes projects which pave the way for active co-operation by the individual citizen and make a direct appeal to the man in the street. I am referring to two projects in particular: Exchange of Workers and Unesco's Gift Coupon Scheme, both of which have been very valuable to us in Denmark. The implementation of these two projects has made a deep impression on Danish minds and has enabled us to dispel in the eyes of the ordinary citizen the abstraction that so easily attaches to international organizations. How can persons not directly engaged in Unesco work identify themselves with the great task for which we have joined forces? I believe that the answer to that question is very important, for, unless the peoples commit themselves sincerely and actively to international work, that work will sooner or later disintegrate.

(145) More than any other of Unesco's initiatives, the Gift Coupon Scheme has assumed concrete form in the minds of the Danish people. It can help people to break away from traditional prejudices and attain a truer sense of values. Indeed the benefits of the coupon scheme to ourselves are so substantial that we have come to look upon the scheme as a gift to us. In the administration of the scheme we in Denmark have endeavoured to give equal weight to its value to recipient countries and to its educational importance for our own people. The coupon scheme has made such a profound appeal to the mind that the Danish youth organizations have joined forces and taken up this work with a realization of its human potentialities and with a keenness no one had dared anticipate. A large share of the work on the coupon scheme has been performed in our schools. There, too, the result has been so encouraging that the non-governmental organization - which the National Commission entrusted with the administration of the scheme - is now framing a school plan. These are, in very brief outline, a few of the thoughts and ideas arising out of our experience of the coupon scheme in Denmark. We want as far as possible to make the scheme a manifestation of human solidarity, a real and true exchange.

(146) And now - speaking of human solidarity - I will add two words on the staff problem submitted for discussion by the Director-General. The Danish delegation finds that the staff regulations are good as they are and we hope that whatever solution is found will safeguard the effective work of the staff without encroaching on the rights of staff members to hold personal opinions in the fields mentioned in the Human Rights Declaration, rights which we in Denmark maintain for our civil servants as a matter of course.

(147) After this general debate, we shall come to grips with the details of our programme. We shall judge each item on its merits according as it advances the well-being of humanity, materially and spiritually; according as it enhances understanding between nations and provides better educational conditions for future generations.

(148) Just as science has no use for national prestige or political prejudice, so in all matters of the mind the indulgence of prejudice and considerations of prestige are short-sighted and sterile. Truth has an inherent strength and this encourages the hope that we shall be able to co-operate, different as we are in ideology and way of life.

(149) With its increased membership, Unesco is faced at this General Conference with new possibilities and they might have been greater still, if we had reached another decision on the admission of certain new members. As things are, let us fact these new possibilities with open-mindedness and courage, with goodwill and patience The Danish delegation pledges its full co-operation at this important juncture.

(150) The PRESIDENT (Translation from the Spanish): I call on the delegate of Guatemala.

(151) Mr. DIAZ SAMAYOA (Guatemala) (Translation from the Spanish): Mr. President, ladies and gentlemen, the delegation of Guatemala to the eighth General Conference of the United Nations Educational, Scientific and Cultural Organization has the honour through me to greet the delegations of the other countries met together on this important occasion, and more particularly the Director-General of the Organization.

(152) It is also a matter of the deepest satisfaction to the delegation of Guatemala to have this wonderful opportunity of enjoying the warm and intellectual atmosphere of Uruguay, a cultured and generous-hearted land which has upheld in Spanish America the loftiest ideals of culture and was and is an exemplar of those purest forms of democratic life towards whose attainment the efforts and aspirations of mankind are directed.

(153) This delegation accordingly pays a tribute of admiration, in the distinguished person of the President of the Conference, Mr. Zavala Muniz, to that hospitable nation which today receives our delegations and it is a satisfaction to us at so auspicious a moment of international communion to recall the glowing thought of José Enrique Rodó, the mentor of American youth, who said "In the life of human societies progress is essentially bringing ideals to life. From the pious veneration of the past and the cult of tradition, on the one hand, and from the bold reaching out to the future, on the other, is drawn the noble power which, uplifting the spirit of the community above the limitations of the present, shapes its stirring and vague emotions into an ideal".

(154) A notion very like that so penetratingly expressed by Rodó - one of America's great minds - has inspired the United Nations Educational, Scientific and Cultural Organization in the distinguished work it has accomplished during its existence, and for that reason the confidence of the peoples within its orbit in its efforts to build a better future for mankind through the gradual extension of the loftiest values of the culture of all ages is firm and unshakable.

(155) With a sure appreciation of the special circumstances of the nations in which it is working Unesco is pursuing the essential aims it professes of progressively elevating the minds of men to lay the solid foundations of permanent peace for distant ages yet unborn. So much is shown by the tasks already partially accomplished - differing indeed but linked in essence by a single intent - in the spheres of scientific research, of the dissemination of culture, of technical assistance, of the teaching of innumerable disciplines and of fundamental education. These tasks of world significance can be seen by all, and the record of them is inscribed in the Report and its supplement submitted by the Director-General and the Executive Board for 1953 and the first half of 1954.

(156) The nature of the work the Organization has accomplished strengthens the idea, already dominant in our age, that humanity, beset by innumerable perils and still tormented by the effects of the late world-wide conflagration, is casting around in search of a way towards the principles of idealism, that it is seeking the path it needs by the light of a revived and spiritualized humanism which promotes the flowering of human personality, champions the basic concept of human dignity and battles to secure the respect and maintenance of that atmosphere of freedom essential for the soul to be able to find its truest and loftiest expression.

(157) This obviously is of primary importance in Unesco's work, but it in no wise means that Unesco forgets that other, material factors have a definite part

in the advancement of those human groups who profit by its work, or underrates those factors. The truth is that in many States, members of the Organization, whole sections of the population are on the borderline of the stage of economic advance achieved by the average man of our age. These groups require priority attention and there can be no doubt that a body such as Unesco will increase the aid it already gives to some of them, fitting them for every aspect of life, with the co-operation of governments, National Commissions or specialized cultural institutions in the countries concerned so that they can attain the enjoyment of the high standard of living to which they are entitled.

(158) It is surely important to repeat that the economic development of these human groups must proceed in close parallel with their spiritual and social uplift, so that the degree of progress thus brought about may fittingly mirror the ideal of the full development of human personality which is the yardstick prescribed by the most advanced educational thought of our epoch. It is only right to provide underdeveloped countries with the material resources they still lack, the specific skills and talents they do not yet possess, so that they may achieve a more rewarding life in the material sense; but what is done will be immensely more laudable if, concurrently and parallel with this, new avenues are opened to their minds by efforts to combat illiteracy and by the training of the intellect.

(159) For these reasons I feel that a word of praise is merited by that section of the Director-General's Report dealing with what Unesco has done in the sphere of fundamental education, supported by organizations and individuals in its Member States; and from the good results secured it would appear that in the future conduct of this line of education it would be well to add to the purely formative subjects the fine arts, in order to continue thereby to awaken to life the full possibilities inherent in human beings.

(160) Guatemala recognizes the successful work accomplished by Unesco in its various activities and through its delegation proclaims its resolve to continue to extend the co-operation merited by the excellence of Unesco's aims. We are convinced that culture is par excellence the medium by which to bring men together on a plane of brotherhood and co-operation and in that belief we are ready to co-operate without reserve in the execution of the projects which Unesco is planning, confident that this will redound to the benefit of mankind and to the cause of justice.

(161) We firmly believe that the same feelings are entertained by the other Member States of this Organization; we are convinced of the ability of those at the head of Unesco, to whose weighty judgment a task as great as it is delicate is committed, and we hope that our own problems regarding the education of people who stand in need of it and regarding the creation of specialist centres for the better exploitation of our natural resources may receive the generous attention from Unesco, from whose services we hope to obtain sure guidance and benevolent support. Only recently our University of San Carlos made the first moves towards the establishment of an institute for the teaching of the social sciences for the specific purpose of research, an example which will be widely followed in the other countries of South America. It has accordingly forwarded a request to Unesco for the provision, as far as possible, of technical assistance in the early formative years of the new cultural institution and hopes for a favourable response.

(162) The delegation of Guatemala believes that Unesco has accomplished invaluable work during the period under examination and extends its warmest felicitations to the leaders who are thus consolidating the existence and prestige of a body which deserves the support of everyone because they benefit from and are ennobled by its work.

(163) The PRESIDENT (Translation from the Spanish): To conclude the debate for this morning I call upon the delegate of Yugoslavia.

(164) Mr. VLAHOVIC (Yugoslavia) (Translation from the Spanish): Mr. President, ladies and gentlemen, the delegation of Yugoslavia has only a few general observations to proffer on the programme and budget and the Director-General's Report. There are many good things in the proposed programme for 1955-56, but we are accustomed to say little about good things since good things speak for themselves. Accordingly, I am going to devote more time to certain observations which should be regarded as suggestions designed to provide some slight assistance towards the improvement of Unesco's work - a thing which I imagine we all desire.

(165) First and foremost, it should be pointed out that in the course of the work done so far Unesco has acquired a rich fund of experience. Year by year the programmes improve but the improvement still does not sufficiently reflect both the positive and the negative lessons of previous years. Sometimes one gets the impression that certain forms of activity pursued by Unesco which have not yielded satisfactory results are continued from year to year simply because Unesco's organs, including the General Conference, are not yet bold enough to liquidate more firmly certain survivals from the earliest years of Unesco's formation and activities when hesitation and experiments were inevitable. On the other hand, the life and activities of Unesco and the evolution of its work are compelling the inception of new kinds of activities which are still not provided for early enough nor exploited to the full.

(166) If we analyse Unesco's programme of work for the next two years on this basis, it will be seen that the programme is more precise and more practical, that it takes into account the experience gained, that it is being resolutely directed towards providing effective aid to the underdeveloped countries, a point I wish especially to comment, but that the old notions of a kind of abstract universalism of the Unesco of the early years still survive in some form in the new programme.

(167) Throughout the programme the tendency is still apparent of trying to combine disparate philosophical ideas, to fuse disparate schools of sociology and even disparate historical methods. We must be clear in our minds that it is no misfortune for contemporary mankind that there should be different philosophical notions, different schools of sociology or different methods of interpreting history and we must realize that these differences cannot be overcome by an artificial synthesis and that all efforts to that end are in vain. I doubt myself whether even the comparative

explanations of the different concepts which are given in publications, as is now being done in the sphere of sociology, can yield positive results.

(168) Secondly, we have seen from the Director-General's and the Executive Board's Reports that Unesco is still not taking proper advantage of the possibilities of National Commissions. The Yugoslav delegation drew attention to this matter as long as three years ago at the sixth General Conference held in Paris, and the heads of certain delegations have mentioned the matter at the present session of the General Conference. I think we are all agreed that, without energetic work by National Commissions and without better integration of their work with that of Unesco, we cannot hope to achieve better results or to succeed in extending and improving the work which is one of Unesco's principal tasks today as in the future.

(169) We fully appreciate the difficulties which Unesco has to cope with in its efforts to cater for culture, education and science in different countries, from the most backward to the most advanced. Clearly, no middle policy can here be found which will satisfy all these different countries nor can Unesco be a world Ministry of Education, Science and Culture. But this difficulty can and must be overcome by fuller co-operation with the National Commissions and by Unesco giving support to the various national schemes. In this last connexion I want to acknowledge with satisfaction the close attention and practical measures of assistance which Unesco has extended to Yugoslavia in such a very interesting undertaking as that of educational reform, the results of which are most important to Yugoslavia, the proposal being to adopt modern teaching methods. There is no doubt that the outcome of this work, which will take some years to accomplish, will also be exceedingly interesting to other countries.

(170) The Yugoslav delegation is accordingly following very closely the efforts of certain other delegations to open up new prospects for Unesco's future work. Here the Indian delegation's proposal drawing attention to the need to allow for the special features of the various parts of the world merits serious consideration.

(171) This brings me to my third point: in the future, interregional co-operation will become much more important. I am glad to be able to point out that scientific, cultural and educational co-operation between Greece, Turkey and Yugoslavia has already yielded modest initial results. I am convinced that this form of co-operation is going to increase progressively and I hope that Unesco will give it every support. As I have already said, the trend towards regional co-operation is growing but it should not become self-centred or isolated, although cases of this kind already exist and will continue to do so in the future.

(172) I want to say a word or two on the question of Unesco's Mass Communication Department. As we already know, more than a million dollars is allocated to this Department and its staff work very hard, but it strikes me that the method of working adopted by Unesco is very similar to the methods of centralized governmental propaganda, where all the information is assembled at the centre and thence routed to the places where it is used. On the question whether this is an up-to-date and effective way of working, there are doubts which are borne out by experience. It is obvious that no proper co-operation has been developed with the information services of the other Specialized Agencies and above all with those of the United Nations so that inadequate advantage is taken of all the services available for the dissemination of information or all the possibilities afforded by the United Nations. On this point the delegation of Yugoslavia wishes to enter reservations and trusts that Unesco will take account of these in its future work.

(173) I should like to emphasize that the present international situation justifies a hope that there will develop an atmosphere more favourable to successful work in those spheres of special interest to Unesco. Although Unesco is a non-political organization, we cannot forget that it is an international organization and as such can make a weighty contribution to the future development of international relations, to the growth of international co-operation, to the deepening of understanding between the peoples, to the notion of peaceful coexistence of countries widely unlike in their economic and social systems, in a word, to the fight for peace and for peaceful relations between States. Science, culture and education can exercise an extremely favourable and positive influence on the future development of international relations if in the latter there prevail better understanding and closer co-operation and if many of the prejudices of the past are eliminated.

(174) I should also like, on behalf of the Yugoslav delegation, to express our gratitude to the Director-General and his staff for the progress achieved in Unesco's work. Not long ago, in Belgrade, Dr. Evans and I had occasion to discuss a number of matters relating to Unesco's activities and were glad to find an atmosphere of mutual understanding. As it has done up to now, Yugoslavia will continue to afford effective aid in the common task of achieving Unesco's objectives and carrying out its programme.

(175) Finally, I should like to associate myself with the remarks of the heads of other delegations and to offer the people and the Government of Uruguay the hearty thanks of the Yugoslav delegation for the cordial welcome given us and for the immense pains taken to ensure that our stay is as pleasant and our work as fruitful as possible in this lovely land.

The meeting rose at 1.15 p.m.

# EIGHTH PLENARY MEETING

*16 November 1954 at 3.30 p.m.*

*President:* Mr. ZAVALA MUNIZ (Uruguay)

CONTENTS

Discussion of the Director-General's Report (continued)
Speeches by the delegates of Brazil, New Zealand, Israel, Colombia, China, Philippines, Union of Burma, Ukrainian Soviet Socialist Republic, Union of South Africa, German Federal Republic, France, United Kingdom and the representative of WHO. . . . . 114

**DISCUSSION OF THE DIRECTOR-GENERAL'S REPORT**
(continued)

(1) The PRESIDENT (Translation from the Spanish): I call on the delegate of Brazil.

(2) Mr. BERREDO CARNEIRO (Brazil) (Translation from the French): Mr. President, ladies and gentlemen, Unesco, in deciding to meet this year at Montevideo, paid deserved tribute to the civic virtues, international spirit and great cultural achievements of the Uruguayan people.

Nowhere would we have found an intellectual and moral atmosphere more conducive to the accomplishment of our work. Everything around us bears the inspiring and ennobling imprint of freedom. Everything around us holds out the prospect of a happier future for mankind. To the expressions of sympathy and admiration conveyed to the Government of Uruguay by all the members of this assembly, I should like to add the fraternal greetings of my country.

(3) The proposed programme presented to this assembly by the Director-General is, I think, worthy of the highest praise. Slight alterations may, of course, be necessary here and there; and we may even decide, in the light of our discussion, to make certain changes of form or substance. But, taken as a whole, it constitutes an excellent survey of our work plans. The division of each chapter into two parts, one dealing with the services and obligations proposed for Member States as a whole, the other with undertakings related to specific problems affecting certain groups of States, is a most useful innovation. Since the first set of projects are of a permanent nature, the second temporary, this arrangement is an eminently logical one.

(4) I am happy to inform you at the outset, Mr. Director-General, that the Brazilian delegation will support your proposals with the utmost enthusiasm, and approves unreservedly the higher budgetary level you propose. Each of the proposed projects will be studied and analysed in detail, at the appropriate moment, in the various commissions and committees.

(5) I should like to congratulate you also on your excellent report on the activities of the Organization during the eighteen months of your term of office. Those who, like myself, have followed the work and life of Unesco since its inception are in a position to appreciate to the full the intensive work done in 1953 and 1954. The Unesco Secretariat has given yet further proof of its high standard of efficiency and unstinting devotion to duty.

(6) The Executive Board has undoubtedly contributed much to the success of the work accomplished under your administration. May I be permitted to convey my sincere congratulations to my former colleagues on the Board, and to their eminent Chairman, Sir Ronald Adam.

(7) It is unfortunate that, owing to its limited resources, Unesco has not yet been able to match its programme to the needs and aspirations of most of its Member States. The vast disparity between our resources and our aims, instead of decreasing, is growing daily more marked. The further we advance along the road mapped out by our Constitution, the greater are the obstacles we encounter. The arm of our lever is too short, try as we may, to lift the weight of ignorance, lack of understanding and poverty crushing the world. Until such time as we have overcome the forces of apathy paralysing our work, there is no point in our wearing ourselves out in planning and revising programmes, establishing priorities, adopting administrative reforms.

In order to make a muscle contract, the intensity of the nerve impulse must attain the threshold of excitability. Until it reaches this point, though the stimuli are multiplied indefinitely, the muscle will not react. This law of all or nothing applies to social mechanisms as well as to the nervous system. Unesco has not attained the threshold of its efficiency. If it is to exert any influence on the chaotic world

around it, to expand its machinery - its financial resources must be augmented.
(8) I am aware that this is impossible at the present juncture. We must content ourselves, for the moment, with the ten million or so dollars in our annual budget. But we must not despair of better prospects for the future.
(9) The continent whose guests you are at the moment, ladies and gentlemen, invites you to consider the problems of education, science and culture on a scale corresponding to its vast area, its prodigious stores of unexploited wealth and its rapidly growing population. From our fields, our cities, our factories and our schools there arise the strains of the Canticle to Hope which you heard from the lips of the students, the workers and the peasants of Uruguay on the day our proceedings were inaugurated: a song of joy but also a litany laden with the suffering of the humble and the obscure.
(10) South America offers the strange and spectacular contrasts of a world in the making. Its cities are springing up and expanding with breath-taking speed; its population is being doubled from one generation to the next; a new type of man, strong and vigorous, is emerging gradually from the mingling of the races and peoples who have come here from all quarters of the globe, attracted by the riches of its soil and the friendly welcome awaiting them everywhere. South America is destined to become one of the world's largest granaries, and a well-nigh inexhaustible source of vital raw materials for all kinds of industries. But, behind this stupendous upsurge, behind this rich promise for the future, there still remains a mass of men, women and children living in utter destitution, without schools, books or teachers, lacking all access to education and culture, hovering on the fringes of our civilization and our age. In several of our countries, half the population can neither read nor write. It is in the interests of us all, in your interests as well as ours, to help them unstintingly to educate, train and equip themselves, firstly in order to enlist their valuable natural abilities for the service of the human community, and secondly in order to help them to exploit their natural resources.
(11) The same needs and demands exist, I am aware, in many other parts of the world as well - all the more reason for taking them carefully into account when planning for the future.
(12) When we review the most urgent cultural needs of so many peoples and regions and compare them with the scanty services we can give them, we cannot but experience acute disquiet. Indeed, in order to bear real fruit, each of the main projects in our programme would by itself require the whole of our budget resources. The critically minded accuse us of raising hopes which are far beyond our fulfilment, and believe that we are doomed to dally for ever with illusions, with nothing to offer the world but small samples in education, science and culture.
(13) Must we accept so sweeping a verdict and resign ourselves to inaction because the work devolving on us proves too arduous? I am loath to believe it. The loyalty we owe to our Constitution, the responsibilities resting on our shoulders, and the dangers threatening a vast part of the world, defenceless in the face of ignorance and poverty, make it incumbent on us to seek a path of salvation, cost what it may.
(14) A year ago, President Eisenhower, in a speech delivered before the United Nations Assembly, spoke of the deep concern of his country and his Government for the cultural needs of our era. In connexion with the utilization of atomic energy for peaceful purposes, he gave us a glimpse of the cultural treasures and abundant wealth which the whole of mankind could enjoy if only the threat hanging over the world were dispelled. The words of the Head of the American State deserve to be recorded in the records of this Conference as a message of cheer and hope.
(15) It is, alas, still too early to think of abolishing our military budget to finance the peaceful cultural work on which we are engaged. But it might already be possible for all countries, East and West alike, to make their contribution to the creation of an International Cultural Fund designed to meet the real needs of the world, as regards education, science, philosophy, arts and letters, technical and industrial training, libraries, books, schools, and travel and study fellowships. A sum equivalent to only one-hundredth part of present-day military budgets would suffice to set up a fund sufficient to provide Unesco with the peaceful tools it needs for the accomplishment of its mission.
(16) Allow me, Mr. President, to remind this assembly of statesmen, educationalists, sociologists and scientists of the solemn warning Artigas one day gave his fellow citizens:

"La causa de los pueblos, no admite, señores, la menor demora".

(The cause of the peoples, gentlemen, brooks no delay). May this General Conference follow the advice of the wise founder of your nation, and proceed forthwith to constructive action.
(17) I wish, with your permission, to place under your august patronage the appeal which I am making to the most favoured Member States of this Assembly. Great power always entails heavy obligations. And I know also that generosity is infectious. We are entitled to hope that those countries, of both East and West, which are in a position to remedy the ills afflicting the great majority of mankind will not refuse their help. It might perhaps be possible to set up immediately, under your auspices, a small working party to study the proposal I have the honour to submit.
(18) We cannot lose the opportunity afforded by this Conference of discussing the core of our problems and embarking on joint action on the strength of this discussion. If this debate is conducted with the goodwill and tolerance befitting our assemblies, I am confident that the Montevideo Conference will constitute the cradle of our renaissance. The creation of an International Cultural Fund would enable us to look forward confidently to a new era of enterprises designed to meet the real needs of mankind. The balance between the forces of good and evil, life and death, hope and despair would thus be restored. Furnished with the necessary implements, we would resume with a surer hand the work of building the world of tomorrow. With but one

hundredth part of the resources hitherto devoted by man in his folly to his own destruction, it would be easy to ensure the triumph of the aims and ideals of our Constitution, and to give millions of outcasts a full spiritual and material life such as, with the wealth of our civilization, we are now able to offer to all alike, without distinction of class, race, religious belief or political ideology.
(19) This victory is within our grasp; we have but to stretch out our hands to pluck it.

(20) The PRESIDENT (Translation from the Spanish): I call on the delegate of New Zealand.

(21) Mr. BEEBY (New Zealand): Mr. President, ladies and gentlemen, may I first say, on behalf of the New Zealand delegation, how grateful we are to be able to spend these few weeks in your lovely and interesting country; a country which, as you so eloquently said in your opening speech, is one where no man can feel a stranger.
(22) I have thought in the last few days more and more that this country reminds me of my own, and there is no greater praise that any man can give to a country that is not his own. We of the New Zealand delegation - the whole two of us - have felt completely at home here. We feel that we have so much in common with this country - our size, our age, our aspirations, our social legislation, our fighting love of freedom, all those things we feel are shared here. If I could for a moment discard all modesty and speak on behalf of the Southern Hemisphere, I should like to welcome Unesco on its first visit to this side of the Equator. It is an experience that will do both Unesco and the Southern Hemisphere a great amount of good.
(23) And now, if I may turn to the programme of Unesco, the New Zealand delegation, and the New Zealand National Commission, of which I am the Chairman, have asked me to congratulate the Director-General on his new programme. We believe it is a better programme than any that we have had and, if you will forgive me for a moment being personal, I would like to break a good rule and refer to one department. Five years ago I was responsible for the Education programme of Unesco; I should like to say to the Director-General that I find it now an infinitely better programme than when I left it.
(24) I should like also to congratulate the Executive Board on its statement on the remodelling of the future programme, with which we found ourselves in general, though not necessarily of course, in full agreement.
(25) We in New Zealand feel some concern about what might be the results if the new programme were carried to extremes. We do believe in the technical assistance programme, in technical aid of all kinds, within the Unesco programme and in the expanded programme, to underdeveloped areas; but we share some of the fears expressed, I understand, by other members, that it might lead to some lack of balance in Unesco's programme. Some of the technical assistance projects have been among our most successful and spectacular. To oppose technical assistance, on the one hand, to international understanding, on the other, would be, I know, to oversimplify. There is not much international understanding in an empty belly or an ignorant mind, and technical assistance may have to provide the conditions under which international understanding can exist. But I feel at times that possible dangers may follow from a misunderstanding of our old Unesco concept of the free flow of ideas.
(26) We sometimes speak as if all you had to do to get ideas to flow in all directions, is to remove barriers. But when you remove barriers, ideas do not flow in all directions any more than water does. If you have water at different levels and remove the barriers, the water flows downhill and so, I think, do ideas. Ideas, if you merely remove barriers, flow downhill, and the downhill, in this case, is descent from the highly technically developed countries to the countries with a low level of technical development, the technological gradient, I might call it, down which flow the motor cars, the refrigerators, the aeroplanes, the fabrics, the tools, the gadgets of modern life. With those material things flow the ways of life and the thoughts of the people who make them. If, on the other hand, people at the lower end of this technological gradient want to get their ideas to flow to the other countries, they must flow uphill, flow against the force of gravity, as it were.
(27) For example, the ideas, the philosophies, the religions of the Far East, and Eastern ways of life generally, have less chance of becoming known in the highly developed technical countries of the world than have ideas flowing in the opposite direction. Now, a mere technical assistance programme could intensify this state of affairs. You can speed up the flow of materials and with them the flow of ideas, down this technological gradient, but you must use the process wisely. What may happen if it is used unwisely? First of all, you may tend to get a flat, level lake of culture throughout the whole world, and the world would be the poorer for losing the turbulence and diversity of the various cultures. On the other hand, you could also arrive at the point when some countries were always givers and other countries always receivers. You run the risk that an international organization like this might gradually become a place where countries that have, meet countries that have not, and hand them out some kind of assistance. I know that this is not what the Executive Board means and I am completely sure that this is not what the Director-General means nor, indeed, what any delegation wants. I know also that everything I am saying now has been said before, ever since our earliest Conferences. But I am not quite sure that we have always seen the practical consequences to our programme that follow from this set of ideas.
(28) Unesco's function, as I see it, is twofold in this respect. In the first place, it must help guide down the gradient certain sets of ideas, particularly in science and in education, that will be of assistance to the people with a lower level of technical development. The other function - just as important - is to help to pump up - if I may continue the analogy - against the force of this gravity, the ideas, philosophies, arts, religions, whatever you like, of the countries that are technologically underdeveloped. That is, the business of Unesco

is to see that there is a circulation of ideas in the two directions. It is easy to exaggerate, to pretend that the only values and philosophies in the world are the ones that came from the East. It does not follow that because a country is underdeveloped it has necessarily better ideas than one which is highly developed. Unesco still has and must go on having the old function of an exchange of ideas between peoples at the same levels. But, my point is this - I know of no other organization in the world, besides Unesco, that can perform this function of helping to pump ideas up against the stream of technological and mechanical products that are flowing down the gradient of which I speak.

(29) Here I see an important and dynamic function for the Cultural Activities Department of Unesco and, in part also, for the Social Science Department. They again will always have to ensure the interchange of ideas between people at the same level, but, above everything, they are concerned with seeing that the countries which have something to give on the cultural and the spiritual side are given the opportunities for their ideas to flow to other countries.

(30) If you see the whole programme from this point of view, you get a new and dynamic conception of the function of these Departments. The Cultural Activities Department is not one that deals with the mere decorative additions to life: it is, and must be, an essential part, for example, of the technical assistance programme. It is not compelled to do the same kind of things that the Science Department and the Education Department should do. It may have to do almost the opposite. Or it can continue to do both, but its functions and its emphasis will be very different from those of the Natural Sciences and Education Departments. We have talked a great deal here of co-ordination within the Secretariat, but co-ordination within the Secretariat does not mean that all departments will necessarily have the same kind of functions. What it means is that the Organization as a whole, with all its internal variety and complexity, will move towards one predetermined goal. What that goal will be, none of us who have been connected with Unesco through the years can have any doubt. Unesco must be dedicated to the one overriding purpose of helping human beings throughout the world to live in such conditions, material and spiritual, that they can understand one another, can share the rich diversity of their common cultures and can learn to live together in peace.

(31) The PRESIDENT (Translation from the Spanish): I call on the delegate of Israel.

(32) Mr. KUBOVY (Israel) (Translation from the French): Mr. President, Colleagues: I would like to begin by associating myself with all those who have expressed their pleasure at finding themselves in this hospitable country, whose people, last Friday, gave so moving a demonstration of confidence. My delegation is doubly grateful to this country for, in addition to appreciating its hospitality, we cherish the memory of the unforgettable part played by Uruguay during the events leading up to the establishment of the State of Israel.

(33) I would like next to congratulate the Director-General on his report presented to this Conference. It is a very valuable document, firstly because of the projects and activities it describes and, secondly, because it gives a very clear picture both of the trends underlying our work in the past, and of our present policy. The programme, which is based on an overall plan and follows a number of clear-cut lines, constitutes a remarkable survey and a first-class working document.

(34) We have been pleased to welcome to Israel, during the past financial year, the Director-General, Dr. Adiseshiah, then Chief of Technical Assistance (whose promotion we are pleased to note), and Mrs. Myrdal, Director of the Department of Social Sciences. These visits, and the thoroughgoing discussions to which they gave rise, threw invaluable light on our common problems.

(35) To turn now to the work programme before us, I am pleased to be able to say that the delegation of Israel - as well as our National Commission - fully approves the new trends which have been introduced into our Organization, particularly as regards the concentration of our activities and the emphasis on projects undertaken at the national level.

(36) The concentration of activities necessarily involves reducing the number of projects undertaken by our Organization, but that is all to the good. Unesco's field of action is so vast - bounded only by the limits of the human spirit - that there is a natural temptation to cover everything, to fritter away meagre resources on a multitude of activities, instead of concentrating on the major problems - raising the cultural level of the broad masses and creating, through fundamental and adult education, an atmosphere of universal agreement and co-operation. By sponsoring a few major projects serving to dramatize its aims and designed to provide an example and an inspiration for the world at large, Unesco would do more to fulfil the high hopes centred in it than by pursuing a multitude of different projects which, valuable though they unquestionably are, have not succeeded, up till now, in catching the imagination of the general public, so that Unesco, for millions of people, has remained an incomprehensible, mysterious symbol.

(37) We are also, as we have said, in favour of the increased importance attributed to national activities in the planning and execution of programmes, of the system whereby Unesco acts merely as an auxiliary, stepping in when projects have already been initiated at the national level. Unesco's job is to encourage, assist and co-ordinate, but not to be a substitute for the efforts of Member States. This is not merely a question of the budget, although the cuts which have had to be made in certain projects already under way have demonstrated clearly that, in view of our meagre resources, every penny of Unesco's money has to be spent with the utmost care. The main point is that, in order to achieve any lasting results in the fields of education, science and culture, Unesco must recruit and train national workers, for the nationals of a country have a deeper and more vital interest in the work to be done than that stemming from mere expert knowledge; they feel that the people to whom they are dedicating themselves are their own flesh and blood, and regard it as their mission to raise the cultural standard of their fellows and so repay the

debt they owe for the opportunities they themselves have enjoyed.
(38) This method is applicable to all countries, but to the underdeveloped ones in particular. Unesco's aim must be to help them to discover and use the abilities of their own people, and to train a group of leaders from amongst the nationals of the country. There is a risk that the work of even the greatest expert may bear no fruit, or produce only temporary effects, if, when he has completed his mission in a foreign country, he leaves nothing but a report, albeit a model of lucidity. But a less eminent consultant, who leaves behind him disciples fired with the desire to increase their knowledge and to carry on his work, will have done a job of lasting value both for Unesco and for the country concerned.
(39) Let us beware, however. The growing importance of work at the national level and the ensuing decentralization must not be confused with excessive administrative decentralization. The regional centres scheme, for instance, has produced remarkable results in Latin America, owing mainly to the homogeneity of language; but that is a single isolated case, and, I fear, an exceptional one. We are pleased to see that Unesco has dropped the idea of setting up a world network of regional centres, which threatened to sow not goodwill, but discord.
(40) I cannot tell you how deeply the Israeli delegation regrets having to request, from this platform, that Unesco should refrain from setting up any centre or any establishment in regions which, for political, racial, religious or other reasons, are inaccessible to the subjects of other Member States. What is the good of talking solemnly, at our meetings, of the universality of Unesco, and the international community of peoples it constitutes, if this universality is not even respected within Unesco itself? It is not for practical reasons that I am saying this. To try to eliminate Israel from the Middle East is, we feel, as futile as to try to eliminate Mount Sinai or the Mount of Olives from history or geography. But can one speak, in the reports before us, of the success of the Sirs-el-Layyan Centre when this establishment, by the fact of its being virtually inaccessible to the State of Israel and its Arab subjects, bears daily witness to the defeat of the most sacred principles of our Organization?
(41) We are fully aware how difficult it is to translate the Universal Declaration of Human Rights into practical international laws; but, if there is one organization where intolerance should be utterly taboo, and where tolerance and the desire for mutual understanding should find a last refuge, that organization is, surely, Unesco.
(42) Israel is a bold undertaking for, as proclaimed by the name it has adopted, my country is striving to realize, in a small patch of territory, all that Israel has represented in the field of culture and human aspirations down through the centuries. My country is a giant laboratory, a melting pot where peoples belonging to every country and every century are blended. The problems raised by education and the need for imparting moral unity to such heterogeneous elements have obliged us to create a sort of national microcosm of Unesco. We know that our first task is physical survival; but we know too - it is an obsession with us - that, unless Israel contributes to the spiritual enrichment of the world, unless it hastens the advent of the Kingdom of God on earth, its resurrection will have been a cruel disappointment both for us and for mankind as a whole. It is in this spirit that we wish to make our contribution to the progress of Unesco, in order that, in the words of the Prophet the earth may be filled with the knowledge of God, as the waters cover the sea.

(43) The PRESIDENT (Translation from the Spanish): I call on the delegate of Colombia.

(44) Mr. BERNAL JIMENEZ (Colombia) (Translation from the Spanish): I wish, as Head of the delegation of Colombia, to take this opportunity, once again, to make a number of comments on various subjects general and detailed, affecting the future of our Organization in varying degrees.
(45) May I be permitted, first of all, to endorse the comments of those distinguished speakers who have praised the report presented by the Director-General, it reflects the profound sense of responsibility and objectivity which have characterized his administration of Unesco.
(46) Although this United Nations Educational, Scientific and Cultural Organization has existed less than a decade, its activities already cover almost the entire globe. The original nucleus of forty-three nations, which signed the Constitution one November day in 1945, has expanded year by year so that, at present, we have seventy-two States assembled under the banner of world solidarity and the generous auspices of this noble city of Montevideo.
(47) This period has sufficed to overcome the first and most difficult stage of Unesco's work - that of laying the foundations of vast projects. This work has been characterized by prudence as well as ambition, by a spirit of co-operation and a keen desire to succeed. Thus Unesco has been able to strengthen cultural relations between peoples through the medium of their governments and university organizations; to encourage scientific research in the natural and social sciences; to facilitate the exchange of persons, books and knowledge. And it has served as a means of communication between organizations all over the world which are striving to attain the lofty ideals of justice, freedom and peace.
(48) One of the most important tasks of Unesco has, perhaps, been to encourage the underdeveloped countries to apply for technical assistance from the culturally advanced ones. Unesco's technical assistance is, fundamentally, nothing but an organized form of the acculturation which is essential to modern progress. Actually, this acculturation operates spontaneously, without being organized, as a result of the migration of human groups. This was what the settled peoples in ancient times achieved in respect of the nomad invaders; what the Greeks received from the Aegeans and the Cretans; what Rome received from the Greeks and what Europe assimilated through the medium of Roman thought. In these South American countries, this process of technical assistance began from the moment when the Spanish conquerors brought the

yoke and the plough to this territory, and thereby drove out the rudimentary methods of aboriginal farming.

(49) Today new forms of acculturation are needed, and it can no longer be left to the spontaneous operation of bygone ages. The evolution of the underdeveloped countries needs to be accelerated by their peoples' receiving education, guidance and advice from experts sent by societies of broad and recognized experience.

(50) Naturally, the chief beneficiaries of Unesco's cultural work are the underdeveloped countries, including most of the countries of this American hemisphere. In this connexion, one of my comments on the report before us would be to call the attention of this assembly to the need to consider more adequate means of reinforcing the technical assistance programme, both economically and from the administrative point of view.

(51) It is particularly heartening to see the attention the Director-General's report devotes to fundamental education. In this field, Unesco is already achieving satisfactory results, with the inauguration of the first centres of a vast network of fundamental education centres planned to extend to all countries having a large proportion of illiterates.

(52) The President of the Republic, in a memorable speech delivered recently to the National Constituent Assembly of Colombia, said that the era of man had arrived; in other words, the time had come to focus official attention primarily on the education of the human being, to whose service all the achievements of technical progress should be subordinated. And he commented, with great wisdom and common sense, on the paradoxical and widespread truth that a peasant who can neither read nor write is quick to learn how to manage an agricultural tractor and other mechanized instruments of modern progress.

(53) Many other points of this report on Unesco's activities might be singled out for mention. Mention should be made of the important place given to the social sciences. The Department of Social Sciences is doing some of the most useful work on sociological research, both by co-ordinating the sociological research done throughout the world in congress and conferences, and by means of its excellent publications.

(54) I would like now to refer briefly to two undertakings which are closely connected with Unesco's cultural work in Latin America. I mean the Sutatenza Educational Radio Project, and the Medellín Public Library Pilot Project. These projects have just been visited by the Director-General of Unesco and the Chairman of the Executive Board, who, in their reports to those bodies, expressed satisfaction with the results obtained.

(55) The Public Library Pilot Project for South America was inaugurated on 24 October, United Nations Day, with a stock of over 10,000 volumes. On the same day the foundation stone of the new building was laid. All these functions bore witness to the interest of the authorities and the enthusiasm of the whole population. That the Library Pilot Project was able to overcome the difficulties of the initial stages was due, mainly, to the work of Mr. Carlos Victor Penna, the Unesco expert, to whom Colombia owes a debt of profound gratitude. The Library is run on the lines laid down by Unesco in its pamphlet: "The Public Library, a living force in popular education". It also has gramophone record library and film and filmstrip services, and its educational work is designed to extend to all sectors of society. But it is essential to see that its mission is fully carried out in the international environment of Latin America.

(56) The lively interest roused by the new experiment in the education of adult peasants now being carried out by the Acción social popular at Sutatenza is fully justified by the results obtained.

(57) From the strictly pedagogical point of view, perhaps, the radio school cannot be regarded as a substitute for the ordinary primary school. It was never intended to be. Mechanical equipment cannot take the place of the teacher, with his personal influence on the pupils. But in backward countries, where the peasant communities are separated by precipitous mountains or vast plains, and where the State educational system is unable to cover the whole of the territory, the radio school is invaluable as an emergency substitute.

(58) This is being demonstrated in Colombia by the powerful network of fundamental education schools which, under the inspired direction of Father Joaquin Salcedo, and with the technical aid of Unesco, is incorporating many thousands of formerly illiterate peasants and country people into the cultural life of the people.

(59) At this moment, when I am about to relinquish the seat on the Executive Board to which the General Conference, at Florence, saw fit to elect me, it gives me particular satisfaction to have had Colombia selected as the site of the Library Pilot Project for Latin America and to have secured Unesco's technical assistance for an educational undertaking on the scale of the Sutatenza educational radio project.

(60) I could not conclude my remarks without referring to a question which was raised by the delegation of Colombia at the General Conference in Florence in 1950, repeatedly revived by the United States delegation and recently brought up again by Professor Veronese, with great skill and effectiveness, in the Executive Board. I refer to the so-called concentration of the programme.

(61) During the Unesco General Conference held in Florence in 1950, I spoke, on behalf of the delegation of Colombia, very clearly and frankly of the danger Unesco was running of frittering away its efforts and resources on a multitude of activities of secondary importance, and so losing in quality anything it might gain in quantity. I remarked, on that occasion, that Unesco should do its utmost to avoid that danger and concentrate its attention on a few basic objectives.

(62) I note today with deep satisfaction that this policy is taking practical shape in the document on the revision and remodelling of the programme, as an outcome of the informal discussions held by the Executive Board at Gif and Longchamps, and finally adopted by the Board at its session in Venice.

(63) This policy, which Colombia continues to support vigorously, does not, of course, involve abandoning activities which form part of Unesco's original work; but it does mean avoiding the

dissipation of resources on obtaining mediocre results in activities which are only remotely connected with the specific projects of Unesco, or which overlap with work already being done by other organizations.
(64) Many other comments occurred to my delegation on reading the report of the Director-General; but, since I do not wish to exceed the time-limit fixed for these speeches, I shall refrain from stating them.
(65) Nevertheless, I do not wish to conclude without expressing an opinion which may well, I think, be shared by the majority of delegates here assembled. This is, perhaps, the largest gathering of States ever witnessed by history. In addition to the seventy-two member nations, whose standards float against the glorious Uruguayan sky, there are the emissaries of many associated countries, whose swarthy countenances we have seen transfigured by the light of new hope. Other countries, where the language of freedom is not yet spoken, have entered the great community of Unesco. It is our duty to say to one and all: Welcome. Welcome because, when a new guest comes knocking at the door of the mansion built to serve as the abode of the basic human freedoms, it is clear that his intention can only be to respect and enforce respect for the regulations of the house into which he is received. Both the ends of Unesco and its means are well known, but they may be summed up in a single sentence: to achieve peace and friendly coexistence between peoples through recognition of human dignity and of fundamental human rights in the fields of education, science and culture.
(66) Many fears have been expressed of the ability of certain countries to fulfil, in practice, the promises they undertake, on entering Unesco, regarding respect for human rights such as freedom of thought, free movement of persons, books and periodicals, and freedom of conscience, which implies, essentially, freedom to disagree and to follow the bent of one's convictions. I myself had occasion to express similar fears. But, at the same time, it must be assumed that a State which pledges its word through signing an international treaty, such as the Unesco Constitution, is in honour bound to keep its promises. The assumption of good faith is the basis of all agreements between individuals and nations. It cannot therefore be assumed, even as a hypothesis, that any State which undertakes, before an international community, to guarantee human rights, would wish to maintain any form of subjection within its own boundaries.
(67) Many are the efforts which have been made, from the time of Grotius to that of Gandhi, to achieve peaceful coexistence amongst men. Many are the illustrious names connected with these attempts. But for my country, and for all those countries which were formerly part of Greater Colombia, it is a source of great satisfaction to be able to name, as one of the most eminent amongst them, one who flashed like a glorious comet across the American firmament. I am speaking of the Liberator, Simón Bolívar. The conquering genius of Bolívar cherished, as his political ideal, the dream of a community of free nations ruled by a pact of peaceful coexistence. This was no Utopia, such as those conceived by certain Renaissance philosophers; but a grandiose, practical conception. All the peoples of the earth were to assemble in a great amphictyony where any disputes which might arise would be settled by amicable means. Bolívar thought that the first steps towards the realization of this noble ideal might be to form a union of all the American States; but his ideal went further than that, and his real aim was to create a kind of ecumenical federation. In his famous Jamaica Charter, when proposing the International Congress of Panama, he stated his aim in the following words: How glorious it would be if the Isthmus of Panama were to become for the American peoples what Corinth was for the Greeks, a place where all the nations assembled to deliberate on the problems of peace and war.
(68) Thus, the history of the peoples of this America of ours is steeped in this tradition, which stems from the theories of Bolívar, and is personified, at a later stage, in the illustrious figure of President Wilson. For this reason, and because the American peoples are free of the heavy burden of surviving traditional inter-State feuds, we hope that the American continent may one day form the meeting place of all the peoples of the world.
(69) This august assembly of nations, which I have the signal honour of addressing this afternoon, is no more than a stage, a link in the great chain of efforts to achieve international brotherhood. We are assembled, this time, under the aegis and the generous hospitality of a great country whose pursuit of freedom was sustained by the will of the indomitable Artigas. We have been speaking of the contribution made to peace by many noble human values. I, for my part, would like to invoke the memory of one who, after dedicating his life and his divine gift of eloquence to preaching the doctrine of goodwill between men, left, as his testament, this sublime message: Peace be given unto you, my peace I leave with you.

(70) The PRESIDENT (Translation from the Spanish): I call on the delegate of China.

(71) Mr. LI YUYING (China) (Translation from the French): I am very pleased to be here for the purpose of studying the numerous problems which arise in the fields of education, science and culture and the organizations dealing with natural and social sciences. It is a veritable encyclopedia, comaining a series of stories, so long that - as the Chinese proverb puts it - we do not know what subject to talk about. Fortunately we have the guidance of the Director-General's report, which is in itself, if not a whole encyclopedia, at least the table of contents or the introduction to an encyclopedia. I can only congratulate him, and express my admiration for his work, for this report is both a summary of and a monument to the work of Unesco.
(72) I shall have occasion to revert to this report, considered as a world encyclopedia. I have only fifteen minutes in which to speak of so varied and such vast subjects - a virtual impossibility. But, thanks to this simple and clear method of arrangement, we have a sort of picture which, like an encyclopedia - word by word, fact by fact - imparts knowledge and enables us to treat every subject thoroughly.

(73) All my colleagues have greeted the Republic of Uruguay, and I do the same; but I wish to do more than that, and my words are not mere politeness or formal courtesy. They are sincere, and they are true: Uruguay, Montevideo represent a torch of freedom, on account not of words alone, but of deeds.

(74) You are all aware that there is a Sino-International library in the National Library of Montevideo. This library, like the continent of China, was about to fall into the hands of the invaders; and its salvation was due much less to concrete, material conditions than to a high sense of democratic and impartial morality. Words fail me to express my gratitude to the Government and people of Uruguay, of Montevideo; the library stands as a symbol of freedom and justice in the history of Unesco, of the whole of mankind.

(75) Another word about Uruguay. Uruguay, as you all know, is aiming at a progressive ideal which is sometimes symbolized by the colour red. There is in China an adage which says that red (colorado) is a good colour; this is not true of purple because the colour purple is not the true red: it is deceptive. Uruguay is not deceptive: its ideology is the true ideology of freedom, equality, fraternity and social justice. In Uruguay education is free at all levels; everyone is entitled to protection, which implies social justice, and everyone is eligible for social insurance. There is no need for me to dwell on this point, as you are all familiar with it.

(76) I shall pass on to another term: the term Sino-International. You will probably ask me, as many people did in Geneva, what justifies the use of this term. The word international covers all the countries of the world; why add the word Sino?

(77) I personally, and we collectively - all of us who belong to the true liberal China, that is to say - are certainly not nationalists or partisans of State control, either Right or Left. It was wrong to call us the Nationalist Government; the Chinese Government itself never called itself by this name, a mistranslation of National Democratic Party. I am speaking of China, not as a Chinese, but from a completely objective point of view. I and my great friend President Herriot used often to say: We are citizens of the world. It is from this point of view that I speak of China, of the Chinese language, of Sinology. Linguistically speaking, Chinese should have been a working language here, but we have not requested that it should be as has been done in the case of Russian, since Chinese is a complicated language, and its adoption as a working language would entail expenditure too heavy for Unesco's budget to meet. We prefer to express our ideas from the point of view both of linguistics and of Sinology. There can be no universality without the real centuries-old China, without Chinese culture and science. The Director-General was formerly Director of the Library of Congress, which was interested in Sinology; and an article of mine on the study of Chinese words was published in Free World . Some Chinese words, especially those in the sphere of moral and psychological conceptions, do not exist in the dictionaries of other languages. Any internationalism omitting China is incomplete. That is why we are stressing this point, not from any spirit of narrow nationalism, but from the objective and universal point of view. The French Lycée in Montevideo has a course in Chinese; and there are 40 Chinese-speaking students who are assisting with the said library, to be inaugurated shortly with an exhibition.

(78) I return to the report of the Director-General, which is, I repeat, an encyclopedia, or the table of contents of a living encyclopedia. The report has been praised but comments have also been made on it. It is said that it is a very extensive programme, perhaps even too extensive. It might be better to concentrate the work, and set up a few large institutions, large branch establishments of Unesco. We do not think the two methods are incompatible. Scale and depth are the two dimensions - horizontal and perpendicular. In my capacity as encyclopedist, I have already published some works on this subject. At the time when I was delegate every year to the Institute of Intellectual Co-operation, both in Geneva and in Paris, I used to submit a project of this kind every time. Unfortunately, although the principle was upheld it was never applied in practice by the Institute.

(79) I have no desire to diminish the scope of Unesco's work - on the contrary, I think it must be extended, but from the encyclopedic point of view. I do not mean that Unesco should issue the whole encyclopedia - we have not sufficient funds, and it is not necessary to have centralized funds in order to perform this task. With our system, every country, institution or even individual could produce a separate, independent volume on a given subject, which might even be a highly specialized one. Thus, it is not my intention that the programme or the scale of Unesco's work should be reduced.

(80) I believe that the French delegation has a research project to submit; and I am convinced that delegates can do no other than support this project. We approve this proposal, not only as a specific proposal but also by way of example. There are many projects regarding science and research, by which I mean to say that size and depth are not incompatible.

(81) The social sciences must not be neglected. The very structure of Unesco is an example of applied sociology. It was Auguste Comte who coined this happy term: sociology. I believe - and I have already expressed these ideas both verbally and in writing - that there is room for a social science which might be called sociotechnics. Sociotechnics would study both society in general and special organizations such as Unesco. Unesco is prospering and progressing - there is no denying that. But one sometimes senses a certain uneasiness; I am not pessimistic on this score - it is only a passing phase.

(82) In the individual there are physiological ailments and pathological ones. In society ailments or diseases are no longer incurable. It is hoped that even cancer, though at present not easy to cure, will in the future be curable. The same applies to society: there is normal and abnormal physiology. It is our job to study abnormal physiology also. How are these problems to be solved? We are suffering from certain diseases, and they

are not benign diseases, but stem from deep-lying causes.

(83) I now come to another word, or rather, two other words, of which we speak every day here. I mean the word peace. No one is against peace, everyone is for it, and has been for it since Confucius, from the philosophers of ancient times to those of our day. But there are two kinds of peace: normal peace, which might be called physiological, and pathological peace. There are times when aggression is approved in the name of peace. I would like to quote an example which I noted myself in France. France, at a certain moment, refused to use the word collaboration, although collaboration is a very fine word. Like the word peace. It is not a question of politics. Many people here say that Unesco is too political; I do not believe it. Regarded from the sociological or socio-technical point of view, all problems are natural, as all diseases are natural and curable. But these problems must be studied, it is not enough to have one word only, particularly in our era, when there is such confusion both mental and factual. Labels no longer have any meaning. People at one time used to say that the Left stands for progress, the Right for reaction; but now this no longer applies; we do not know which side is the left and which is the right. We therefore need a new name and the encyclopedia I have in mind will provide the true definition. That is why I think it corresponds to a deep need.

(84) I now come to the last word, the word universality. It is like the word peace - everyone is for it. It is on account of this word that we are here; no one is against universality. In order to achieve universality, we have to take account of the factors and phenomena of which I have just spoken: universality must be genuine, like all words, all facts, all phenomena. I long passionately - I and all my friends, not in China alone but throughout the world - for the advent of true universality; and though I am, naturally, interested in China, I have perhaps been much more interested, for the past 50 years, in the question of world co-operation and of the World Federation of International Organizations which was presided over by Mrs. Roosevelt, in New York, some ten years ago, and which constitutes the real basis for universality. I long passionately, I repeat, for the advent of universality, but on condition that it is an instrument not for world hegemony but for true co-operation, true federation, true universality, and true peace.

(85) The PRESIDENT (Translation from the Spanish): I call on the delegate of the Philippines.

(86) Mr. DE LOS SANTOS (Philippines) (Translation from the Spanish): Mr. President, Mr. Director-General, delegates: I have the undeserved honour of greeting, on behalf of the delegation of the Philippines, all the illustrious delegates gathered here to share with us in the difficult tasks facing this General Conference; and of greeting, also, the people and the Government of Uruguay, who have welcomed us all to their beautiful and hospitable country. Fortunately our two countries - nay more, all the South American countries and the Philippines - are bound, though not by concrete, physical ties, by the imperishable bonds of religion, culture and a common desire to improve both our own countries and all the other countries of the world. The Filipinos and the South Americans pride themselves on the fact that they have, for historical reasons, or maybe by the dispensation of providence, inherited from a common ancestor some of the same spiritual and moral traditions.

(87) Eight years ago, in Paris, the city of light, leaders from all over the world, men of all races and all political and religious beliefs, spurred by the same desires, beset by the same anxieties, united by the same desire and fortified by the same unswerving faith, assembled in that city at the First General Conference of this international organization

(88) Unesco as a whole believes that mankind must save itself by its own efforts; that it must, in order to do so, protect itself against its own weaknesses; that it must cure itself of its own afflictions: ignorance, hunger, physical and spiritual ailments; fanaticism, intolerance, love of excessive power, all of which lead to war and the defeat of the weak at the hands of the strong. And by what means did the visionaries of 1946 hope to achieve their noble aims? Strange as it may seem, they put their trust not in material but in moral forces; not in death-dealing weapons, but in the fruits of the creative mind; not in hate, but in love; not in excessive nationalism but in universal understanding. In a word, they laid all their hopes in Man, man with all his human, moral, dynamic and meritorious qualities.

(89) How can this man be produced, how can he be developed? That, is the great question which we must answer satisfactorily on pain of seeing man disappear, or revert to the brutish state in which he lived before the dawn of civilization. Ours is a titanic task, a great and noble task. There is no room for overweening impatience, destructive criticism or unwarranted despair. We must work earnestly and with perseverance; and because the work on which we are engaged is good and great and noble, it must needs be slow; it will take generations to complete, since we have to destroy the roots of evil which have spread wide and deep.

(90) It has rightly been said that there are no longer several worlds, but only one; and that this one world has shrunk so much that all problems affect us all equally. That is perhaps why the founders of Unesco adopted the single principle of human solidarity and universal comprehension. To know is to understand; to understand is to love.

(91) In the light of this irrefutable truth, I shall endeavour to tell you briefly of the position of the Philippines towards the problems with which we are dealing. I shall give a true picture. I shall not confine myself to describing the successes we have achieved whilst glossing over our failures and weaknesses. The picture will be in chiaroscuro, it will not be overwhelmingly beautiful, but it will be accurate. For the thinker who said that half-truths are better than a lie struck the right note. We cannot solve the problems of the world if we provide those who are seeking after the truth with misinformation or information which is only half complete.

(92) The Philippines are comparatively small; they have an area of only 15,000 square miles, inhabited by some twenty-one million people of different racial stocks. There are immense natural resources in its 7,000 islands and islets, but they are as yet untapped. As an independent country, it is still very young. Our independence was granted us by the magnanimous United States of America, as recently as 1946, in loyal fulfilment of a pledge voluntarily given when it occupied the country at the close of the Spanish-American war. Our independence came at a time when we were still suffering acutely from the horrors of the last war. Economically, our position is worse than it was before 1941. But, despite this difficult position, the Philippines have not been backward in participating in all international activities aimed at improving the conditions of twentieth-century man. We are members of all the international organizations, and we were among the first to join Unesco.

(93) Our Constitution furnishes definite proof that we Filipinos renounce war as a national policy, since we wish to live in peace with all the world. We have no designs on so much as a square inch of territory which is not ours; we do not even wish to exercise moral or spiritual domination over any other country, near or far. It is written in our Constitution, moreover, that all educational centres must undertake: (1) to train young people in accordance with the lofty principles of humanity; (2) to inculcate personal discipline; (3) to develop civic consciousness; (4) to teach the duties incumbent on the citizens of a democracy; and (5) to train everyone for an occupation or a profession. The Constitution also stipulates that primary school education shall be free and compulsory for all, and it guarantees freedom of expression, thought and religion, and freedom to exercise any profession. Finally, arts and science are placed under government protection. I have tried to sum up briefly the reasons impelling us to take part in all Unesco's activities.

(94) I cannot give impressive statistics of the number of books we publish, or other details calculated to produce a good effect. We are beginning to tread the path of progress, but we are proceeding with resolution and tenacity, overcoming obstacles here and there. Our proportion of illiteracy is, nevertheless, high - approximately 40% of the adult population are illiterate. As from the present school year, however, we have succeeded in admitting every child of school age to school. The school attendance throughout the whole of the country is approximately five millions. We have hundreds of secondary schools, arts and crafts colleges, agricultural colleges, domestic science colleges, teacher training and higher educational colleges, and fourteen universities. But it is not only numbers we are aiming at; we are now engaged in improving the standard of all our schools. We are also faced with the serious problem of reducing the number of young people entering the liberal and also the technical professions. The fact is that we are training more school teachers, engineers, accountants, chemists, dentists, graduates in commerce than the economic development and industrialization of our country, at least in its initial stages, is able to employ.

(95) Since the general economy of the country is at present at a low ebb, there is a great deal of poverty and unemployment amongst the masses. The standard of living of the rural population has not improved very much over the past thirty years. We are pledged to find adequate remedies for these evils, which are being accentuated by the rapid increase of the population: the total population has trebled in fifty years. I take this opportunity to request that there be included, amongst the urgent problems with which Unesco has to deal, a study of demographic conditions in Eastern Asia. Half the population of the world lives in this area with the result that food, fundamental education and health problems there are more acute. With all the goodwill in the world, there is not much we can do for people who are sick, hungry and who lack the means for satisfying their most pressing needs.

(96) Another question to which the delegation of the Philippines wishes to draw the attention of the Conference is that of spreading the knowledge of the use of new scientific discoveries and techniques, with a view to enabling the whole world, the greatest possible number of people, to enjoy the benefits of modern scientific discovery and so live, if not in happiness, at least in comfort; so that people may enjoy a higher degree of well-being, without being beset constantly by the fear that science and modern technique may one day be used for the diabolical purpose of destroying mankind. As Carlos Lazo, the designer of the new university city of Mexico rightly said:

"The world is lacking in co-ordination. Science introduced order into life, and the time has now come for life to put order into science so that the two may be made compatible, and that we may prevent life from coming to an end. It is not order that is lacking. What we lack is the co-ordination of order, a complete vision of the world and society, a consciousness of universality, a sense of planning. We are witnessing the spectacle of an age when the only technique which is not flourishing is that of using the accumulated knowledge possessed by mankind for the benefit of society".

The following declaration, made by James Roscoe, President of the North Western University of Illinois, United States of America, is also very apposite:

"It is not the atom bomb which is the greatest power in the world at present. The human mind which invented the atom bomb is a greater force, from all points of view. We have no reason to fear this power, if it operates in an atmosphere of freedom. We have reason to fear it if it is used for wrong ends, if we allow the intellect to be divorced from the conscience; if that happens, all the achievements of science, the accumulation of human wealth, the monuments erected by man and the discoveries of medicine will be worth no more than a handful of dust".

(97) I shall now proceed to state briefly the views of the Philippines delegation on a number of subjects

directly connected with the questions before us.
(98) Firstly: we support the idea already put forward by several delegations - that we must celebrate the tenth anniversary of the Organization by adapting our action to the new political, social and economic developments of the world.
(99) Secondly: the delegation of the Philippines considers the Director-General's report on the Organization's activities during 1953 and the first half of 1954 very satisfactory as regards both form and content and accordingly offers the Director-General its warm congratulations. We reserve the right, none the less, to submit our comments, both favourable and otherwise, when the opportune moment arrives.
(100) Thirdly: we support the plan to reinforce the National Commissions in every way possible. All Member States agree that the strength of Unesco is derived from its individual Member States.
(101) Fourthly: our Government and our people deemed it a great honour to receive the visit of the Chairman of the Executive Board, the Director-General and Mr. Secco Ellauri, which gave the Philippines National Commission and the friends of Unesco in our country fresh inspiration. Moreover, Mr. Secco Ellauri's praise of the beauty of your country was partly responsible for our decision to send a full delegation to this Conference, for the second time only since the establishment of Unesco.
(102) Fifthly: we support the proposal that the staff of Unesco should be free from political pressure, should enjoy stability of tenure in their posts, and be given the opportunity for promotion to higher posts subject to personal integrity, loyalty to the aims of the Organization, efficiency and devotion to duty. Without an efficient staff Unesco cannot achieve its aims.
(103) Finally, the delegation of the Philippines wishes to thank Unesco for all the assistance it has given our country since it was first founded. We have received much more than we have contributed; but we are determined to do all in our power to increase our assistance.
(104) May I be permitted, by way of conclusion, to quote one of the stanzas of the Last Farewell, written by the Philippine national hero, Dr. José Rizal, on the night before he was shot:

"On the field of battle, wrestling with delirium, others are giving their lives, without hesitation or regret. The spot matters not - cypress, laurel or lily, scaffold or open field, in battle or cruel martyrdom, it matters nought, when country and home command".

(105) Indeed, the place is of no importance, be it the open field, the office of the official or the professional worker, the research worker's laboratory, the factory, the teacher's rostrum, the pulpit - no matter, when the call of tortured humanity resounds. All alike must contribute in the measure of our resources to the dignity of man and the realization of the noble aims of Unesco.

(106) The PRESIDENT (Translation from the Spanish): I call upon the delegate of the Union of Burma.

(107) Mr. THA HLA (Union of Burma): Mr. President and fellow delegates: I would like to join previous speakers in their spontaneous expression of gratitude to the Government and people of Uruguay for inviting the General Conference to this beautiful city which symbolizes the great and glorious culture of the Latin American peoples. For the members of my delegation and myself, this is the first visit to this great continent, and I would say with honesty that our information, gathered from books and previous visitors about the traditional hospitality and friendly attitude of the Uruguayan people, is not exaggerated. The moment we landed in Montevideo, after crossing the Equator for the first time, we felt we were in the midst of a sincere and friendly people - despite our unfortunate ignorance of the language. We are all sincerely grateful for the hospitality of our charming and considerate hosts, and we feel privileged to be in this part of the world which lies far from our own country in space though certainly not in spirit: in their ways of living, and in their cultural values and sense of hospitality, the Asian and Latin American peoples have much in common. It is our ardent hope that Unesco will be able to promote cultural exchanges on an ever greater scale between these two regions and also between all nations of the world. On behalf of the Government and the delegation of the Union of Burma, may I extend our hearty greetings to the great Republic of Uruguay?
(108) Turning to the report of the Director-General on the activities of Unesco and the Proposed Programme for 1955-56, I shall be brief in my comments at this stage. The Burmese delegation wishes to congratulate the Director-General on the very substantial achievements of Unesco during the last two years both in the implementation of important projects and in the planning of future activities. Unesco has now established itself as an instrument of international co-operation in the fields of education, science and culture, and is therefore capable of making substantial contributions towards building up the intellectual and moral solidarity of mankind. That intellectual and moral solidarity is, indeed, the very foundation upon which the entire structure of the United Nations is built. All that now remains is for the Member States to show ever greater faith and zeal in the activities of Unesco, (and, in this particular, special responsibilities rest on those Member States which are more fortunately endowed with material resources) and show what is even more important, enough goodwill and faith in carrying out this great task of promoting knowledge and understanding so that the true worth of man everywhere may be revealed. In the infallible teaching of our omniscient Lord Buddha, the three flames, lobha, dosa and moha, which in our sacred Pali language mean greed, anger and infatuation, are the cause of distrust, fear, misunderstanding and all evil in mankind. When these flames have been extinguished, we shall all prefer the building of schools, public libraries and museums to the gigantic production of armaments for the destruction of humanity, its culture and all besides.
(109) The Government of the Union of Burma has been deeply interested in the ideals and the work of

Unesco from the time we were honoured by joining this great Organization. In a letter addressed to the Director-General, our Minister for National Planning, Religious Affairs and Union Culture sent this message: "I am taking this opportunity to convey to you through the Burmese delegation the kindest greetings of my Ministry and of the Government of Burma and their best wishes for the success of the Montevideo Session of the Unesco Conference. We in Burma are looking to this Conference to come to the aid of the cultural programme of our people. Indeed, we feel very strongly that Unesco should make greater efforts to prove its active interest in matters cultural as much as it has been doing in matters scientific and educational".

(110) We feel that, in the activities planned for Unesco's future action, cultural activities should be given a very high priority and certainly much more generous resources should be allocated for such activities than are proposed in the programme and budget for 1955-56. In making this suggestion, I do not for one moment ignore the magnitude and the importance of the immense needs in the fields of education and science, but when Unesco's total budget is less than the annual expenditure of a single American university of medium size, its efforts in these fields, where the main problem is one of resources, will not even touch the fringes of the problem. It is in this light that I made my humble remark just now that more goodwill and zeal are called for from Member States, particularly from those with ampler material resources than others. Whatever is being done or planned by Unesco in education and science is certainly very useful and our delegation would like to see even greater efforts made in these directions also. In fact, my delegation has submitted a formal request for aid to the Director-General to be granted in the form of essential equipment for geophysical research and a teaching laboratory in the University of Rangoon. Therefore, it is not our intention to emphasize Unesco's cultural activities at the expense of its educational and scientific activities. But we do feel that, in a proper balancing of the programme of Unesco, cultural activities should be undertaken on a bigger scale than has been possible so far. We believe that Unesco will find even better opportunities for the promotion of international understanding in the field of culture than in the fields of education and science. Activities such as the establishment of national libraries, national museums, the preservation of a cultural heritage, the promotion of arts and crafts and the dissemination of the highest form of culture through books, art reproductions, musical recordings, films, etc., are of the greatest importance to all countries, especially to those which are economically less developed and where traditional cultures are threatened by the onslaughts of modern technology. Technology should certainly march forward and rapidly in these underdeveloped countries, but only hand in hand with cultural appreciation. For this reason we welcome the inclusion of aid to Member States in the field of culture, which was unfortunately, in our opinion, ignored by the United Nations Programme of Technical Assistance. Assistance in the field of culture is not a one-way traffic; the expert who brings techniques and equipment often carries back the knowledge and appreciation of another culture, and in this way such programmes are invaluable for the enhancement of international understanding.

(111) Among the fields of Unesco's action, the Union of Burma attaches the highest priority to advice and technical aid for establishing our National Cultural Centre in the city of Rangoon, with its offshoots outside the capital and, secondly, for establishing a teaching and research laboratory in geophysics in the University of Rangoon. For us, this project for a Cultural Centre will not only fulfil the cultural ideals of a single people, but also contribute substantially towards the success of the historic and truly international meeting of the great Sixth Buddhist Synod now in session, which will last for two years. In the last 2,500 years there have been only five such Synods. The first three were held in India, the fourth in Ceylon and the fifth in Burma. Thus an international Buddhist Synod or Council has been convened on an average once in every 500 years. A Synod is a conference of all the leading Buddhist eminences from all over the world, at which the existing position of Buddhist philosophy and culture is assessed, standardized and recorded after the necessary purification and regularization of texts.

(112) We propose to establish a National Culture Centre, the nucleus of which will comprise a National Museum, a National Library, a school of Fine Arts and Crafts, a National Theatre and a National Art Gallery. The Union Government has been able to allocate four hundred thousand dollars, only a quarter of the total sum requested for the purpose by the Ministry concerned. The funds will probably suffice to carry out the main part of the project, but Unesco's assistance in the form of experts and equipment would certainly be most welcome. The Government's preoccupation with minor internal troubles and with the still very serious troubles created by Kuomintang Chinese aggression in Burmese territory is responsible for the drastic cutting down of the funds requested for cultural activities.

(113) We feel that Unesco's association with this national cultural project will give it an international character. There is no better way of improving international understanding than for nations to help each other in carrying out cultural and allied tasks; in the course of this collaboration they learn to understand and respect each other.

(114) My delegation notes with satisfaction the improvement effected by the Director-General in the organization of the Secretariat. I should, however, like to associate myself with the remarks of the delegates of Indonesia and India, on the question of a better geographical distribution of posts both in the Secretariat and on the Executive Board. We feel there is room for improvement in this regard. For instance, the Union of Burma, long a staunch supporter of Unesco from the South East Asian region, still has not had the honour and opportunity of serving either in the Secretariat or on the Executive Board. As for experience, we shall never have it unless an opportunity is first given us. And we feel that the requirement of proficiency in both English and French is quite unnecessarily harsh.

We do not deny the value of proficiency in two languages, but we are sure that duties can be efficiently discharged in the Secretariat even with a proficiency in one language only.

(115) I wish, in conclusion, to express the satisfaction of our delegation at the enlarged membership of Unesco although we are sorry that the General Conference has seen fit to postpone application of the principle of universal membership in the case of certain States, particularly Rumania, Bulgaria and the great Republic of Peiping, China. The Chinese people number today over 600 millions, in other words, there is one Chinese person to every four people in the whole world, and I feel that we shall be missing something if we do not hear the views and do not receive the co-operation of that great people. But we hope that the present obstacles to universality will soon disappear and that we shall be abie to welcome all, whatever their ways of thought or living, to this great family of nations in a spirit of tolerance and goodwill which must conquer the intolerance and distrust that corrode the hearts and minds of man.

(116) The PRESIDENT (Translation from the Spanish): I call on the delegate of the Ukrainian Soviet Socialist Republic.

(117) Mr. KOVAL (Ukrainian Soviet Socialist Republic) (Translation from the Russian): Mr. President, ladies and gentlemen: Allow me on behalf of the Ukrainian Soviet Socialist Republic to greet the delegates to the Eighth Session of the General Conference of Unesco and to wish all of you success in your work. On behalf of the delegation of the Soviet Ukraine I wish to thank the Government of the Republic of Uruguay for creating favourable conditions for the work of our session.

(118) The delegation of the Soviet Ukraine considers that Unesco can make a definite contribution to the development and strengthening of cultural ties between States and to co-operation between them in matters of culture, science and education, if it acts in strict compliance with the principles which are laid down in the Constitution of the Organization. The Soviet Ukraine for its part is ready to support the activities of Unesco directed toward the development in every direction of science, culture and education in the interests of strengthening peace and creating an atmosphere of confidence, friendship and mutual understanding among the peoples. Our attention should be constantly concentrated on the strengthening of peace, all-round development of economic and cultural ties between peoples on the basis of confidence and equality, the elimination of racial discrimination and extending every kind of assistance to the underdeveloped countries.

(119) Our delegation will actively support all proposals directed against the utilization of the means of mass information for the propaganda of war, which brings in its train endless unhappiness to the peoples and destruction of material and cultural values. We, the Soviet people, recall the destruction which befell our country in the Second World War. Nearly all the scientific and cultural establishments in the Soviet Ukraine - institutes, schools, theatres, museums, hospitals, monuments and natural reserves - were ruined, destroyed and plundered. The total damage amounted to over 285 billion roubles. Many valuable examples of the sculpture, architecture and painting of the Ukrainian people were irrevocably lost.

(120) The Ukrainian Soviet Socialist Republic joined Unesco after the annual report for 1953 on the work done in the field of education, science and culture had already been submitted. I would ask you, therefore, Mr. President, to permit me within the time-limit which has been laid down to give the Conference some facts and data on public education, science and culture in the Ukraine.

(121) The Ukraine, whose people suffered before the great October Socialist Revolution took place in Russia from social and national oppression, from economic and cultural backwardness, has during the period of the Soviet régime become a country with a highly developed economy and culture. The grievous heritage of previous years - illiteracy and a low level of education among the adult population - has been completely eliminated in our Republic. All the children everywhere enjoy universal primary education extending over seven years and every year sees an increase in the facilities for secondary education with a ten-year course, which will soon become universal also.

(122) Teaching in the schools is given in the native language of the pupils; schools where the classes are taught in Ukrainian constitute 92 per cent of the total but there are also schools where the children are taught in the Russian, Moldavian, Polish and other languages.

(123) The Soviet Ukrainian Government annually assigns large sums of money for public education. Expenditure on public education and culture in the current year amounts to about 60 per cent of the whole budget of the Republic. The steady growth of State allocations for public education makes it possible from year to year to increase the construction of school premises, institutes of higher education and children's homes, to give schools much larger supplies of school equipment and literature, to train and maintain teaching staff, to provide the pupils with all the necessary textbooks in their native languages. In 1954 alone 428 new school buildings were erected and more than 40 million copies of school textbooks were published. In the seven years since the war ended, 4,430 school buildings have been restored or erected. Education in our schools is secular and is organized on a scientific basis. Our Soviet system for the education and upbringing of the young generation is imbued with lofty humanitarian ideas and respect for all nations, large and small. The young boys and girls matriculating from Ukrainian secondary schools are given the necessary training to enter any higher educational institution or to work in industry, farming or culture.

(124) In my country great attention is devoted to the education of young workers and the adult population. Thousands of seven-year and secondary schools have been opened for such groups in the towns and countryside, and there are numerous correspondence schools. In these schools young workers and the adult urban and rural population can get

a secondary education free of charge without leaving their employment.
(125) Young people in the Soviet Ukraine have ample opportunities of acquiring a university education. The Ukrainian Soviet Republic devotes special attention to teachers in primary schools. We have a very extensive network of higher and secondary institutions where teachers are trained. At the present time 145,000 students are preparing to become school-teachers. Over 300,000 teachers are now working in the schools of the Ukrainian Soviet Socialist Republic. More than half of our teachers are women. Women teachers in our country receive the same salary as men.
(126) Teachers in the Ukrainian Republic are given two months' vacation a year on full pay. Since the war the real salary of teachers has more than doubled. To help teachers in their work special newspapers, magazines and educational works of various kinds are published. There are also consultation cabinets and research institutes for pedagogy, psychology and the treatment of defects.
(127) Large numbers of intellectuals trained in higher educational institutions have played a leading rôle in the economic and cultural development of the Soviet Ukraine. In the Ukraine there are 137 universities, polytechnics, pedagogical, agricultural, architectural, medical or other institutes of higher education which train all the specialists required by the national economy. In 1954 alone Ukrainian institutes of higher education trained over 40,000 teachers, doctors, engineers, agriculturists, and other specialists.
(128) All students recording normal progress receive State scholarships, and graduate students are offered employment suited to their speciality. Our Republic has created facilities also for the training and development of science teachers for the universities. In addition, the Ukraine has 634 special secondary schools (technical schools).
(129) Five hundred and eighty-one thousand students are being trained in higher and special secondary schools, some of them by correspondence, without interrupting their employment.
(130) The Ukraine has an Academy of Sciences and a large network of scientific research institutes, in which more than 20,000 scientists are studying problems of agriculture, technology, medicine, biology, literature, language, history and art. The results of the research work done are widely published in the press. All of them are directed to peaceful development, to the production of material wealth for the people, to the alleviation of working conditions, to the use of natural resources for the well-being of humanity. The research work done by the Academicians E.O. Paton in the field of electric welding, N.D. Strazhesko in clinical medicine, V.P. Philatov in ophthalmology, A.A. Bogomolets in clinical physiology, A.V. Palladin in the biochemistry of the brain, V.Y. Youriev in grain selection and by many others is widely known.
(131) The scientists of the Ukraine are always ready to share the results of their research with the scientists of other countries and to take an active part in the work of international scientific conferences.
(132) We sympathize with and support the proposal of Unesco for the improvement of relations between the scientists of the various countries. In recent years scientists from Great Britain, Finland, Norway, Japan and other countries have visited the Soviet Ukraine and have become acquainted with the work of Ukrainian scientists. Ukrainian scientists have attended scientific congresses abroad.
(133) The Soviet Ukraine is covered by a dense network of clubs, libraries, cinemas, museums, opera houses, theatres and philharmonic societies. I shall not cite figures but will only say that everyone in the Soviet Ukraine has full facilities to obtain from a library any book he is interested in, to see cinema films and go to the theatre. The Ukrainians love music, singing, and theatre and books. Our theatres and art groups give performances with great success in the other Republics of the Soviet Union and abroad.
(134) The cultural relations of the Ukrainian people with the peoples of other countries, relations of friendship and peace, are becoming stronger and more extensive day by day. These relations take the form of exchanges of literature, musical works, and artistic productions. Suffice it to point out that in the last three to four years alone dozens of different delegations of representatives of culture, including delegations from Argentina, Great Britain, France, India, Denmark, Italy, Belgium, Luxembourg and other countries, have visited the Ukraine.
(135) The delegation of the Soviet Ukraine considers that Unesco has great possibilities of developing and strengthening cultural ties between all countries. We consider that Unesco will be definitely successful if it subordinates all its work to the interests of peace and the strengthening of world security. Science and culture must serve mankind, serve the noble purposes which are laid down in the Charter of the United Nations and in the Constitution of Unesco. The delegation of the Ukrainian Soviet Socialist Republic hopes that at this eighth session of the Unesco General Conference all possible and necessary action will be taken to consolidate peace and international co-operation, that no single possibility of easing international tension and of strengthening friendly relations in the fields of education, science and culture will be missed. On this will depend the success of our Conference and the real influence of the decisions adopted here on further progress in the life of the peoples.

(136) The PRESIDENT (Translation from the Spanish): I call on the representative of the Union of South Africa.

(137) Mr. POHL (Union of South Africa): Mr. President and fellow delegates: After listening yesterday to the moving discourse of the delegate of Uruguay - a speech, if I may be permitted to say so, completely in line with the record of this progressive and friendly country whose hospitality we are all enjoying so much - there is no more that I can say about the aims and objects of our Organization or about its achievements. Nor is there anything I can add to the remarks of other delegates

about the praiseworthy work of the Director-General and the Secretariat, both of the Organization and of this Conference.

(138) A point however in the address of the delegate of Uruguay that struck me forcibly was his description of the occurrences which led to what he called a small crisis in our Organization some while ago. This crisis had an economic basis and the thought immediately came to me: is it not our duty so to regulate our affairs that we can avoid so far as is humanly possible running into more crises?

(139) Previous South African delegations to Unesco have consistently urged that in the planning of programmes certain fundamental points be accepted if the most effective use is to be made of available resources. These are, very briefly, the need for budgetary stabilization, for concentration of the programme and the paramount need for the application of a system of priorities that will ensure that the Organization's resources are used to the best advantage.

(140) As regards budgetary stabilization, my Government has observed with regret the introduction of the concept of a higher budgetary level. To say the least, we consider this a retrograde step and I am instructed to make it clear at the outset that the South African Government is strongly opposed to the adoption of a budget on this basis. Other Specialized Agencies, in response to the wishes of a majority of Member States, have succeeded in introducing an element of stability into their budgets and it was our earnest hope that Unesco would follow this line and stabilize its programme activities now at the 1953-54 level.

(141) On the question of priorities, my Government feels that, althought the principle has been acknowledged, it has not sufficiently been translated into action. To us it appears that the only priority distinction in the 1955-56 budget is the differentiation between a programme item falling under the present budgetary level and one falling under the higher budgetary level. My Government is of the opinion that programme items which do not give satisfactory results should be discarded in favour of those which do.

(142) It will be recalled that the Economic and Social Council of the United Nations at its eleventh and thirteenth sessions laid down - and recommended Specialized Agencies to adopt - certain criteria for priorities. At its fourteenth session the Economic and Social Council laid down certain programme priorities for education and science. My Government feels that these concepts of priority should serve as a guide to Unesco when drawing up its grammes.

(143) In making these few remarks, I sincerely trust that my delegation will not be regarded as wishing to introduce an unnecessarily sombre note at this early stage of the Conference. On the contrary, our comments are motivated solely by a sincere desire to further the best interests of the Organization. Let us do a few necessary things well rather than attempt too much and lay ourselves open to the charge of biting off more than we can chew.

(144) The PRESIDENT (Translation from the Spanish): I call on the delegate of the German Federal Republic.

(145) Mr. HALLSTEIN (German Federal Republic): Mr. President, ladies and gentlemen. In addressing this Conference on behalf of the German Federal Republic, I wish first of all to convey our sincere gratitude to the country which is extending to us such generous hospitality. By holding this session on the South American continent, Unesco gives proof of the sincerity with which it follows its leading principle of universality. The Republic of Uruguay, a foremost exponent of a common Latin American culture, can be proud of its achievements. In these parts of the world, the heritage of Europe is happily blended with ancient traditions of the native soil. Many nations, and among them the German people, have benefited from the fruits of this growing civilization, which, at all times, has been open to international intercourse. We Germans feel gratified by a mutually productive cultural relationship with Uruguay, as indeed with the whole of Latin America. It is a particular privilege to lend expression to this feeling before a distinguished gathering such as the General Conference of Unesco.

(146) The occasion of this biennial Conference should, on our part, be used for re-stating our attitude towards the basic conception of Unesco, for reporting to the Conference the ways in which we try to meet our obligations at home and, finally, for setting forth some principles which we hope to support, during the deliberations of this assembly, together with many other delegations.

(147) Germany feels privileged to be a member of the United Nations Educational, Scientific and Cultural Organization. We are deeply attached to its principle of universality. We understand this principle not merely in the sense of aiming at a maximum number of members. We understand it rather in conjunction with the basic principles of common action as it is expressed in the first paragraph of Article I of the Unesco Constitution. The fundamental aims of Unesco correspond to a basic need established in every human being by nature itself. It is the need for the free and productive development of the human personality. Here is the common basis which justifies the principle of universality. In this service to the very humanity of the human being all nations should feel united beyond differences.

(148) You will allow me, I am sure, to speak frankly. At a moment when all responsible people are aware of tensions, we sincerely hope that this session of Unesco's General Conference will make a contribution towards the relaxation of this world-wide tension. All nations are suffering from it - the German people in particular, by the loss of its unity. And therefore this meeting, precisely because it is devoted to the ultimate goal of cultural co-operation, kindles our hopes for being reunited in peace and in liberty.

(149) Today, we Germans look back upon more than three years of active participation in the work of Unesco. Many links, both technical and personal, have been established between this world organization and Germany. They were strengthened

in particular by the recent visit of the Director-General to my country. I should like to express my heartfelt thanks to him for his visit and for his presence at the General Meeting of the German National Commission for Unesco. During these three years, my fellow citizens have learned to understand the significance of Unesco. We are convinced that (1) Unesco is destined to be the moral conscience of the United Nations; (2) by committing each of us to work in common with other member nations for the nobler purposes of human civilization, Unesco has become an institution of international co-operation unique by its very universality; (3) by engaging in this endeavour the German branch of human civilization is given the chance of displaying all that is best in it and, in turn, of being infinitely enriched by its contacts with others.

(150) As you know, we are not yet a member of the United Nations. All the more, we Germans feel gratified at belonging to Unesco, which is devoted to the peaceful tasks for which the United Nations are to lay the political foundations. For too long mankind has been engaged in promoting the art and science of war. We conceive of Unesco as the outstanding instrument of the world community for developing the art and science of peace.

(151) Thus, we are pledged to active co-operation in the work of Unesco, and I may now turn to some organizational problems. We approve the intention manifested in the new programme to consolidate the achievements of Unesco by a wise self-restraint. We have few objections to raise, and none of them on grounds of principle. From time to time, as a matter of course, the programme will be re-examined in the light of duly appraised experience.

(152) We welcome, therefore, the thorough examination of certain problems, as it is envisaged in the programme, especially in regard to educational activities and to the social sciences. We hold that the emphasis laid upon the humanities is a most gratifying development. It will bring a better insight into the particular variety of human culture which each national civilization represents, and into the ground common to all of them. We believe that the foremost need of our work is a sincere respect for the autonomous roots of each culture, for the particular wisdom inherent in each language, for the humanity basic to each religion. All of us have learned that the promotion of international understanding depends upon such respect for each other's basic cultural formation. The fact has been increasingly recognized that he who teaches also learns. In this spirit, we are resolved to take our modest share in the proposed studies and meetings on problems of inter-cultural relations and education, in the continued efforts at securing translations, and in providing reading material for new literates.

(153) In order that this work may be as efficient as possible, we approve Unesco's decision more and more to use already existing channels of international exchange rather than to act directly. For the same reason the relation between Unesco and regional international organizations needs to be drawn closer. For example, the co-operation between Unesco and the Council of Europe holds great promise. The process of consolidation initiated by the new programme will greatly enhance the results of the Organization's work.

(154) Both for financial reasons and for the sake of more thorough preparation, we welcome the decision to convene the General Conference biennially. This makes it even more necessary to strengthen the work of Unesco within each Member State and to strengthen likewise co-operation between the Executive Board, the Secretariat, Member States and the National Commissions. With the longer interval between Conferences, increased significance is attached to the permanent institutions of Unesco. Therefore, attention should be given to the most effective organization of the work of the Member States during these intervals. In order to maintain and possibly to increase Unesco's productivity, serious consideration should be given: (1) to the adequate participation of Member nations in the work of the Secretariat and (2) to the adequate participation of Member nations in the Commissions and other bodies set up by Unesco. If these questions of organization are solved in a spirit of fairness and equity, as well as in accordance with the needs of the work before us, the impulse toward active co-operation on the part of all Member States will gain momentum and, with that, the success of Unesco activities as a whole will be increased. We hope that the solution of this problem will already be reflected in the decisions to be taken by this General Conference.

(155) I will conclude my remarks with an expression of confidence that Unesco will preserve its character as a universal forum for discussion; that it will maintain free and intensive exchanges between all nations and cultures, and that it will succeed in engaging each of them more and more in the common task. You will find, we are sure, that we Germans shall accompany you along this common road, sincere, co-operative, ready to learn and, above all, unfalteringly attached to the great aim of Unesco. I am saying this not only on behalf of the population of the German Federal Republic, but on behalf of the whole German people.

(156) The PRESIDENT (Translation from the Spanish): I call on the delegate of France.

(157) Mr. BERTHOIN (France) (Translation from the French): My first duty, or rather, my first pleasure, is to convey greetings, on behalf of the Government of the French Republic, to the whole of this American land, whose very name, the New World, speaks of the promising discoveries which the old civilizations are ever eager to find there and the aspirations they have reason to hope will be realized there. Professor Carneiro already spoke in eloquent terms, three years ago, on the occasion of the 500th anniversary of Christopher Columbus and Isabella of Castile, of the historical and contemporary significance of the links between the Old World and the New.

(158) The history of Unesco, even before its Constitution was laid down, was linked with the Western hemisphere. It was in fact, in 1945, at San Francisco, the cradle of the United Nations Charter, that the foundations of the Greek temple which constitutes our symbol were laid. It was in Mexico,

in 1947, that the Organization first took stock of the full scale and complexity of its task. And now, seven years later, during which our Organization has matured, striving to forge an effective instrument to serve the cause of peace, it is again one of the republics of Latin America that provides our meeting place.

(159) I wish to convey particularly warm greetings and thanks to the people of Uruguay, to whose traditional hospitality we are indebted for the opportunity of assembling here.

The French delegation to Unesco considers itself very fortunate to have been invited - albeit at the price of a 32 hours' flight - to visit this city of Montevideo, some 3,000 miles away from Paris in distance, though, happily, much closer to it in spirit.

(160) We are no longer at the stage of discovering Uruguay; and we know a little more about it than did Juan Diaz de Solis or Magellan. We are now able to appreciate with our own eyes the beauties of which we knew, up till now, only by hearsay. And indeed what we had heard was true. And this pleasant abode, with its modern boldly constructive town planning, which has yet managed never to mar the beauty of the natural sites, is symbolic of the scale and boldness of the progress which you in your country have always managed to achieve without trampling on your most venerable ancestral traditions. We know that you Uruguayans are justly proud of your democratic institutions; that your social security system, for instance, was introduced a quarter of a century before ours in France; that children, families and workers enjoy protection which might well be taken as a model. And I could continue in the same strain .....

(161) You will, I hope, forgive me for not enlarging further on a subject of vital importance to a State which is a credit to mankind; and passing on to one with which I am more closely acquainted. I want to speak of the admirable progress made by Uruguay in the field of public education. As I remarked, it is a matter for special eulogy, and one directly relevant to the work on which we are all engaged, that this country is one of those which has the lowest percentage of illiteracy and the highest number of playing fields and sports grounds, doubly useful for being attached to schools. I need hardly remind you that higher education is given here in Uruguay free of charge, by eminent teachers, some of whom are world renowned; nor need I describe so daring an experiment as the evening high school catering specially for young people working during the day; and divers other admirable experiments the success of which may well make us envious and rather abashed.

(162) Everything indeed, in this generous country, bears witness to its deep feeling for humanity. And if the song of the thousands of children who came to celebrate the solemen inauguration of this Conference, under the aegis of the illustrious Vice-President of the Republic of India, touched a chord deep down in the hearts of those privileged to be the guests of this country, it was because they all had the overwhelming feeling of finding in Uruguay a true spiritual brother.

(163) To proceed to the subject we have to discuss, I shall, I feel sure, speak for all the delegations if I begin by congratulating the authors of the programme of work we have before us this year. To prepare that programme was no easy; it required a great effort of clarification and synthesis.

(164) All the questions covered in the programme are of vital importance; there can be no question of omitting any. We shall have an opportunity, in the course of our work, of taking them one by one. Indeed, the peoples who have placed their reliance on us from the outset would be justified in becoming more and more demanding as their anxiety increases; and we are in honour bound to heed their indications.

(165) Let us clear up, without further delay, a question which, as all our governments know, is perhaps the most serious and disturbing of all: the question of our budget. The budget should, in our opinion, be so adjusted as to maintain the requisite balance between two categories of projects - the one dealing with direct assistance, the other with the maintenance of the continuing services and international intellectual co-operation work - which act, as it were, like beacons lighting up our path.

(166) That is why the French delegation will give whole-hearted support to the Director-General's proposal that Unesco, in conjunction with the World Health Organization, should undertake international action to promote and co-ordinate fundamental research on cancer, the vital importance of which was stressed yesterday by the eminent spokesman of the Swiss delegation.

(167) The French delegation would also view with favour the establishment of an Institute of Industrial Techniques in South America, an immense area full of promise for the future.

(168) On the other hand, the French delegation would regard the elimination from the Secretariat of the section on international understanding, and the absence of any project on teaching about human rights, as an indication that the Organization was neglecting one of the tasks considered by most countries to be one of its essential duties.

(169) These subjects would appear to require further examination, and the French delegation will make its views thereon clear in the various committees and commissions. If the reasons for these and other changes are financial, it might perhaps be possible to reallocate the budgetary credits, or to concentrate certain administrative expenses somewhat; or even, if necessary, to allocate increased funds to certain items. France would certainly, in view of the importance she attaches to the retention of certain activities, raise no objection.

(170) One thing which I can state now - but do I really need to repeat it? - is that my country has never ceased to regard money invested in cultural enterprises as one of the best forms of investment, and to consider that the highest and safest securities on the market, in this world where the passage of time lays all too much stress on material trends, are those which, if I may so put it, promise good returns in the form of culture, that is to say, in the final analysis, of spiritual profit.

(171) Nor do I intend to shirk speaking from this rostrum, albeit very briefly,

on the subject of the Organization's staff.
(172) Under your outstanding administration, Mr. Director-General, and on the basis of the tradition inherited from your eminent predecessors, the Organization has, amidst the multiple activities to which the voluminous reports presented at this Conference bear witness, achieved a number of highly successful results. These are due both to your personal initiative, to which I have great pleasure in paying public tribute, and also to the unremitting efforts of all the officials whose competence and devotion to the ideal of international co-operation are known to us all and, I am confident, fully appreciated by you. It behoves us to keep our conscience alert when it comes to dealing with certain questions which you, as chief international official of the Organization, have thought fit to submit to this Conference.
(173) France, which has the great privilege of being the seat of the headquarters of the Organization - to which it has readily granted important concessions, especially as regards territorial sovereignty - does not consider that it is thereby entitled to interfere in the Organization's domestic affairs. But it cannot remain indifferent to this problem. It cannot but hope that the General Conference will examine it calmly, in a spirit of impartiality, and that a balance will be struck between the powers invested in the Director-General and the guarantees enjoyed by the members of the staff. France also hopes, naturally, that the independence of the officials of the international organization and of the members of the Board in regard to their governments will be maintained. Incidentally, the rights of the members of the Board would seem in any case to be safeguarded, since it is the governments which appoint delegates to the General Conference, and it is the Conference itself which decides on the amount and composition of the budget. But let us view the problem from a wider angle: is it not self-evident that sure and lasting happiness for any people can only be achieved through the happiness of the world as a whole; and that, accordingly, a good servant of Unesco must, ipso facto, also be a good citizen of his own country?
(174) As regards the programme which we have before us, and on which the French delegation has just now indicated its views, it must in any case be examined as a whole; and the separate parts of it, different as they may appear to be, must necessarily reflect a single guiding policy. This underlying unity must be stressed over and over again, for it determines the specific nature and to some extent the authentic character of the enterprise to which we are dedicated, a character which must be maintained at all costs, even if it means rejecting projects which in themselves are excellent, but which would in practice lead to dispersal of effort.
(175) The Organization must make its influence felt in its Member States not merely through its special projects, its offices and its delegations, but above all, through its work, its special initiatives and its support of everything designed to further international co-operation in the non-political sense of the term, its rôle always being to rise above individual and sectarian interests (noble though they may be), and to seek the human, the universal element.
(176) In short, France considers that, while a certain pragmatism is undoubtedly necessary in order to continue to bring the benefits of progress within the reach of the underdeveloped countries, Unesco's reputation would be enhanced if it demonstrated courageously that the first duty of so noble an institution must always be to elevate a civilization which is in danger, unless we take heed, of making efficiency the be-all and end-all.
(177) The French delegation therefore ventures to suggest that even the initial premises must be reexamined if we can thereby restore to our humanitarian policy the full significance it sometimes seems to have lost. The path to ideal fraternity is a long and a thorny one.
(178) Why is it that, despite an encouraging glimmer on the horizon, the fruits of the first, albeit restricted, agreement between the Great Powers on disarmament - so long pursued like a myth - the world is still fumbling on the road to universal peace?
(179) It is because all spoken or written protestations, however sincere, are powerless in the face of a contradiction which still remains fundamental: the contradiction between the individual and the group, between the conception of the Nation or the State - corresponding to the conception of order and efficiency - and that of the world, or the human community - corresponding to an ideal of solidarity and justice which is irrefutable but which cannot, obviously, become part of everyday life until man's needs, which appear egoistic but are in fact merely vital have been satisfied.
(180) If one thing is certain, it is that all the delegations assembled here firmly intend to reach a sincere agreement, one dedicated passionately to the cause of peace. And we are equally sure that their desire for agreement is a faithful reflection of the fundamental wishes of our peoples and our governments.
(181) But it is true too that each of our countries derives, from its traditions, customs and peculiar racial characteristics, certain dominant local, geographical, historical, and even ethnic trends which, besides being truly symbolic of the diversity of life, are probably necessary in order to lend civilization a pleasing variety.
(182) Now, our national soul is imprisoned in a body called the State, making its own demands and also having its own exalted duties, which are not invariably compatible, at any rate for the present, with those we are striving for. That is why no societies based merely on considerations of political coexistence can ever, even at the best, be more than federations of agreements, a far cry from an empire linked by ties of friendship. If such an empire ever came into existence, an empire which might take as its motto the famous saying of your great Artigas, "I have no enemies save those who are hostile to the public weal", its first decree, against which there would be no appeal, would be to proclaim peace. And none of the subjects of this empire would ever have to face problems such as those by which our world is racked. But we are well aware that this empire, if ever it comes into being, must be born of something other than reason: from an impassioned

appeal for the restoration of the ascendancy of spiritual over material values.
(183) This is not the actual atmosphere in which we are living in this era of machinery and speed, this atomic, or rather this nuclear age whose wizardry could, on the contrary, be devoted to reviving the prosperity as well as the virtues of the golden age.
(184) Never has it been more vital for man, unless he is to plunge into the abyss, to defend all spiritual values and to promote all means, both of improving understanding in communion with his fellow men of all countries and of savouring life with greater pleasure. The more mechanized civilization becomes, the deeper man penetrates, though without really understanding them, into what we call the secrets of nature, the more completely he appears to tame these forces, which nevertheless remain dangerously mysterious; the more widely he exploits them to extend his conquests in the eternal night through which he is travelling - the more imperative does it become for man to preserve the things which in this new age still remain free: the power of thought and the power of love.
(185) Thus culture alone is capable of defending everything that makes this life worth living; and this makes us realize the full grandeur of our mission, which is to render education ever more worthy of humanity and give man an ever closer understanding of the thought of his fellows. This alone would be a magnificent achievement, and we must make every effort to fulfil it worthily, enlisting all the successes of material progress for the protection and salvation of the spirit.
(186) And it may be that, by dint of working for and passionately desiring this end, we shall, one day, go a step further, and, passing beyond the realm of thought, creating the new ethical standards of which Dr. Schweitzer spoke in his remarkable address in Stockholm a few weeks ago, we shall attain to the state of heightened awareness which transforms everything and engenders, in perfect love, those great emotional forces which alone are irresistible. When the time comes, ladies and gentlemen, politics will no longer matter much, the domain of man will know no bounds, Unesco will reach its supreme aim, and the noble sacrifices made by all national patriotisms will appear to have been made for the sole purpose of paving the way for the utter devotion of the citizen of the world to his boundless country, his ideal of peace and complete humanity.

(187) The PRESIDENT (Translation from the Spanish): I call on the representative of the World Health Organization.

(188) Dr. BUDNIK (World Health Organization): The Director-General of the World Health Organization has instructed me to convey to the General Conference of Unesco his greetings and good wishes. Unesco and WHO are members of the family of Specialized Agencies of the United Nations. They are organizations with closely related objectives in raising standards of human welfare, and with mutual interests in the fields of education and science. These are fundamental reasons for close association and co-operation. On behalf of the Director-General of WHO it is, therefore, a pleasure for me to report to you our acknowledgement of the constant and friendly collaboration of the two organizations, and of the excellent assistance and support we receive from Unesco in so many fields. The essential contribution Unesco has to make to the work of WHO in all countries and in all subjects through extending basic knowledge is well recognized.
(189) In the period since your last General Conference there has been a growing number of subjects in which the two organizations have successfully co-operated. These have included your programme of fundamental education and arid zone studies, conferences on education and scientific publications, joint work on community development, health education, housing, documentation and bibliography.
(190) WHO is pleased to be represented at this eighth session of the General Conference, to take note of your deliberations in general and of those which bear directly on matters of health and medical interest.
(191) I have been instructed by my Director-General to call your attention to the communication he has sent to the Director-General of Unesco asking for clarification of two points in the document containing the Proposed Programme and Budget for 1955-56 . The details are fully explained in the document before you. I might, however, for your information, explain to you the interest of the World Health Organization in the field of cancer.
(192) The problem of cancer and the possibility of further organized international action have been before the World Health Organization regularly. Account has been taken of the substantial funds in many countries at the disposal of universities, foundations, research institutions and individuals. We know that the scientists concerned are constantly considering all possibilities of extending and improving study of the whole complex range of pathological conditions implied in the word cancer. Guidance in the matter must come from the experts, whether expressed through their national or international association with the World Health Organization.
(193) It has been accepted too that international programmes are only needed where appropriate action is not possible through local institutions or arrangements. As local resources and effort are enormous, and are appropriate for meeting most needs, WHO has not been requested to undertake many international programmes in this field. Apart from general health and medical services, which are as important in cancer as in other conditions, WHO has undertaken the requested international services, covering such fundamental matters as nomenclature, standardization of definitions, collection and analysis of epidemiological data, co-operation with the responsible international bodies concerned with cancer, and related subjects.
(194) However, with the many newer techniques available, WHO intends to review the position even more thoroughly. It will consult the responsible experts and scientific groups to determine whether there is any way in which the world medical and health groups amalgamated in WHO can fruitfully contribute more to the investigation of

this subject. This too will be a most timely complementary survey, to be linked with possible international application of the newer techniques coming from the field of atomic and nuclear physics.
(195) These considerations are sufficient confirmation that any work Unesco can launch in the basic sciences, studying cell growth and other phenomena of the cell, will be welcome to medicine. Indeed, such study is an essential parallel to medical scientific work on cancer. I am therefore instructed to say that WHO, so far as resources are provided, will be willing to accept any responsibilities which co-operation in such work with Unesco will impose.
(196) May I again convey to you the good wishes of WHO to its sister organization.

(197) The PRESIDENT (Translation from the Spanish): I call on the representative of the United Kingdom.

(198) Sir Ben BOWEN THOMAS (United Kingdom): Mr. President, fellow delegates. As I join in this debate, now drawing to its close, I recall that good man who married a widow with ten children. With entirely estimable humility he confessed to a friend that he felt that there was little left for him to do! We remaining speakers now feel that there is little left for us to say. My first word, however, is a simple one. It is that all the members of the United Kingdom delegation are glad to escape from their northern winter into the summer sunshine of Uruguay and to find that this sunshine has its counterpart in the warmth of heart of their hosts.
(199) This is the first time that a Unesco Conference has met in South America. Among the Latin American republics, what better choice could have been made than Montevideo, the capital of Uruguay? My country has always taken a special interest in this liberal State, having had the honour to play some small part in its foundation. The ideals practised here are the ideals of Unesco, too, and so the hospitality of the Government of Uruguay is particularly welcome. May I on behalf of the British delegation express our pleasure at being in this country, so happily free from political persecution, tyranny and oppression and now so melodiously active in the excitements of an election campaign. We are watching this with great interest. If we cannot readily grasp all the issues at stake, we are gratified to see that, in contrast to the fate of the people of some countries, everybody here can say what he thinks, or sing what he likes if he feels that to be a more satisfying way of expressing himself.
(200) Today is the sixteenth day of November. On 16 November, nine years ago, Unesco's Constitution was approved in London. Today we number 72 Member States and 4 Associate Members. The mere numbers are sufficiently impressive, but far more significant are the hosts of individual men and women who will now be brought into active co-operation with Unesco through the action of the Government of the Union of Soviet Socialist Republics in signing the Constitution of Unesco. The United Kingdom delegation, and Her Majesty's Government in the United Kingdom which it represents, share the satisfaction I am sure we here all feel at the entry into Unesco of the USSR. We recall their co-operation with the London Conference of Allied Ministers of Education, whose work led to the foundation of this Organization. We remember how at our first conference in Paris we all hoped to see a delegation from Moscow, and how disappointed we were that they did not come. Much has happened in the nine years that have since elapsed; fear and suspicion again cloud the minds of men. The preamble of the Constitution of Unesco contains words which, when they were drafted, were thought likely soon to become out of date as obsolete reminders of a state of affairs that had passed away. Unfortunately we have by no means seen an end to the denial of the principles of the dignity, equality and mutual respect of men. Ignorance of each other's ways and lives and the prejudice which that ignorance breeds have continued to create suspicion and mistrust between the peoples of the world. My delegation therefore warmly welcomes the presence here of delegations from the USSR, Byelorussia and the Ukraine, and also those from Czechoslovakia, Hungary and Poland. We have noted with profound satisfaction, especially in the comprehensive speech delivered by the leader of the USSR delegation, that his country has decided to accept with sincerity the fundamental principles on which Unesco is founded. If he and his colleagues have come here with a desire to co-operate with us in the work of this Organization, then bright vistas open before us. Perhaps we shall at last be able to see an end of recrimination, to bridge the gap which divides the Communist from the non-Communist world and gradually bring about that intellectual and moral solidarity of mankind of which Unesco's Constitution speaks. Printed and spoken words however are not enough. It is easy to write and talk about principles in general terms, but it is right to ask for deeds as well. What kind of deeds do we want to see? Virtue and truth are the monopoly of no group or people. We want to see a readiness on the part of all of us to give as well as to take, we want to see the free exchange of ideas of knowledge recognized as a two-way traffic, including the admittance to and circulation within all Member States, of information and ideas which governments may not like, and of knowledge which may be politically inconvenient. We want to see the free movement of peoples and not merely the approved transport of officials, experts and delegates. Nor do we want a rigid political approach to the problems which confront us. To push rigid principles remorselessly in the affairs of international institutions is to produce frustration and instability. Let us rather work for practical expediency, based upon increasing mutual understanding and respect. We do not want a political approach to the problems which confront Unesco, and so we should like to see, not merely at this Conference but in the years to come, the abandonment of any tendency to approach our affairs in terms of political blacks and whites, rights and wrongs. We want a spirit of real tolerance, for, without it, education becomes indoctrination, science becomes bigotry, and culture degenerates into thought control. Let us then start our work together in the belief that we are making

small beginnings from which great things will grow. Suggestions as to what might be done can be found on almost every page of Unesco's draft programme. If we eschew the general and abstract and concentrate upon the modest, the practical and the concrete, we shall find ourselves building on better foundations than we know.

(201) Saturday, 13 November 1954 will be a proud day in the annals of the British Commonwealth, for we then witnessed the entry into Unesco, in their own right and with impressive dignity, of two large territories and two large groups of territories forming part of the British Commonwealth of Nations, as Associate Members. There have always been representatives from these territories on United Kingdom delegations, but they will now, as Associate Members, make their own independent contribution. We are confident that they will effectively enrich our proceedings. They have already thanked you, but the United Kingdom delegation, on behalf of the people of Great Britain and of all other British overseas territories, would also like to do so.

(202) Our colleagues who have attended other General Conferences will be aware of the constant preoccupation of the Government I represent with the cause of economy. It is forced upon us by the heavy financial burdens our own people are bearing at the present time. We represent a country in which thrift is still regarded as a virtue and unjustifiable expenditure as an evil. In the last ten years my country has contributed nearly 8 million dollars to this Organization, and very much more to the United Nations and other Specialized Agencies. At the same time we are making available for economic and social development within our Commonwealth over 350 million dollars each year. These contributions are being made at a time when expenditure upon the defence of all those values for which Unesco stands absorbs about one-eighth of the total resources of the United Kingdom, and when our country is only just emerging from a long period of austerity, during which there was little to spare for the considerable social and industrial development that was necessary within the United Kingdom itself. We are deeply concerned at the steady rise in the budgets of the international governmental agencies, to all of which we contribute. In our opinion, it does not necessarily follow that, because new Member States join us, we must expand our programme. The concentrated programme for which so many delegations have asked should remain concentrated, whether there are 50 or 100 Member States. In these circumstances, the United Kingdom stands firmly for the adoption of the present level budget which the Director-General has presented. So strongly do we believe this that at a suitable opportunity we shall propose a resolution to that effect. Subject to this, my delegation believes that Unesco is developing on the right lines, and that the remodelled programme gives promise that such a development will continue.

(203) The Director-General has shown a sincere and sensitive appreciation of the needs of our Member States in this draft programme. Let me pay a special tribute to Dr. Luther Evans. First of all we are very greatly in his debt for undertaking the heavy burdens of this most difficult office. They were more than Dr. Torres Bodet could bear, as he himself told us. His loss two years ago was a serious blow, but we remember him with respect and with gratitude. We hope that with his health restored he will, in his present high position, continue to follow and help the fortunes of Unesco. High courage was needed to follow in his footsteps. Dr. Luther Evans possesses that courage and we should like him to know that he has our confidence. We must have a strong and resolute Director-General. He must also know that we are strong and resolute in his support.

(204) Of course we have our duties also. May I briefly restate them as I see them? We need loyal and active Member States, effective National Commissions and enterprising international non-governmental organizations, aiding Unesco voluntarily with their own resources. We also want the record of Unesco to be more widely known; its achievements in fundamental education and campaigns for literacy and free and compulsory education, its work for the arid zones, the progress of the social sciences and their international applications, library development throughout the world, the dissemination of reproductions of the world's masterpieces in art, copyright conventions, the reduction of barriers to the movement of books and films, coupon schemes and facilities for the exchange of persons. We need to see growing amongst people an awareness of their responsibility to co-operate in these tasks; tasks to which they have been dedicated through their governments. There are no international interests and duties that are not national interests and duties and are not ultimately private interests and duties, and we cannot lose sight of the needs and aspirations of the millions of human beings on whose collective behalf we meet here in Uruguay.

(205) I believe that there is a character in an Icelandic saga named Hord. It was his attribute that he saw things clearly and without glamour. Let our discussions too be of a practical nature, in which we shall concentrate upon securing a manageable programme related to urgent and necessary tasks.

(206) I think I have said enough to show that the economy for which my country stands is not a rigid and inelastic economy, rather is it that of a prudent and eminently practical economy. This view is one which we know that we share with other Member States.

(207) In the successful conduct of public affairs, in the exercise of the arts of the possible, there must always be a combination of three factors: there must be idealism, there must be realism, and the two must be married in an effective and practicable policy. Let us keep our hearts warm, but let us keep our eyes clear, let us keep our feet firm and steady on a broad highway. Bertrand Russell, that doyen of British philosophers, in his latest book concluded with words which I would like to quote to you on this occasion:

"I see before me a shining vision: a world where none are hungry, where few are ill, where work is pleasant and not excessive; where kindly

feeling is common and where men released from fear create delight for eye and ear and heart. Beyond all reason, I am unconquerably persuaded that this will come."

Mr. President, ladies and gentlemen, let us bend our energies to the task of hastening its coming.

The meeting rose at 7.20 p.m.

# NINTH PLENARY MEETING

*17 November 1954 at 10.30 a.m.*

*President:* Mr. ZAVALA MUNIZ (Uruguay)

CONTENTS

Addition of two items to the Conference Agenda . 135
Discussion of the Director-General's Report (continued): Speeches by the delegates of Costa Rica, Cuba, Iraq, Czechoslovakia, Turkey, Laos, Mexico, Cambodia, Viet-Nam, and the representatives of the United Nations and of the Organization of American States . . . . . 135

## ADDITION OF TWO ITEMS TO THE CONFERENCE AGENDA

(1) The PRESIDENT (Translation from the Spanish): I have to announce that Yugoslavia and Israel have submitted requests, similar to that put forward by the Government of Iran under item 9.4.7 of the agenda, for the writing off of a sum owed to the Organization, being a loss incurred by the National Commission acting as a distributing agency for Unesco coupons.
(2) The General Committee proposes that two new items be added to the agenda:

9.4.7.1: Request from the National Commission of the Federal People's Republic of Yugoslavia for the writing off of the sum of $1,666.67, being a loss incurred by the Commission acting as a distributing agency for Unesco coupons.

9.4.7.2: Request from the delegation of Israel for the writing off of the sum of $5,714.30, being a loss incurred by the Israeli National Commission acting as a distributing agency for Unesco coupons.

(3) In accordance with Rule 14, paragraph 2, of the Rules of Procedure, new items of the agenda, proposed to the Conference by the General Committee, must be approved by a two-thirds majority of the members present and voting. If there is no objection, I shall take the vote on the two requests together, as both are concerned with the same question and will be dealt with in the same resolution.
(4) The result of the voting is: 26 in favour, 2 against and 2 abstentions. The requests made by the delegations of Yugoslavia and Israel are therefore to be added to the agenda.
(5) I have to announce that, this morning, on the proposal of the delegate of Colombia, Mr. Bernal Jimenez, the General Committee unanimously decided to invite the famous poetess, Juana de Ibarbourou, to attend a meeting of this Conference, as a tribute both to her genius and to the Republic of Uruguay. The General Committee will be responsible for making the necessary arrangements.

## DISCUSSION OF THE DIRECTOR-GENERAL'S REPORT (continued)

(6) As the list of speakers is still so long, I should like to ask delegates wishing to speak to confine themselves strictly to the prescribed time-limit. I call upon the delegate of Costa Rica.

(7) Mr. GAMEZ SOLANO (Costa Rica) (Translation from the Spanish): Mr. President, ladies and gentlemen, the Government of Costa Rica, through its delegation to this eighth session, wishes to convey its greetings to the General Conference of Unesco.
(8) In 1949, as a member of the Junta Fundadora of the Second Republic, the present President of the Republic, Mr. José Figueres, signed the decree whereby Costa Rica became a member of this Organization. He therefore wished to send me, the present Minister of Education, to represent him at this session of the Conference, for

I was also in office at the time when the instrument of acceptance was signed in 1949. Our Government places such steadfast confidence and such great hopes in international organizations that, were it not for the special responsibilities of his office, the President of our Republic would be here himself, leading the delegation as he did at the First Regional Conference of National Commissions, held at Havana in December 1950.

(9) Our country is so small and our people so few that we need have no fear of aggression by armed might and can stand aside from the great struggles to which the clash of economic interests gives rise.

(10) With our clear appreciation of our responsibilities, we are a people devoted to the cultivation of Man, the finest flower of the Universe. It has truly been said of my country that its teachers outnumber its soldiers, and I can state here today, as a tribute to world culture, that, under the explicit provisions of the Constitution, there are now no soldiers in Costa Rica, but there are teachers. Our armies are striving for the development of character through culture: they are the children at school, the young people in our colleges, the men at the university. We are seeking to give the men and women of Costa Rica rights of property, but it is our firm resolve that they shall be first and foremost lords and owners of themselves.

(11) If we ever have to fight for the defence of our territorial sovereignty, we shall be able to call upon our citizens, our civilians, who will have learnt at school to love their native country more than life itself. And they are fully aware that their blood may justly be required of them, for it is the life-giving sap from which the splendid tree of national honour draws its strength. Moreover, as a nation belonging to the Organization of American States, we trust in the observance of the treaties governing inter-American relations, which we, for our own part, have sworn to respect and are indeed respecting.

(12) This being so, the trust and confidence we place in all international organizations, and, more particularly, in Unesco, will be readily understood. In view of the functions which the United Nations is undertaking, including the functions of Unesco, whose field of activity is steadily being more clearly defined, we consider that the system of co-ordinating the activities of the various departments, as described by the Director-General, is very suitable and effective. Such co-ordination is bound to benefit the Organization, and we believe that the United Nations might very well introduce a similar system among all the Specialized Agencies in order either to avoid duplication of work or to furnish greater aid in specific directions.

(13) With regard to the Organization's programme for the forthcoming two-year period, 1955 and 1956, our delegation is very well satisfied with the division of each chapter of the proposed programme and budget into two distinct parts - namely, services, activities and obligations for all the Member States as a body, and work connected with special problems in which individual States may be particularly interested. This programme structure meets the need, mentioned in his report by the Director-General, for giving greater assistance to Member States and for working out more practical schemes for them. The decentralization of the implementation of Unesco's programme, of which there has been so much talk at this and previous sessions of the General Conference, can now be based on devoting larger resources to the carrying out of these urgent projects for providing the help needed by States. In the opinion of our delegation, the planning of these practical projects calls for careful study and wise and cautious preparation, so that they may not compromise the established service activities of the Organization, in which all the Member States are interested. Unesco's work, since the Organization came into being, has been marked by a clear and constant extension of the scope of the Organization's activities. It sometimes seems to us that this extension, although it may be considered natural for an Organization working in a field as wide as that of education, science and culture and reaching out to every branch of man's activities, entails a danger that efforts and resources may be dissipated unprofitably on too large a number of projects. Our delegation is pleased to see the great efforts that Unesco has made to do really useful work in fundamental education, which is rightly considered to be one of the Organization's main responsibilities, and to plan for a better co-ordination of work in this field by elaborating special projects for the purpose, which are shown under the headings of Cultural Activities, Social Sciences, Mass Communication, Exchange of Persons and, in particular, Education. We can say the same of the improvement of textbooks, syllabuses and teaching methods, a field in which careful thought has been devoted to the need for giving the individual a well-balanced training, and for discovering the needs of the community, and the opportunities open, in advance.

(14) With regard to the work already done, and the activities planned for the purpose of developing the spirit of international understanding, we note with satisfaction that the Organization has attributed very great importance to these activities, which are basic to the programme of Unesco. In this connexion, when the proposed programme and budget come up for discussion, our delegation will have an opportunity of speaking of an activity which, in our opinion, is one of the most useful, enduring and effective of all our projects; I refer to the scheme of co-ordinated experimental activities in education for international understanding and co-operation.

(15) We must recognize that there are two distinct sides to Unesco's work: the governmental side, carried out through the delegates and the officials who give their services to the Organization, and the no less important activities in which the peoples take a direct part. Without this backing from the ordinary citizen, the work of this and all other international organizations would risk being undervalued because it is not understood, or coming to nought because people are not interested in it. This popular support is furnished by the work of the non-governmental organizations; and the National Commissions play their part, in the various Member States, by stimulating and co-ordinating the activities of these organizations.

The National Commissions are small-scale Unescos in all the Member States, responsible for ensuring continuity in the efforts for the implementation and development of the programme and for helping to achieve the ideals set forth in the Constitution. The work of Unesco is an act of faith; as an alternative to the misunderstanding, fear, hatred and doubt which seem to prevail in certain parts of the world, it offers the understanding of man for man, the principles of collective security, and an unfailing trust in the triumph of the postulates of the Universal Declaration of Human Rights.

(16) We hope that, at this eighth session, the General Conference will adopt the provisions in the proposed programme and budget relating to the encouragement and better co-ordination of the work of the National Commissions. We for our part shall take the opportunity of putting forward some ideas and suggestions on this question, which is of special interest to us.

(17) The Costa Rican delegation to the First Regional Conference of National Commissions, held at Havana in December 1950, which was led by Mr. José Figueres Ferrer, now the President of the Republic, submitted a request for technical assistance for the country. That request was approved and in 1951 we signed the basic agreement for a five member technical assistance mission, which began work immediately on fundamental education, the organization and administration of primary education, the organization and administration of secondary education, vocational and technical education, and the training of teachers.

(18) This mission has worked with us for three years and we, the members of the present Government, have seen its results. I have with me the final report of the mission, which we shall make available to the delegations attending this Conference and on which I shall comment in due course.

(19) Technical assistance is, we consider, the most important of all Unesco's activities, for it brings the Organization into direct touch with the real needs and aspirations of the peoples. On its success or failure the prestige of the Organization very largely depends, not only in the eyes of the governments but also in those of the people they represent. Unesco should therefore devote the utmost care to this type of assistance and mobilize all the factors which can help, or on which final success depends. Sometimes these factors depend on the government which has requested assistance; sometimes they depend on the organization of the Unesco mission; and sometimes they depend on the methods and techniques adopted by the mission in planning and carrying out its projects.

(20) It would be a wise move on the part of Unesco, in this extremely important field, to review and improve the methods of supervising the work and giving assistance during the progress of the projects, and of evaluating results.

(21) On the termination of the three-year technical assistance agreement concluded with my country, I have to bring this Conference the grateful thanks of the Government and people of Costa Rica for the invaluable co-operation furnished,and to state our firm intention of continuing the experiments already launched and of carrying out immediately the recommendations contained in the relevant reports.

(22) The Government of Costa Rica thought that the choice of this model Republic of Uruguay for the seat of the eighth session of the Conference was an excellent one. The excellence of that choice can be seen immediately in the fact that, at this present session, a larger number of countries are represented and there is a larger number of delegates per country. I thank you, Mr. President, for allowing us to come and live among this proud and glorious people of Uruguay, whose every action, every thought provides a lesson in nobility. This is a fair country; Nature here is fair; but fairest and most glorious of all is Man. Such is the distinguishing feature of the laws and way of life of Uruguay, this laboratory of democracy.

(23) A government is drawing to the end of its term of office surrounded with the respect and admiration of its people, who are now preparing, with processions, songs and demonstrations, to cast their votes for the candidates of their choice, while in public places the work done is freely discussed, and arguments and plans for the future are expounded. Freedom and dignity are the bread of life for the citizens of Uruguay. The schools of Uruguay are academies of democracy. The colleges of Uruguay are academies of democracy. Its universities, too are academies of democracy.

(24) Thank you, Mr. President, for having brought us to Uruguay. Here we can speak of freedom. Here we can speak of brotherhood, for every man respects, in his fellow man, that wherein he is most truly man - his thinking, his speaking, his actions. Here we can speak of equality, because all have the same opportunities of cultivating their abilities, because the only difference which counts is the difference of personal culture. The only man who can claim superiority is he whose mind and soul are superior. In Uruguay, we can dream of a better humanity because, here in the Americas, it furnishes an archetype of civic life. Costa Rica, through me, pays tribute to the people of Uruguay.

(25) The PRESIDENT (Translation from the Spanish): I call upon the head of the delegation of Cuba.

(26) Mr. FERRARA MARINO (Cuba) (Translation from the Spanish): Mr. President, ladies and gentlemen, it seems to me appropriate, in this general discussion of the business of the eighth session of Unesco's General Conference, to make a reference to the presence of Soviet Russia in our Organization. More than two hundred million men and women, living in an enormous, fertile land, have just brought their aid to this great Republic of Learning in action. They come with an age-old literature whose clarity of expression and vigour of thought compete for our admiration; they come with amazing scientific skills which we hope will soon be devoted to ensuring the welfare of their people, whose lot, like that of many other nations, is certainly not entirely happy; and with achievements in education to their credit which seem to me, as a humble but impartial student of history, to represent the best side of their present régime.

(27) The adhesion of Russia is particularly important because other States, holding similar political views, have now expressed their intention of co-operating in the same way with the rest of the world in the wide field covered by the United Nations Educational, Scientific and Cultural Organization; and because certain others, who seemed to have decided to abandon the noble undertakings to which they had once voluntarily committed themselves, are now returning to the fold.

(28) All this should cheer us, especially as these developments combine with other signs in the political firmament (which we would wish to see more often and more generally) to strengthen the belief that we are now on the threshold of a general agreement, despite differences in political creeds which, reflected in disputes between governments, have recently assumed a bitter and menacing character.

(29) The Conference has adopted the British proposal that the discussion on the admission of the Republics of Rumania and Bulgaria be postponed until the next session; but this - far from indicating, as has been suggested, any intention of abandoning our progress towards universality - reflects a determination to make the foundations secure, so as to avoid trouble and difficulty at a later stage. The vote can be interpreted as showing that this Conference desires the co-operation of Rumania and Bulgaria but hopes that, once the still heated passions of the revolutionary days have calmed, the generosity of human feeling will return and that we, distant spectators, will hear at least some rumour of the event.

(30) Another happy idea in connexion with this matter of universality was the United Kingdom proposal that we should open our doors to territories and groups of territories which are not entirely responsible for their international relations, as Associate Members of the United Nations Educational, Scientific and Cultural Organization. This suggestion from the United Kingdom Government, which has been enthusiastically welcomed by the Conference, means a practical widening of the world - a step forward which, in helping the underdeveloped countries, also helps those which are already advanced, and opens up new opportunities for the welfare of mankind and the development of the human mind.

(31) This eighth session in Montevideo, beginning with this addition to its membership, will do its work well in the days to come, as can be prophesied from the report by the Director-General and the Executive Board, and from the proposed programme, on which we are soon to begin discussion.

(32) The American proposal that Member States be given greater responsibility in the structure of the Board will strengthen the bonds between each one of the Member States and the community to which we all belong. It is a well-known fact that, in international organizations, any exercise of authority brings with it greater responsibility. Unesco will therefore be strengthened by this new system for the election of its highest administrative organ, without losing the flexibility and variety it owes to the independent cultural organizations operating in its orbit, or the independence of thought and initiative essential to any mental process based on reason; these, in our particular case, are the direct and necessary consequence of the Organization's varied and heterogeneous make-up, or, in other words, of its universality. It would be a very grave error to seek to impose State control over the elusive operations of the mind and the great adventures of the spirit. The United States of America would never entertain such an idea - and I say this to the honour of all the States belonging to that Union - precisely because the chief cause of its political greatness and economic development lies in the limitations imposed by its Constitution on the power of the State and, especially, on the power of the Federal Government. By approving the United States amendment, Unesco will ensure its future but will remain free.

(33) The programme submitted by the Director-General for the next two years is arranged on rational and practical lines. The proposed activities described in that programme can be divided into two groups - one group being designed to complete what has already been begun, improving and systematizing the work, and the other to meet the latest demands.

(34) Any human community, great or small, private or public, religious or speculative, must from time to time pause and give thought to co-ordinating the principles, ideas, activities and aims which have grown up spontaneously and sometimes in confusion.

(35) Far be it from me to suggest a pause in our work; but I do wish to help, by my words, in ensuring that the various projects already adopted or about to be adopted are fitted into a system of practical application which will enable them to produce all the results hoped for by the States which have proposed them. Ideas, even the most brilliant, produce good results only when efficient, orderly and, above all, systematic arrangements are made for carrying them out. This co-ordination will be facilitated in the future if the States proposing projects, or the delegations taking part in the Conference's work, will elaborate their ideas a little more when initiating new activities - that is to say, if, instead of setting forth general desires, as they sometimes do, they will propose specific projects. The United Kingdom has performed what I have in mind with its proposal regarding Associate Members. A proper presentation of resolutions submitted to Unesco would enable our Conference to take fuller advantage of the investigations made by the proposing State and would give the Executive Board and the Director-General, as it were, an authoritative interpretation of the purposes of the proposals. By this means, moreover, the Conference could more easily cast its resolutions in a mandatory form instead of limiting itself, as sometimes unfortunately happens, to the vague terms of political and diplomatic papers, which, though they may occasionally solve practical problems, do not assist in creating a fitting idea of justice among the ordinary people - who, incidentally, with ever critical eyes, look to us, raised on our lofty stage, for constant and unfailing wisdom.

(36) In my opinion, the United Nations Educational,

Scientific and Cultural Organization is now about to delimit the scope of its concerns and to determine its objects more precisely. If we are to do this, it is essential that we lay fresh emphasis on the free and popular character of our Organization, for there could be no greater mistake than to abandon this great centre of culture - the promoter of progress and of intellectual and moral development - to an impersonal bureaucracy, ruled from afar by a hundred discordant political heads. A Unesco which stooped to being the tool of an official culture, of an autocratic science or art - fossilizing itself, at best, in a particular historical stratum - would be, not a force for progress, but an agency of stagnation or indeed of deplorable regression.

(37) We must ensure that our Conference is not infected by the errors which, in some countries, have evoked criticism of parliamentary assemblies. If fixed majorities and minorities established themselves, our discussions could not achieve their aim. The overriding influence of certain dominant countries, though perhaps tolerable in the political field, would be disastrous in the field of culture. The growth of satellite groups, clinging like fungi to any power able to provide material advantages or minor honours, would be the beginning of the end. Anything which marked a departure from universality, from strict equality, from the full observance of geographical representation in the making of appointments to certain posts, from the true, lofty and just application of our Constitution and our accepted principles, would be a sign of the incipient decadence.

(38) The Republic of Cuba sees in this tremendous adventure - daring to the point of temerity - which goes by the name of Unesco, something more than the idea of maintaining an intellectual centre for the world, distributing modest material resources for the attainment of certain spiritual ends: it sees in it something even higher, something which, in truth, emerges as the synthesis of all the programmes drawn up, all the proposals made and all the measures taken by the Executive Board, the Director-General and successive sessions of the General Conference. We look forward to an Organization constantly developing and progressing, in which pursuit of the temporary, futile advantage of the moment gives place to a spirit of well-advised foresight uniting the good of the one with that of the many. And may this change come about not only through the work of education and the public formulation of moral principles, which are easy enough to proclaim but difficult to put into effect, but also through the practice of living as a community, resulting from the combination of a habit of mind - perceiving, albeit dimly, the true import of events - with the practical enjoyment of the blessings of peace and the rich fruits of our dynamic modern civilization.

(39) In Cuba we are seeking to make ourselves equal to our lofty aspirations, by endeavouring to unite all the factors which may help to achieve these purposes around the National Commission. Even now, there is increasing evidence of the vitality of culture and a healthy way of life in our country. We hope that we shall have still better success in future and that, one day, we may be able to show you a free organization, full of variety and uniting a multiplicity of tendencies, which will give a complete reflection of the educational, scientific and cultural life of our nation.

(40) I would not wish to end my remarks without endorsing all the tributes which, from this rostrum, have already been paid to Uruguay. Whenever in future I hear the inspiring strains of the Canticle to Hope, that wonderful testimony of art to the greatness of humanity, which thousands of youthful voices sent surging upwards to the cloudless sky in front of this Parliament building, I shall wonder afresh, in retrospect, at that mighty appeal to the sovereign with a hundred thousand heads - the only arbiter and judge of the peoples' destinies - to take part in the struggle which is going forward, before our eyes, with a true sense of civic responsibility and firm resolve.

(41) My hope for the people of Uruguay, now as ever, is that they will enjoy greatness but not pride, will know prosperity unsullied by the suffering of others, and will be granted happiness in full and unfailing measure.

(42) The PRESIDENT (Translation from the Spanish): I call upon the head of the delegation of Iraq.

(43) Mr. AL-HILLI (Iraq): Mr. President, fellow delegates. On behalf of the Government of Iraq and my colleagues I would like to express my profound gratitude to the Government and the people of Uruguay for their generous hospitality.

(44) Wendell Wilkie, the eminent American leader, said, while visiting Baghdad, the capital of my country: "I have heard of the Thief of Baghdad but I have never heard of so many thieves in it. Indeed, they have stolen my heart." To pass the remark, if I am allowed, the Montevidean people with their charm prove to be real thieves of hearts.

(45) Iraq, as you know, is an Arab country of five million people. This country, once the cradle of civilization, is known to some of you as Mesopotamia, to others as the land of the old Caliphs, of the magic carpet and the Arabian Nights.

(46) Iraq has seized every opportunity to secure its development in the different spheres of life. In Iraq one can see ancient and modern civilization side by side. The former indicates the endeavour of Babylonia, once the centre of the world, to establish an immortal civilization the relics of which still survive here. It may be of use to point out that the latest excavations at Tell Harmal in Iraq are changing our whole concepts of Ancient History. Among the many great finds, we are told it was there that the first university of the world was established. The awakening of modern Iraq indicates the will of our people to preserve the glorious legacy of their fathers and to adopt the best in modern civilization.

(47) In commenting on the report of the Director-General I should like to describe the advance that we have made in education recently, how Unesco has assisted us in this advance in the last four years, and how it can further assist us in the next two or three years.

(48) We are a country with a high rate of illiteracy. At the end of the First World War we had no more than about 6,000 children in our public schools.

By 1932, when the British mandate ended, we had about 35,000 children or almost six times the enrolment in 1918. By 1944 this primary school enrolment became slightly over 100,000 and now stands at a little less than 300,000 students. This is almost fifty times what it was in 1918, eight times the figure of 1932 and three times that for 1944. Nevertheless we have yet a long way to go in order to put every one of our children to school. Our present primary school enrolment, in spite of all the advance achieved, is still only half of what it should be.

(49) At the same time Iraq is an agricultural country with great potential agricultural resources. It also has rich resources in oil. To raise the standard of living of our people we must develop our agricultural and technical education. We have had technical and agricultural schools for a long time, but they have not been very successful either in attracting students or in giving them a good training.

(50) We also need leaders in all fields of life. For this purpose we have been sending students abroad by hundreds. There are this year more than a thousand students studying in universities in Europe and America as well as in the Middle East. We have also founded our own colleges for higher learning, which now have more than 5,000 students.

(51) In the last five years we have applied to Unesco and other Specialized Agencies for assistance. Unesco sent us an expert in 1950 to make a preliminary study of the problem of compulsory education. For the last three years we have had a five-man technical assistance mission in fundamental education, which has been operating successfully on one of our new land distribution schemes. Through that mission and with the full support of the Iraqi Government the idea of fundamental education has taken root, so much so that we have established a fundamental education section in the Ministry of Education.

(52) Unesco also sent us a two-man mission on vocational education and its relation to secondary education. On the technical assistance programme we have also been sent two technical education experts. These have helped us reorganize our technical schools, and their reports have been translated into Arabic and published by the Ministry of Education.

(53) Further, Unesco sent, at our request, an expert librarian who has reorganized our public library and the libraries of two of our higher institutions. We have also had for the last three years four professors of science and mathematics in the University College of Baghdad, who have helped in laying down courses and founding laboratories. We have also received a number of fellowships in all the above fields.

(54) We are very grateful to Unesco for this aid, but we are a fast developing country, which wants to exploit its resources in order to raise its standard of living and to lead a new, cultural and peaceful life. We therefore need further assistance.

(55) In the first place we must put all our children to school. This is now the policy of our Government. How to organize, administer and finance a school system which will take another half million children on top of the 300,000 now enrolled is a problem for which we need advice from Unesco. Along with that, of course, should go a programme of teacher training and we have already begun to found new training colleges.

(56) Side by side with the compulsory education campaign we want to establish a wide programme of fundamental education. For the training both of rural teachers and of fundamental education leaders we want to establish a national training centre. We should very much like to have Unesco's assistance in this field, and for this reason we welcome the project of rural teacher training in Unesco's education programme for 1955-56.

(57) Again, one of our big problems is the training of teachers of vocational and technical subjects, and Unesco might be able to assist in this field. We welcome the conference on vocational and technical education in the Arab States proposed in the programme.

(58) It is our hope that Unesco's assistance in the field of libraries will continue. Of great importance to us also is the close relationship between our rich archaeological museum and Unesco.

(59) I have said enough to show how the programme of Unesco has been closely tied up with our needs, how it has contributed to our educational and cultural development and how we hope it will continue to do so. For my part I am glad of the new tendency in the programme to give direct aid to Member States at the higher budgetary level.

(60) I should not like to leave the floor before raising one further point. Unesco, in co-operation with the United Nations, has been ensuring that the children of Arab refugees shall have a good measure of education. We are grateful for this and in the last few years hundreds of schools have been opened for refugees. But, if I may say so, I am puzzled by the lowering of Unesco's contribution to this enterprise. We hope that no petty pecuniary considerations will stand in the way of this real human endeavour. After all, the Arab refugees who were deprived of the National Home that is rightly theirs, should at least, by the assistance of Unesco, secure proper education for their children. In our opinion, this is the duty not only of Unesco but of the whole world.

(61) Unesco's name stands high in Iraq and in the Arab States. This is in recognition of its constructive work of the last four or five years. I sincerely hope that in the coming years it will continue to advance from one good achievement to another and better achievement in our Arab lands as well as in the rest of the world.

(62) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Lebanon.

(63) Mr. AMMOUN (Lebanon) (Translation from the French): Mr. President, delegates, ladies and gentlemen, the Lebanese delegation wishes first of all to discharge a pleasant obligation - one, however, which it is a delicate matter to put into words.

(64) In this country, where culture, education and science appear to have found an ideal climate, and whose thinkers, writers and poets have borne high the banner of the mind in all fields and

in many languages, no delegate to a Unesco General Conference can altogether feel a stranger.
(65) But what is the position of the Lebanese representative? Yesterday you gave our Head of State, President Camille Chamoun, a welcome that still echoes in our hearts and that we shall long remember. In this country of Uruguay, which preserves among its splendid characteristics a sense of hospitality both Spanish and Arab, to which it is one of the successors; where so many Lebanese, received with open arms and assimilated, now share your life, your joys and your sorrows; how could I feel a stranger, even in expressing the fullness of my gratitude? It is thus as a brother, if you permit it, Mr. President, that I express from the bottom of my heart, the feelings of my country's friendship and admiration for all you have done for us, as well as the sense of my own personal gratitude.
(66) You will know, gentlemen, the saying of a French historian about Talleyrand: "So much bad has been said of M. de Talleyrand that to speak about him with any novelty one must say something good". The same might almost be said of the report of the Director-General. So much good has been said of it that to speak with any novelty one would need perhaps to say something bad; however, the taste for novelty will not carry us to this extreme.
(67) Since its foundation, Unesco, faithful to its Constitution, has constantly contributed to mutual understanding among the peoples. To follow and grasp the immensity of the task it has undertaken - to appreciate the results of the efforts made, which would have been even more fruitful if budgetary difficulties had not arisen to impede or retard them - it is enough to glance at the programme. We, Mr. Director-General, associate ourselves with numerous other delegations in expressing our deep gratitude to you, in saying how much we admire your programme, and in assuring you that we recognize the full value of your endeavours.
(68) All branches of human activity in the fields of science, education and culture have been intelligently and effectively dealt with. The immense effort spread over every discipline of the mind, the creation and subvention of international associations, fellowships, practical aid through technical assistance, social studies, cultural endeavours, fundamental education projects, meetings, numerous agreements and conventions, travelling exhibitions, the literacy campaign - all this is but a brief summary of Unesco's activities.
(69) The results are encouraging - even magnificent. Undeniable achievements stand to Unesco's credit. Yet this is not enough; and we should like to see Unesco tackling one essential, vital problem. This problem has been raised in a draft resolution by the Indian delegation, and we would like to see our Specialized Agency make the principle there enunciated into a prime aim of its activity and research.
(70) The drama of our age, the only real problem, is the latent apprehension in face of the power inherent in our resources for destruction - the wearing anxiety, the fearful anticipation of the hour when man might grasp the paraphernalia of science, suspended by an invisible nail, from the ceiling of his fate, and which would inevitably smother him in its fall.
(71) Not one of us, even in his daily routine occupations, can presume to escape from this tragic obsession. Two ideologies, two systems of thought, two different conceptions of man, and two beliefs - if not, indeed, two religions - face each other in opposition. What is to be gained by refusing to recognize this fact? Is it not our compelling duty to look for a common denominator between these two conceptions, and to seek for means whereby these two ways of thought may coexist?
(72) Without renouncing our convictions or our faith, without being false to our ideals, must not we of Unesco seek to expand our search and action to the uttermost human limits and discover, by every possible means, the point of contact?
(73) We have nothing to be ashamed of in our convictions, our faith and our ideals; but neither must we fear to face convictions, faith and ideals that are different.
(74) Never have we approached as closely as today to that universality which is the very essence of our Organization. Everything bids us act, and act before the sorcerer's apprentice of our childhood tales can lay hands on that dreadful paraphernalia upon which our apprehensions are concentrated. Ideas lead the world, and will continue to lead it, towards the best or the worst of fates. To reconcile, defend or spread them - that is our task and our mission.
(75) Will there ever be a more favourable moment? Throughout the world today, all men of goodwill are showing a desire to give first priority to this problem of coexistence.
(76) Several months ago, at The Hague, we signed a Convention for the Protection of Cultural Property in the Event of Armed Conflict; but must we not do all in our power to avoid the conflict itself?
(77) What is the use of fundamental education and our efforts to raise the cultural level of adults, if tomorrow sons and fathers are to perish together on the same battlefield, among the ruins of a civilization so dear to them, and if the survivors (assuming there are any) can reproach us with having neglected to take all measures consistent with honour, humanity and dignity for its defence and preservation? When such things as human life itself and the future of civilizations are at stake, there can be no room for scepticism or discouragement, and no effort can be regarded as vain.
(78) An Eastern parable tells, as you know, of a king's son who had fallen sick. In order to recover he had, for a few hours, to wear the shirt of a happy man. His father despatched messengers throughout the kingdom, but they searched for such a man in vain; everyone had something to make him afraid. At last a happy man was discovered; unfortunately, he had no shirt! Are not the happy peoples the peoples without the bomb, like the man without the shirt? We are one of those peoples.
(79) Let therefore Unesco's eighth General Conference, and its Director-General, identify themselves with this task. In so doing they will be serving the Constitution and its aims, which is good; and they will have responded to the hopes placed in them by all men of goodwill, which is even better.

(80) The PRESIDENT (Translation from the Spanish): I call upon the Head of the Czechoslovak delegation.

(81) Mr. HAYEK (Czechoslovakia) (Translation from the French): Mr. President, delegates, ladies and gentlemen, it so happens that the Czechoslovak delegation takes the floor in this great assembly on International Students' Day, which commemorates a tragic event in the life of our people and in our national civilization. Fifteen years ago, on 17 November 1939, the Hitlerite occupation struck a heavy blow at the culture of the Czech people and its century-old achievements, when it closed all higher educational establishments - including the Charles University of Prague, the oldest in Central Europe - and massacred and deported their intellectual workers, as well as thousands of students. This act of violence, which was only the prelude to subsequent and even more cruel massacres in many other countries, shook the conscience of the world. What had made it possible was the failure of earlier attempts to preserve peace on the basis of coexistence and collective security. On the other hand, the indignation it aroused helped to revive intellectual and moral solidarity among the peoples attached to peace and freedom; this solidarity triumphed and, after the victory over Fascism and Hitlerism, resulted in the basis being laid for the fruitful and constructive co-operation outlined in Unesco's Constitution.

(82) If our delegation has mentioned this tragic date in the history of Czechoslovak and world culture, it is merely to say that it is in this same spirit of solidarity and co-operation that our civilization and our people today commemorate this anniversary with all the universities of the world, with all intellectual workers, and with all student youth. It is in this spirit that they are striving to make a positive contribution to the intellectual, cultural and moral progress of mankind. The history of the past fifteen years has amply shown us that the development of our national life and culture is closely linked with the cause of peace, of mutual understanding and of international co-operation.

(83) Today, in Czechoslovakia, we are witnessing an unprecedented expansion in our culture, science and education. Science, as a guiding principle of our national policy, and education and culture, as important factors in social progress, the economy, and the training of men, occupy a prime place in our national life. This is shown by the figures of our national budget. In 1953 25.8 per cent and in 1954 31.2 per cent of the total budget was devoted to education, culture and public health. If we compare these absolute figures, we find an increase of 23 per cent during last year alone. As a result of our achievements in the economic sphere, the Government has been able to carry out important measures in education, culture and the organization of science, of which we will merely mention the most outstanding. We have established a unified educational system, which we are gradually expanding with a view to achieving, before long, complete, free and compulsory secondary education for all young people up to the age of 17. The number of higher educational establishments has been increased to an extent never before attained. Special forms of secondary and higher education have been developed in order to raise the professional and cultural level of tens of thousands of workers. The organization of scientific studies has culminated in the creation of three Academies of Sciences. Access to the classics of literature and art, both national and international, is now ensured for our people on a large scale, thanks to a rational publishing system. There are a vast number of galleries, museums, exhibition halls, theatres and concert rooms, continually thronged by fresh visitors who are showing themselves most sensible to artistic and cultural values. The radio and television networks have been extended, and their programmes assign a considerable place to educational, cultural and artistic activities.

(84) It is in this spirit that we wish to work, likewise, within Unesco. So far as Unesco's mission is concerned, we base ourselves on the provisions of the Constitution, which states that the Organization's purpose is - and I quote it - "to contribute to peace and security by promoting collaboration among the nations through education, science and culture".

(85) Such collaboration, as contemporary history shows us, can be based only on peaceful coexistence between countries and nations, whatever their economic and political systems may be. It must be founded on mutual respect for their sovereignty, frontiers and internal affairs. These principles, which are the very foundation of the United Nations Charter, must also be applied in the cultural sphere. In this field, therefore, the creation of ideological blocs and exclusive groupings can make no contribution to the strengthening of confidence or to peaceful coexistence. Trends of this kind are becoming more and more discredited by world opinion and by history. It would be all the more unfortunate were they to try to gain the upper hand in cultural and intellectual relations; any such attempt could not but prejudice our Organization and its mission.

(86) The influence of these trends is the main source of the weaknesses that public opinion has, in recent times, identified in Unesco's work. From the standpoint of Unesco's peaceful mission and the Organization's universality, its gravest defect is the absence, from its ranks, of countries and nations which, in the creation of cultural values and in efforts for peace, occupy a position of the first importance. This applies, in the first place, to China. The fact that China is not represented in the organs of the United Nations is in itself a grave injury to the cause of world peace, and to the effectiveness of the United Nations. In Unesco the absence of the true representatives of China is a cultural absurdity. Many speakers here have already shown, eloquently and persuasively, how mistaken it is to ignore the tremendous historical process of a cultural revolution whereby 600 million human beings are taking in their hands the splendid heritage of a culture thousands of years old and are placing their talent and their labour at the service of peace and international co-operation. It is regrettable that our Organization has failed to take the slightest initiative towards solving this problem, which is one of the

most serious known to present times. To postpone dealing with a problem that is now so mature is by no means to solve it.

(87) Unesco's universality and peaceful mission have also been gravely harmed by the fact that at this very Conference certain political pressure has prevented the admission of Bulgaria and Rumania, although they were recommended by the Economic and Social Council and by Unesco's Executive Board. This is the more regrettable in that the sole reason for this negative decision was the fact that these peoples, which are culturally most active and evince a great desire for peace, have chosen an economic and social system displeasing to the governing circles of certain countries. We must nevertheless stress with satisfaction and gratitude the vigorous opposition shown by many delegations to this evidence of intolerance. We have the proof that in Unesco there are forces loyal to the Organization's mission. Their presence here allows us to hope that the serious errors committed in this matter can be rectified.

(88) In the spirit of the universality and peaceful mission of Unesco we support the proposal by the great nation of India that Unesco shall turn its attention to the culture of the countries and peoples of Asia and Africa, whose values have not been sufficiently appreciated in certain countries of Western Europe and North America. We think the same is true of the culture of Central and Eastern Europe, and especially of the Slav nations. In this connexion we can detect inadequacies in the programme of the International Commission for a History of the Scientific and Cultural Development of Mankind, to which we shall revert later.

(89) We hope that in this sphere, as well as in that of bibliographies and cultural documentation, the Conference will succeed in informing Unesco's work with the requisite spirit of universality. We in Czechoslovakia are following with keen interest the efforts put forth by Unesco in the field of education and the considerable advances made by the Organization in the campaign against illiteracy and ignorance in certain regions of the world. We shall be happy to contribute within Unesco, thanks to our own experience, to educational co-operation, and to benefit from the experience of others. We agree that Unesco should concern itself with the problem of education for living in a world community. This trend, however, should not lead to speculations about some so-called citizenship of non-existent super-States, or to the evolving of theories contrary to common sense and the true interests of nations. We consider that the education of youth and adults should be directed towards practical understanding of the concept of peaceful coexistence. Education must inculcate a respect for the existence and special characteristics of other nations; it must teach respect for the freedom and sovereignty of other nations, and lay stress on the need for enlisting their co-operation. Here, Unesco can assume a task of the highest importance - the elimination, from education and public opinion, of all factors calculated to produce, support, encourage or foment war propaganda or the glorification of aggression, such as might stimulate national or racial hatred or any form of intolerance.

(90) The scientists and numerous other scientific workers of our country have, since the war, renewed and extended their contacts with colleagues in other countries. Through Unesco they will be happy to strengthen these relations and to take part in numerous forms and plannings of international scientific co-operation. They would like to make known their not inconsiderable achievements - to give proof of their unshakable faith in the power of science to accomplish the great tasks of our age, and of their fidelity to the mission of science in the service of humanity and peace. Peace is essential to the development and true freedom of scientific research. It is right that Unesco should devote its attention to research in nuclear physics; we in Czechoslovakia fully appreciate the fundamental importance of this research for science as a whole, for technology, for production, and hence for every form of social relationship. We warmly welcomed the plans for the peaceful use of atomic energy, and the pioneer example of such use given, this year, by the Soviet Union. But it seems to us impossible to work for the peaceful use of atomic energy so long as we are overshadowed by atomic and hydrogen bombs and their testing, by the abuse of science and its results for the purpose of the mass destruction of civilization. We consider it essential to prohibit atomic weapons of every type, and to set up an effective system of international inspection and control. We can only welcome the progress made at the Ninth General Assembly of the United Nations. We regard it as one of Unesco's primary tasks to make its contribution to further progress in this direction.

(91) The Czechoslovak people attaches particular importance to the social sciences. It regards intellectual workers in this field as the engineers of human society, and wishes them also to be engineers of peace. Unesco should act here in order to steer scientific work towards research into the bases of social relationships from the standpoint of coexistence between the nations. The collection of international legal texts mentioned in the report is already a step forward. Unesco might well encourage investigation of the contemporary historical processes whereby, thanks to humanity's efforts in the cause of peace, the principle of coexistence is manifesting itself ever more clearly - in economic relations, in human thought and in the realm of politics and law.

(92) One of the principal tasks assumed by Unesco is that of developing and expanding cultural exchanges. Czechoslovakia is happy to state that in this sphere the country has achieved considerable results. Numerous exchanges of delegations, of folk art and folklore groups, of scientists and artists, and of the results of their activities and creativeness have placed our peoples in close contact with the cultures of neighbouring peoples and other nations which, despite their geographical distance from us, are so at one with us by reason of their efforts in the cause of peace and constructive progress. Our cultural activities, our endeavours in education and science, and our international relations are aimed at mutual understanding and peaceful co-operation with all peoples. Cultural events of the greatest importance in our country, such as the

Prague International Spring Music Festival, the International Film Festival at Karlovy Vary, and this year the celebration of the anniversary of the composer Antonin Dvorak, have had international repercussions as demonstrations for peace and peaceful co-operation among all nations.

(93) During 1953 and 1954 many delegations visited Czechoslovakia, including groups from Italy, France, Belgium, the Scandinavian countries, Uruguay and Brazil, and a delegation of British writers. Quite recently a large Indian delegation of artists and cultural workers was warmly welcomed in our country.

(94) In addition, Czechoslovakia has taken part in various international events, such as the international film festivals at Locarno, Venice, Edinburgh, Cannes and New Delhi, and in Argentina, Mexico and Uruguay. All this shows us that, in order to expand cultural exchanges, it is essential to create a firm basis and a favourable atmosphere for them. A climate of confidence must be established and international co-operation must be practised, on a world as well as a regional scale, on a solid foundation of peaceful coexistence. Allow me to say that it is the great peoples of Asia who, in the form of peaceful agreements between the People's Republic of China, India and Burma, have set us the example. We should like to believe that Unesco, by developing cultural relations, will throughout the world contribute to the success of the noble efforts put forth by the peace-loving governments and peoples which are now being intensified and are aimed at creating a genuine system of collective security based on peaceful coexistence, without distinctions of political or social régime.

(95) It is likewise on such a foundation and within such a framework that the best prospects can be held out for the technical assistance plans designed to help less developed nations and peoples to shape their national cultures, so that they may contribute more effectively to the cultural endeavours of humanity as a whole. Czechoslovakia has, in the course of many centuries, acquired certain experience which can be usefully applied in the planning and implementation of educational, scientific and cultural assistance, and she would be happy if this experience could effectively be made use of.

(96) Many speakers have eloquently described the new prospects opening up before Unesco, thanks to the results of the efforts of certain governments and peoples to bring about a gradual lessening of international tension. It is for us at this General Conference to take these great possibilities into account and jointly to convert them into reality, with a view not merely to developing cultural activities but to using them in the cause of world peace. If we do that, this Conference may well mark, as certain speakers have hoped, the beginning of a very great period for our Organization. The Czechoslovak delegation, inspired by its people's desire for peace, will do all in its power to contribute to such a result.

(97) (Translation from the Spanish): In conclusion, Mr. President, allow me to pay tribute, in the name of the Czechoslovak delegation, to the Government and people of Uruguay for the hospitality with which we have been received in this beautiful city of Montevideo, and to express our desire that the democratic traditions and peaceful spirit of the people of Uruguay may contribute powerfully to the creation and maintenance, in this Conference, of a fruitful atmosphere of mutual understanding and international co-operation.

(98) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Turkey.

(99) Mr. TUNCEL (Turkey) (Translation from the French): Mr. President, ladies and gentlemen, in the name of the Turkish delegation I have the great honour to greet the representatives of Member States assembled, thanks to the legendary hospitality of Uruguay, in this beautiful city of learning, and to make certain observations with regard to the reports of the Director-General on the activities of the Organization between January 1953 and June 1954.

(100) We will venture, first, to recall that the aspirations of the new Turkey have harmoniously coincided with the ideals and objectives of Unesco. An organization assuming the task of dealing with major questions such as fundamental education and international understanding could not but merit the attention of our country, which has long been exerting itself in regard to them. This has been reflected in Turkey's implementation of the programmes adopted by the General Conference; and our country will likewise actively further, in every way it can, the execution, on a national scale, of the various resolutions adopted during the present session. I shall not abuse your patience by discoursing at length on the separate chapters of the reports, which have been prepared with an admirable regard for accuracy and scientific precision. Even a superficial examination of the reports reveals substantial progress in the Organization's activities. It can be frankly said that, so far as the execution of its programme is concerned, Unesco has done everything in its power to facilitate the task of Member States. Activities are beginning to assume clearer shape and to concentrate on essential problems. We are persuaded that, in time, the Organization will be in a position fully to attain these objectives, for the greater good of humanity. Many problems, however, remain whose solution demands more active collaboration from governments. Co-operating bodies are also faced with important tasks, if Unesco's work is to become more effective.

(101) Having stressed the significance of the Organization's activities during the past year, I shall proceed, on behalf of my Government, to make certain observations on Unesco's actual programme.

(102) We think that, if Unesco's action is to be effective, the Organization should concentrate on matters outside the competence and functions of other United Nations Specialized Agencies or governmental and non-governmental organizations concerned with education, culture and science. In other words, close co-operation with other Specialized Agencies is essential. In this way, in the different subjects of the programme, the danger of overlapping can be avoided. Our Government also considers that, when the draft programme is being prepared, the Executive Board should give most careful consideration to the real needs of

Member States in the fields of education, science and culture. The reports of Member States to the General Conference could provide a reliable source of information as to the requirements of each country, and one could thus draw up a simple, practical programme in which certain essential subjects, such as fundamental education and technical assistance, would occupy the place they merit. Admittedly the reports of Member States have, since the fifth session of the General Conference, been studied by a special committee set up by the Conference. But this examination is in our view far from adequate, since it is simply devoted to establishing how far the reports conform to the plan evolved by the committee and proposed to Member States by the Director-General. What is required is, not a purely formal examination which in time might become over-mechanical, but a thorough study of common problems and common needs, which would be determined systematically and listed in a genuine order of priority. It would thus be desirable to expand the qualifications and powers of the Committee on Reports of Member States, in such a way that its work would greatly facilitate the task of the Executive Board when the draft programme was being drawn up.

(103) We hold that Unesco's relations with governmental and non-governmental organizations merit greater attention. Close collaboration with appropriate bodies in this category would singularly lighten the tasks and financial burdens of the Organization. Certain activities might well be completely entrusted to them. There are, in addition, organizations that are even more specialized in the fields associated with certain parts of Unesco's programme. In another connexion, the working of the centres and institutes set up by Unesco should be the subject of special treatment in the Director-General's report; in this way a picture could be obtained of these institutions' achievements, or of the difficulties impeding their development.

(104) So far as fellowships are concerned, we favour their further expansion, in relation to the actual needs of each State.

(105) The steps taken by the Director-General to deal with the delicate question of Unesco's administrative services appear to meet the requirements of good functioning within the Secretariat. New methods of staff recruitment are necessary, in order to achieve better output and a saving of expense, such saving being employed for the execution of the programme itself. In our opinion broader geographical distribution must be adopted in staff recruitment, so as to enable all Member States to collaborate effectively with the Organization. Apart from the permanent posts, which demand continuity of work, certain temporary functions might be entrusted to skilled personalities, who would thus acquire valuable human experience. To sum up, if Unesco is to make its action effective and spread its message abroad, it needs the active collaboration of outstanding specialists and scholars from every country.

(106) In conclusion, Mr. President, we wish all success to Unesco, which, with a simple and practical programme and through concrete achievements, will continue to serve the cause of peace and international understanding, while remaining, as ever above purely political considerations.

(107) The PRESIDENT (Translation from the Spanish): I call upon Mr. Steinig, representative of the United Nations.

(108) Mr. STEINIG (United Nations): Mr. President, ladies and gentlemen; with the wishes of the Secretary-General of the United Nations for a fruitful session of this General Conference and the full success of your endeavours, I am desired to express on his behalf deep appreciation of Unesco's efforts to realize the fullest possible measure of co-ordination of its activities with those of the United Nations and its other Specialized Agencies and to thank the Director-General and his staff for their most active and helpful co-operation towards this end. The United Nations welcome the emphasis placed by Unesco upon full co-operation and participation with the United Nations in projects originating in the General Assembly, the Economic and Social Council and other organs of the United Nations. As you know, United Nations organs have specifically requested the collaboration of Unesco in a number of fields and its participation in certain major co-operative and joint programmes. I need not enumerate them: they as well as the Secretary-General's views are before you in the different documents submitted by the Director-General to this Conference.

(109) As you are no doubt aware, the General Assembly of the United Nations, now in session in New York, is deliberating on certain projects which are also on your agenda or are connected with it. To mention only two: the peaceful uses of atomic energy and the establishment of a Special United Nations Fund for Economic Development - a question on which the Second Committee of the General Assembly took a decision yesterday afternoon. It will be my duty to keep the Director-General informed of developments in the General Assembly of the United Nations, so that you may have before you at the earliest possible moment its views and decisions.

(110) To Uruguay, a member of the United Nations, its people and Government go, with our warm thanks for their cordial hospitality, our wishes for unbroken, steady progress in their efforts for peace, social justice and freedom. We shall long remember the moving ceremony in front of this Palacio Legislativo on the opening day of this Conference, when the children of Uruguay in their distinctive, white uniforms witnessed the unfolding of the flag of their country together with the flag of the United Nations and the flags of the Member States of Unesco, a symbol which, we hope, impressed their young minds with the possibility of the friendly peaceful coexistence of different nations and cultures, the true concordia varietatis.

(111) I could not conclude these few remarks in a manner more fitting to the occasion than by quoting the question addressed about a fortnight ago by the Secretary-General of the United Nations to an illustrious audience and, beyond it, to all of us. On a solemn occasion during the ceremonies accompanying the observance of Columbia University's Bicentenary, he said:

"Who questions the value of knowledge? And yet we know that the challenging theme for the Columbia University Bicentennial - Man's right to knowledge and the free use thereof - draws attention to ideals that are in need of defence. True, we all of us are quick to recognize in principle the value of knowledge. Yet we may hesitate to do what is necessary in order to open wider access to knowledge for others or to deepen our knowledge. Too often we even share in reactions that can be explained only by a fear of knowledge.

This contradiction - so prevalent in our generation, so dangerous to the peace and progress of future generations - is not a new one. Its cause is to be found in attitudes common to all men and all times.

If we fear knowledge, and act under the ban of such fear, is it not often because we fear change? In order fully and freely to accept knowledge, and what flows from knowledge, we have both to muster the courage and possess the humility that enable us to accept change."

(112) But the Secretary-General added: "We have lost the optimistic faith held by some of our predecessors that new knowledge would necessarily - almost automatically - lead to new progress in civilization. We have learned that whether changes resulting from knowledge will be for the better or worse finally depends on ourselves. The very fact that we feel this burden of responsibility and see more clearly the dangers with which we must cope, increases the temptation to resist change - and to fear knowledge. In losing the easy optimism of a preceding generation, we must not act as though we had also lost the deep conviction of our predecessors of the value of knowledge. We must act with undiminished faith in freedom of thought, freedom of research, freedom of speech - in full knowledge of the dangers involved in the changes we may set in motion, but also of our own responsibility to give that change creative direction."

(113) Pausing a moment to give thought to the ideas formulated by the Secretary-General, it might not be out of place to remember that, since the beginning of this century and, more particularly, since the end of the First World War, a chorus of voices from different quarters has not ceased to assure us that the motives which precipitate man on his course to self-destruction are inscrutable and, consequently, permanently effective. Since then the appearance of atomic weapons, prophecies of catastrophes have painted nightmarish pictures of unrelieved gloom. We need not share this deeply pessimistic, negative view of man's future, this outright negation of the valid concept of equal chances expressed in memorable words in the opening sentence of Unesco's Constitution, that peace and war alike have their origin in man's mind. For what are the facts? During this same half-century science has opened new avenues to man's knowledge about himself and about the motives of his actions and, although he resists self-knowledge with firm determination, man will have to acquire it if he is to survive.

(114) Science does not always enable us to control events, but it almost always increases man's chances to influence their course and direction.

(115) The PRESIDENT (Translation from the Spanish) I call upon the representative of Laos.

(116) Princess Souvanna PHOUMA (Laos) (Translation from the French): Mr. President, Mr. Director-General and colleagues, I must confess that I long hesitated to enter my name on the list of speakers taking part in the discussion of the report of the Director-General.

(117) I hesitated, because the calibre and eloquence of the previous speakers, the constructive comments made and the eulogies pronounced were bound to contrast with my own humble effort. I wanted to draw your attention, Mr. Director-General, to the fact that, although you left Paris - left France - on a journey to the Far East, you completely passed over, on that journey, the few Member States of Unesco which, alone in the far east of the old world, employ the French language.

(118) Lack of security, I should have thought, could hardly have been a reason for your not visiting us. You will have realized that we would have taken greater care of your life than of our own. As for educational problems, they have continued to absorb our attention no less and indeed even more than in time of peace; for though we have had other things too to think of, our rising generation has not been stopped in its growth, and has been insistently claiming the attention to which it was entitled.

(119) I think you would have been interested by the grafting of French culture and education on to a country having its own culture derived from two eminently humanistic sources, one stemming from ancient China and the other from ancient India. The remains of magnificent Buddhist monuments, and the dances inspired by ancient tradition, would at Luang Prabang have shown you, for instance, in the unfolding of the scenes of the Ramayana, the picture of Jatayous the Vulture in alliance with Rama attempting to deliver the beautiful Sida from the hands of her ravisher. Such are a few examples drawn from the artistic, religious and literary past of my country.

(120) We should have been happy to show you the lycées and schools coexisting with this ancient and deep-rooted culture, and to submit to you the pressing problems demanding quick and effective solution.

(121) In short, Mr. Director-General, my country would have been comforted by a friendly gesture, or even the intention of one, in our time of trial, which has now lasted for nearly ten years. While we were struggling to preserve the integrity of our territory and to gain our place in the sun, we should have appreciated recognition from a friend who knew us.

(122) It is because we have survived these storms that I can convey to you, today, the feelings of my country on reading the important report which you have drawn up.

(123) The tireless activity that Unesco has displayed under your leadership, the results obtained in the few years of its existence, the wide scope of the projects, the success of the work undertaken, and the increase in the number of Member States - all this provides, once more, convincing proof of the nobility and solid achievement of this magnificent and fascinating human enterprise.

(124) This success is partly due to the efforts of all the experts whose meetings and research had made it possible for Unesco to publish its very informative booklets. The report also reveals the unobtrusive but highly effective part played by the Executive Board, whose members have continued to meet in order to prepare for us a large proportion of our Conference working papers. Our thanks are due to them all.
(125) The execution of the programme has obviously, as the report shows, been a difficult matter, and it must be admitted that in most fields it has been carried out admirably. The chapter on technical assistance attracted my particular attention because, as I have already pointed out on many occasions, this form of assistance is essential to us as a means of accelerating our educational programme. When reading the list of recipients I noticed, with pleasure but surprise, the very large amount of aid granted to the first country mentioned - a country on the continent of Africa. I have no wish to embark on statistics or to draw comparisons, and went no further into the matter. But I should like to ask the representative of the friendly country in question how he managed to make himself heard and to find ... a helping hand. And I fear I must urge, Mr. Director-General, that you revise your technical assistance projects so far as my country is concerned.
(126) Laos wishes to live in peace and will certainly develop better, in the peaceful atmosphere now at last restored to it, the spirit of international understanding and human solidarity. We are, unfortunately, only too well placed to appreciate the inestimable value of such an attitude.
(127) All praise and honour in the history of humanity to those who, no sooner had a term been put to the horrors of the most terrible of wars, began to lay the foundations for the improvement, through science and culture, of the spirit and condition of man.
(128) The presence of all of us here, in a country which has given us so kindly an invitation and welcome, bears witness once again to our community of aspiration and to our world-wide friendship - a true friendship, born of repeated meetings, and transcending frontiers, oceans, races or creeds.
(129) In the name of my country I have the agreeable task of expressing to the Uruguayan Government and people my greetings and my thanks for the hospitality we are enjoying on the occasion of this eighth session of Unesco's General Conference.

(130) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Mexico.

(131) Mr. ROMANO MUNOZ (Mexico) (Translation from the Spanish): Mr. President, ladies and gentlemen, the delegation of Mexico has particular pleasure in conveying its greetings and respects to the Government o this sister Republic of Uruguay and in expressing its most warm and cordial gratitude for the delightful hospitality extended to us, which has so richly earned our thanks.
(132) Mexico, a country where freedom and genuine democracy flourish, has been greatly impressed, in the person of its representative, by the dignified yet enthusiastic contest in which the people here are engaging for the election of the highest authorities of this sister country of Uruguay; this land, where freedom and genuine democracy likewise prevail, has thus become the spokesman of the ideals and the conscience of America. Our country is greatly interested in the constructive work of Unesco. Patzcuaro is the headquarters of the Regional Fundamental Education Centre for Latin America, known by the abbreviation CREFAL; and in Mexico City we have a Scientific and Technical Documentation Centre which is designed to provide useful scientific information and documentation for all Latin American countries. Finally, thanks to the efficient work of its National Commission for Unesco, our country is effectively helping to develop the Organization's programme, throughout our national territory, by means of special missions in each of the most important towns.
(133) Mexico has complete trust and confidence in Unesco's world-wide activities; and for that reason it hopes and desires that at no time and on no pretext will anything be done to detract from the part this Organization plays as an agency for the promotion of peace solely through education, science and culture.
(134) The world desires to live in peace, and Unesco has at its command the best known means of achieving a system of peaceful coexistence. It is therefore our duty and responsibility to do everything necessary for attaining so noble an end.
(135) Our country is very pleased at the Secretariat's decision to concentrate the financial resources of the Organization on the conduct of a very few practical programme projects, for this will lead to greater efficiency and more constructive results. We offer our congratulations.
(136) The delegation of Mexico is particularly anxious that the budget of Unesco should be as large as possible, as our distinguished compatriot, Mr. Torres Bodet, foresaw and recommended during the time when he was Director-General of the Organization. We therefore favour maintaining the present annual contributions of the Member States and using the contributions of the new Members to increase the budget, so as to expand our resources and create greater opportunities for extending and improving our work.
(137) If this should not be practicable, we hope in any case that means will be found of balancing the budget as satisfactorily as possible. We take this opportunity of extending a most cordial welcome to the representatives of the States which have recently become Members of Unesco and are taking part in the Organization's General Conference for the first time.
(138) The world has great hopes of the contribution they will make to our work, and we are confident that the concerted efforts of all will finally bring, to all individuals and peoples, renewed faith and trust in the attainment of peace by the noble paths of culture, friendly international co-operation and true goodwill.

(139) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Cambodia.

(140) Mr. KIMNY (Cambodia) (Translation from the French): Mr. President and delegates, the

Cambodian delegation wishes first to thank the Government of Uruguay and the City of Montevideo for the most friendly welcome extended to it. The generous and spontaneous hospitality we have received can only increase our admiration for this country's progress and development in all fields - economic, political, scientific and cultural. We are particularly grateful to the Uruguayan Government for enabling us, while doing our work here at Unesco's eighth session of its General Conference in the most agreeable atmosphere and surroundings, to get to know this great and beautiful country and to appreciate it better.

(141) The Cambodian delegation likewise wishes, at the outset of the Conference to render public tribute to the Unesco Secretariat for the helpful understanding it has always shown for the particularly difficult problems facing Cambodia in the fields of education, science and culture.

(142) Thanks to the valuable co-operation and assistance of its experts, we have been able to begin implementing certain parts of the Unesco programme, especially the improvement of the system of free compulsory education and the institution of fundamental and adult education.

(143) Since our country became a member of Unesco, the national liaison body has been co-operating with the Secretariat ever more closely and fruitfully. The people of Cambodia is more than ever aware of the importance of the work done, and the noble aim pursued, by this great community of nations of goodwill.

(144) We have followed the life of the Organization with the greatest interest, in times of difficulty as in periods of success; and we can record, with satisfaction, that during the past few years Unesco's action has become increasingly effective.

(145) This progress can doubtless be partly ascribed to the system of biennial sessions of the Conference; but much of the credit is due to the Secretariat and its outstanding Director-General.

(146) The task remains a vast one and the problems facing the General Conference become more varied and more considerable with each session, in proportion as the Organization itself develops.

(147) Other speakers, in particular the Director-General and the Chairman of the Executive Board, have already emphasized the scope of Unesco's accomplishments in every sphere embraced over the past nine years throughout its sphere of action, and have dwelt on the difficulties encountered and the perspectives of future action.

(148) The Cambodian delegation associates itself with the conclusions contained in the report of the Director-General. It considers that important new advances have been made and has noted, with lively satisfaction, the new trend in the Organization's programme. The excellent report of the Director-General shows that, for the first time, Unesco's action is emerging from the stage of trial and error and is now decisively entering upon that of practical achievement. The criteria and priorities adopted at the seventh session of the General Conference have been faithfully observed. Specific tasks have been defined and spheres of action delimited, in accordance with the Organization's fundamental aims. To sum up, the programme established in 1952 is well on the way to practical realization.

(149) The Cambodian delegation particularly wishes, at this point, to record its satisfaction with the very proper principles underlying the preparation of the Proposed Programme and Budget for 1955-56. I refer to the division, within the traditional sections, of each chapter into two parts - a long-term programme confined to international action for the benefit of all of the Member States, and the short-term programme designed to solve specific problems in certain States - problems which elsewhere may not exist, or at least may not arise with the same urgency. This distinction corresponds to the de facto existence of two categories of Member States - the advanced countries and the so-called under-developed countries.

(150) The Cambodian delegation is of opinion that, while the principle of mutual co-operation and assistance must prevail uniformly and absolutely among all Unesco's Member States, the problems necessarily differ from country to country and the methods to be applied in order to overcome them must also, therefore, differ in each country. The Director-General's remarks on this point are very pertinent, clear and judicious.

(151) The need to draw such a distinction has in fact long been evident; but everyone had a different view of the way in which it might be translated into fact without risking fragmentation of the programme itself. The clear-sightedness of the Executive Board and the efficiency of the Secretariat have together been instrumental in giving the programme a new trend, to the general satisfaction.

(152) On the one hand, each single Member State is now sure of receiving assistance better adapted to its own needs. On the other, by undertaking only projects based on strictly available resources, Unesco has increased its chances of successfully achieving its short-term programme.

(153) There is, however, another aspect of the question to which the Cambodian delegation wishes to draw attention - namely, the implementation by Member States of the new provisions of the programme as thus modified. Can this programme achieve real results if Unesco continues to confine itself to making more or less general recommendations, which more often than not fail to attract the notice of States, even though the latter may, on occasion, be directly concerned by them?

(154) In our opinion the Secretariat should select, from among the recommendations of the General Conference, those inspired by the internal situation of certain specific countries in the field of education, science and culture. It should draw the attention of those particular countries to the recommendations in question, closely following their subsequent implementation through an individual exchange of correspondence, and not by the general procedures adopted in the past.

(155) May I close these few remarks by expressing, in regard to the present programme as a whole, my country's confidence in the success of Unesco's action for world peace and prosperity.

(156) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Viet-Nam.

(157) Mr. VO VAN LUA (Viet-Nam) (Translation from the French): Mr. President, ladies and gentlemen: The delegation of Viet-Nam, although among the last to take the floor, associates itself no less warmly and sincerely with the tributes paid to the friendly feeling shown by the Uruguayan Government and people towards the delegates to the eighth session of the General Conference, here in Latin America.

(158) Our delegation is at one with all the delegates in stressing the great clear-sightedness which the Director-General and Unesco's Secretariat have shown over the preparation of the proposed programme for 1955 and 1956, and in paying tribute to the former as to the latter for the outstanding and untiring devotion they have brought to the execution of the decisions and resolutions of the seventh session of the General Conference.

(159) Indeed, since I have been a member of my country's National Commission for Unesco I have gained a very clear insight into the difficulties which the Organization has to face and surmount in the pursuit of its ideals - on the one hand, the promotion of international understanding and, on the other, the pursuit of agreement among the peoples, of lasting peace among the nations.

(160) These ideals Unesco must translate into reality by a method simple and inexpensive - the education and training of individuals' hearts and minds, I say simple and inexpensive because, in every State in the world, there are national Ministries of Education with access of budgetary resources.

(161) Nevertheless, if we read the programmes of the Organization, we see that Unesco has set itself a gigantic task, outstripping its financial and material resources and liable, to a certain extent, to create uneasiness among the nations called upon to finance Unesco's various undertakings. The reason is, and will long continue to be, the specific and differing needs of Member States, needs which the Organization is bound to try to meet, partially, if not completely.

(162) To speak in more concrete terms, and to adhere to facts, we could say, with our colleague of Cambodia, that Unesco's Member States at present comprise exceptionally advanced nations, such as the United States of America, France and Great Britain, and other nations less advanced, economically underdeveloped, and under-prepared for fruitful international co-operation, such as Viet-Nam.

(163) These differences in evolution and development give rise to different and often contradictory requirements. Viet-Nam, for instance, needs technical assistance from Unesco in order to combat the illiteracy which still, unfortunately, largely pervades its territory; it needs Unesco's technical aid in order to develop fundamental education. It thereby creates financial problems for the Organization. Other Member States, however, which are not afflicted by the same evils as Viet-Nam, are asking, for example, that Unesco concern itself with the construction of scientific research centres of international scope; these would certainly contribute to the advance of civilization but can present no immediate interest for Viet-Nam or for any other country in a similar position.

(164) All these conflicts between the needs of Member States have the result that the Organization's action is constantly expanding to cover a wide diversity of problems and daily increasing in scope, at a cost that is beyond Unesco's present financial resources.

(165) The people and Government of Viet-Nam have fully understood this situation. When, last September, the Viet-Nam National Commission for Unesco produced a programme for the establishment of a fundamental education centre with a definitely professional and technical complexion, it shrank from raising the financial issues necessarily involved. But if we avoid mention of such financial questions, that does not mean they do not exist, or that we are able to solve them with our own resources.

(166) Public opinion wishes to believe that Unesco ought to help us to solve them; it knows nothing of Unesco's budgetary difficulties, or of the specific obligations of the Organization towards its Member States. Yet public opinion - not merely in Viet-Nam, but in most of the countries of the Unesco family - creates the power and prestige of the Organization throughout the world, and contributes to the successful implementation of Unesco's doctrines and ideals.

(167) Thus from every point of view it is to Unesco's advantage to deal with the problem of how the projects launched in its name, and on its moral responsibility, are to be financed. Instead of drawing on its limited funds to complete no more than half of its difficult task, and even so at the cost of certain Member States which often have only a remote interest in the particular undertakings involved, could not the Organization devise a better solution, whereby Member States would cease to be divided, so to speak, into two clans - on the one hand the donors, on the other the receivers (or parasites).

(168) This readjustment, if it is to be fair, must be made at the cost of the beneficiary party. It has already been applied in favour of certain Member States, with assistance from various international credit organizations. Unesco need have no direct part in any such action.

(169) But the solution itself is a good one and Unesco might well adopt it, applying it generally whenever the financing work undertaken in its name and on its moral responsibility in any Member States so required. What is now accidental and exceptional would in the future become a rule, a principle of action.

(170) Before the opening of the present session of Unesco's General Conference, the question of finance was raised by certain delegates in the Advisory Committee on Programme and Budget. They approached this problem with the implicit intention of solving it. We hope, indeed, that it can be solved. It cannot, however, be solved by concentrating Unesco's efforts on a small number of objectives. Certain delegations have advocated such concentration; and it has, of course, the merit of wisdom and of unquestionable practical value. All the same, I wonder how the Organization could settle the choice of such objectives, if it desired that they should meet the wishes and needs of all the Member States - wishes and needs that differ so greatly from country to country, and cease

to follow the same order of priority as soon as we pass from the interests of one member of Unesco to those of another.

(171) The inevitable result of such a policy would be to sacrifice a proportion of the Member States to the rest of the Unesco family, and even to favour the aspirations of some at the expense of the majority. And Member States which felt thus injured, or disappointed in their expectations, would undoubtedly lose interest in the activities of the Organization and might, indeed, withdraw from it altogether.

(172) Thus Unesco, whose aim it is to embrace communities differing fundamentally in their needs, degree of advancement and economic and cultural development, finds itself in a cruel dilemma in face of a diversity of interests, each as legitimate as the other. The problem of financing its undertakings may now be compared to that of squaring the circle; and the dilemma cannot be solved by neglecting some Member States to the advantage of others.

(173) The many different forms of Unesco's action, and the thousand and one facets of its programme, represent an ingenious but burdensome compromise - the only one, however, which can at present satisfy all quarters, or even safeguard the Organization's very existence. Through these many-sided activities and programmes, Unesco, as the Director-General's report for 1953 and 1954 shows, has embarked upon much that is designed to prepare all men's minds and consciences for living in a better world, in an atmosphere of peace and good understanding. And in this Unesco has been successful. There is no reason why it should halt on so promising a road, why it should alter its attitude.

(174) Whatever be its fate, Viet-Nam will remain faithful to Unesco, for the Organization is pursuing one of the noblest aims of man - to inaugurate the reign of friendship and love among the peoples, and this through the medium most acceptable to man's self-respect, namely the heart and the mind.

(175) Once the intellectual and moral frontiers have been crossed, political barriers will soon fall, and the tablets of history will then record the greatest victory of Unesco, the last victory to be aimed at by the men of goodwill now assembled in this magnificent hall of Uruguayan democracy, the Palacio Legislativo under the banner of absolute community of thought, idea and feeling.

(176) The PRESIDENT (Translation from the Spanish): I call upon the representative of the Organization of American States.

(177) Mr. SANCHEZ REULET (Organization of American States): Mr. President, ladies and gentlemen. In the vibrant speech that my colleague and friend, Dr. Guillermo Nannetti, made to this assembly he reported on various aspects of the programme that Unesco and the Organization of American States are carrying out together for the purpose of combating illiteracy and furthering fundamental education in Latin America. Collaboration between these two organizations has not, however, been limited to the field of education - although this appears to be the field in which collaboration has so far been most fruitful - it has also extended to other branches of science and culture. It is now my privilege to review the activities that the two organizations have been carrying out since the last General Conference of Unesco, for the promotion of knowledge and scientific research, the protection of copyright, the improvement of libraries, the development of bibliographic studies, and the dissemination of the works of the writers and artists of the Americas.

(178) So far as the exact and natural sciences are concerned, it is well to remember, first of all, that our Section of Science and Technology has maintained constant and cordial relations with the Science Co-operation Office that functions here in Montevideo and also with Unesco's Department of Natural Sciences in Paris. The relations with the Montevideo office have been in keeping with the terms of the agreement that was signed in Washington in February of last year at the first meeting of the OAS-Unesco Joint Committee on Co-ordination and, true to the spirit of this agreement, duplication of functions has been avoided.

(179) The Science and Technology Section has also collaborated with the Mexican Scientific and Technical Documentation Centre, which institution was established by Unesco but has since become a branch of the Mexican Government, by sending it collections of specialized periodicals and information material. Through its publications, it has likewise helped to make known the work that Unesco is doing to encourage the advancement of science in Latin America. Unesco, for its part, has utilized the materials prepared by our Scientific Information Service and given them wide publicity in more than five thousand newspapers of the world.

(180) Collaboration between the two organizations should be intensified. To this end, our Section of Science and Technology hopes to be able to participate more actively in the scientific meetings and seminars organized by the Montevideo office. It would also be desirable to study the possibility of co-ordinating some of these meetings with the seminar that OAS plans to carry out in 1955-56 to consider the problem of science teaching in Latin America.

(181) The basis for collaboration in the social sciences was established at a special meeting held for this purpose in Washington in March 1953. This collaboration has so far been limited because the two organizations' programmes for this period had already been approved and were in process of execution.

(182) However, our Social Sciences Section has co-operated in the work of Unesco by sending information to the Regional Centre of Unesco at Havana on researchers, institutions, periodicals and specialized libraries in Latin America. It likewise participated in the preparations for and meetings of the round table on social science teaching that was held in Costa Rica in July of this year under the auspices of Unesco. This office has also prepared the Latin American section of the International Register of Current Team Research in the Social Sciences, for publication by Unesco in 1954. In addition, it furnishes bibliographic information on Latin America to Current Sociology and to the International Committee on Social Science Documentation.

(183) It is to be hoped that this initial collaboration will grow. OAS hopes to take part in the preparatory work of the second meeting of the round table on the teaching of the social sciences in Latin America, which Unesco plans to hold in 1955. It would also be willing to collaborate in the Meeting of Immigration Experts. In this matter, the migration studies made by the specialists of our Department of Economic and Social Affairs provide valuable background information that should be utilized.

(184) There are still other forms of collaboration to be studied. For example, there is the possibility of launching a programme for the translation into Spanish of important works in the social science field. We have a small sum set aside in our 1955-56 budget for this purpose.

(185) The Organization of American States, which has for more than sixty years been concerned with copyright protection, has participated in the work done by Unesco for the establishment of a Universal Copyright Convention. The Secretariat of OAS called a meeting of experts of the American countries for the purpose of studying the possibility of co-ordinating the principles of the planned Universal Convention with those of inter-American treaties and conventions. This meeting was held in Washington in 1952 and it was responsible for the paragraph which later became Article XVIII of the Universal Convention approved in September of that year at Geneva. This article provides that, in the event of differences between the provisions of the Universal Convention and those of inter-American conventions the most recently formulated Convention shall prevail between the contracting parties.

(186) Finally, OAS hopes to collaborate with Unesco in the publication of copyright protection laws of countries throughout the world, and to this end is prepared to compile and publish the laws of the American countries and those of Spain and Portugal.

(187) In the field of libraries and bibliography collaboration between the two organizations has been particularly close. Both agencies helped to organize the Technical Meeting of Agricultural Librarians held in Costa Rica last year at the suggestion of the Inter-American Institute of Agricultural Sciences. Our library - which is known as the Columbus Memorial Library - regularly provides lists and catalogue cards of various kinds to the Unesco offices in Paris and Havana and to the Fundamental Education Centre at Patzcuaro. It also sends a regular report on important news in the field of library science in Latin America. The Columbus Memorial Library is in close touch with the Unesco specialist at the Havana Regional Office and has requested his advice at different times. This was done, for example, in the case of the Dewey Decimal Classification System, which is being translated by OAS and which it hopes to publish very soon.

(188) In connexion with bibliographical activities we should mention that our Secretariat regularly sends to Paris catalogue cards for the Index Translationum and that it has in principle accepted responsibility for the translation and publication in Spanish of Unesco's Bibliographical Handbooks.

(189) Looking to the future, OAS hopes to take part in the organization of a Conference on the Interchange of Publications, to be held in Havana in 1956, and to send a representative to the World Congress of Librarians in Brussels next year. Lastly, we hope very soon to hold an inter-American seminar for teachers of library science, under the auspices of both organizations, in accordance with the recommendation made by the Sao Paulo Conference of Librarians.

(190) Although there is no express agreement between Unesco and OAS for the promotion and publicizing of musical activities, the Music Section of the Pan-American Union has for years attended meetings of the International Music Council, which, as we know, is supported by Unesco. In accordance with a recommendation of the Inter-American Cultural Council, this section is at this moment taking steps for the establishment of an Inter-American Music Council that will function as an integral part of the world organization and bring all the countries of the Hemisphere together at its seat.

(191) Unfortunately, in the field of fine arts, there has not as yet been any real collaboration between the offices concerned. It is timely, therefore, to recall the recommendations that were made at the meeting held by the Co-ordinating Committee in Washington in February of last year with respect to the organization of circulating exhibits, the furnishing of slides on American art and the publication of guides to public collections in the American countries. Here I might mention that OAS is now preparing the third volume of these guides, which will cover Mexico, the Central American countries and the Caribbean region.

(192) A cultural activity in which collaboration between the two organizations is beginning to produce excellent results is the programme for the translation and publication, in French and English, of representative works of Latin American literature and thought. As we know, this programme was started by Unesco on a recommendation made by the General Assembly of the United Nations in 1946 to the effect that it was necessary to start a programme for the translation of the classics, especially those of countries whose literature was least known. This programme, in so far as Latin American literature is concerned, took shape in the publication in French of three works: Enriquillo, by Manuel de Jesus Galván, an Anthology of Mexican Poetry, compiled by Octavio Paz, and a volume of the Paginas Escogidas of Martí. Further, OAS had for some time expressed its desire to collaborate in the development of this programme. As a result of negotiations between the respective offices, an agreement was finally reached by which the two organizations would assume joint responsibility for the translation programme. Under this agreement, Unesco will from now on be directly responsible for the publication of the works in French and OAS for their publication in English. In this agreement OAS has also undertaken to present a list of works whose translation is most desirable and to furnish Unesco with their respective texts, which obligation it has been meticulously fulfilling.

(193) My Organization has signed a contract with the University of Indiana for the publication in the United States of America of the three aforementioned works. Up to now, Enriquillo (the English title of

which is The Cross and the Sword) is the only one that has been published, but the Anthology of Mexican Poetry and the Martí volume will be released within the next twelve months. We are now negotiating for the publication of two more volumes: Los últimos días coloniales en el Alto Perú by Gabriel René-Moreno, and Tabaré by the great Uruguayan poet Zorrilla de San Martín. The translation of all the aforesaid works was the responsibility of Unesco. OAS has also assumed responsibility for a new translation of the Comentaries Reales by Inca Garcilaso and has started to negotiate for the translation and publication of a volume of Cuentos by Monteiro Lobato and Viajes by Sarmiento.

(194) I regret having taken up more time than I should have with an extremely detailed and almost bureaucratic account of the activities that are being carried out jointly in Latin America by Unesco and OAS in the various branches of science and culture. But small, everyday activities are as important in the life of man as the exploits of great heroes.

(195) The noble aim of Unesco is to ensure justice, freedom and peace, through education, science and culture. And it is also the purpose that inspires the countries of the Organization of American States. But the realization of this ideal, this hope, this grand dream necessarily lies in the hands of a legion of obscure heroes - teachers, writers, artists, scientists, thinkers - and to these we must finally add all men of goodwill. We are gathered here on this soil of Uruguay, in this land that is receiving us so generously, and in an atmosphere of freedom, tolerance and democratic dignity, to give impetus to this idea, this hope, this grand dream.

The meeting rose at 1.30 p.m.

# TENTH PLENARY MEETING

*17 November 1954 at 3.45 p.m.*

*President:* Mr. ZAVALA MUNIZ (Uruguay)

CONTENTS

Discussion of the Director-General's Report (end): Speeches by the delegates of Liberia, Honduras, Bolivia and Nicaragua . . 152
Reply by the Director-General . . . . . 157

## DISCUSSION OF THE DIRECTOR-GENERAL'S REPORT

(1) The PRESIDENT (Translation from the Spanish): I call upon the Head of the delegation of Liberia.

(2) Mr. KNIGHT (Liberia): Mr. President and fellow delegates: The delegation of Liberia would have liked to take a far larger share than this in the lively, inspiring and most profitable debate on the reports of the Executive Board and the Director-General, so befittingly commented upon by the delegates who have preceded me.

(3) The pattern of mutual understanding and joint co-operation that has characterized the contacts, intercourse and activities between the Secretariat and my Government and the mutual benefits already derived therefrom are too important and spectacular not to be at least amplified before this assembly. Even these brief remarks do not, in the opinion of my Government and delegation, adequately convey their gratitude for the interest and assistance accorded us by the Director-General, through the Secretariat's technical assistance programme.

(4) My delegation had hoped that by now, our Chairman, Professor Massaquoi, would have arrived with such views, comments and suggestions as our Government would desire the delegation to offer during the general debate. But owing perhaps, to an extended schedule of the visit to the United States of America, paid at the kind invitation of President Eisenhower, by our illustrious Chief of State, accompanied by Professor Massaquoi, it seems, however, that our Chairman will only arrive within the next five or ten days.

(5) The delegation of Liberia could not permit this debate to terminate without recording the layman's views and considerations of the ultimate meaning and objectives of our honoured institution. So far as the cultivation and development of human relations are concerned, we are completely convinced that Unesco is the only solid foundation of a lasting universal peace.

(6) We are privileged to have been accredited to the seventh session of the General Conference, which has now passed into history as a most critical stage in Unesco's development, if not the real test of its will to survive. Even the most prejudiced, if there be any, might unhesitatingly join in the chorus of praise and commendation, first, to Dr. Taylor, whose difficult and unenviable lot it was to fill the unfortunate breach in the walls of Unesco's solidarity, occasioned by the sudden resignation of Dr. Torres Bodet, and the very serious repercussions that followed. Secondly, to Dr. Luther Evans, our resourceful, progressive and highly specialized Director-General.

(7) The glowing tributes paid to these eminent intellectuals and administrators by previous speakers are no mere platitudes; they are a genuine acknowledgment of gratitude for universal humanitarian services well performed. My country and delegation most enthusiastically and sincerely join in this chorus.

(8) With particular regard to specific projects jointly undertaken by Unesco, through its technical assistance services, and my Government, the report of the Director-General contains an up-to-date account. In the considered view of the Liberian Government and people, Unesco has demonstrated the kind of co-operation that could be emulated with advantage internationally, by the successful

accomplishment of certain limited projects carried out in Liberia. Since applying for technical assistance, my Government, in pursuance of its policy of contributing liberally to, if not far in excess of, any outside aid and assistance made available, has appropriated and expended a large part of its annual revenue on JULEP, teacher training, science teaching at the University of Liberia, on fundamental education and technical training, while an even larger contribution and increased activities are contemplated for 1955.

(9) While looking hopefully to the continuation by Unesco of the above projects and to the possibility of a sizeable increase in funds and activities, more than justified by the special needs of Liberia, I should like to emphasize that, ever since its foundation, barring two decades of colonial existence under a private and limited American company, Liberia and its Government were completely lacking in the means and economic backing to develop its culture and to spread education among the masses of its population until 12 years ago, and even then development was on a very moderate and limited scale. The national progress could not stand comparison with that of Liberia's neighbours, Sierra Leone and the French Guinea and Ivory Coast, which have enjoyed a preponderance of economic support, centuries of cultural and educational experience and facilities made freely available to them. These basic facts should be taken into consideration in any fair and unbiased appraisal of my country's present needs and of what it has thus far achieved in the way of political, economic and cultural advancement.

(10) The decision of the seventh session of the General Conference of Unesco to convene its eighth and current session on the great South American continent, and at Montevideo, capital of the model, traditionally peace-loving country of Uruguay, is, in our humble estimation, a wise step towards the goal of selling Unesco directly to the peoples of the world, so as to win their abiding faith and confidence.

(11) In view of what looks like a healthy change in the international climate, it is more than a coincidence in time that this freedom-loving country and its capital are playing the rôle of host to the eighth session of the General Conference of Unesco, at this important psychological juncture in the evolution of a world community.

(12) In our considered opinion, the enjoyment by Uruguay of this privilege and honour is merited and testifies to international esteem for, and recognition of, the invaluable contribution its Government and people have made culturally, socially and politically to the cultivation of universal goodwill, understanding, co-operation and peace.

(13) For us, it is a great privilege to be associated with our distinguished colleagues of Member States in their laudable efforts to work at this General Conference for the spiritual and cultural reawakening, the enlightenment and development of mankind. These efforts, if persevered in, will be recognized by future historians and coming generations as the first hopeful ray of light in the dawn of an era of lasting world peace and happiness.

(14) Our country has placed unswerving faith in Unesco from its very beginnings, when it was generally regarded as an experiment, and our Government and people have since confirmed that faith in terms of concrete activity. We pledge Liberia's continued collaboration and co-operation with Member States, the Executive Board and the Secretariat, in the execution of the ambitious but rewarding task of implanting virtue and truth in the minds and consciences of mankind through a universal Unesco.

(15) From the particular viewpoint of those areas of the African continent embracing the British Colony and Protectorate of Sierra Leone, the French overseas territories of Guinea and Ivory Coast, the British Colony of the Gold Coast and the sole sovereign State of Liberia, one of the outstanding events of this General Conference is the unanimous admission to associate membership of Sierra Leone and the Gold Coast. It was a very great pleasure indeed to my country and delegation to join in the enthusiastic welcome that was accorded the distinguished representatives of these two strategic, culturally advanced and progressive West African areas of the British Commonwealth of Nations, at the third plenary meeting of this Conference. The Liberian Government and delegation therefore offer their sincere congratulations to Her Majesty's Government in the United Kingdom and its accredited delegation at this Conference, upon this enlightened act, which we hope will eventuate, in the not too distant future, in the admission of these two areas as full-fledged members of the Organization. Having had the honour and privilege to serve for these many years as the only fully qualified spokesmen and advocates of the African masses inhabiting the West Coast, it will be for us a day of profound joy when other fully qualified countries of our region are permitted to take their rightful places in the galaxy of free nations.

(16) To our generous, hospitable and friendly hosts, the Government and people of Uruguay, we express the sincere appreciation and gratitude of ourselves and of our Government and people, for the kindness and cordiality so spontaneously extended to us, in common with our colleagues of other Member States. We shall leave Montevideo with pleasant and unfading memories, and shall not fail to report these acts of generosity and hospitality to our Government and people.

(17) May we, one and all, great and small, leave these halls, constructed as it would seem, upon foundations of international solidarity, edified and kindled by the singleness of purpose, the high endeavour and firm determination shown in the task of raising a super-structure of goodwill, sympathetic understanding, co-operation and universal fraternity in the minds of our respective peoples, thus heralding the dawn of an era of lasting peace and happiness for all.

(18) The PRESIDENT (Translation from the Spanish): I call upon Professor Bardales, Head of the delegation of Honduras.

(19) Mr. BARDALES (Honduras) (Translation from the Spanish): Mr. President, Mr. Director-General, ladies and gentlemen: It is with deep

satisfaction that the delegation of Honduras, on behalf of its Government, expresses its very sincere gratitude to the Government and people of Uruguay for the kind hospitality offered to us during our stay in the Uruguayan capital, on the occasion of the eighth session of the Unesco General Conference. At the same time it fervently trusts that the democracy embodied in the Constitution of Uruguay, guaranteed by the Government and the Executive Power, and daily reflected in the civic life of the Uruguayan people, may go on from strength to strength as an example and pattern for the nations of the world.

(20) The object of the present debate is to pass judgment upon the work accomplished by Unesco during the most recent period of its activity and the Government of Honduras is happy to express its appreciation of the numerous achievements sponsored and directed by Unesco in the various Member States. Unesco's objective is nothing less than the improvement of education throughout the world so that there may be a better type of humanity in every quarter of the globe.

(21) Of the many activities of Unesco, some are of outstanding importance. Such, for example, is the activity known as fundamental education, the greatest of all because it reaches down to the masses, to all the humble folk throughout the world.

(22) The object of fundamental education is to instil certain minima of knowledge, attitudes, habits and interests, so as to raise the intellectual and social level of the world. This activity, in which Unesco has always been fittingly assisted by the Organization of American States, through the Department of Education, is one of those which receives the most sympathy and support from the Government of Honduras.

(23) The reason is not far to seek. The work has not been confined to solving the problems of training teachers but has also dealt with new techniques in the preparation of materials and the selective organization of curricula, so that teaching methods and fundamental education in general may be more effective in improving the lot of the simple country dweller.

(24) In Latin America this work enjoys the distinguished co-operation of the Regional Fundamental Education Centre for Latin America at Patzcuaro, whose particular responsibility is the training of the necessary staff for the fundamental education campaigns and programmes in the Western Hemisphere.

(25) Honduras, which for various reasons has hitherto been unable to associate with Unesco in carrying out a project on any aspect of education, has had an opportunity of taking part in fundamental education by means of the fellowships which are a special feature of CREFAL. A team of five professors and another of ten teachers are now undergoing a course of training. With the help of the team of teachers, we have set up the National Fundamental Education Centre at Cedros, which began its work with an intensive course for training a group of teachers from our own country and giving instruction in the techniques of fundamental education. When the course was finished, the Ministry of Public Education posted the teachers at strategic points throughout the country; there are now five fundamental education zones, in which these teachers are working for the betterment of the rural inhabitants.

(26) Honduras has not only benefited in this way by the activities of Unesco, but it has also been busily engaged, in agreement with Unesco, in training a larger number of primary teachers, for which purpose it has inaugurated a big scheme of scholarships for the training of primary school teachers. The scheme includes the selection and training of candidates and even acts as an employment agency, offering them good opportunities, so that they shall not later be tempted to leave the profession.

(27) In addition, Honduras has been taking a great interest in the training of its secondary schoolmasters. Here, too, it has taken account of Unesco directives and has launched an interesting scholarship scheme for training secondary teachers outside the country. It has also instituted a permanent system of refresher courses for secondary teachers by means of summer schools and extension courses on a national scale.

(28) Unesco's plans for the improvement of education include other activities, such as the interchange of information and documents on various aspects of education, and the organization of seminars and the publishing of handbooks of value to teachers. In this way it has striven to perfect the teaching profession in all the Member States of the Organization.

(29) It has been said in this Conference that the National Commissions constitute an essential element in giving effect to the work of Unesco. With that we agree, and we only regret that the National Commissions, being composed of people sometimes heavily burdened with other official duties, do not have sufficient time to devote themselves, body and soul, to exercising the responsibility which they hold conjointly with Unesco. It is to be hoped that the Member States will in due course see to it that the National Commissions are composed of capable persons with time at their disposal to dedicate themselves to the educational work of their countries, and that the Member States will also make sufficient funds available to the National Commissions for the promotion of national education programmes.

(30) We believe it to be a fact that Unesco has done important work in the world on behalf of education, which was formerly looked down upon and treated, perhaps, as the Cinderella of the public services. Unesco has succeeded in interesting governments in education, and not the governments only, but the peoples, the community, the public. It has awakened a new conscience in the teaching profession, has made them aware of their dignity as schoolmasters, and has taught them the significance, the value and the mission of national education in the guidance of peoples and the destiny of nations. And it has taught the school that its task is something beyond the simple rôle of making the masses literate, by bringing it to realize that, if a school is really to be a school, it must serve the interests of the community.

(31) I pray that Unesco will continue to work

tenaciously for the extension of its educational programme and that in this splendid task the Member States may offer it still greater co-operation as a result of the present meeting of the General Conference.

(32) The PRESIDENT (Translation from the Spanish): I call upon the Head of the delegation of Bolivia.

(33) Mr. SANGINEZ URIERTE (Bolivia) (Translation from the Spanish): Mr. President, Mr. Director-General, ladies and gentlemen: The Republic of Uruguay, the cradle of liberty, has welcomed to its midst delegations from all over the world, who, after travelling hundreds of miles, are now met together to partake of the bread of the spirit, namely, education, science and culture. It would be difficult to imagine any other capital city excelling Montevideo in offering us such a cordial and fraternal atmosphere. On behalf of the Government of Bolivia, therefore, I wish to express our appreciation to the Government, the people and the press of this great country, pre-eminent among all the nations of the world by its democratic tradition and its love of freedom and justice.

(34) Bolivia, notwithstanding its 129 years of independence, has only recently given birth to a life and autonomy of its own, since the Revolution of April 1952 swept the National Revolutionary Movement into power. Cast in an antiquated mould, our culture and education were the toys of vested interests, the fortunate lot of certain privileged groups. The popular revolution finally ousted the oppressors - the big mining concerns and feudalism - and the Government became dedicated solely to the service of the people.

(35) Thus, in 1952, so far as educational matters were concerned, the country was disorganized and had no funds to cover the most urgent needs; and it was a long time since the human element - the teacher - had been chosen as for a high calling. The entire edifice had to be started again from the foundations and, as a result of a supreme decree there was set up a commission for the reform of education, whose report is now being studied by the Government.

(36) Of all Latin American countries, Bolivia has the highest percentage of illiteracy: among adult country dwellers it reaches 84%, representing about 865,000 illiterates. Of the rural school age population from 5 to 19 years of age, 63% do not attend school, that is to say about 465,000 children and adolescents. That is why enormous importance has been attached to fundamental education.

(37) In the report of the Director-General and the Executive Board of Unesco, mention is made of the help received by Bolivia through the assistance of two experts of the Experimental School at Miraflores (La Paz), which has enabled the professional training of teachers to be improved and broadened, and made more practical. Through this school pass hundreds of teachers, trained in fundamental education and with a genuinely practical and pedagogic outlook.

(38) Fundamental education is governed in our country by geography and the historical past, which is reflected in our traditions, our social, economic and political movements and in the soul and individuality of the people; it must therefore derive its inspiration and sustenance from these sources and seek its own national, regional and local ends.

(39) Its work is eminently social: it is the complete education of the community, since its action not only embraces all the components of the community - men and women, young and old, the home, the economy, recreation, health, and the spread of literacy, but also includes the aspirations and desires of the community, its eagerness for political, economic and social progress and for the formation of a national consciousness.

(40) The Agrarian Reform which has been decreed in Bolivia has incorporated about two million rural inhabitants into the life of the nation by making them proprietors, who produce and, by the same token, consume. In addition, it has created in them a greater interest in the education of their children, with the result that the school population has appreciably increased, thus raising the serious problem of the shortage of teachers, premises, furniture and educational equipment.

(41) The revolutionary movement has gone so deep among the people that there has been an enormous increase in the interest shown by the working classes in instruction in the new book learning. Their keenness is for professional and technical instruction, for further education, and more extensive specialized classes. The demand for new establishments is surprising and contrasts sharply with the shortage of funds available for the fulfilment of this compelling obligation.

(42) May I therefore be allowed to urge that Unesco's fundamental education project pay greater attention to countries which, like Bolivia, have a high percentage of illiterates, both adult and juvenile, and are thus obliged to give their instruction a practical trend.

(43) At Sirs-el-Layyan (Egypt), in Thailand, and in Africa - in the non-self-governing dependent territories of Britain and France - fundamental education is producing excellent results, as may be deduced from the Director-General's report, and it is also contributing to the solution of social and economic problems.

(44) So sincerely progressive is the present government in an essentially popular and rural sense, that the plan for combating illiteracy has had three interesting effects. Decrees and other legislation now stipulate that: (a) all those who aspire to a university degree must teach at least ten persons to read and write before they are granted the desired diploma; (b) under the educational Reform Act every person who has become literate must similarly teach one other person to read and write, and (c) everyone attending teachers' training colleges and establishments must teach not less than ten persons to read and write before being officially awarded a diploma.

(45) It is worthy of notice that there is a five-year plan for the systematic wiping out of illiteracy. Special funds for this purpose have to be provided out of the national budget, but still greater support will be needed in view of the magnitude of the problem.

(46) In Bolivia, everything is overshadowed by one important fact: up to 9 April 1952, education was restricted to certain classes in a privileged economic position and certain ages only. All those who were unable to continue their secondary studies were destined to swell the ranks of the destitute, for lack of opportunity for further study; courses in practical, technical, industrial, commercial, and agricultural subjects, stock-breeding, etc. were non-existent. Furthermore, the traditional secondary school teaching was theoretical, bookish and unimaginative: it provided only a feeble preparation for the university - a university run on academic and highly theoretical lines, standing quite aloof from the national, social and economic life of Bolivia. After the revolution secondary education became much more diverse: there was an increase in the number of vocational schools for women and of industrial schools in various districts; new sections were formed, dealing with stock-breeding, horticulture and forestry, as well as petroleum engineering; commercial colleges, schools of accountancy and instruction centres for Customs officials were opened. With a clear sense of direction, public education forms a co-ordinated ideal that is essentially social and democratic. It is an education for all ages and classes, education designed to increase the productivity and industrialization of the country, to improve its economic diversity and train technicians and skilled workers in all branches.

(47) The profound effect of the national revolution, especially since the agrarian reform, is amply proved by the pressure of the rural population in favour of schools, founding them at their own expense and building them with their own hands, in rough and ready style it is true, but to such purpose that in about 18 months some 3,000 small village schools have been constructed in this way.

(48) In Bolivia, just as in other countries, primary, secondary, technical and university education is absolutely free - a clear proof that, despite enormous economic difficulties, the State is making every effort to educate the people. Thirty per cent of the nation's general budget is allocated to education.

(49) An American from the United States said recently that countries - he was referring to Latin America - must begin by aiding themselves, by working out their own salvation. This the Government of Bolivia has been doing, but in view of the incontrovertible facts reflected in the illiteracy figures, it is to be hoped that Unesco will extend its assistance programme to countries like mine by affording them greater economic, educational and cultural aid, by granting scholarships, by providing them with better techniques for rural education, and by trying to extend its future action to the great masses of the people who in many places are totally unaware of Unesco's existence. A million Bolivian illiterates, ripe for education, are awaiting the help of Unesco.

(50) I am grateful to the Director-General for the interest he has shown in Bolivian affairs and I hope that next time he visits my country he will obtain complete first-hand knowledge of our educational difficulties, to our subsequent advantage in finding a better and juster solution of the grave problem with which we are faced.

(51) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Nicaragua.

(52) Mr. SACASA (Nicaragua) (Translation from the Spanish): Mr. President, ladies and gentlemen: Nicaragua is a small country in Central America, which lives and works and strives to achieve its ambitions in the very heart of this great continent of liberty and hope. Today it pays warm tribute to the native land of Artigas, and is happy to acknowledge publicly the manner in which the Republic of Uruguay has once again given proof of its democratic traditions by inviting Unesco to hold the eighth session of its General Conference in this city of Montevideo, that blossoms like a garden on the banks of the River Plate, burial place of heroes and nursery of brilliant minds. And here we meet within the walls of this magnificent Parliament building, an assembly of governments and peoples, uniting their thoughts and efforts to bring about a future of universal peace and brotherhood through the strong and effective development of education, science and culture.

(53) With unshakable faith, the Government presided over by General Anastasio Somoza has ushered in a new era of important achievements in the field of education by giving top priority to the development of the primary schools, where instruction is compulsory and free. Its main purpose is to raise the educational standards of the great mass of our rural inhabitants. It also fosters the national campaign against illiteracy, and gives general application to the principles and practices of modern pedagogics, which have reached their highest expression in Unesco's scheme of fundamental education.

(54) With a population of one million three hundred thousand inhabitants, my country is beginning to consolidate its economy under the protection of a stable peace: it is mechanizing its agriculture and taking the first steps to organize its youthful industries. For the time being, however, it cannot have enough school centres to enable it to develop its general culture, nor does it possess an adequate number of books, reviews and periodicals from our own presses. On the other hand, we are rightly proud to announce before this assembly of Unesco that the Nicaraguan State schools are making every effort to form the minds of our citizens and give them a strength and clarity of thought which influence the spirit, shaping, purifying and improving it, and imbuing it with devotion for the highest ideals; preparing it also for the exercise of freedom and citizenship, of respect for different or antagonistic ideologies and for its own, whether in the political, social, philosophical, religious or cultural fields. At the same time we are trying to create a firm national consciousness, with no tendency to narrow-mindedness, but rather with a fullness of judgment and goodwill that will lead the Nicaraguan to understand the American, the European, the African, the Asiatic and the Oceanian, and to love them as himself, and will make him a citizen of the world, the brother of all mankind,

without discrimination of colour, race or tongue.
(55) The Nicaraguan delegation, in taking its seat in this great assembly, does so in the loftiest spirit of co-operation and in the desire to add its modest contribution to the noble labours of Unesco, whose aims are proof that it intends to consolidate and render more fruitful the progressive movement which is now influencing intellectual and spiritual life in Nicaragua. My delegation also hopes that Unesco's future programme will contain duly defined and concrete measures of assistance to the less developed, less wealthy and less powerful countries, thus giving the smaller nations an acceptable and generous message of courage.
(56) In the three years that have elapsed since Nicaragua joined Unesco, the country has been able to meet its moral and financial commitments and has succeeded in working, within the limits of its capacity, to bring about real national prosperity and harmony among the nations, in the desire that these may be reflected in the material well-being and happiness of man, in his dual aspect as an individual and a member of society. We are at all times ready to co-operate in any action which consists not merely of high sounding proposals, but of their practical realization, in conformity with the ambitions and guiding principles of the Nicaraguan motherland, which are in harmony with the ideals of this honourable Organization of the United Nations.
(57) The Unesco National Commission in Nicaragua, with the staunch support of the Ministry of Education, has applied itself to studying the programmes and activities of the Organization, in order to plan its work in accordance with the directives of Unesco and with the opportunities they offer in relation to the needs of our own nation, especially in the fields of education and technical assistance. With regard to the latter point, I am happy to acknowledge the benefits conferred on my country by the Regional Fundamental Education Centre for Latin America (CREFAL), which is supported by Unesco, the Organization of American States (OAS) and the Government of Mexico, and which has been instrumental in securing us 15 fellowships, with the result that, after intensive training for two years, ten of our schoolmasters have already returned to Nicaragua and have begun, with conspicuous success, their difficult work of popular education and the training of other teachers. At the same time I have pleasure in stating that our Government and Unesco last October signed an agreement on technical assistance, with the object of making available to my country the services of two experts, one in urban education and the other in rural and fundamental education. We shall later urge that the mission be completed by the addition of other experts to deal respectively with school administration and the training of secondary teachers.
(58) I also consider this the proper place to state that the Nicaraguan delegation, or rather our Government, firmly supported the Government of its sister republic of Honduras in sponsoring the project to celebrate an annual Culture Week, an idea originally put forward by the scientific and literary group set up by the Union of Latin American Universities.
(59) Before concluding I should like to say that my delegation warmly joins in the tribute of appreciation and gratitude paid to the efficient work of Dr. Luther H. Evans, Director-General of Unesco - a work which is demonstrated in the concise and clear report he has presented.
(60) And, finally, allow me on this solemn occasion to lift up my voice in prayer to the God of the nations, that Unesco may daily grow in wisdom and stature; that its ideals may penetrate ever more deeply into the conscience of the peoples and guide and regulate the counsels of governments; that over the whole wide face of the earth the banner of Unesco may fly triumphant; and that under every sky, men and nations may forget their quarrels in growing tolerance and brotherhood, and, devoting themselves solely to the arts of progress and culture, may raise their voices in hymns of peace, accomplishing in their minds and hearts the manifest destiny of humanity, whose birthright it is to live dignified lives in freedom from fear and want.

**REPLY BY THE DIRECTOR-GENERAL**

(61) The PRESIDENT (Translation from the Spanish): I call on the Director-General.

(62) The DIRECTOR-GENERAL: Mr. President, honourable delegates, I do not feel that I have been under heavy fire from the comments you have made. I have taken note of points where you have criticized or raised questions but, before I comment on them, I wish to say how deeply gratified my colleagues of the Secretariat and I are at the unanimous expressions of confidence in the principles of Unesco and of faith in the future of the Organization, made by delegates in their speeches of the last few days. This creates for all of us, Secretariat and delegates alike, a fine atmosphere in which to do the work of this Conference. This reaffirmation of faith, it seems to me, is very important for all of us and it is also very important for the peoples of all the Member States.
(63) I wish to thank delegates for the kind remarks they have made about the report and, in general, about the policies which the Secretariat has followed and the actions it has taken in implementation of the current programme and in the drafting of the new one. I wish to express my personal appreciation to those delegates who mentioned that I have visited their respective countries in the past two years, and I wish to explain to those delegates who have expressed regret that I have not visited them, that I hope to do so in the near future. It has been impossible for me to visit all countries. I assure you that the principal reason has been the harshness of the time schedule and the fact that I have tried to follow a pattern of geographical distribution. I not only have to secure a geographical distribution of the Secretariat, but also a geographical distribution of the Director-General! I have already expressed the pleasure I had in taking members of the Executive Board, including the Chairman, with me on some of these visits and I should like to thank those of you who have mentioned the visits of the Board members.

(64) It is a matter of very great pleasure to my colleagues and myself that a number of delegates have spoken in favourable terms of the efforts which they have noted on the part of the Secretariat to make the application of the programme and also the development of the new programme more genuinely responsive to the needs of Member States, as Member States themselves understand those needs. I said in introducing the report that that has been our main objective and I would like to point out, in answer to remarks by one or two delegates, that responding to the needs of Member States does not necessarily mean responding only to economic desires, responding only to material requirements. Many of these efforts are efforts to respond to spiritual needs, to things of the mind, to things of the heart. Let us not, therefore, make a terminological error, an error of conception, and identify responsiveness to Member States' needs and requests with the granting of economic or purely material aid.

(65) We not only, as some delegates have noted, try to be responsive to the requirements of Member States, but we have also tried to be responsive to the requirements of the United Nations and the Specialized Agencies, the Organization of American States, the Council of Europe and other agencies and groups. I am glad that a number of delegates mentioned this fact, because it is important for these other organizations to know that we not only have tried to be co-operative, but that the Conference recognizes that they have responded and have co-operated with us.

(66) I am glad that some speakers pointed out that, when they commented on the report of the Director-General, they were commenting on the work of an organization and not a person, and that the work that is reported here is the work of a staff of zealous people, many of them with highly specialized talents, who have all worked as a team to carry out the wishes of the General Conference. I hope when you use the term Director-General you will have in mind that you are talking about 800 persons who work in the Secretariat in Paris, as well as a number who work in the field. The keynote of our efforts to work as a homogeneous group in the Secretariat is not collegiate confusion of responsibility but rather strong and smooth team work with a great deal of initiative and independence of thought on the part of all members of the team, and a great deal of harmony in carrying out a policy or a directive once it is agreed upon.

(67) Some delegates have referred to certain of our shortcomings. One delegate referred to lapses in administration, others have said that sometimes we seem still to be too bureaucratic minded, and adopt too much an attitude of omniscience. The Secretariat is striving not to give any basis for a belief that it regards itself as high and mighty or that it regards Member States as the public knocking on its doors. We do, of course, have a burden of work which we are not always able to transact as rapidly and as well as we would wish. Also, we may have been guilty on occasions of errors of judgment or of some other kind of failure in administration, but it is our belief that these mistakes are decreasing and, as we find the causes of them, we are genuinely trying to improve our administrative organization, our administrative procedures and the spirit in which we operate the machinery. The best way to clear up these matters is to be told about them so that we can work on them in the friendliest spirit of co-operation.

(68) I appreciate the fact that a number of delegates have commended the Executive Board. The Executive Board, with which I have been very well acquainted either as a member or as Director-General since 1948, has, in my opinion, played a more significant rôle in the affairs of Unesco in the past year than at any time since I have been closely acquainted with it. It took the courageous decision at about the time of my election, to take a good look at the state of Unesco's programme, Unesco's organization, Unesco's accomplishments and to try and think out some general conclusions as to what ought to be done about certain of the weaknesses and failures of the Organization. The results of that effort have already been reported to you, and certain of these results will be before you in your consideration of the programme and the budget. I merely wish to say at this time that I concur with the Board in its efforts and in its objective and that I have co-operated with it as closely as possible. I took the liberty of asking the Board to assume a strong leadership rôle in the work of the Organization - that is, as the representative of the Conference, to give me guidance on some of the larger decisions that have to be made as to the directions the Organization should follow in the future. I think this has been highly beneficial to the Organization, and I hope in the future to be able to work with the Board in the closest kind of co-operation and I hope that it will give leadership to the future sessions of the General Conference, as well as guidance to me in interpreting the will of the past Conference. To have this organ, half-way between the Director-General and the Conference, is, in my opinion, one of the great sources of strength of the Organization.

(69) Much was said by delegates in welcome to the new Member States, and I was pleased to hear that welcome. It was to me a sort of ex post facto authorization of what my colleagues and I had already done to help in every way possible to integrate the new Member States in the work of the Organization. We have done everything we could to give all legitimate aid to the new Member States, in learning about our programme, in learning about our procedures, which to a new Member State are very complicated, and I am very glad that the Conference has carried out the same policy which we felt sure in advance it would wish us to carry out.

(70) Some reference has been made to the relationship between the Director-General's report (including the Executive Board's report) and the reports of Member States. The Chairman of the Board himself pointed out that perhaps we have not as yet developed the best feasible relationship between them. I do not have anything to suggest on this point except that the Secretariat is ready to discuss this problem with appropriate organs of the Conference, with a possibility of developing a closer internal and organic relationship between these major documents. I feel certain that eventually the

Secretariat's report ought to include more information about what is going on in Member States, in direct execution of Unesco projects and programmes, but one has to move cautiously, for obviously whole educational programmes of Member States are in some cases influenced by Unesco's advice, and one cannot include the progress of the whole educational programme of a country in a Unesco report of its own activity. But perhaps there is something more we could do to integrate into the account of our own activities, in terms of the reporting itself, the activities of Member States. The Secretariat is very glad to explore this possibility with you.

(71) It has been a pleasure to us to have some of the information given in Member States' reports supplemented by the reports delegates have made at these meetings, and we are also glad that many of the reports of what has been happening in Member States have contained references to what Unesco has contributed. I would observe to delegates who have some doubt about the technical aid, special project trend in the new programme and budget proposals, that most of the references of Member States to Unesco activities which have given them assistance in their own educational, scientific and cultural programmes, have been to technical assistance projects; not all of them, by any means, but most of the projects mentioned, those of which delegations have shown themselves most conscious, have been of the technical aid type. I do not mean that technical aid ought to encompass our entire programme, but I do mean to bring a fact to your notice which I think is significant for your later discussion of the new draft programme and budget.

(72) A number of speakers mentioned the failure of the Secretariat to achieve an adequate geographical distribution in the staff and there were suggestions as to what we should do about language qualifications. I am very sympathetic to this attitude and to these suggestions and will study the matter seriously. I wish to report, in relation to the present situation, that we have made real efforts in the past two years to increase the representation of certain countries which are either not represented at all or are not adequately represented on the staff. We have taken steps forward, and steps backward, for some of our good people from countries insufficiently represented have been taken back from us by their governments, and we have had to start all over again. We applaud governments' taking such persons back in some cases, because frequently the return of one of our employees to his own country is one of the best ways of developing effective liaison between that country and Unesco, and also one of the best ways for Unesco to assist the country.

(73) This leads me to the suggestion that the Turkish delegate made, which he and I talked over when I was in Turkey recently, that perhaps we ought to have posts in the Secretariat where we bring in persons for two or three years, with a definite understanding that at the end of that term they will go back to their old posts or to other posts in their government. I also call your attention to the fact that our possibilities of redressing maldistribution on a geographical basis are very limited at the present time, and there are certain proposals before you, to be considered later on, which are calculated to assist in the solution of this problem.

(74) A great deal has been said in your comments about our failure to do all we should do to encourage National Commissions, and, beyond them to get our message across to the people. I will not speak about either of these things at this time, except to say that, as regards both, we are far from doing a satisfactory job, in the opinion of the Secretariat, but, also as regards both, we definitely need some clarification from you as to exactly what our programme should be. We will try to pose those problems in sharper outline when we discuss the relevant chapters in the proposed programme.

(75) It has been a great pleasure to me to have so many delegates mention the centres of fundamental education at Patzcuaro and Sirs-el-Layyan. Since the report before you was written, I have visited both of these centres, Sirs-el-Layyan in September, and Patzcuaro in October. I had previously visited Patzcuaro, but this was my first visit to Sirs-el-Layyan. I can tell you quite candidly that I agree with the delegates who mentioned these centres, that they are, as far as we can tell at this early stage, doing a really successful job.

(76) Mention has also been made of our work for the Arab refugees from Palestine and in Korea. I think we ought to acknowledge, perhaps publicly on some occasion, that, as regards both of those programmes, Unesco is just a tiny tail wagging a great big dog. We are with our very few experts, at relatively small cost, helping in the expenditure of enormous sums of money in the countries concerned, sums that come from other sources. In the case of the Arab refugees, it is the United Nations Relief and Works Agency that is in charge and it is spending millions of dollars each year on the education of the children. Unesco is providing the educational leaders for that programme and, if we are able to do something successful and useful, it is because of the intelligent and devoted management by the people who are in charge of UNRWA. In Korea it is the United Nations Korean Rehabilitation Agency which is really doing the job, and Unesco is merely giving expert advice. I hope that we may find during the discussions in the Programme Commission that we can do more than we have proposed in regard to the Arab refugees' programme, and I would like also to say that we stand ready to do more than we have been called upon so far to do in Korea. Our relations with those those agencies are good, and I look confidently for increased success in our work in those two important fields.

(77) The Swiss delegate said that we ought to do more in our reports to tell Member States where they were falling short in certain fields of work, such as the ratification of Unesco conventions. I would like to discuss later exactly how far we should go in this regard, for we might easily raise controversial issues and create delicate situations with Member States if we did too much. To be sure of our ground in making any such comments, we should have to be in possession of a lot more information than we now have in most of these cases. Perhaps also our report ought not to emphasize anyone's failures, except the failures of the Secretariat. In relations with Member States, we

ought to point to the positive side of achievement. Of course, in talking about our positive achievements we are sometimes referring to successes scored against barriers that Member States have erected; and in that case we are giving factual statements.

(78) One or two references were made to publications and, as at every General Conference, beginning with the second one, Unesco publications have been criticized, I would like to say that, in my opinion, great strides have been made, particularly in the past two years, in improving the mechanisms by which we review our publications before they are printed in order to make sure that we do not issue publications that are not of high quality, or that, for one reason or another, do not need to be published. I believe, if you were to make a critical examination of our publications of the past year or so, that you would find very few useless or low quality publications. We have established very good machinery for checking our manuscripts before publication, and we have also invited Member States to co-operate with us in having specialists in various fields review publications and give us a critical evaluation of them. These critical evaluations are very helpful to us in two ways, and I would appeal to Member States to co-operate with us in this matter. They give us an outside judgment of our work, a judgment by the best intellectuals of the world in the fields in which the respective publications fall. Secondly, when these learned persons find that a publication is good, their good evaluation of it spreads to other intellectuals in the field and the publication sells a lot better and has a lot more influence.

(79) Despite my statement the other day, some delegates expressed concern at the way I was treating the staff of Unesco. I do not want to go into that again but I can genuinely affirm that I do not believe, since I have been Director-General, that I have ever interfered with anyone's freedom of conscience or have in any other way violated, or even threatened, any rights which a member of the staff as an international civil servant ought to have.

(80) Mr. President and delegates, I am going to reply in the Programme Commission to many comments that were made here on programme matters and I hope that you will not feel offended if I have not addressed myself to them here. I am taking your comments on the programme seriously and shall reply to them on another occasion.

(81) In concluding, may I observe how pleased I am that some of the delegates made laudatory references to Dr. Torres Bodet, my eminent predecessor, and to Dr. Taylor, who held the fort so well in the six months between Dr. Torres Bodet's term and my own.

The meeting rose at 5.05 p.m.

# ELEVENTH PLENARY MEETING

*22 November 1954 at 3.30 p.m.*

*President:* Mr. ZAVALA MUNIZ (Uruguay)

CONTENTS

Communications by the President . . . . . 160
Statement by the observer for Paraguay . . . . . 161
Second Report of the Credentials Committee . . . . . 162
Report of the Administrative Commission on Item 9.3.1 of the revised agenda (document 8C/JUR/2) and discussion thereon: Speeches by the delegates of Panama, France, Switzerland, Haiti, Italy, German Federal Republic, Denmark, United States of America, Lebanon, Uruguay, Colombia, Belgium, Yugoslavia, Japan, Laos, Egypt and the United Kingdom . . . . . 162

**COMMUNICATIONS BY THE PRESIDENT**

(1) The PRESIDENT (Translation from the Spanish): Ladies and gentlemen, the General Committee regrets to announce the death of a member of the Belgian delegation, Professor de Thibault. In view of this sad news, and as a token of the grief which the General Conference must surely feel - as it is

felt by the General Committee - and as a mark of our condolence and sympathy with his colleagues in the Belgian delegation, I suggest to the Conference that we should all rise to our feet for one minute's silence as homage to our departed friend.
(2) I call upon the delegate of Belgium.

(3) Baron van der STRATEN WAILLET (Belgium) (Translation from the French): Mr. President, ladies and gentlemen, it is with deep emotion that I thank the President for the tribute he has just paid to Mr. Ivan de Thibault.
(4) A talented, charming and genial man, Mr. de Thibault, who had a brilliant civil service career behind him, had specialized in problems of technical assistance, and had been appointed to speak in the discussions to be held on this subject during the present Conference. From the first he was charmed by this beautiful country; the Uruguayan beaches cast their spell over him. He loved the sea, and it was the sea which drew him to his tragic end. The accident, which took place on Saturday at about 6 o'clock and brought consternation upon the Belgian delegation and the entire Conference, appears to have been due to a heart attack.
(5) As we were away from Montevideo for our week-end relaxation, we were not able to inform our friends in all the delegations of the blow which had befallen us, before the ceremony of burial which took place locally on Sunday at 5 o'clock. On behalf of my country, I wish to thank the Minister of National Defence, who kindly arranged to be represented at the ceremony. I would also thank the Director-General and his staff, who on Sunday travelled to Punta del Este in order to be with us in that sad hour. Finally, I should like to thank all those of you who have since been kind enough to present their condolences to our delegation. May the memory of Mr. de Thibault bring us closer together than ever before in the pursuit of the ideal for which he came here to battle by our side.

(6) The PRESIDENT (Translation from the Spanish): Ladies and gentlemen, the General Committee regrets to inform the General Conference that, according to information received today, the death has occurred of Mr. Andrei Vishinsky, Vice-President of the General Assembly of the United Nations and First Deputy Foreign Minister of the Soviet Union.
(7) I call upon the delegate of India.

(8) Mr. KABIR (India): Mr. President, fellow delegates. It is my melancholy duty to move on behalf of this Conference a sincere vote of condolence at the sad loss which the Union of Soviet Socialist Republics has suffered in the death of Mr. Andrei Vishinsky. It is not necessary for me to speak at length of his services; he has been one of the foremost figures in the international field, and in the last few days he had been playing an important part in bringing the different nations together. By his death, the United Nations and the cause of peace have suffered a loss, and Unesco, as an associate of the United Nations, expresses its sorrow on that account.

(9) The PRESIDENT (Translation from the Spanish): The proposal of the delegate of India is before the meeting for consideration. The General Committee understands that the vote we are about to take will be in the form of a communication from the General Conference to the Soviet Government, expressing our sorrow at the death of Mr. Andrei Vishinsky.
(10) If there is no opposition, I take it that the motion is approved.

(11) Agreed.

### STATEMENT BY THE OBSERVER FOR PARAGUAY

(12) I call upon the observer of the Republic of Paraguay.

(13) Mr. RAMIREZ (Paraguay) (Translation from the Spanish): Mr. President, ladies and gentlemen, on behalf of the Republic of Paraguay, and in accordance with my instructions, I have great pleasure in announcing to this international assembly, which is fraught with such consequence to the world, that my Government, exercising the right it enjoys as a founder member of the United Nations, formally communicates to this eighth session of the General Conference of Unesco its firm intention to adhere to this Organization, as soon as the requirements of its domestic legislation have been satisfied.
(14) Paraguay could no longer continue outside this Organization, which is developing close spiritual ties between the peoples as a means of opposing the floods which threaten to sweep away the rights of men. Moreover, these high objectives now being pursued throughout the world are in perfect harmony with the history of Paraguay.
(15) Unesco has undertaken to develop education, science and culture because through them it is seeking peace, freedom and justice, principles which must be upheld if this stricken world is to receive a new legal and social structure.
(16) As you know, it was in the land of the Guarani that the first shout of liberty was heard on 11 March 1542, during an act of rebellion by the Paraguayan people. To the cry of Liberty! Liberty! they deposed the governor, who was later taken to Spain on board the caraval Comuneros, built at Asuncion. In many periods and in various ways this idea has pervaded our national thinking.
(17) Paraguay, at the imperious command of those fundamental and universal ideas, has sacrificed her own existence and with the blood of her sons has sealed her devotion to those ideals. The exaltation of historic deeds far from being vainglorious, is a mere statement of fact.
(18) Education in Paraguay, according to the great Alberdi, became compulsory as long ago as 1857, a time when it was by no means so in the majority of European countries. With its feet firmly planted in history Paraguay can embark without hesitation on the course traced by Unesco. A love of education, of peace and of respect for international agreements is deeply rooted in the Paraguayan people. Its fortunes may have swayed this way and that, as often happens in the lives of nations and individuals; yet always its long-established belief in those standard principles of human life has remained unshaken.

Thus the universal values which survive through the ages are being fortified by the constructive efforts of this great international Organization, which is called upon to transform the world and make possible peaceful coexistence through culture, education and science.

(19) These brief remarks explain why my country is joining Unesco, to carry out with its fellows a realistic and concerted action to bring about a radical change in international relations, taking those same principles as a basis for the future. It is doing so with a full sense of responsibility, at this eighth session of the General Conference now taking place in this friendly country, whose institutions are buttressed by freedom and democracy in the service of peace and the brotherhood of man.

SECOND REPORT OF THE CREDENTIALS COMMITTEE

(20) The PRESIDENT (Translation from the Spanish): I call upon the Chairman of the Credentials Committee.

(21) Mr. BERNAL JIMENEZ (Colombia) (Chairman of the Credentials Committee) (Translation from the Spanish): Mr. President, ladies and gentlemen, in conformity with the authorization conferred upon the Chairman of the Credentials Committee at its first meeting, I now submit this second report so that the President, if he thinks fit, may place it before the General Conference for consideration.

(22) Since the first meeting of the Credentials Committee the following countries, which had already deposited provisional credentials, have now submitted powers found in good and due form, in accordance with Rule 22 of the Rules of Procedure of the General Conference: Argentina, Chile, Colombia, Honduras, Korea, Liberia, Mexico, Netherlands and the Philippines. Powers found in good and due form, in accordance with Rule 22 of the Rules of Procedure of the General Conference, have also been received from Saudi-Arabia, which when the first meeting of the Committee was held had still not deposited any credentials at all.

(23) It is recommended that the General Conference consider as fully valid the credentials submitted by the delegations of the aforementioned Member States and that these delegations be permitted to take part in the eighth session of the General Conference.

(24) Letters or telegrams have been received accrediting the delegations of Bolivia and Syria. It is recommended that the General Conference consider these documents as provisional credentials of the representatives of those Member States.

(25) Powers have also been received accrediting an observer of Paraguay and a representative of the United Nations Food and Agriculture Organization. It is recommended that the General Conference accept their credentials.

(26) The PRESIDENT (Translation from the Spanish): The report just submitted is open for discussion. If there is no objection, I will take it as approved.

(27) Approved.

REPORT OF THE ADMINISTRATIVE COMMISSION ON ITEM 9.3.1 OF THE REVISED AGENDA (document 8C/JUR/2) AND DISCUSSION THEREON

(28) The PRESIDENT (Translation from the Spanish): I call on the Rapporteur of the Administrative Commission.

(29) Mr. ERIKSSON (Sweden) (Rapporteur of the Administrative Commission): Mr. President, fellow delegates, this report covers only item 9.3.1 of the revised agenda, which concerns the structure of the Executive Board, and therefore also draft amendments to Article V of the Constitution and to the Rules of Procedure relating to the Executive Board. The matter in question was discussed at several meetings of the Administrative Commission and was also referred to the Legal Committee. As the decision of the Administrative Commission on the report of the Legal Committee could only be taken this morning, I am sorry to say that we have not been able to prepare a written report on the subject. I wish, however, to draw your attention to the second report of the Legal Committee, 8C/JUR/2. This document contains, from the second half of page 1, starting with the word Constitution, the text approved by the Administrative Commission for submission to this plenary meeting of the Conference. The only change made by the Administrative Commission is, in fact, in the French edition under A - Composition, paragraph 4, the last line, where the word portion has been changed to durée.

(30) The draft amendment to the Constitution, Article V, was passed by 45 votes for, 6 against, and no abstentions. The consequent amendments to the Rules of Procedure were passed unanimously. The Commission has also decided to request the Legal Committee to interpret the text in paragraph 3 of Article V, concerning the eligibility of members of the Executive Board.

(31) With this introduction I will read the text as it was adopted by the Administrative Commission. I start with the part concerning the Constitution, Article V, Executive Board.

"A - Composition

1. The Executive Board shall be elected by the General Conference from among the delegates appointed by the Member States and shall consist of twenty-two members, each of whom shall represent the government of the State of which he is a national. The President of the General Conference shall sit ex officio in an advisory capacity on the Executive Board.

2. . . . . .

3. . . . . .

4. In the event of the death or resignation of a member of the Executive Board, his replacement for the remainder of his term shall be appointed by the Executive Board on the nomination of the government of the State the former member represented. The government making the nomination and the Executive Board shall have regard to the factors set forth in paragraph 2 of this Article.

B.- Functions

12. Although the members of the Executive Board are representative of their respective governments, they shall exercise the powers delegated to them by the General Conference on behalf of the Conference as a whole.

C - Transitional Provisions

13. The term of office of the members of the Executive Board during the eighth session of the General Conference shall end at the close of the eighth session of the General Conference. At the eighth session of the General Conference, twenty-two members shall be elected to the Executive Board pursuant to the provisions of this Article, of whom one half shall retire at the close of the ninth session of the General Conference, the retiring members being chosen by the drawing of lots. Thereafter, eleven members shall be elected at each ordinary session of the General Conference.

Rules of Procedure

XVII. Election of members of the Executive Board

Rule 95 - Elections

1. At each of its ordinary sessions, the General Conference shall elect by secret ballot eleven members of the Executive Board.
2. Only a delegate nominated by the government of the State of which he is a national for election to the Executive Board may stand for election.
3. . . . . .

Rule 95, A - Transitional provision

The term of office of the members of the Executive Board during the eighth session of the General Conference shall end at the close of the eighth session of the General Conference. At the eighth session of the General Conference, twenty-two members shall be elected to the Executive Board pursuant to the provisions of Article V of the Constitution, of whom one half shall retire at the close of the ninth session of the General Conference, the retiring members being chosen by the drawing of lots. Thereafter, eleven members shall be elected at each ordinary session of the General Conference.

Rule 98 - Death or resignation of a member of the Executive Board

In the event of the death or resignation of a member of the Executive Board his replacement for the remainder of his term shall be appointed by the Executive Board on the nomination of the government of the State the former member represented. The government making the nomination and the Executive Board shall have regard to the factors set forth in Article V, A. 2 of the Constitution."

(32) The PRESIDENT (Translation from the Spanish): The report which has just been read is open for discussion. I call upon the delegate of Panama.

(33) Mr. AMADO BURGOS (Panama) (Translation from the Spanish): Mr. President, ladies and gentlemen, through absence, the Panamanian delegation was unable to take part in the debates of the Administrative Commission, and is grateful for being allowed this opportunity to express a few ideas on the resolution we are now considering.
(34) We do not come as censors: we have the highest respect for all the governments and delegations represented here. We regard the problem, not as a governmental or political, but as a cultural one, and we know that in all countries and delegations, irrespective of the way they vote, there are people who sincerely hold opposite views.
(35) There are some Unesco matters which appear to be of purely administrative importance. In fact, however, they have world-wide repercussions. They have, of course, no repercussions on the millions of men who still, unhappily, lead lives of spiritual and material impoverishment. Perhaps they have certain repercussions, in a distorted way, on those millions of citizens whose governments restrict their freedom of intercourse with the outside world; but assuredly they find an echo in the hearts of those other millions of men and women everywhere in the world, who are sustained by faith and hope; in those millions of intellectuals, professional men and research workers, who have hitherto been the strongest bastion of freedom of thought and action. And they have also found an echo in the most authoritative organs of the daily press, with their millions of readers, in the more serious publications, in institutes, academies, assemblies, higher education centres and universities all over the earth. Therefore the decisions taken on these matters are heavy with consequence. Sometimes, in the ever more arduous struggle against totalitarian excesses, whether from the left or the right, they bring fresh armament to bear; and at other times they depress and discourage the best forces of humanity, of that humanity which has demanded and is still demanding an International Declaration of Human Rights, and which has suffered and is still suffering unforeseen disappointments.
(36) I am no fanatic, neither am I prejudiced, but when I have the honour of speaking before this distinguished gathering, in which America's hopes and desires for freedom in its sublimest forms are centred, I feel bound to ask myself whether this is really the time or the place to approve an amendment which has been branded, in the Executive Board of Unesco, by one of the most eminent authorities in Europe, as retrograde. I wonder whether this session of the General Conference has not the right, perhaps even the duty, in the light of those eternal principles of free humanity, free investigation, free education, also to look upon those millions of men of whom I just spoke and to repeat before them the exemplary words of Artigas, which are sculptured in the marble of this Palace: "My authority comes from you and ceases in your sovereign presence".
(37) The delegation of Panama, a small country with big problems, supports the arguments which have led the representatives of Uruguay, Belgium, Denmark, France, Haiti, Switzerland and Yugoslavia to object to the transformation of the Executive

Board into a political body. To these arguments could be added those brought forward in Paris in November 1952. In alluding to them I have no intention of levelling the slightest reproach at the contrast between an opinion freely held at that time and the resolution which is being voted today. Neither the circumstances nor the arguments have changed, but as the representative of a government I know that I myself may be faced with a similar situation. I allude to them in order to say to the other delegations: read these arguments and then you will understand how governments, for reasons which are no doubt legitimate, but of immediate concern, can exert their influence to modify decisions on matters of permanent value. I should further like to reply to a statement which has been made more than once in these debates. It has been maintained that governments are inherently good. Governments may be a necessity, but frequent interventions by governments, constant political interventions in problems of education, science and culture, are as a general rule pernicious. To uphold the contrary view is tantamount to repudiating the best traditions of the universities and cultural centres of Europe and America.

(38) Hitherto governments have exercised, and they still exercise, three distinct forms of legitimate influence upon this Organization. They have exercised it by nominating the delegations to sessions of the General Conference, which in its turn directs the Organization. They have exercised it by restricting the election of members of the Executive Board to members of the delegations appointed by the governments themselves. Finally, they have exercised it by accrediting permanent representatives in Paris. This, apparently, is not enough. It is desired that even the men appointed to execute the decisions shall be subordinate to the demands of the policy of their respective governments. It is desired that every vestige of universality shall disappear, de facto if not de jure. The members of the Executive Board will change in accordance with changes of government. And this is called realism. It has been claimed that the members of the Board already act as government representatives. The delegation of Panama does not believe it. On 18 November 1952, Mr. Verniers, of Belgium, refuted this assertion. He said that for five years he had been a member of the Executive Board, that he had never asked for instructions from Brussels and that his Government had never permitted itself the slightest suggestion, even in cases where opinions and votes were not to its liking. This is the type of international civil servant whom it is our duty to train, to support and to protect, instead of abandoning and destroying him.

(39) The considerations which have led the Panamanian delegation to oppose the amendment to the structure of the Executive Board are based entirely on arguments of principle and arguments of experience, which I will briefly expound. The United Nations, without doubt, constitutes an international court; but this is not, and cannot be, its most important function, however much the great Powers have desired to proclaim it as such. Essentially the United Nations is the great act of faith of the twentieth century. Through its Specialized Agencies it is seeking, in matters of health, labour, food, education, science and culture, to provide a better life for man, who today is threatened, more seriously than by nuclear fission, by those aberrations of thought which, since the middle of the nineteenth century, have regarded him not as an end in himself, but as a means, an instrument or a cog in a wheel of immediate purpose, whether that of a business concern, or of a State and a government. It is urgent to prevent the further spread of this wrong-headedness; it is urgent to strip education of materialism, with its insistence on the useful, the mechanical, the immediate. If materialism continues to flourish, we shall arrive at the negation of all spiritual values; we shall witness the decline of our heritage, both aesthetic and moral, and the breeding of a mentality which is fertile ground for those political extremes repudiated by our civilizations. The intervention of governments in the Executive Board of Unesco seems to the delegation of Panama, on a long-term view, to be a disconcerting step in the wrong direction.

(40) The practical arguments are also numerous. They have already been expounded in masterly fashion by other delegates. I will only add that I have had an opportunity of learning from experience the disadvantages of transforming international civil servants into government representatives. For three years in Geneva I represented the Panamanian Merchant Fleet at the International Labour Organization. The Rules of Procedure of ILO did not require that members of the Governing Body should be representatives of governments, but, when some of them thought and spoke in that capacity, the objectivity of its decisions vanished. In the end I found it quicker and less difficult to refer matters to them through the Chanceries themselves or by some indirect channel. Such are the indecisions, complications, delays and superfluities resulting from the suppression or even the weakening of the function of international civil servants in organizations of this kind.

(41) When large nations try to stop smaller peoples from making tragic mistakes, it is customary for a cry to go up in some quarters about the need for realism. Realism is doubtless a healthy and a balanced attitude of mind, which may well be applied to things and facts; but it is out of place in the moral sphere, in the principles of right and in the demands of the spirit. We, the small nations, shall be realists if we understand that the Great Powers of the twentieth century must necessarily regard problems from angles considerably different from ours, if we acknowledge that they can steer the activities of Unesco at their own free weill, whenever they turn a deaf ear to the voices of distinguished men, both ours and theirs. They have on their side the importance of their financial contributions, their superior initiative, their own material greatness and strength. But the Great Powers will be realists in their turn if, instead of measuring the extent of their own reserves, they pay more attention to gauging the deep distrust felt by many peoples equally deserving respect for certain aspects of materialistic and utilitarian civilization. They will be realists if they understand that the demands of liberty and culture, as every people conceives and defends them, must not be confused with the

condescension of governments. Lastly, they will be realists if they reject or at the very least defer the plan to reduce Unesco to the level of other international institutions of a governmental nature; if they do not permit government authority to eclipse the assertions of culture.
(42) The universities and higher education centres have prospered only where governments have had no peg on which to hang their hats, nor have even left their visiting cards. Let us not forget this when we come to the vote.

(43) The PRESIDENT (Translation from the Spanish): I call upon the delegate of France.

(44) Mr. BERTHOIN (France) (Translation from the French): Mr. President, ladies and gentlemen, the significance of today's debate must appear to me decisive, and the force of my conviction be great indeed, if, at this stage, when the result already seems a foregone conclusion, I mount this rostrum to make known the views of France.
(45) But we should surely be misunderstood if we were silent at a moment when you are about to take a decision on a text which apparently marks a new departure, introducing a far-reaching innovation into one of the basic principles of the Charter that unites us.
(46) There is no need at this juncture to trace the background of the resolutions on which we have to vote, nor to recall in detail the exhaustive discussions that have taken place in our Administrative Commission. I shall do no more than crave your indulgence while I demonstrate, by means of a comparison that I should like to make as clear and concise as possible, the distinction between the present procedure and the one now proposed - a distinction which applies to the letter, if not to the spirit.
(47) What actually happens under the present system? And what may happen if there is disagreement between a member of the Executive Board and the government of his country? Let us assume that a delegate of a particular government - appointed, therefore, by his government - an outstanding personality of high culture and reputation is appointed a member of the Executive Board. From that moment he may be said to be outside the scope of national control. But, be it observed, he is outside it only for a temporary period, at most for four years. If his government ceases to nominate him as a delegate to our Conference, he is then de facto no longer eligible to serve on the Executive Board. Thus national control, national sanctions, can be completely and unreservedly exercised, should the occasion arise. So far, I imagine that everyone present must agree with what I am saying.
(48) But let us get away from our texts, from our legal procedure and interpretation, and let us look at the matter from the moral standpoint. Let us consider the duties of the man on whom his government has conferred the signal honour of nominating him to take his seat among us and who, ipso facto, being already unofficially proposed by his government, receives the additional honour, the major distinction of being called to sit on the Executive Board. It may be that this man finds himself in disagreement, during his term of office, with some new policy started in his own country. Or it may be that, for reasons of his own, he has turned his back on the general policy of his government, not of course - let me make this quite clear - within the normal framework of party politics, which are a credit to genuine democracies, but because he is fundamentally opposed to the régime itself. In that case I say that this man, if he does not want to lose his self-respect and the respect of his fellow men, if he simply wishes to be honest, must resign from the office which, directly or indirectly, he holds under the government of his country.
(49) Indeed, if we did not respect these rules of elementary morality, by what right could we claim to be elevating the conscience of mankind and pointing the way for the peoples of the world? Nevertheless, that would appear to be the danger that Unesco, by the amendment in question, is trying to provide against.
(50) Let us see, then, what will happen if you adopt the new text. What was hitherto done unofficially will henceforth be done in the broad light of day. A government will say: I propose that such and such a delegate shall represent me on the Board, with the approval of the General Conference. But there comes along a new government, which considers that it is not represented by the nominee of its predecessor, and asks him to resign. Suppose the representative refuses: what can the government do? Nothing, except take note of the refusal and wait until his term of office expires, that is to say, exactly what it would be obliged to do under the present system. Of course, there will now be a direct official link where previously there was only a moral link. Are we quite certain that, for us, the moral link would not prove the stronger and that what the authors and supporters of the amendment desire would be any better guarantee? In fact, we are given the first and the middle term of a syllogism, but not the conclusion; and the conclusion, as you all must feel, is the recall from office. Happily, however, it was formally stated in the Commission that recall is impossible. So much for the new security the proposed text offers our governments!
(51) But what a price we are going to pay for this new security! We are going to proclaim to the world, in the most solemn way we can, that we have no confidence in those distinguished men whom our Charter desired to make the permanent Board of our Organization. We are going to proclaim that, by becoming direct representatives of the governments appointing them, and only to a lesser degree the representatives of the others, the members of the Executive Board will no longer be free men. Unesco's policy will be settled outside Unesco by prior consultations, by the inevitable arrangements between governments. Doubtless the framework will be maintained and the façade preserved, but within or behind will be only what political expediency has decided to place there. Admittedly, generosity may still be there, but do we want to set up a form of international paternalism? Is that to be the inspiration of our acts and the guide to our conduct? I am thinking just now of certain small countries, small in territory or strength, but as great as the others in everything else -

countries which I shall have learned to know and to love through coming here. I am thinking of the atmosphere in which we now live, in this beautiful country, where all of us are learning to be citizens of the world. I am thinking of the manifold contacts we make each day. Among us there are, in reality, neither small nor great nations any more, there are only human beings with equal rights; here are neither rich nor poor, but all are rich - inexhaustibly rich - in trust and friendship; here there are neither believers nor infidels, but we are all devotees of a single faith which makes all our hearts beat as one. Even when the language barrier prevents us from exchanging our thoughts, when lips must remain silent, looks can speak, understand one another and bring about the deep communion of souls.

(52) Let us make the most of the time that is left, for the future that awaits us will no longer have the same inspiration nor the same atmosphere. Inevitably, the disappearance of that institutional independence to which members of the Executive Board may today lay claim, if necessary, vis-à-vis their respective governments, and which enables the governments themselves to resist any too pressing interventions that may be directed against them, will imperceptibly, perhaps very rapidly, cause Unesco to become a kind of closed shop in which assorted coalitions of satellites will ultimately be formed and will consequently oppose one another. Between today's and tomorrow's position there will be all the difference, illustrated in such masterly fashion by Bergson, between closed morality and open morality. Intellectual co-operation, the fount of understanding and conciliation, is threatened with penetration and domination by political considerations which it was hitherto our duty to ignore. Tomorrow we shall not even have the right to ignore them.

(53) And all this - I hope that I am wrong, but my fears are grave - all this may come upon us much more quickly than we think. In order to avoid difficulties, governments may feel obliged to send to the General Conference men selected not only for their intellectual distinction but also - let us be frank - for their natural docility. Astuteness and skill may be placed on the same footing as intrinsic worth. Political and financial considerations will soon outweigh the others. The vicious circle of cause and effect will inexorably drag us into a situation which each of us, in the depth of his heart, can only dread.

(54) You all know the traditional attitude of France and no one will be surprised if she asks you to weigh your decision very carefully. That decision will certainly be fraught with many consequences for the future of Unesco. At a time when so much advice has been lavished on my country counselling her to embark upon the path of what is called supra-nationalism - which is still the best path to the future - why, when timid attempts were made to introduce the supra-national idea into our Organization, is it now desired to suppress it?

(55) I need not add that, if the concept of universality were to suffer a setback as a result of your vote, France would in no way change her traditional attitude. She would only feel regret that into this temple of the mind a spirit had entered that seemed to her to run counter to her hopes for the future of the Organization and that here, where all that is best and noblest in the human mind is concentrated together, all that wealth of the spirit may one day be at the mercy of the temporal fluctuations and political contingencies to which our governments are inevitably subjected.

(56) Before I step down from this rostrum, where each of us has an obligation to speak with a freedom we do not always enjoy elsewhere - and we all know to what a great and noble people we owe that freedom - let me tell you about something that happened to me a short while ago.

(57) One evening, I opened at random an old book containing some of the finest pages of ancient story. It was one of those books whose yellowed leaves one turns with mingled humility and respect. My eyes fell upon a passage from a Philippic in which the greatest orator of all time addresses his fellow citizens. As usual, he spoke severely, he warned them against taking the line of least resistance, against losing their self-respect; he reminded them of the general moral principles whose untroubled sway endures throughout the centuries and the abandonment of which was to spell the doom of sacred Attica. And then, as if he felt that to carry his audience with him, he must speak from the very depths of his soul, Demosthenes cried: "Athenians, I should like to please you, but I had rather save you!"

(58) My friends, may that noble sentiment guide the vote we shall shortly take. Heaven send that, in departing from the straight and trustful path, we do not quench the pure flame of freedom and hope that men of goodwill have entrusted to our protection!

(59) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Switzerland.

(60) Mr. de SALIS (Switzerland) (Translation from the French): Mr. President, ladies and gentlemen, I ask your permission to explain the attitude of the Swiss delegation, which will shortly vote in favour of the status quo, that is to say against the amendment by the United States of America on the reform of the Executive Board.

(61) Our representative in the Administrative Commission has already explained, in the meeting of 16 November, why the Government of my country has instructed us to uphold the present system as regards the election and responsibilities of members of the Executive Board. I can therefore be brief.

(62) You know that our delegation to the General Conference has constantly defended the existing provisions of Unesco's Constitution. We are naturally sorry that a fairly high proportion of delegations from friendly countries do not share our views on this important question. But, after studying their arguments closely, we still do not feel able to change our point of view.

(63) First of all, we would emphasize that no express criticism has been levelled at the Executive Board in its present form. On the contrary, this Conference has paid tribute to its positive achievements. It is asserted, however, that we shall reinforce the authority of the Board and simplify its task if we decide that in future its members shall represent the government of the State of which they

are nationals, whereas hitherto they have been elected in a personal capacity and are responsible only to the General Conference.
(64) Has the Executive Board itself ever made any pronouncement on this question which directly concerns it? If it has, its views are not known to us. Although, in one way, such discretion is understandable, we consider that an essential element is thus lacking, if we are to arrive at a sound judgment of the situation. For we are about to take a vote, and still we do not know what the Executive Board thinks about this revision of the Constitution.
(65) I beg you to believe that the supporters of the status quo are not acting out of sheer obstinacy and have no thought of making an empty gesture when they warn the Conference against a decision which, in our view, violates the independence of the Executive Board. It is certainly not our intention to play the part of prophets of disaster. As good democrats we shall accept the majority decision. We shall join in the future work of the Organization in the same spirit we have always shown.
(66) But Switzerland has always defended the independence of international organizations vis-à-vis their Member States. It considers that the fewer political and governmental influences there are in the field of education, science and culture, the better. Democracy, as we understand it, is moreover closely akin to certain democratic practices in America and the British Commonwealth, in that it believes in the efficacy of the principles of self-government and responsible government, and has confidence in the men who freely assume the responsibilities of public office. If we are not in a position to support the proposed amendment submitted by the American delegation, the reason is that we would have liked to see the practice of responsible government upheld, as well as a certain individual liberty for members of the Executive Board. This seems to us to be a guarantee of the objectivity of the deliberations and decisions expected of the Executive Board.
(67) Furthermore, the more those decisions are characterized by the spirit of independence and by the desire for objectivity, the greater will be the confidence in Unesco displayed by educators, scientists and cultural representatives everywhere in the world, and the easier it will be for us to fulfil our task of spreading the gospel of international understanding and the brotherhood of man.
(68) Mr. President, perhaps the ascendancy of the sovereign State is a sign of the times. We could have desired that Unesco might still be able to sail for some time sheltered from the winds that blow from that direction, so as the better to gain the open sea.
(69) The New York Times, in an article dated from Montevideo, said a few days ago that our Organization "has to face an issue that may seriously change the Organization's character". This appraisal of our present situation seems to us correct. It would indeed appear probable that the decision this Conference is called upon to take by a two-thirds majority may seriously change the character of our Organization. This, then, is the very reason why the Swiss delegation has been anxious to explain its vote, in the course of a debate the freedom and frankness of which are infinitely valuable.
(70) Our country will remain faithful to the idea of Unesco and to Unesco itself. Even though its structure be modified, Unesco can count upon us as a faithful partner. So far as in us lies, we intend to co-operate fully in the work undertaken towards achieving the aims of this world organization.

(71) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Haiti.

(72) Mr. LALEAU (Haiti) (Translation from the French): Mr. President, ladies and gentlemen, I shall be brief. I wish merely to indicate the position of the Haitian delegation in regard to the United States proposal, as I have already done, by an unequivocal vote, in the Administrative Commission. We are resolutely against the amendment. We are convinced that this proposal, which turns members of the Executive Board, from being delegates of Unesco, into direct representatives of their governments, jeopardizes the independence of the Board and weakens the very foundations of the Organization.
(73) Unesco is an association, not of governments, but of the peoples of the world, developing under the aegis of education, science and culture, all of which transcend the boundaries of States. In this it is akin to the United Nations, from which it sprang; and the United Nations did not hesitate - and this was an innovation in international relations - to proclaim clearly in the first words of the San Francisco Charter that it constitutes, and intends to remain, a bond and a pact between men of goodwill in all the countries of the world, and not only between their leaders. "We the peoples of the United Nations", it is written.
(74) The fact is that governments succeed one another and are not always alike. It would not be at all surprising if the man who today represents one of them on the Board were tomorrow to see its successor withdraw from him that confidence which is essential to the loyal exercise of his functions. This would naturally lead to a conflict between that government and Unesco, which would be harmful not only to the prestige so vital to our Organization, but also to the faith which it must inspire in all who have enthusiastically adhered to it.
(75) I do not like being a prophet either, especially a prophet of disaster. My name is not Cassandra. But if my fears of today were to become tomorrow's reality, we should certainly not be glad at it. Sometimes it is very painful to be right. But perhaps we, the delegation of Haiti, would then be able to cry: "We are innocent of the blood of this just man ...".
(76) It costs us something, however, to oppose the resolution proposed by the United States delegation. In tragic circumstances, not more than a few weeks ago, the American Government and people flew to our aid with a spontaneity and generosity which stamped them as brothers rather than as mere good neighbours. But gratitude springs from the soul and does not mean subjugation of thought. We found it hard to restrain our feelings, but we managed to do so, and it is the promptings of our conscience that cause us to maintain in this plenary meeting the attitude we adopted in the Administrative Commission.
(77) Remember that what you are staking with

such apparent nonchalance is the very future of Unesco.

(78) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Italy.

(79) Mr. BADINI CONFALONIERI (Italy) (Translation from the French): I asked to speak only in order to explain my vote, since I do not want to prolong this discussion by repeating the arguments already put forward by the Italian delegation in support of the proposed amendment to the composition of the Executive Board.
(80) I am anxious, however, to throw a little more light on our attitude, since we have been told by certain friendly delegations that we are upholding State control against liberty of culture.
(81) Let it be clearly understood that we have in no way changed our point of view. We have been, we are today, and we shall be tomorrow in favour of free cultural expression. We are not making a choice today between individuals and the State. As things are now, if the General Conference wanted a certain eminent person in the sphere of science or culture, who was doing useful work for peace and human rights - in short, for the aims of Unesco - to become a member of the Executive Board, it could not do so unless that person had already been selected as a candidate by his government and unless he belonged to the delegation of some Member State.
(82) If this is to be regarded as a fault, it is to be ascribed to the original Constitution and not to this amendment. Nor shall we be called upon to vote in any sense for the Member States; it is not they who will be the direct holders of the offices concerned, in spite of what has been published in certain newspapers.
(83) As in the past, the General Conference must endeavour, to the best of its knowledge, to see that the Executive Board is composed of persons in the educational, scientific and cultural world who fittingly represent the various disciplines and cultures. It has been truly and accurately said that the beginning and end of the mandate held by members of the Executive Board remain unchanged.
(84) The change that we are supporting is above all intended to have an effect during the operation of that mandate, by strengthening the position of the Board in the exercise of its functions, which will be the same as before, and it will thus give the Director-General, in regard to the preparation and execution of the programme, some indications which may provide him with the firmer basis for which he has so often expressed a desire.
(85) In short, we are not trying to enable governments to give instructions beyond what they are, in fact, able to give today; our main interest - on the lines of the principle of government representation and its still more strongly implied commitment for Member States - is to co-operate in the work of Unesco.
(86) We even think that the members of the Executive Board cannot fail, in their new status, to have an increased influence on their governments.
(87) There is one further point I should like to emphasize: it is not because we have no confidence in the Executive Board or in the work it has accomplished that we have adopted our present attitude; far from it. We should certainly not wish to increase its influence, as we are doing, if that were the case, since we are persuaded that the amendment will not mean any change in the quality of the persons elected to the Board.
(88) Indeed, it is for these very reasons and as a tribute to the qualities of the retiring members of the Board, that we voted for the amendment submitted by Japan, to retain on the Board the ten members whose term does not expire until the next session.
(89) Since this motion did not obtain the required majority, we have supported in its turn the proposal put forward today, transitional provisions being necessary in any event. In any case, I should like to take this opportunity of renewing the expression of our gratitude to the retiring Board.
(90) We do not think the proposed amendment will bring about governmental control of Unesco to any greater degree than at present, because Unesco is in any event an organization of States; especially since, as I already said in the general debate, Italy desires to see a more lively co-operation between the free forces of culture, and this can be achieved in still larger measure if there is closer and more active co-operation between National Commissions. Those are the reasons why the Italian delegation will vote in favour of the amendment tabled by the Administrative Commission.

(91) The PRESIDENT (Translation from the Spanish): I call upon the delegate of the German Federal Republic.

(92) Mr. LOEFFLER (German Federal Republic) (Translation from the French): Mr. President, ladies and gentlemen, on behalf of the German delegation I should like to explain why we shall vote for the amendment. I will admit that no decision has caused us so much heart-burning as this. It involves a number of vitally important questions. Under the present system, paragraph 12 of Article V of the Unesco Constitution provides that the members of the Executive Board shall exercise the powers delegated to them by the General Conference on behalf of the Conference as a whole and not as representatives of their respective governments. Clearly the idea is to make them representatives of Unesco as such, that is to say, to provide a strong expression of the special juridical and sociological character of this world organization. Some have regarded this as an expression of the autonomy of the cultural life of the world united in Unesco; the recognition, in fact, of the principle that culture is not an instrument of political power or of the State, but that it must be free from all political and governmental commitments. It is, however, understood that this principle, which colours the entire philosophy of Unesco, is in no way modified by the amendment in question. The special experience we possess of the relations between culture and the State enables us to make that point.
(93) Secondly, we would insist that the amendment must not lead to any change in the qualifications demanded of persons nominated for the Executive Board. There must be no substitution of mere

government officials for personalities holding leading positions in the cultural life of their countries and of the world. The fact that also, according to the amendment, the election of members is to be the province of the General Conference, should be a guarantee of that.
(94) Consequently, the amendment, in our view, simply means making the governments jointly responsible with their nationals who, on their proposal, have been elected to the Executive Board. If the amendment is adopted, the Board will continue to be subordinate to the General Conference, and, in particular, when there is a conflict between an instruction given by the Conference and instruction received from a government, the former will have priority.
(95) To sum up, the amendment is simply the organizational expression of the fact that Unesco is an association of States, and that those States, by adhering to Unesco, have accepted the obligation to safeguard and protect the freedom of cultural life.

(96) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Denmark.

(97) Mr. NIELSEN (Denmark): Mr. President, fellow delegates; as I mount this rostrum, I realize that the vote we are about to take on this issue is probably decided beforehand, since most of the delegations will vote according to instructions from their government. To that extent all interventions in this debate may be in vain. However, as the proposal makes a radical change in the spirit of our Constitution, it is perhaps not quite useless that the views of those who do not agree with the United States proposals on this important issue shall be put before the meeting.
(98) In that respect, I fear that future meetings of the Executive Board, if this proposal is adopted, will be somewhat similar to the debate in which we are involved this afternoon. On important questions the members of the Board will arrive with definite briefings from their governments, and words spoken in the debate will be spoken in vain. It will only be on minor issues that members of the Board will be able to bring their own judgment to bear. The Board will - more or less - become an instrument of Foreign Ministries. This was certainly not the intention of the founders of Unesco. When we met in London in 1945, it was the expressed intention of the Conference - and it was specifically supported by the delegation of that country which now moves the change - that we should, as far as possible, keep Unesco outside day-to-day politics, and should entrust the conduct of affairs between Conferences to independent representatives of the cultures of the different areas of the world, who would at the same time represent the main fields of the mind which are Unesco's domain.
(99) What then has brought about the change of views? In the discussion which has been going on these days I have never heard any criticism levelled at the work done by the Board in these eight or nine years, a point which was stressed just now by the delegate of Switzerland. In all these years I have followed the work of the Board closely, although it is only in the last two years that I have gained inside experience as a member of the Board. With this experience I venture to say that some of the documents placed before this Conference by the Board, and to which some of the speakers have paid tribute, bear witness to the fact that the Board has not only dealt with current administrative detail, but has tried - without governmental instructions and without preconceived ideas - to do some amount of thinking on the fundamental problems of Unesco. It is my conviction that these discussions would hardly have been possible in this harmonious and open-minded way, if the members of the Board had had to check whether their views were agreeable to their governments.
(100) I feel convinced that the constituent Conference of 1945 wanted the Board to watch conscientiously over the vital interests of Unesco by not making it a governmental agency.
(101) I know full well that the proposal has changed at different stages. Its effects have to some degree been mitigated by providing that members are to be chosen from among delegates to the General Conference, a provision to which the honourable delegate of Italy has just referred. It may well be that this mitigation of the original proposal was decisive in changing the minds of delegations, but it should not conceal the spirit behind it.
(102) The authors of the proposal have pointed to the kind of persons that will be chosen as members even under the new regulations and, unless future experience shows the contrary, I anticipate, and I am glad to say so here, that the Conference will carry out that provision in the spirit in which it is intended. But I also realize that the double rôle which members are supposed to play as government representatives and at the same time spokesmen of the General Conference may lead to difficulties and conflict.
(103) The honourable delegate of Germany said a moment ago that, if there were a conflict between the intentions of the Conference and the intentions of the government of the State from which the member of the Board came, then the intention of the General Conference would prevail. I hope he is right, but I do not find at any point in the proposal put before us any guarantee of that. The proposal before us simply states that the member is the representative of his government and has at the same time to act on behalf of the Conference as a whole.
(104) Let me only mention one point in this respect. We prescribe regulations about how to proceed if a member of the Board dies or resigns. We are not told what will happen if a government which has a member on the Board should resign. I shall not embark on that; I put the question to you, ladies and gentlemen.
(105) In spite of all human shortcomings I still feel that Unesco would be best served by a team of 22 people who would act according to their own conscience and to the best of their judgment, bearing in mind at all times the interests of Unesco as a whole.

(106) The PRESIDENT (Translation from the Spanish): I call upon the delegate of the United States of America.

(107) Mr. KOTSCHNIG (United States of America): Mr. President, ladies and gentlemen: There is one point I should like to make clear first of all. The proposals now before this plenary meeting are not the proposals of the United States of America. They were originally the proposals of the delegations of four countries, the United Kingdom, Brazil, Australia and the United States of America. They have since become the proposals of the Administrative Commission of our Conference. They have become the proposals of 45 delegations which voted for this change this very morning.

(108) We are the first to recognize that the decision before us is a very important one. It deserves our most careful consideration, and I submit that the Administrative Commission gave these proposals the most careful consideration extending over a long series of meetings. We were not stampeded by bursts of oratory into the report which is now before us. No one was dragged into a decision against his better judgment by outside pressures on the part of any big States. I wish, at least in this our Organization, in Unesco, that we could get away from this notion of big and small. In the area of culture that difference, as we see it, does not exist. The size of a country, or its military or economic power, is no indication of its cultural achievements. It is those who talk about the big and the small who attempt to bring political considerations into our midst. My delegation as a delegation objects to that notion, in Unesco above all. No, there was no oratory there was no dragging in of anyone. What the Administrative Commission did was to consider most carefully what was best for our Organization - what was best for the future of Unesco - what was best for the advance of education, science and culture in the world.

(109) We started with a discussion of the reasons in favour of a change in the present arrangements. It was realized that the Executive Board is the very heart of Unesco. It is the one representative body that meets frequently; it is the only representative body that meets more than every second year. We recognized also that this Board has extremely heavy responsibilities in the administrative field, in the financial field and in the development of rules and regulations,without which no organization can function. All these are matters of primary interest to governments. We further recognized that this Board is frequently confronted with major political issues. It is the Board which recommends, for instance, to this General Conference which countries are eligible for membership. And, most important of all, we recognized that it is the responsibility of the Board in co-operation with the Director-General to carry out the programme which we meet every two years to define.

(110) Thus the Executive Board is at the very heart of our Organization. The fact that we now meet only every second year makes the Board all the more important. And we realized that no body composed of 20 or 22 or even 30 individuals could carry these heavy responsibilities without help - the help of experts, financial experts, programme experts and others. As long as the Board is composed of individuals serving in their own capacity, these expert services which governments can provide are not available to us.

(111) We recognized also that, if this change were made, if this Board should in future be composed of government representatives, it would gain in stability, the whole Organization would gain in stability. There would be more continuity in our work.

(112) Even at this Conference we have been struck by the fact that a good many decisions and recommendations of the Board did not find favour with this Conference. This is no criticism of the Board. What is important is that the Board, composed as it is at the present time, in no way commits governments, that there is very often a hiatus between the Board and this Conference, which is composed of governments; for after all we are an intergovernmental organization.

(113) That brings me to the last point, which I believe weighed very heavily with many of those who finally voted for this change in the Administrative Commission. If this change is made as we see it, it will increase the confidence of governments in the Organization. Or to put it differently, more constructively, it will increase the sense of responsibility of governments for this Organization. Let us be quite frank. At the present time, Unesco in many countries is a stepchild of their governments, they do not feel responsible for it. When it comes to the Food and Agriculture Organization or the International Labour Organization, or others, there is a keener sense of responsibility than governments show with regard to Unesco. We believe that, if the change is made as here suggested, that situation will change, that we shall get more enlightened support for the important work which Unesco is doing.

(114) At the same time, we are, of course, not unsympathetic to the apprehensions of those who feel that Unesco might become an intergovernmental organization where the dead hand of bureaucracy kills all creative impulses, kills the life of the spirit. It is for this very reason and in order to allay these fears that it is proposed to preserve paragraph 2 of Article V. I want to make it quite clear that that paragraph will remain in our Constitution. It means that the General Conference will continue to be bound by the Constitution to endeavour to include persons competent in the arts, the humanities, the sciences, education and the diffusion of ideas. We do not want just government officials to run this Board. We want to be quite sure that the men and women who serve on the Board, from here on, will continue to be outstanding men in their respective fields. And the Conference itself has it in its hands to guard over that, because it is not States that will be elected. The Conference will continue to elect individuals, and the Conference will be free to reject the candidate of any government who does not measure up to the high criteria which are set for membership of the Board. Finally, the amendment, as now proposed, also provides that the members of the Executive Board, while being representative of their respective governments, shall exercise the powers delegated to them by the General Conference on behalf of the Conference as a whole. They are responsible, not only to their respective governments, they are responsible to this Conference. They are entrusted

with carrying out the policies as set by the Conference every two years. It does seem to us that these are important safeguards and ought to allay the fears of those who still continue to be opposed to the change that is now before this Conference.

(115) A few words in conclusion. The one thing that struck my delegation, and I am sure it must have struck other delegations, is the implication that was quite clear in a good many of the speeches to which we have listened this afternoon; and that is that government in itself is evil, that government is hostile to the arts, hostile to education, opposed to the sciences and destructive of the spirit. Where, may I ask, would education be, where would science be, where would culture be today without governments? Should we have free and compulsory education in most parts of the world? Would it be possible, as it is in more and more countries, for a boy or girl to begin his education at the age of three or four in kindergarten and go through the whole educational system free up to the university, without governments? Of course not. And I am not talking of the developed countries alone. I have had the privilege to visit a great many of the so-called underdeveloped countries. I have seen the magnificent efforts which are being made there to build schools, to develop laboratories, to facilitate culture in every way, to give the people libraries, and it is being done in nine cases out of ten by governments. No, we cannot take the view that government is evil, that government is destructive of everything that we cherish.

(116) Several speeches this afternoon expressed the surprising notion that government and freedom are incompatible. To us who come from the democratic countries that notion is just incomprehensible. We just do not understand what is meant by it, for democratic government, as we understand it, has the supreme task of safeguarding the freedom of the individual, of making it possible for the individual to grow to his full stature. Naturally, government is not only responsible for scientists and educators and other cultural leaders, governments represent all the people; but then Unesco is an organization of all the people. Unless we are able to help meet the educational and cultural aspirations of everyone in our various countries, high or low, educated or uneducated, we shall fail in our task. In order to succeed, we need more, much more, support from governments than we have had in the past. We believe that such support will be forthcoming if the amendment before us is carried, and it is in that hope we trust that the amendment will meet with the favour of this Conference. In this way we shall really be better able to respond to the hopes of all the people who aspire to freedom, to educational and cultural achievement, who aspire to peace.

(117) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Lebanon.

(118) Mgr MAROUN (Lebanon) (Translation from the French): The attitude of the Lebanese delegation to the amendments of the Unesco Constitution has not changed since the last session of the General Conference. During the discussion in the Administrative Commission, the Lebanese delegation, by putting repeated questions to the Chairman of the Commission and the representative of the Director-General, tried to obtain some clarification of obscure points in the amendment proposed by the United States of America.

(119) We find that in the document submitted to us by the Legal Committee today, the same obscurities persist. They are to be found in the following paragraph: "The Committee noted that none of the draft provisions submitted to it was at variance or in conflict with the Constitution or the Rules of Procedure of the General Conference".

(120) Twice we put this question to the Legal Committee and the Administrative Commission. The members of the Executive Board, it is said, shall represent the General Conference, but shall exercise their functions on instructions given by their governments. Twice, therefore, we asked the question: how can the exercise of an essentially international function be reconciled with submission to instructions given by particular governments?

(121) As you know, the Organization, during the interval between sessions, is governed by its two organs, the Secretariat and the Executive Board. You recognize the immunity of the Secretariat, because it is exercising an international function, and its staff members are independent of their governments.

(122) But does the second organ, the Executive Board, which is entrusted with supervising the work of the Secretariat and of ensuring the operation of the Organization during the interval between sessions, also exercise an international function? If so, how can the exercise of that function be reconciled with stipulations and instructions given by particular governments? Again, at the bottom of the page, paragraph 4, we read: "In the event of the death or resignation of a member of the Executive Board, his replacement for the remainder of his term shall be appointed by the Executive Board on the nomination of the government of the State the former member represented". If the government of which the former member was a representative is already out of office, what happens? If the government has changed, whom will the new member of the Executive Board represent?

(123) Thus, there are obscurities in the text submitted to us by the Legal Committee and ambiguities in the report of the Administrative Commission. That is why the Lebanese delegation abstained from voting in the Commission. Today we have our backs to the wall. We are now dealing with a final text. The obscurities and ambiguities remain, and the Lebanese delegation must therefore vote against this text.

(124) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Uruguay.

(125) Dr. CARBAJAL VICTORICA (Uruguay) (Translation from the Spanish): Mr. President, ladies and gentlemen, Uruguay has explained why it must oppose the amendment originally tabled by the United States of America and since supported by Australia, the United Kingdom and Brazil. I am a believer in persuasion and not in mere repetition. I shall not repeat the speech I made in the Administrative Commission, but should like to summarize

the grounds on which our attitude is based.
(126) Let me say in all sincerity that we have the greatest respect for the nation that has proposed this reform and for the delegations, or perhaps I should rather say many of the delegations, that support it, representing, as they do, peoples admired by Uruguay for their legitimate historical pre-eminence, for their defence of human freedom against totalitarianism, and for their contribution to civilization and culture. To all these countries Uruguay owes a debt of gratitude and special solidarity, because they are honourably fulfilling the aims of Unesco.
(127) Our attitude is the result of mature reflection, of the certainty in our minds that the proposed amendment is a mistake which may have fateful consequences. We fully understand the contrary viewpoint; our action does not spring from the vanity of mentors, nor is our position childishly censorious. It would be a grave injustice to claim that the supporters of the reform are trying to debase Unesco's aims. But, though we are sure that it is not so, we cannot rid our minds of the certainty that the amendment is a mistake.
(128) We know the reasons for it; we have heard the arguments in favour of the reform: we are all aware it may be said that the governments intervene in Unesco because they nominate the delegates, because they consult with their permanent representatives, because it is the General Conference, with its government delegations, which draws up the programme and fixes the budget. Moreover, we all know what is meant by political authority, which does what it can and must, and at times exerts its influence to do certain things not in conformity with normal juridical precepts.
(129) Faced with this fact, you will say to us: if governments are already exerting their influence in this way, why do you not agree to this amendment, which merely regularizes an existing situation, makes us recognize things as they are and puts an end to a comedy that talks about stimulating the social factors affecting education and culture, whereas we all know that Unesco is pervaded by governmental action.
(130) Such unwillingness to think the matter out, when faced with definite facts, is not realistic and will not bear good fruit in influencing the behaviour of mankind. Laws are not made by giving way to human conduct; laws are not a chronicle, they are a plan inspired by ideals, encouraging men to do their duty, but not forcing them to behave in accordance with the general line of conduct. In Unesco those defects are predominant, and our duty should be to eliminate them. But in my opinion they will not be eliminated, they will become more pronounced, by increasing governmental action. Our aim should be to effect a reform which opens wide the doors of Unesco to education, science and culture, the offspring of social spontaneity, so that Unesco may forge an international public opinion capable of overcoming all political excesses.
(131) If we need a conference of governments, we already have the United Nations, and experience teaches us that infallibility is not always the guiding light of government delegates, nor are governments themselves always a guarantee of efficiency.
(132) We want this Organization to use education, science and culture as watchwords for the world, so that all peoples may be governed democratically, so that there may be universal protection of human rights and national self-determination, transfused with strong and virile sentiments and enlightened thought. Thus tyrannies may cease, surviving only as a terrible memory of a tragic period.
(133) Unesco can accomplish this aim because it is a body where the free thought of all peoples can meet. I do not think this aim can be achieved by increasing the influence of governmental delegates. I know that Unesco is not a totalitarian court of law, but neither can it be a hospitable home for the accomplices of totalitarianism.
(134) Government delegates, in their new status of semi-ambassadors, will dissipate their energies and efforts in the suavities demanded by protocol and in a mutual exchange of compliments. But there is a reverse side to the picture: the peoples will still be subjected to political terror, and they will look at us amazed, in a kind of stupor, when we offer them, as a sort of intellectual entertainment, these academic theses promising a better world, whilst they on their side are divided and follow temporary occupations in the armed camps imposed upon them by a world that is always on the verge of the tragedy of war in the atmosphere of cold fear so well described by the delegate of India. But our hopes go much further. The United States delegate said it is not true that authority is always a terrible instrument; he added that in the democracies there is identity, or perhaps it would be better to say close relationship, between people, nation and system of government. But the democracies have learned their creed by distinguishing between man, society and the instruments of authority. And we, under a democratic State, living fully as democrats, desire to see self-governing schools, self-governing universities, independent of the political power. Our eminent thinker, that great teacher Vaz Ferreira, once said: "A university under political direction is such a disgrace that I would prefer to have no university at all".
(135) That is the spirit we want to see in Unesco. It does not matter to us that the governments appoint delegates and maintain permanent representatives. Our desire is to see a proper relationship established between education, science and culture, as the free expression of thought, untrammelled by any governmental pressure. In this spirit, and with no wish to anger anyone, we have come here to Unesco and defended the attitude of Uruguay.
(136) We want to see peace between the peoples. I share the hope of those who believe it to be a good augury that here, in the Commissions and sessions of the General Conference of Unesco, we are united in what I shall call brotherly conclave; we support the view that man, the people as a collection of individual human beings, affirm by their political organization a constant urge to evolve and to abide by certain principles, and that the authorities cannot be the exclusive centre of invention and the creative impulse.
(137) We meet in brotherly conclave with those who contend that an essential condition for

establishing justice among men is the dictatorship of class or party, and who affirm that the State is the sole fount of social life, saying that education, science and culture must never be divorced from authority as the generator of minds, as the means of imposing a political creed.

(138) I accept the idea of a conclave and I believe that it may be very useful; but we shall the better exchange impressions, discuss and examine our conduct and indulge in mutual criticism - which is very salutary - if here in Unesco we do not act so much as governmental delegates, if we do not balk Unesco's work by the vain compliments of protocol - and if we all remember what we ourselves have learned since the colonial days under Spanish rule - the wise maxim: the State is as much bound by the law as any individual.

(139) Let us strive for world peace without forgetting the edict of Unesco that it is a duty for all States to join the Organization. Unesco does not affirm the principle of autocracy: it states that the peoples must strive to assert the principle of democracy. Unesco does not say that the ideas of the government must be imposed upon the people by force; but it does say that Unesco, by means of education, will enhance the dignity of man and will watch over the liberty of the peoples.

(140) What we desire is the union of the world on the basis of this creed. There we have the foundations of a coherent ideological bloc. It is not by opposing one dictatorship to other dictatorships that we shall, by some miracle, bring into being a democracy which is the protector of human dignity.

(141) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Colombia.

(142) Mr. BERNAL JIMENEZ (Colombia) (Translation from the Spanish): Mr. President, ladies and gentlemen, it was not my intention to intervene in this debate. I had already put forward a few brief considerations in the Administrative Commission, which studied this problem exhaustively. But in fact, the procession of eloquent speakers, the emphasis, the oratory that has flowed from this rostrum gave me a feeling that if some of us, after careful reflection and considerable mental effort, had agreed that the formula suggested was a prudent and sensible one, we may perhaps have made an irreparable mistake.

(143) But I must frankly confess that the whole course of the debate, the arguments put forward by men of such eminence, by first-class minds, by distinguished professors, like the speaker who has just resumed his seat, and by members of parliament and other public figures, have simply brought us back, after all this deliberation, to my starting point. What are you after? What does the formula approved by the great majority - two-thirds - of the Administrative Commission really set out to do? Is it to strike a final blow at this Organization we have all loved from its foundation? Is it to direct it along tortuous paths which will finally land it in the slough of despond? I do not believe it.

(144) This formula springs from a lively concern for the very future of Unesco. It originated with nations who have been fighting for the concepts so often mentioned in the course of this debate: freedom and democracy. How could it possibly be imagined that distinguished peoples who gave their high patronage to this Organization in its early days, should be waiting around the corner to deal it a treacherous blow? The idea is preposterous. What, then, is the amendment aiming at? At something very natural, logical and rational: it is aiming at co-operation and harmony; it does not want Unesco to be a loose unilateral organization following a chance road in search of its own destiny, without the support of those who could support it, and detached from those institutions called governments. What hard things have been said about governments! Why, this afternoon, has authority been arraigned at the bar of this Organization? Is not government, is not authority the climax of a long series of historical endeavours to prevent the peoples from being plunged into disorder and anarchy? Does not government precisely represent the culmination of that prolonged effort to construct the modern legal order?

(145) How can we talk of strengthening Unesco if we do not seek a method of co-operation between State authority and the free action of the peoples? That, and nothing else, is the purpose of the amendment.

(146) Perhaps some of you have been imagining that Unesco would one day be converted into a sort of international Ministry of Education to replace and supersede the work of governments and education authorities. The representative of the United States of America brought out this point very astutely when he asked where an organization would be in that event. He is right, and any motion to the following effect will be supported by my delegation: that in this Organization the highest values of the spirit must be congregated; that the representatives of free and autonomous cultural organizations from all over the world must assemble here; that for this reason we have other institutions within the Organization, such as the international non-governmental organizations with consultative status, which constitute a legion within the Unesco camp.

(147) But why, at the same time as we increase the action of those special autonomous organizations along these universal lines, do we not also try to strike a balance as regards the support of governments?

(148) Those of us who have followed the activities and efforts of Unesco have noticed how in recent years - and we have a most up-to-date example of this - it would be fatal to the aims of the Organization if there were a complete separation between government support and the aims of Unesco.

(149) But does the representation of governments run counter to the free democratic character of the Organization? Are not governments the authentic representatives of the will of their peoples - at any rate in most cases and in the majority of the delegations here present?

(150) It has also been argued that the new system may lower the intellectual level of the Executive Board. I would ask you this: if at this moment, or tomorrow, by approving this amendment, we proceed to elect the Executive Board, who are the

candidates going to be? They will be chosen from among yourselves. You are the leaders of world culture; you represent, or at least we must presume that you represent, the cultural currents of your respective peoples.
(151) The Board, then, will be elected from the delegates to this Conference; and this process is to be continued in the future. Why, then, should the Executive Board lose in intellectual quality? I cannot understand the reasoning of some of the delegates who have spoken from this rostrum, such as my distinguished friend Mgr Maroun, who said that the Executive Board will have an international function that cannot be exercised by members representing governments. Such an argument would also apply to the other international bodies composed of representatives of governments. Does the fact that a body is composed of government spokesmen mean that it cannot possibly exercise an international function? I, for one, do not believe it.
(152) The course of this debate has actually given greater peace of mind to those of us who support the motion. We have defended it entirely of our own free will, because, just as we support this amendment now under discussion, on which we are going to vote this afternoon, so also, as far as my delegation is concerned, we have been and perhaps still are in disagreement on many other points with the originators of this motion. With the same freedom and independence that we say no to proposals of similar origin but different content, we shall vote for the present amendment.
(153) I believe that in so doing we can set our minds at rest. This is a compromise between autonomy, which is the special strength of associations functioning in any country, and the necessary support of governments. It is a harmonious and balanced solution, and it alone will guarantee the future progress of the Organization.

(154) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Belgium.

(155) Baron van der STRATEN WAILLET (Belgium) (Translation from the French): Mr. President, ladies and gentlemen, William the Silent, at a critical period of his life, said that it was not necessary to hope in order to act, nor to succeed in order to persevere. The advocates of the status quo in the organization of the Executive Board have not so far succeeded, but they are persevering and they keep on hoping.
(156) I wish merely to explain why Belgium intends to vote for the status quo, in the hope that our conviction will sweep the remaining waverers into our camp. I shall not therefore repeat the arguments already put forward at some length by the Belgian delegate in the Administrative Commission.
(157) The Belgian Government considers that it is of prime importance for international understanding and the consolidation of peace that Unesco should preserve much greater independence vis-à-vis the Member States than does any other international organization. The tributes paid to Mr. Verniers, who was for a long time a member of the Executive Board, enable me to say that Belgium has special experience of the Board and that her traditional freedom of thought gives her a very special reason for intervening in this debate.
(158) We believe that if a better world is to be built it is of tremendous importance that there should be constant and trustful co-operation between governments and the men who devote their lives to science, education and culture.
(159) Doubtless, as has been said here, the support of governments is indispensable in all three fields. No one dreams of disputing this, but we live in a time when, all over the world, free men are striving, often at the risk of their lives, to defend the independence of those moral forces which are the true greatness of nations, against the efforts of many governments to enslave the mind. These men are trying to induce the peoples to clasp hands across the frontiers, despite the political differences which divide their governments. At such a time it would be paradoxical if, at the instance of those Member States which most loudly proclaim their devotion to liberty, we were to amend our Charter in a direction which, whatever one may say, threatens to turn the Executive Board into a battlefield where national doctrines will confront one another, instead of making it a sanctuary where, sheltered from political passion and pressure, scientists, educators and artists from all over the world can collaborate. Not only would such a decision considerably strengthen the number of sceptics and the arguments of our detractors, but it might also destroy the faith and enthusiasm of Unesco's most ardent defenders. In the hope of improving our material organization we are in danger of stifling the very spirit which Unesco is intended to defend.

(160) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Yugoslavia.

(161) Mr. VLAHOVIC (Yugoslavia) (Translation from the Spanish): Mr. President, ladies and gentlemen, I only wish in a few words to explain the vote of the Yugoslav delegation, for our delegate has already explained our viewpoint in the Administrative Commission.
(162) We agree with those delegations which consider that it is not necessary to revise the Constitution. We are led to take this view for the same reasons as the other delegations who have expressed themselves against the amendment and we have no desire to repeat the same arguments.
(163) I should simply like to add two things. The delegation of Yugoslavia has special reasons for voting against, because in my country a constitutional reform is in progress, as a result of which the State will have an ever decreasing influence on certain aspects of life and work. In this respect a beginning has been made with culture, science and education.
(164) In these fields a wide degree of decentralization is being effected, and we have at present no central body in the Federation, no central ministry for problems of education, science and culture. Educational, scientific and cultural work has become completely self-governing, and there are special organizations, associations and other bodies which enjoy complete independence, being governed and

administered by themselves without any State intervention.
(165) Moreover, two currents are to be observed in the present-day life of States: one favours the development of State power in political, cultural and economic life; the other encourages the participation of the citizens, that is to say of society, in political, cultural and economic life. The Yugoslav delegation considers that Unesco should support the latter current.
(166) For these reasons the Yugoslav delegation will vote against the alteration of the Constitution, but it will also respect the vote of the majority of the General Conference, and in the future, as in the past, will give full support to Unesco to assist it in carrying out its obligations.

(167) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Japan.

(168) Mr. HAGUIWARA (Japan) (Translation from the French): Mr. President, ladies and gentlemen, since the sixth session of the General Conference the Japanese delegation has always supported the idea of altering the composition of the Executive Board, or rather of altering the status of its members. It did not take this view because it thought the Executive Board ineffective or of inadequate composition, but because it believed that more responsible decisions, in greater conformity with the wishes of Member States and of the General Conference, could be taken by the Executive Board if its members could request instructions from their governments on certain matters.
(169) My Government not only supported the original proposal of the Governments of Brazil, Australia, the United States of America and the United Kingdom, but also, in the desire to arrive at as perfect an arrangement as possible, submitted, in accordance with the terms of the Constitution, a motion to modify the original amendment on two points.
(170) The first point made in our proposal was to increase the number of members of the Executive Board from 20 to 22. This, to our great satisfaction, was accepted by the Administrative Commission, and it is now embodied in the text before you.
(171) By adopting the proposed amendment we shall have a Board of 22 members. This increase in the size of the Board is justified by the increase in the total number of Member States. During the discussion in the Administrative Commission opinions were expressed in favour of raising the figure to 24. That, however, was impossible because no formal motion had been tabled in conformity with the provisions of the Constitution and Rules of Procedure. It will be for the next session of the General Conference to consider whether the number of members could be further increased. But I am happy to note that at least our proposal for 22 members has been included in the present amendment.
(172) The second part of our proposal dealt with the transitional provisions, which would allow the present members of the Executive Board whose term has not yet expired to retain their seats in certain conditions, in the new capacity of government representatives, thus preserving continuity in the Board. In the Administrative Commission this motion, although it received the assent of a fairly large majority, was nevertheless not adopted because it was not approved by a two-thirds majority. In this connexion I feel bound to cast certain doubts on the procedure adopted by the Commission. I consider that, to enable the Commission to work out a better text, the choice between two texts should be voted by simple majority, the two-thirds majority rule being applied only when the text as a whole is under consideration. I say this because I feel that the procedure is worthy of more detailed study for future cases when constitutional amendments are presented.
(173) I am sorry that the second part of our proposal was not accepted by the Administrative Commission, but the Japanese delegation has no intention of reverting to this question at a plenary meeting and will vote for the text as it stands. Moreover, the object of the Japanese proposal on the transitional provisions will partly be met through the interpretation given to paragraph 3 of Article V. As the Rapporteur of the Administrative Commission has mentioned, I hope that the interpretation of this doubtful point will be considered first by the Legal Committee and then by the Administrative Commission, and possibly by the General Conference before the close of the present session.

(174) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Laos.

(175) Princess SOUVANNA PHOUMA (Laos): Mr. President, ladies and gentlemen, I am sure that many of the delegations must share the distress I feel myself. Now that we are about to decide between two different schools of thought, we cannot but regret that the large countries so categorically ranged in opposite camps have not been able, during the period of over two years since this question was first broached, to find some common ground in order to avoid the split with which we are faced today.
(176) Many small nations like the one I have the honour to represent are faced with a trial of conscience and are, I venture to say, hesitating about the decision they are asked to take. They are well aware of the risk they may run when the members of the Executive Board no longer represent all the nations, but primarily, and in the end exclusively, the countries of which they are the direct representatives.
(177) A great scholar from a small country has very little chance of ever being a member of the Executive Board in its new form, which in practice gives the Board a political complexion, whereas under the procedure still in force he may be chosen simply on account of his personal distinction.
(178) We would ask the large countries to spare us the necessity of making a choice, to give some thought to the way this painful problem affects us, to take fresh counsel together and - since there is really no desperate urgency - to agree, as a magnanimous gesture, to defer the decision to the General Conference two years hence. We would ask them to submit to that Conference a text which would be likely to receive a unanimous vote - for such, surely, is their real duty - and you may perhaps feel that a very small nation, whose soul is as great as that of the others, might fittingly submit such a proposal to the Conference.

(179) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Switzerland, on a point of order.

(180) Mr. BOURGEOIS (Switzerland) (Translation from the French): On behalf of the Swiss delegation I have the honour to second the motion submitted by the representative of Laos.

(181) The PRESIDENT (Translation from the Spanish): In accordance with the Rules of Procedure, the motion submitted by the delegate of Laos, seconded by the delegate of Switzerland, has priority. Two speakers are permitted, one for and the other against the motion. I call upon the delegate of the United States of America to speak on the motion.

(182) Mr. KOTSCHNIG (United States of America): My delegation is opposed to this motion of adjournment. We have every sympathy with the difficulties, not only of small, but of big countries. We also have our scruples of conscience, but we thought them out, over the last four years, for this motion for a change in the structure of the Executive Board was first put forward in 1951. We have discussed it already at two General Conferences and it took up a great deal of time at both. We believe that every argument for or against has been brought forward and we have listened carefully both to the pros and to the cons. We know what the elements in the situation are and we feel that the time of choice, the time of decision, has come. It will not serve the interests of this great Organization if in Conference after Conference we come back to the same issues. The time to decide is now, and for this reason we are opposed, and strongly opposed, to the motion by the distinguished representative of Laos.

(183) The PRESIDENT (Translation from the Spanish): I call on the delegate of Belgium.

(184) Mr. BAUGNIET (Belgium) (Translation from the French): Mr. President and fellow delegates, you are aware of the attitude which our country has adopted to the problem now under consideration. We support the motion submitted here by the delegate of Laos. We consider, indeed, that so vital a question, which will have such far-reaching effects on the structure of our Organization and may well jeopardize its very principles, merits further reflection. I am convinced that an appeal for more time to consider this problem will not fall on deaf ears.
(185) It was also said a few minutes ago by the delegate of Lebanon that in the texts submitted to you there were some provisions which threatened to produce disputes in an Executive Board composed in the manner suggested. I therefore think that it would be wise to reflect still longer upon this amendment and to postpone any amendment to our Charter until one of the next General Conferences, when the powers which stood sponsor at the birth of this Organization will have had more time to study the proposed insertion. This all too short Conference has given us insufficient opportunity for such reflection. I therefore confidently ask you to support the motion just submitted by the delegate of Laos.

(186) The PRESIDENT (Translation from the Spanish): In accordance with the Rules of Procedure, the debate on the motion by the delegate of Laos is closed. If no delegates object, the vote on the motion to adjourn the matter under discussion will be taken by roll-call. I call upon the delegate of Switzerland.

(187) Mr. BOURGEOIS (Switzerland) (Translation from the French): I am very sorry, Mr. President, ladies and gentlemen, that I must suddenly appear as a stickler for legality, but our Rules of Procedure, in Rule 83, state that "normal voting shall be by a show of hands or by standing".
(188) The word normal is interpreted by the Swiss delegation, naturally enough I think, as follows: that it rests with this Assembly, the sovereign Plenary Assembly, to decide upon some other method of voting, at its discretion. On behalf of the Swiss delegation I have the honour to propose that the vote on the motion now before you be taken by secret ballot.

(189) The PRESIDENT (Translation from the Spanish): The proposal submitted by the delegate of Switzerland is before the Conference. The question is: that the vote on the motion to adjourn the matter under discussion be taken by secret ballot.
(190) For the information of delegates in regard to the matter raised by the delegate of Switzerland, I will read the text of Rule 87.

"Secret ballot

1. The election of the Director-General and members of the Executive Board shall be by secret ballot, as set forth in Rules 95 and 100.
2. All other elections and decisions relating to individuals shall be voted on by secret ballot whenever five or more members shall so request or if the President so decides."

(191) The Chair rules that the motion by the delegate of Laos now under discussion does not fall within the above provisions. If the Conference is of a contrary opinion, I hope that it will express its views. In view of the Rule which has just been read out, I must insist on the procedure already proposed, namely that voting shall be by roll-call.

(192) The vote was taken by roll-call.

Voted for: Belgium, Denmark, France, Haiti, India, Laos, Lebanon, Liberia, Panama, Switzerland, Syria, Uruguay, Yugoslavia.
Voted against: Argentina, Australia, Austria, Brazil, Burma (Union of), Cambodia, Canada, Ceylon, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Egypt, German Federal Republic, Greece, Guatemala, Honduras, Indonesia, Iraq, Israel, Italy, Japan, Jordan (Hashemite Kingdom of), Korea, Libya, Netherlands, New Zealand, Nicaragua, Norway, Pakistan, Philippines, Salvador, Saudi-Arabia, Spain, Sweden, Turkey, Union of South Africa,

United Kingdom, United States of America, Viet-Nam.

Abstentions: Monaco, Mexico, Thailand, Byelorussian Soviet Socialist Republic, Ukrainian Soviet Socialist Republic, Union of Soviet Socialist Republics.

Absent: Afghanistan, Ecuador, Luxembourg, Nepal, Peru, Venezuela.

(193) The PRESIDENT (Translation from the Spanish): The result of the voting is as follows: 13 votes in favour; 41 votes against; abstentions 6; absent 6. The motion is accordingly rejected and the debate on the substantive motion will continue. I call upon the delegate of Egypt.

(194) Mr. AWAD (Egypt): I do not intend to take up much of the Conference's time at this late hour and I certainly shall not emulate the oratory and eloquence to which we have been exposed this afternoon. I can only describe what I have witnessed here today as a storm in a teacup. Never in the history of Unesco as an organization has a matter that has been thrashed out so thoroughly in the Commission taken up so much time of the General Conference. I am very glad to speak as an old associate of this Organization, as one who has always represented his country and his government year after year, no matter how the government and its politics have changed. Governments are not as stupid as they have been represented this afternoon. I can see among my colleagues here delegates who have been my colleagues for the last eight years, delegates from Denmark, from Sweden, from Norway and from Lebanon. From the very beginning they have always been there, although their governments have changed, their parties have changed. In Lebanon there has even been a revolution, yet the same delegate enjoys the confidence of his government. This is as it should be. The delegate of Lebanon should always enjoy the confidence of his government, no matter what government, what party, what revolution may come, because he is a good Unesco man. It is a good thing that a delegate should always enjoy the confidence of his government. What good is a member of the Executive Board, to the Executive Board and to Unesco and to his government, if he has lost the confidence of his government?

(195) Honourable delegates, let us refrain from representing governments as one camp and the Executive Board as another camp. We are an international and an intergovernmental organization. If we enjoy the confidence of our government, it will help us to promote the cause of Unesco, to collaborate more closely in its work and to induce our governments to behave as Unesco wants them to behave. We have all read in the report of the Director-General a very pregnant sentence, that, from now onwards, the future of Unesco will be concerned with work done in the individual countries and not carried out at Headquarters in Paris. This passage has caught my attention and the admiration of my colleagues and, if the future work of Unesco lies in the individual countries, how could you possibly carry out such work if you are going to put the government of those countries out of sympathy with Unesco?

(196) I therefore hope that all delegates present will vote for the amendment and, seeing that we are in such an enormous majority, let us do so unanimously. After all, what is proposed to us is nothing very new: a simple formality to strengthen the hands of the Executive Board and to make it a more useful and practical and effective instrument for promoting the work of Unesco.

(197) The PRESIDENT (Translation from the Spanish): I call upon the delegate of the United Kingdom.

(198) Sir Kenneth GRUBB (United Kingdom) (Translation from the Spanish): Mr. President, ladies and gentlemen, the United Kingdom has long been in favour of the motion adopted by a large majority in the Administrative Commission. I, like the delegate of Egypt, appreciated the eloquence with which the opposing viewpoint was presented. But in all these brilliant speeches from the lips of highly distinguished orators I have not heard a single new argument which had not already been considered at length in the Administrative Commission.

(199) The United Kingdom delegation does not take the view that the proposal of the Administrative Commission will radically change the character of the Organization. On the contrary, it should strengthen the Organization through the continuous confidence and full support of the governments. We of the United Kingdom delegation do not anticipate any revolutionary changes, but we do anticipate that the General Conference will have at its disposal a more effective instrument with which to carry out its plans.

(200) The United Kingdom delegation believes that in this way we shall invest the Organization with added authority and influence. We do not believe that the Executive Board will become a political body, but that in the widest possible way, and in view of the high qualities of its present members, it will be placed in a better position to carry out the wishes of its superior body, the General Conference.

(201) The PRESIDENT (Translation from the Spanish): The debate is closed. Delegates are reminded that by virtue of Rule 81, section (b), of the Rules of Procedure, approval of the amendment requires a two-thirds majority of the members present and voting.

(202) If no delegation requests a vote on each paragraph separately, the Chair proposes that the vote be taken jointly on all the paragraphs of the amendment, and that in view of the nature of the subject, voting shall be by roll-call.

(203) The vote was taken by roll-call.

Voted for: Argentina, Australia, Austria, Brazil, Burma (Union of), Cambodia, Canada, Ceylon, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Egypt, German Federal Republic, Greece, Guatemala, Honduras, Indonesia, Iran, Iraq, Israel, Italy, Japan, Jordan (Hashemite Kingdom of), Korea, Liberia, Libya, Mexico, Netherlands, New Zealand, Nicaragua,

Norway, Pakistan, Philippines, Salvador, Saudi-Arabia, Spain, Sweden, Syria, Thailand, Turkey, Union of South Africa, Byelorussian Soviet Socialist Republic, Ukrainian Soviet Socialist Republic, Union of Soviet Socialist Republics, United Kingdom, United States of America, Viet-Nam.

Voted against: Belgium, Denmark, France, Haiti, Lebanon, Panama, Switzerland, Uruguay, Yugoslavia.

Abstentions: India, Laos, Monaco.

Absent: Afghanistan, Ecuador, Luxembourg, Nepal, Peru, Venezuela.

(204) The PRESIDENT (Translation from the Spanish): The result of the vote is as follows: for the amendment, 49; against 9; abstentions 3, absent 6. Having obtained the two-thirds majority required by the Rules of Procedure of the Conference, the amendment submitted by the Commission is approved.

(205) In accordance with the motion just adopted, it will be necessary to amend the Rules of Procedure of the General Conference. Rule 95 now reads:

1. At each of its ordinary sessions, the General Conference shall elect by secret ballot eleven members of the Executive Board.

2. Only a delegate nominated by the government of the State of which he is a national for election to the Executive Board may stand for election.

Rule 95, A - Transitional provision

The term of office of the members of the Executive Board during the eighth session of the General Conference shall end at the close of the eighth session of the General Conference. At the eighth session of the General Conference, twenty-two members shall be elected to the Executive Board pursuant to the provisions of Article V of the Constitution, of whom one-half shall retire at the close of the ninth session of the General Conference, the retiring members being chosen by the drawing of lots. Thereafter, eleven members shall be elected at each ordinary session of the General Conference.

And Rule 93, Death or resignation of a member of the Executive Board

In the event of the death or resignation of a member of the Executive Board his replacement for the remainder of his term shall be appointed by the Executive Board on the nomination of the government of the State the former member represented. The government making the nomination and the Executive Board shall have regard to the factors set forth in Article V, A. 2 of the Constitution.

(206) I call upon the delegate of Belgium.

(207) Mr. BAUGNIET (Belgium) (Translation from the French): In order to harmonize the texts before you, in the French text of Article 98 the word portion should be replaced by the word durée, as it was in the text of Article V, paragraph 4 of the Constitution.

(208) The PRESIDENT (Translation from the Spanish): If there is no objection by the Conference, the modification just proposed will be made.

(209) As a result of the amendments to the Constitution which have just been approved, the General Conference must proceed at its present session to elect the 22 members of the Executive Board, each one of whom will represent the government of his State. The election will take place in conformity with Article V of the Constitution and with Rules of Procedure Nos. 30, 95 and 96.

(210) I propose that the Nominations Committee meet for this purpose in the afternoon of 6 December and the morning of 7 December, and that the election take place at the plenary meeting on Tuesday afternoon, 7 December.

(211) It is therefore hoped that all delegations will have received the necessary instructions from their governments in time for these meetings. Nominations may be submitted at any time up to and including the meetings of the Nominations Committee and the plenary meetings. However, for the convenience of delegations, the Secretariat will publish all nominations received in advance and will have brief biographies of the candidates distributed. It is hoped that all nominations will be submitted not later than Saturday, 4 December.

(212) A few nominations, which appear in document 8C/NOM/20, have already been announced. With few exceptions, however, these nominations were submitted with a view to the election of members of the Board appointed in a personal capacity, an election which would have taken place if the amendments to the Constitution had not been adopted. Only a small number are also valid for election as government representatives. Delegations which have submitted nominations, without indicating whether the candidate is proposed as a government representative are therefore asked to confirm those nominations if they so desire. Delegations wishing to put forward candidates for the Executive Board and to have their nominations communicated in advance to the meeting of the Nominations Committee, should send in the names through the Secretariat.

(213) If there is no objection, the procedure is approved.

The meeting rose at 7.15 p.m.

# TWELFTH PLENARY MEETING

*24 November 1954 at 11 a.m.*

*President:* Mr. BADINI CONFALONIERI (Italy)

CONTENTS

Payment of arrears of contributions (document 8C/ADM/30 Add.1). China's right to vote . . . . . 179
Scale of contributions and methods of financing the budget in 1955-56 (document 8C/ADM/33) . . . . . 180

**PAYMENT OF ARREARS OF CONTRIBUTIONS (doc 8C/ADM/30 Add.1)**

(1) The PRESIDENT (Translation from the French): The General Committee decided this morning to hold a plenary meeting to discuss two items on the agenda: (1) The payment of arrears of contributions and China's right to vote (document 8C/ADM/30 Add.1); (2) The scale of contributions and the methods of financing the budget for 1955 and 1956. I call on the Rapporteur of the Administrative Commission.

(2) Mr. ERIKSSON (Sweden) (Rapporteur of the Administrative Commission): Mr. President, fellow delegates, owing to changes in the meetings scheduled, I am not able to present a written report on this first item just mentioned by the President. I hope, however, that you will be willing to accept this oral report.
(3) I will first take the arrears of contributions - requests from Czechoslovakia, Hungary and Poland.
(4) The Administrative Commission recommends the adoption of the draft resolutions contained in this document, subject to the following changes:
The words "... each of the ordinary sessions of the General Conference" should be substituted for "... each session of the General Conference", in paragraph (iii) of each resolution. There are also some small drafting changes in the French text, concerning paragraph 1 of each resolution.
(5) The Commission has also considered the introductory remarks and recommends their adoption, subject to the following changes: on page 2, the end of the second paragraph should read: "... in implementing the current programme or in formulating future programmes of the Organization". On the same page, add at the end of the second paragraph: "Neither should such an arrangement constitute a precedent". This resolution, of which we have recommended the adoption, includes full voting rights for the three countries concerned: Czechoslovakia, Hungary and Poland. I would add that the delegates of these countries have informed the Administrative Commission that their Governments accept these arrangements for the payment of their arrears.

China's right to vote

(6) The next point is the voting rights of China. The Administrative Commission recommends that the General Conference adopt the following resolution:
"The General Conference
Decides to permit the Chinese delegation to vote during the present session of the Conference in pursuance of Article IV, 8 (c) of the Constitution".
(7) That is exactly the same wording as was adopted by the General Conference last time.

(8) The PRESIDENT (Translation from the French): I call on the delegate of the Union of Burma.

(9) Mr. THA HLA (Union of Burma): Concerning the arrears of contributions, we were discussing the right to vote in the case of Czechoslovakia, Hungary and Poland. I note, in document 8C/ADM/30, Add.1, that these countries are paying their debts. Czechoslovakia is paying back in nine years, Hungary in ten years and Poland in twelve years. In the opinion of the Burmese delegation, it is evident that these countries are genuine in their desire to pay back; it is a matter of time and the particular manner in which this payment will be made. So in the name of the delegation of the Union of Burma, I am in favour of their being given the right to vote.
(10) With regard to the debts of the Kuomintang Chinese Government, I do not see the same sincerity, and I am not quite sure, under these circumstances, whether I could support their desire to vote. It may be that I am prejudiced by the fact that the Kuomintang Chinese Government is still carrying on an act of war, affecting, amongst other things, cultural buildings and sites on Burmese territory today. However, for the moment

I will try to ignore these incidents. But I am still thinking in terms of the technical requirements of the Constitution. Here is a country which, in my opinion, does not show real evidence of a desire to pay back its debt, and I think, in such a case, we should be mindful of the requirements of our Constitution; therefore I, for one, shall not vote for the recommendation that the Kuomintang Chinese Government be given the right to vote in the proceedings to come.

(11) The PRESIDENT (Translation from the French): I call on the delegate of Brazil.

(12) Mr. BERREDO CARNEIRO (Brazil) (Translation from the French): Mr. President and delegates, the Brazilian delegation fully supports the request made to us to give the right to vote to the countries which are in arrears with their contributions - Czechoslovakia, Hungary and Poland. The Brazilian Government commends the formula that has been so skilfully found and the efforts made by these countries to meet their obligations towards our Organization.
(13) The Brazilian Government similarly supports the request put forward by the Chinese Government, which has been represented in this Organization since its inception.
(14) In the Committees and Commissions where these two questions have been discussed, political reservations have been made by various parties against various motions, and these may be found in the records. I had hoped that at this plenary meeting we could make an effort to reach mutual understanding and not reopen these bitter questions, all of which have left their trace in the records and on each of which individual delegates have commented as instructed by their governments. I would like to see a unanimous gesture of mutual concession and to hope that we might keep as far as possible out of our discussions reservations that might be more appropriately raised and debated in the United Nations. I should like to appeal for unbroken unanimity so that we can work in harmony with Czechoslovakia, Hungary, Poland and China.

(15) The PRESIDENT (Translation from the French): If no one wishes to speak I declare the discussion closed and we shall proceed to the vote.
(16) We shall now vote on the question of Hungary, Poland and Czechoslovakia. If there is no opposition, the vote will be taken by roll-call.

(17) The vote was taken by roll-call.

Voted in favour: Argentina, Australia, Austria, Belgium, Brazil, Burma (Union of), Byelorussian Soviet Socialist Republic, Cambodia, Ceylon, Chile, Costa Rica, Cuba, Denmark, Ecuador, Egypt, El Salvador, France, German Federal Republic, Haiti, India, Indonesia, Iran, Iraq, Israel, Italy, Japan, Jordan (Hashemite Kingdom of), Lebanon, Liberia, Libya, Mexico, Netherlands, New Zealand, Nicaragua, Norway, Pakistan, Philippines, Saudi-Arabia, Sweden, Switzerland, Syria, Thailand, Turkey, Ukrainian Soviet Socialist Republic, Union of Soviet Socialist Republics, United Kingdom, Uruguay, Yugoslavia.

Abstained: Canada, Colombia, Dominican Republic, Greece, Guatemala, Honduras, Korea, Spain, Union of South Africa, United States of America, Viet-Nam.

Absent: Afghanistan, Laos, Luxembourg, Monaco, Nepal, Panama, Peru, Venezuela.

(18) The PRESIDENT (Translation from the French): The result of the voting is as follows: in favour: 48, against: nil; abstentions: 11; absent: 8.
(19) The delegations of Poland, Czechoslovakia and Hungary are henceforth admitted to the vote.
(20) We shall now take a vote on the question of the voting rights of the Chinese delegation. The vote will be taken by roll-call and will be on the right of China to vote.

(21) The vote was taken by roll-call.

Voted in favour: Argentina, Australia, Austria, Belgium, Brazil, Cambodia, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, Egypt, El Salvador, France, German Federal Republic, Greece, Guatemala, Haiti, Honduras, Italy, Japan, Jordan (Hashemite Kingdom of), Korea, Lebanon, Liberia, Libya, Mexico, Monaco, Netherlands, New Zealand, Nicaragua, Pakistan, Philippines, Saudi-Arabia, Spain, Thailand, Turkey, Union of South Africa, United States of America, Uruguay, Viet-Nam.

Voted against: Burma (Union of), Byelorussian Soviet Socialist Republic, Ceylon, Czechoslovakia, Denmark, Hungary, Norway, Poland, Sweden, Ukrainian Soviet Socialist Republic, Union of Soviet Socialist Republics, Yugoslavia.

Abstained: Canada, India, Indonesia, Iran, Iraq, Israel, Switzerland, Syria, United Kingdom.

Absent: Afghanistan, Laos, Luxembourg, Nepal, Panama, Peru, Venezuela.

(22) The PRESIDENT (Translation from the French): The result of the voting is as follows: 42 in favour; 12 against; 9 abstentions; 7 absent.
(23) The resolution granting the Chinese delegation *the right to vote at the present session of the Conference* is therefore adopted.
(24) Before taking the second item on the agenda I should like to make it clear that the vote taken on the admission to the right to vote of Hungary, Czechoslovakia and Poland covers approval of the report of the Administrative Commission on the scale of contributions.

## SCALE OF CONTRIBUTIONS AND METHODS OF FINANCING THE BUDGET IN 1955-56 (doc. 8C/ADM/33)

(25) I call on the Rapporteur of the Administrative Commission.

(26) Mr. ERIKSSON (Sweden) (Rapporteur of the Administrative Commission): Mr. President, fellow delegates; you have received this morning the first interim report of the Administrative Commission on matters relating to the ceiling of the budget for 1955-56 - see document 8C/ADM/33.

You will find in that report, under paragraph 1, Scale of Contributions, that the Administrative Commission recommends the adoption of the draft resolution which appears on page 5 of document 8C/ADM/31. That is the second interim report of the Committee on Contributions, on Scale of Contributions.

(27) I will take the main points in that report. We recommend that the scale of contributions for Member States for 1955 and 1956 shall be calculated on the basis of the scale of contributions adopted by the General Assembly of the United Nations for the year 1955, suitably adjusted to take into consideration the difference in membership between Unesco and the United Nations, the principle that no one Member State should in normal times contribute more than one-third of the budgetary appropriations of Unesco, and the principle that in normal times the per capita contributions of any Member State should not exceed the per capita contribution of the Member State which bears the highest assessment.

(28) Member States of Unesco, according to Point 2, who are members of the United Nations shall be included in the scale on the basis of their percentages in the United Nations scale of assessments.

(29) Member States of Unesco who are not members of the United Nations shall be included in the scale on the basis of their theoretical probable percentages in the United Nations scale. You will find those countries listed under Point 3.

(30) The resolution further recommends that the General Conference of Unesco shall give full effect to the principle of per capita limitations. This concerns five countries which are listed under Point 4.

(31) Numbers 5, 6 and 7 are in accordance with resolutions adopted by other sessions of the General Conference. A new point is added under No. 8: we recommend that the contribution of Associate Members shall be assessed at 60% of the minimum percentage assessment of Member States and those contributions shall be accounted for as miscellaneous income.

(32) Paragraph 2 of our interim report concerns methods of financing the budget. There you have the report of the Committee on Contributions on methods of financing the budget (8C/ADM/32). The Administrative Commission has considered this report and adopted the following resolution:

"While agreeing to finance the budget for 1955-56 in accordance with the Financial Regulations, recommends that surpluses from 1947 to 1952 in an amount of $603,600 be retained instead of being returned to Member States, pending a decision of the ninth session of the General Conference."

(33) The effect of such a decision is that the following sums would be available for the financing of the budget of 1955-56:

Miscellaneous Revenue ..... $ 389,614
Assessments on new Member States .. $1,228,216

(34) The rest of paragraph 2, down to Point 6 included, is more or less to help you put in the figures which we shall be voting on. I will not go into any details. If anyone wants any information, they may get it from the Secretariat. The main thing is, as far as the Administrative Commission's recommendations go, that we have $1,617,830 for the 1955-56 budget and that $603,600 will be retained, instead of being returned to Member States, pending decision of the ninth session of the General Conference.

(35) The PRESIDENT (Translation from the French): I thank the Rapporteur of the Administrative Commission. The discussion on the scale of contributions is now open. I call on the delegate of Jordan.

(36) Mr. SALIM (Hashemite Kingdom of Jordan): I just want to refer to No. 7 in the resolution on the scale of contributions. I feel that this paragraph should either be deleted altogether or the introduction of three decimal places in the scale of contributions should be accepted. It would be impossible to adjust the figure unless three decimal places were used. I do not speak on this point for Jordan, I feel I am speaking for 49 countries which have to pay more than they should.

(37) As regards No. 8 of the same resolution, I feel that, if the minimum contribution should be .04%, the figure 50 should take the place of the figure 60, for if you put the figure 60 then you would have to use three decimal places. My remarks are not a formal proposal; but are intended to explain why I did not wish to vote on paragraph 7 of the resolution.

(38) The PRESIDENT (Translation from the French): I call on the delegate of Turkey.

(39) Mr. TUNCEL (Turkey)(Translation from the French): The compromise solution just proposed by the Committee on Contributions for the settlement of arrears of contributions by payment in instalments does not seem to us a convincing one. I am addressing this assembly with the sole intention of calling your attention to the fact that the method proposed for payment of the two annual sums falling due in 1955 and 1956 is a deviation from the general principle laid down in resolution 17.3 adopted by the seventh session of the General Conference.

(40) I may add that the arguments advanced by the governments of the three countries in question would apply equally to all Member States in general and to certain States in particular.

(41) The PRESIDENT (Translation from the French): I call on the delegate of the Union of Soviet Socialist Republics.

(42) Mr. SOLDATOV (Union of Soviet Socialist Republics)(Translation from the Russian): Mr. President, the Soviet Union delegation has already explained in the Administrative Commission why it is unable to support the draft resolution approving the scale of contributions levied on Member States of Unesco, which has now been submitted to the plenary meeting for examination, and which in fact is based on the scale of contributions adopted by the United Nations.

(43) At sessions of the General Assembly and in the United Nations Contributions Committee the Soviet Union delegation has advanced relevant

arguments demonstrating that, in fixing the proportion of the contributions from the Union of Soviet Socialist Republics, the Ukrainian SSR and the Byelorussian SSR to the United Nations, insufficient account was taken of the following facts: first, the enormous destruction suffered by the economy of the Soviet Union during the Second World War and the fact that several branches of the Soviet economy are not yet completely rehabilitated; secondly, the difficulties experienced in obtaining foreign currencies, due, as we all know, to the artificial barriers erected by certain countries in the sphere of international trade, thirdly, in determining the scale of contributions to the United Nations, no account was taken of the fact that the Soviet Union had joined a number of international organizations, such as the International Labour Organization and the United Nations Educational, Scientific and Cultural Organization, which entailed additional expenditure in foreign currencies by the Union of Soviet Socialist Republics, the Ukrainian Soviet Socialist Republic and the Byelorussian Soviet Socialist Republic.

(44) The Soviet Union delegation considers that the above factors should also be taken into account when determining the share of contributions to Unesco to be paid by the Union of Soviet Socialist Republics, the Ukrainian SSR and the Byelorussian SSR. The Soviet Union delegation considers that the rates of contribution to Unesco of the countries in question would be correctly assessed as follows: Soviet Union - 10 per cent, Ukrainian SSR - 1 per cent, Byelorussian SSR - 0.45 per cent. A proposal in this sense was submitted for the consideration of the Administrative Commission, but failed to gain the necessary support. The section of the draft resolution concerning the scale of contributions provides for increases in the contributions to be paid by the USSR, the Ukrainian SSR and the Byelorussian SSR which the Soviet Union delegation cannot accept. Further, the Administrative Commission, when dealing with the scale of contributions, discussed the question of the amounts to be contributed by the United States of America. The proposal submitted to the Administrative Commission that the contribution of the United States of America should remain at its previous level, namely, 33.3 per cent, was not adopted. The Soviet Union delegation considers that there were no grounds for this decision, and for this reason also objects to the scale of contributions submitted for approval by the plenary meeting. In view of the above considerations the Soviet Union delegation will vote against the scale of contributions and the relevant draft resolution submitted by the Administrative Commission for the consideration of the plenary meeting.

(45) The PRESIDENT (Translation from the French): We shall now vote by show of hands on the report of the Administrative Commission on the scale of contributions.

(46) The scale of contributions is adopted by 47 votes in favour, 10 against and 2 abstentions.

(47) I call on the delegate of Greece.

(48) Mr. PHOTIADES (Greece)(Translation from the French): Mr. President, ladies and gentlemen, we have pointed out to the Administrative Commission the illogicality of the proposal that the former member countries which have now rejoined the Organization should pay their contributions in local currencies; we can see no reason for this change in the method of payment since nothing special has happened in the meantime.

(49) At the plenary meeting we pointed out that the Greek delegation fully endorsed the point of view put forward by the Turkish delegation.

(50) The PRESIDENT (Translation from the French): We shall now proceed to a vote by show of hands on the second item on the agenda: methods of financing the budget.

(51) The method of financing the budget was adopted by 50 votes in favour, 3 against and 6 abstentions.

The meeting rose at 12.05 p.m.

# THIRTEENTH PLENARY MEETING

*24 November 1954 at 6 p.m.*

*President*. Mr. ZAVALA MUNIZ (Uruguay)

CONTENTS

Examination of the report of the Programme and Budget Commission and provisional decision on the maximum assessment level and on the total budget figure for 1955 and 1956. 183

(1) The PRESIDENT (Translation from the Spanish): I call on the Rapporteur of the Programme and Budget Commission.

(2) Mr. HOPE (United States of America) (Rapporteur of the Programme and Budget Commission): Mr. President, honourable delegates, the document to which I now refer is 8C/ADM/33. I would remind you that at this morning's plenary meeting of the General Conference you voted upon No. 1, scale of contributions, and No. 2, methods of financing the budget. The Programme and Budget Commission, which met this afternoon, has heard the report of the Administrative Commission upon that document and has considered the framework of recommendations which are intended to fix the maximum contributions of Member States for the financial period 1955-56. On the subject voted upon by the Commission, I have the following report to make to you.

"The Commission recommends that the following resolution be adopted by the General Conference:

"The General Conference resolves that:

(1) The maximum assessment level to be used to finance the provisional budget shown in paragraph 3, is $20,000,000.

(2) In accordance with Financial Regulation 5.2, the following adjustments are to be made to the provisional gross budget level for the two-year period 1955-56:

Miscellaneous Income ..... $ 389,614

Contributions of new Member States .. $1,228,216

which makes a total of ..... $1,617,830

(3) In the light of the adjustments mentioned in paragraph 2 above, the provisional gross budget level for the two-year period 1955-56 is $21,617,830

(4) Since it is anticipated that the contributions which may not be receivable in respect of 1955-56 will amount to 5.06% of the assessment level, the provisional spending budget is $20,605,830.

(5) Budget surpluses relating to the years 1947 to 1952, which at the present time amount to $603,600, shall be retained, instead of being returned to Member States, pending a decision of the General Conference at its ninth session.

(6) Any changes may be made to the figures given above for the provisional gross and spending levels and incorporated in the Appropriation Resolution provided that the above-mentioned assessment level shall not be increased."

(3) I now turn to Part 3 of document 8C/ADM/33. I shall not read it in its entirety, but shall merely report to you that it was passed in full, namely, (a), (b), (c) and (d) - Parts I, III and IV of the budget. These three parts are to be found on pages 2 and 3 of the document. This was approved in the Programme and Budget Commission this afternoon.

(4) The PRESIDENT (Translation from the Spanish): The discussion is open on the report just read to us. If no one wishes to speak, a vote will be taken.

(5) The report of the Programme and Budget Commission was approved by 47 votes in favour, 14 against and 1 abstention.

The meeting rose at 6.22 p.m.

# FOURTEENTH PLENARY MEETING

*6 December 1954 at 3.45 p.m.*

*President:* Mr. ZAVALA MUNIZ (Uruguay)

CONTENTS

Report by the Credentials Committee . . . . . 184
Consideration and adoption of amendments to Rules 88 and 89 of the Rules of Procedure of the General Conference and to Rules 13, 14 and 17 of the Rules for the Conduct of Elections by Secret Ballot (documents 8C/JUR/5, 8C/JUR/5 Corrigendum and 8C/DIV/133) . . . . . 184

## REPORT BY THE CREDENTIALS COMMITTEE

(1) The PRESIDENT (Translation from the Spanish): I call upon Mr. Bernal Jimenez, Chairman of the Credentials Committee.

(2) Mr. BERNAL JIMENEZ (Colombia) (Chairman of the Credentials Committee) (Translation from the Spanish): Mr. President, since the oral statement made by the Chairman of the Credentials Committee at the eleventh plenary meeting of the General Conference, on 22 November 1954, credentials have been received for the Luxembourg delegation which are in accordance with the provisions of Rule 22 of the Rules of Procedure of the General Conference. The General Conference is, therefore, recommended to regard the credentials of this Member State as fully in order, and to admit the Luxembourg delegation to the eighth session of the General Conference.
(3) A cable has also been received, accrediting a Peruvian delegate. It is recommended that this cable be regarded, according to the customary practice, as provisionally accrediting that delegate, and that the Peruvian representative be admitted to the present session of the General Conference, subject to the later submission of credentials in due form.
(4) For the rest, the Credentials Committee finds that all the delegates attending the General Conference are now entitled to vote at the forthcoming elections.

(5) The PRESIDENT (Translation from the Spanish): I put to the meeting the report just submitted by the Chairman of the Credentials Committee regarding the credentials of Luxembourg and Peru.

(6) Approved.

(7) The delegates of Luxembourg and Peru are thus admitted to the General Conference, subject to the conditions set forth by the Chairman of the Committee.

## CONSIDERATION AND ADOPTION OF AMENDMENTS TO RULES 88 AND 89 OF THE RULES OF PROCEDURE OF THE GENERAL CONFERENCE AND TO RULES 13, 14 AND 17 OF THE RULES FOR THE CONDUCT OF ELECTIONS BY SECRET BALLOT

(documents 8C/JUR/5, 8C/JUR/5 Corr. and 8C/DIV/133)

(8) The PRESIDENT (Translation from the Spanish): I call on Mr. Saba, the Legal Adviser, to make a statement regarding the majority required for the election of the members of the Executive Board, the validity of ballot papers containing fewer names than there are persons to be elected, and the eligibility of candidates whose names are not included in the list drawn up by the Nominations Committee (documents 8C/JUR/5 and 8C/JUR/5 Corr.).

(9) Mr. SABA (Legal Adviser) (Translation from the French): The Legal Committee was asked by the General Committee for an opinion on the three following questions concerning the election of members of the Executive Board:

Majority required for the election of members of the Executive Board;

Validity of ballot papers which contain fewer names than there are persons to be elected;

Eligibility of candidates not included in the list prepared by the Nominations Committee.

(10) The Legal Committee has considered these questions and submitted a report to the General Committee, which has decided to put that report before the General Conference with a view to the adoption of certain amendments which the Legal Committee considers to be necessary. With regard to the first point - the majority required for the election of members of the Executive Board - there was found to be a discrepancy between Article IV, paragraph 8, sub-paragraph (a) of the Constitution

and Rule 89 of the Rules of Procedure of the General Conference. The Constitution states that, except in cases where a two-thirds majority is required, the General Conference shall make its decisions by a simple majority - half plus one of the votes recorded - whereas Rule 89 of the Rules of Procedure states that when a second vote is taken candidates who obtain pluralities shall be elected. In other words, according to the Rules of Procedure, it would be possible for a candidate to be elected by a number of votes which, though higher than the number obtained by any other candidate, was less than half plus one of the actual votes recorded. Abstentions, I must remind you, do not count.

(11) The Legal Committee took the view that procedure should be governed solely by the provisions of the Constitution, that being the authoritative source and the document which the General Conference should always follow. The Committee felt, therefore, that the Rules of Procedure should be amended, and consequently wishes to submit the following resolution to the General Conference for approval:

"The General Conference

I. Decides to substitute the following for Rules 88 and 89 of the Rules of Procedure of the General Conference:

Rule 88 - Election of a single person

When a single elective place is to be filled and no candidate obtains in the first ballot the majority required, additional ballots shall be taken which shall be restricted to the two candidates obtaining the largest number of votes. If in the third ballot the votes are equally divided, the President shall decide between the candidates by drawing lots.

Rule 89 - Election of two or more persons

When two or more elective places are to be filled at one time under the same conditions, those candidates obtaining in the first ballot the majority required shall be elected. If the number of candidates obtaining such majority is less than the number of places to be filled, there shall be additional ballots to fill the remaining places, the voting being restricted to the candidates obtaining the greatest number of votes in the previous ballot, to a number not more than twice the places remaining to be filled."

(12) That is the actual wording used in the Rules of Procedure of the General Assembly of the United Nations.

(13) The second part of the Legal Committee's proposal, embodied in the same resolution, runs as follows:

"II. Decides to substitute the following for the last sentence of Rule 17 of the Rules for the Conduct of Elections by Secret Ballot, adopted by the General Conference at its sixth session:

Half plus one of the votes recorded shall constitute the majority required under Article IV. 8 (a) of the Constitution and Rules 88 and 89 of the Rules of Procedure of the General Conference."

(14) The PRESIDENT (Translation from the Spanish): It is for the Conference to decide whether it wishes to discuss the Legal Adviser's report point by point, or to hear it right through. I suggest that it be taken point by point, for the sake of clarity. If the Conference has no objection, we will adopt that course. In that case, we will now consider part I of the report presented by the Legal Adviser.

(15) Part I of the report, as amended by document 8C/JUR/5 Corr., was approved unanimously.

(16) Mr. SABA (Legal Adviser) (Translation from the French): The second question relates to the validity of ballot papers containing fewer names than there are persons to be elected. The Legal Committee found that, under Rule 14 of the Rules for the Conduct of Elections by Secret Ballot (8C/DIV/133), ballot papers containing the same number of names as there are persons to be elected, or fewer names, shall be valid. However, the Committee took the view that this provision should be amended. It accordingly proposes the following resolution for adoption by the General Conference:

"The General Conference,

Decides to amend as follows, Rules 13 and 14 of the Rules for the Conduct of Elections by Secret Ballot:

Rule 13:

After paragraph (b), add the following:

(c) Ballot papers on which the name of any one candidate appears more than once;

(d) Ballot papers on which there are fewer names than there are persons to be elected".

(17) I should remind you that Rule 13 begins with the words:

"The following shall be considered invalid". The suggestion now made to the Conference is, therefore, that ballot papers on which the name of any one candidate appears more than once, or on which there are fewer names than there are persons to be elected, shall be considered invalid.

(18) The draft resolution now submitted to you continues as follows:

"Delete Rule 14.

Renumber Rules 15, 16, 17, 18, 19, 20 and 21 accordingly".

(19) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Guatemala.

(20) Mr. MENDOZA (Guatemala) (Translation from the Spanish): The delegation of Guatemala does not support the insertion of clause (d), suggested by the Legal Committee as an amendment to Rule 13. Under the terms of this amendment, the number of names on the ballot paper must exactly correspond to the number of seats to be filled.

(21) My delegation objects to this amendment, because it is contrary to the parliamentary procedure generally adopted in international organizations. No delegation can be compelled to vote for the full number of candidates. That is an optional matter, for the decision of each individual delegation.

(22) Any delegation, in any international organization, is entitled to vote for whatever number of candidates it may think fit, always provided that it does not

exceed the number of seats vacant; but in no circumstances can any delegation be forced to vote for the entire number of vacant seats. Cases might arise in which delegations wished to vote for some candidates and not for others.
(23) If clause (d) were accepted as an amendment, as proposed by the Legal Committee, it might lead us into serious difficulties, now or at some future time. For instance, should a delegation, for some reason, not wish to vote for a particular candidate or candidates, it would be forced to abstain from voting altogether. The delegations would thus be compelled to choose between abstaining altogether, or voting for all the candidates, including those whom, for some reason, they do not approve or wish to support. I feel that the Legal Committee's proposal, while undoubtedly made with the best of intentions, seriously restricts the delegations' right to vote as they judge fit.
(24) Moreover, it might happen, even in the forthcoming ballot, that some of the candidates withdrew, so that only 22 would be left. If this rule were adopted, every delegation would then be forced, willy-nilly, to vote for all the candidates. This restricts freedom of expression and freedom of voting, the sovereign right of each delegation to vote for the candidates it prefers or considers most suitable. My delegation therefore considers that the existing rule should not be amended in the manner suggested. And I should like to ask beforehand that this resolution be put to the vote, paragraph by paragraph, and that clause (d) be the subject of a separate vote, because, for the reasons I have given, the delegation of Guatemala will vote against it.

(25) The PRESIDENT (Translation from the Spanish): I call upon the Chairman of the Legal Committee.

(26) Mr. AWAD (Egypt) (Chairman of the Legal Committee): With regard to what was said by the delegate of Guatemala this matter was very carefully debated and considered in the Legal Committee. It was taken into account that the right of delegates to put any number of names, no matter how few, might possibly be abused and that this would give undue weight to certain candidates, giving them a much greater chance and thus depriving others of the same chance. After all, the number of candidates is something like double the number of seats to be filled, and it should surely be possible for any voter to choose half of the names in front of him.
(27) Thus the Legal Committee went deliberately into the question and decided that there would be considerable abuse if delegates were not required to give the exact number of candidates on their ballot sheet.

(28) The PRESIDENT (Translation from the Spanish). I call upon the delegate of Switzerland.

(29) Mr. BOURGEOIS (Switzerland) (Translation from the French): The Swiss delegation supports the proposal made by the delegation of Guatemala. So far as we know, the procedure just suggested by the Legal Committee is not followed in any democratic system of balloting; we know of no precedent for it, and we therefore support the Guatemalan delegation in asking for the deletion of the clause which would compel the delegations to record a number of votes equal to the number of seats to be filled.

(30) The PRESIDENT (Translation from the Spanish): If no one wishes to speak, we will proceed to vote, paragraph by paragraph. A vote will first be taken on the paragraphs which have not given rise to discussion.
(31) I call upon the Legal Adviser.

(32) Mr. SABA (Legal Adviser) (Translation from the French): I should like to make two small observations on points to which delegations have called my attention.
(33) The first of these concerns the proposed wording of Rule 13 of the Rules for the Conduct of Elections by Secret Ballot, which refers to "ballot papers on which there are fewer names than there are persons to be elected". It has been pointed out to me that the words "on which there are fewer names" are too vague, and that the words "of candidates" should be added, to ensure that names other than those of candidates shall not be entered in order to bring the total up to 22. This is a pertinent comment.
(34) My second observation concerns the proposed text of Rule 17. This states that "Half plus one of the votes recorded shall constitute the majority required under Article IV. 8 (a) of the Constitution and Rules 88 and 89 of the Rules of Procedure of the General Conference". Owing to a typographical error in the Corrigendum, this text is included in the second part of the report of the Legal Committee, whereas in reality it belongs to the first part. I mentioned this when dealing with the first point, and you have already approved it.

(35) The PRESIDENT (Translation from the Spanish): I shall now take a vote on the proposals of the Legal Committee, with the exception of clause (d), to which the Guatemalan delegation, seconded by the Swiss delegation, objects.

(36) Approved unanimously.

(37) A vote was then taken on clause (d) which was adopted by 27 votes to 24, with 3 abstentions.

(38) The PRESIDENT (Translation from the Spanish): I call upon the Legal Adviser.

(39) Mr. SABA (Legal Adviser) (Translation from the French): The third question submitted to the Legal Committee concerns the eligibility of candidates not included in the list prepared by the Nominations Committee. In this connexion, the Committee noted that, as a result of the amendment made by the General Conference, at its present session, to Rule 95 of its Rules of Procedure, the provision that only candidates nominated either by the Nominations Committee or by two delegations, may stand for election, is annulled.
(40) The Committee takes the view that any nomination put forward by a government in accordance with the new text of Article 95 is valid, even if the

candidate's name does not appear in the list submitted to the General Conference by the Nominations Committee. It also considers that it is in order to submit a nomination up to the time when the ballot is opened in the General Conference.
(41) This last part of the report, Mr. President, does not entail any resolution; it is merely an opinion expressed by the Legal Committee, which the General Conference is free to accept or to reject.

(42) The PRESIDENT (Translation from the Spanish): The report you have just heard is now open to debate. If no one wishes to speak, I shall take a vote on the interpretation proposed by the Legal Adviser.
(43) Will those in favour please signify their approval?

(44) Adopted.

The meeting rose at 4.20 p.m.

# FIFTEENTH PLENARY MEETING

*7 December 1954 at 4 p.m.*

*President:* Mr. ZAVALA MUNIZ (Uruguay)

CONTENTS

Report of the Nominations Committee on the election of members of the Executive Board . . . . . 187
Decision on the place of the Ninth Session of the General Conference, on the report of the Executive Board (document 8C/6) . . . . . 189
Election of 22 members of the Executive Board (documents 8C/DIV/145, 8C/DIV/133) . . . . . 194

## REPORT OF THE NOMINATIONS COMMITTEE ON THE ELECTION OF MEMBERS OF THE EXECUTIVE BOARD

(1) The PRESIDENT (Translation from the Spanish): I call upon the Chairman of the Nominations Committee.

(2) Mr. KABIR (India) (Chairman of the Nominations Committee): Mr. President and fellow delegates: I present to you the report of the Nominations Committee.
(3) At the meeting held this morning it was found that the number of Member States entitled to vote was 72. Four were absent. Of the votes cast one was an abstention and one was invalid; there were therefore 66 valid votes recorded; consequently, the number of votes constituting the required majority was 34.
(4) After the ballot was counted the Nominations Committee put forward the following 22 candidates as persons who have the recommendations of the Committee. In addition, two more candidates secured the required number of votes:

1. Mr. Raadi of Iran, 65 votes; 2. Mr. Secco Ellauri of Uruguay, 64 votes; 3. Mr. Martinez Cobo of Ecuador, 64 votes; 4. Mr. Spilhaus of the United States of America, 64 votes; 5. Mr. Ferrara Marino of Cuba, 62 votes; 6. Mr. Laugier of France, 62 votes; 7. Mr. Sharif of Pakistan, 62 votes; 8. Mr. Awad of Egypt, 61 votes; 9. Mr. Berredo Carneiro of Brazil, 61 votes; 10. Mr. Mudaliar of India, 60 votes; 11. Sir Ben Bowen Thomas of the United Kingdom, 60 votes; 12. Mr. Veronese of Italy, 58 votes; 13. Mr. Haguiwara of Japan, 55 votes; 14. Mr. Estelrich of Spain, 54 votes; 15. Mgr Maroun of Lebanon, 53 votes; 16. Mr. Massaquoi of Liberia, 53 votes; 17. Mrs. Schlueter-Hermkes of Germany, 51 votes; 18. Mr. Bender of the Netherlands, 48 votes; 19. Mr. Nielsen of Denmark, 44 votes; 20. Mr. Solodovnikov of the Union of Soviet Socialist Republics, 42 votes; 21. Mr. Johannes of Indonesia, 41 votes; 22. Mr. Malakul of Thailand, 41 votes.

(5) These are the twenty-two recommendations. In addition, there are Mr. Piaget of Switzerland, who secured 39 votes, and Mrs. Rodriguez of the Philippines, with 35 votes
(6) The Nominations Committee also wanted it to be brought to the notice of the Conference that the Conference might decide on the appropriate procedure

to be adopted when the number of candidates securing more than the requisite number of votes exceeds the number of vacancies.

(7) The PRESIDENT (Translation from the Spanish): After hearing the report presented by the Chairman of the Nominations Committee, I think that, with regard to the question he raised at the end, there are two courses open to us: either the Rules of Procedure can be amended or, should the Conference prefer, a simple vote can be taken, on the understanding that if in any ballot the number of candidates securing the majority required exceeds the number of vacancies, the candidates obtaining the largest number of votes shall be elected.
(8) However, if two or more of the candidates obtaining the largest number of votes obtain the same number and are competing for one or more vacancies, a new vote will be taken. The Conference will decide whether this procedure is correct and, if it decides to adopt it, will do so by a simple vote. In order to shorten the proceedings, I propose that, if the Conference has no objection, a vote be taken on the procedure just suggested.

(9) Approved, with one abstention.

(10) Before we come to the election, I would like to ask whether any of the candidates whose names were read out by the Chairman of the Nominations Committee wish to withdraw or whether they all maintain their candidature.
(11) In the latter case, we will proceed with the election, in accordance with the report of the Chairman of the Nominations Committee.
(12) I call upon the delegate of Switzerland.

(13) Mr. BOURGEOIS (Switzerland) (Translation from the French): In order to avoid any possible misunderstanding, and in view of the large number of votes secured this morning in the Nominations Committee by the Swiss candidate, Mr. Piaget, I should like to say that the Swiss delegation feels it to be its duty to support the candidature of Mr. Piaget, which was put forward by the Swiss Government. Mr. Piaget is therefore a candidate for the Executive Board.

(14) Mr. HAGUIWARA (Japan) (Translation from the French): Mr. President, I attended the meeting of the General Committee, at which you yourself presided, and, if I understand rightly, document 8C/NOM/40 was approved. Page 2 of that document contains the following:

2. Ballot papers

Delegations will be able to choose one or other of the following two methods of voting:
(i) Delegations wishing to vote for the 22 candidates presented by the Nominations Committee will place in an envelope the list of the 22 names presented by the Committee:
(ii) Delegates wishing to vote for candidates not on the list presented by the Nominations Committee may use the full list of candidates as a ballot paper, placing a mark opposite the names of 22 candidates.

(15) In fact I have only found one list, with 30 names; the list containing 22 names has not been distributed to delegations. I should like to know whether this decision by the General Committee has been annulled.

(16) The PRESIDENT (Translation from the Spanish): The Secretariat informs me that, owing to the hour at which the meeting of the Nominations Committee ended and its resolutions were approved, there was no time to prepare the lists; also, that the Nominations Committee presented 24 names, and not 22.
(17) I therefore suggest that the full list of candidates be used, as the Conference decided, by placing a mark opposite the names of 22 candidates. If the Conference agrees, this procedure will be followed. I call upon the delegate of Poland.

(18) Mr. MICHALOWSKI (Poland): Mr. President, it might appear from what you said that we have to vote only for those 22 or 24 candidates who obtained the majority this morning. I should like to make it clear that we are completely free to vote for any delegate who is a candidate on the list before us. I stress this because I still maintain the nomination of the Polish delegate, Professor Wierbłowski, who was voted upon this morning.

(19) The PRESIDENT (Translation from the Spanish): That is correct. Delegates may vote for any candidate whom they think suitable, from among those on the list of thirty.
(20) I call upon the delegate of Japan.

(21) Mr. HAGUIWARA (Japan) (Translation from the French): Mr. President, you have just said that the Nominations Committee had proposed 24 names. If I understood the Chairman of the Nominations Committee aright, he mentioned 22 names, adding that two more candidates had secured the required number of votes; the number of names proposed is therefore 22 and not 24. In these circumstances I do not understand why there is no list of 22 names, as mentioned in document 8C/NOM/40, which was approved by the General Committee. If the Secretariat has not had time to prepare this second list, I formally propose that the meeting should be adjourned.

(22) The PRESIDENT (Translation from the Spanish): I call upon the Chairman of the Nominations Committee.

(23) Mr. KABIR (India) (Chairman of the Nominations Committee): Mr. President and fellow delegates, I want to make it clear, as I also stated in the morning, that no elections have been held by the Nominations Committee. Therefore you cannot say that anybody has been elected there. The Nominations Committee, on the results of the ballot, has proposed 22 names for the consideration of the General Conference. In addition, it has reported that two other candidates secured more than the required majority.

(24) The PRESIDENT (Translation from the

Spanish): I call upon the representative of Cuba.

(25) Mr. ICHASO (Cuba) (Translation from the Spanish): Mr. President, the Cuban delegation supports the Japanese delegation's view that it is essential, for purposes of the vote, to have two lists - one containing the 22 names approved by the Nominations Committee and the other containing the names of all the candidates - so that delegations can choose between two methods of voting, the first following the Committee's proposal and the second completely independent. But the procedure itself has been settled; we have approved it; and I do not think that the Conference should go back on its decision. The reason that the Secretariat has not had time to distribute the list does not seem to me to be adequate. I think that the meeting should be adjourned so that the Secretariat can prepare and distribute the list. We shall then be able to vote properly. I submit this proposal formally to the Conference.

(26) The PRESIDENT (Translation from the Spanish): The question is before the Conference for its consideration. As the Japanese delegate's motion, which has just been supported by the Cuban representative, was the earlier, it is submitted to the Conference; it is, that the meeting adjourn in order that the work of the Nominations Committee may be completed and the two lists prepared.
(27) We will now vote on the adjournment of this meeting for one hour in order that the Nominations Committee may complete its work.

(28) The Japanese delegate's motion is approved, by 35 votes in favour, 20 against and 5 abstentions.

(29) I call upon the delegate of Canada.

(30) Mr. PIERCE (Canada): I should like to know whether we were voting on the adjournment of this question only or of the whole meeting. We have other questions on the agenda.

(31) The PRESIDENT (Translation from the Spanish): If the Conference thinks that it can continue with the consideration of the other items on the agenda, it is for it so to decide.
(32) I call upon the delegate of Egypt.

(33) Mr. HUZAYIN (Egypt): I beg to move that we continue our work and do not interrupt it at the present moment. We had enough of the election question this morning, sitting for three and a half hours on it. It would be useful to get on with our work, and I am sure the Secretariat will do their very best to get the new list prepared for us while we continue. In that way we shall not waste time.

(34) The PRESIDENT (Translation from the Spanish): If there is no objection, the meeting will continue.

**DECISION ON THE PLACE OF THE NINTH SESSION OF THE GENERAL CONFERENCE, ON THE REPORT OF THE EXECUTIVE BOARD** (document 8C/6)

(35) The PRESIDENT (Translation from the Spanish): I call upon the Chairman of the Executive Board to make a statement on item 16 of the revised agenda.

(36) Sir Ronald ADAM (Chairman of the Executive Board): Mr. President, fellow delegates, the Rules of Procedure lay down that on the proposal of the Executive Board the General Conference, during its ordinary session, shall fix the seat of the next session. You have in document 8C/6 the resolution of the Executive Board:

"The Executive Board

Considering Rules 2 and 3 of the Rules of Procedure of the General Conference,

Considering that the Government of India, by letter dated 20 August 1954, invited the Organization to hold its ninth session in 1956 in New Delhi, India,

Considering the report (document 39 EX/5) on division of responsibilities and costs of a session of the General Conference between the host country and the Organization and on material facilities available in New Delhi,

Recommends to the General Conference that it hold its ninth session in New Delhi, India,

Recommends that this session should open in November 1956."

(37) The PRESIDENT (Translation from the Spanish): The Executive Board's proposal is before the Conference.
(38) I call upon the delegate of Brazil.

(39) Mr. BERREDO CARNEIRO (Brazil) (Translation from the French): Mr. President, fellow delegates, when this question was discussed by the Administrative Commission I ventured to say that the Latin American countries claimed the honour and pleasure of being the first to support the proposal that the next session of the General Conference should be held in New Delhi.
(40) In so doing they would be giving a token of their gratitude towards all the delegations which had travelled from the confines of Asia to these far regions of Latin America, to pool their efforts and ideals in a spirit of international co-operation. I ventured to recall that it is by moving about the world in this way that Unesco impresses itself on the minds of the peoples, and I also referred to the similarity in their economic and moral development which, for centuries past, has bridged the great distances between the peoples of Asia and the peoples of America.

(41) The PRESIDENT (Translation from the Spanish): I call upon the delegate of the United States of America.

(42) Mrs. HEFFELFINGER (United States of America): Mr. President and fellow delegates: It gives me great personal pleasure to tell you that the United States of America whole-heartedly supports the Government of India's invitation to hold the ninth session of the General Conference of Unesco in New Delhi. My delegation looks forward with enthusiasm to bringing the people of the United States of America, through their delegation to that

Conference, into close touch with the people of India and, in consequence, to conveying to the people of India our warmest expressions of friendship and regard.

(43) The selection of a place in Asia convenient to all Asians is a fitting recognition of the great contribution which the people of Asia make to the work of Unesco. It causes us to realize the great contribution they have made in the past, and will continue to make in the future. We are all well aware of the significant contribution to man's progress which has been made by the peoples of Asia, particularly in the spiritual and cultural spheres.

(44) We in the United States of America are proud that our culture is the result of an accumulation of the cultures of the world, brought to our country by each of the representatives of Unesco here. We are proud of the fact that the United States of America is a land and a people which are receptive to new ideas, spiritual, cultural and otherwise, and we have confidence in the building of our great country through these ideas. We are anxious to know the peoples of Asia, even better than we do now, and we believe that this will bring about the betterment of mankind and will further peace. In asking that our next General Conference be held in a country of Asia, it seems to me that we are taking a tremendous step towards bringing the peoples of the world closer together in bonds of friendship, goodwill and mutual confidence. This may help to bring us nearer to that great ideal of peace which all of us so ardently believe in. I take great pleasure in seconding the motion put by Brazil to hold the ninth session of the General Conference in New Delhi.

(45) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Uruguay.

(46) Mr. SECCO ELLAURI (Uruguay) (Translation from the Spanish): Mr. President, fellow delegates, our delegation warmly supports the proposal that the next session of the General Conference of Unesco be held in New Delhi. I should also mention that the Executive Board of Unesco, when it considered this question, decided by a unanimous vote in favour of the proposal. To those who may, for apparently serious reasons, have doubts concerning the wisdom and legitimacy of this request by India, it should be pointed out that, superficially, there would seem to be two objections to it - one legal and the other financial.

(47) The legal obstacle is the following. The Constitution, by which we are bound, originally stipulated that sessions of the Conference should be held alternately in Paris and elsewhere. A new system was later introduced, under which sessions of the Conference could, but would not necessarily, as at first, be held away from Paris. According to this system, it would therefore appear that since on this occasion the Conference is held in Montevideo, it should be held next time in Paris. That, it seems to me, is the legal obstacle. The other, which has come to light during our deliberations, is financial. If the Conference were held in Paris it would involve less expense; if it were held in New Delhi it would apparently be extremely expensive. If it were held in Paris the estimated expenditure would be $234,000, as against $548,000 for New Delhi. A comparison of these figures shows that the holding of the Conference in India would entail an increase of more than $300,000 in Unesco's budget, over which we have kept such careful watch.

(48) But these two obstacles are in fact illusory. Neither is really valid on this occasion. The legal objection does not hold for the simple reason that the Unesco headquarters building in Paris cannot be finished in 1956; and according to Secretariat spokesmen, the present Unesco building is no longer adequate for sessions of the Conference, which are attended by steadily larger numbers. The new building will not be ready, and any attempt to expedite its construction would entail an extra cost comparable to, or even higher than, the $300,000 increase involved in holding the Conference in New Delhi.

(49) Further, with regard to this figure - if there is still any room for hesitation - I do not think it quite accurate. I believe that the Secretariat, with understandable caution, has calculated the figures at their maximum, without taking into account reductions which are likely to occur later. But that is not all. There is another most important consideration: Unesco's itinerant policy - if I may so call it - of leaving its permanent headquarters in Paris to travel about the world, providing an opportunity for these world-wide parliaments of minds to be held in other countries, is extremely useful from the standpoints of information and propaganda. It is particularly valuable in that it familiarizes people with Unesco in a way that even the best organized and most costly propaganda through books or pamphlets could not do.

(50) Again, it is a tremendous help to propaganda in the country where the Conference is held, and not in that country alone but also among its neighbours. This was the case in Montevideo, as the time for Unesco's visit drew near. Despite all our publicity, the hearts of our compatriots had not up to then been stirred in Unesco's cause, but the actual presence of the Organization has produced a veritable wave of interest, and an ardent desire for information. And, in referring to Montevideo, I believe that what I say applies to Latin America as a whole. To Latin America, this visit has been a feast for the mind. Why should Asia be denied the same privilege - distant Asia which Unesco has never visited in its previous journeyings? It has visited the Middle East, at Beirut; another European country, at Florence; northern Latin America, at Mexico City; and the southern part of that cultural region, at Montevideo, omitting from its journeys outside Europe only Asia. This, gentlemen, is Unesco's only opportunity of going outside Europe. Once the headquarters building in Paris is finished, Unesco will probably remain anchored for a long time in Europe. This is Asia's last and only opportunity of being visited by Unesco. For this reason I began by saying that we warmly and enthusiastically supported the proposal. And in this I am in no sense swayed by my personal feelings or tastes. I have acted as a delegate, putting my professional conscience first. For, had I been considering this question as a private person, I would not have had the slightest hesitation. I have

had the good fortune to visit New Delhi, to see for myself its archaeological treasures, the riches of its past, the splendour of its present, and to glimpse the promise of its future.
(51) I still see in my mind's eye the Mogul palaces, those eloquent testimonies to India's rôle in the past as a cradle of culture. And I am still amazed by the stupendous social experiment now being carried out in the sub-continent of India.
(52) For me as a private person, then, this problem raises no doubts. And, though this is not a matter of interest to my fellow delegates, I would say - following the example of the King of France who remarked that Paris was well worth a Mass - that New Delhi is well worth an effort on your part.

(53) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Japan.

(54) Mr. SAWADA (Japan): Mr. President and fellow delegates: On behalf of the Japanese delegation, I have great pleasure in supporting the proposal of India to invite Unesco to hold the next session of the General Conference in New Delhi.
(55) As you all know, eight years have passed since the birth of Unesco and eight General Conferences have been held in succession, but none of them has been held in Asia. Japan, for one, has long been desirous of seeing such a conference held in our part of the world. Naturally we were much pleased when we heard of the intention of India to invite Unesco to hold the next session of the General Conference in its capital. I am inclined to think that this proposal will be unanimously adopted and that, with your approval now and here, the next General Conference will be held in India in two years' time. In that case, I am confident that it will prove to be an event, not only in the development and promotion of Unesco's activities in Asia, but also in the annals of Unesco itself. I may tell you on this occasion that, not long after its establishment about three years ago, our National Commission for Unesco passed a resolution urging our Government to take steps to invite Unesco's General Conference to Tokyo and favourable consideration was given thereto by our Government at that time. Owing, however, to circumstances entirely beyond our control, Japan has not been able to make a definite proposal on this subject to the General Conference. Thus, cherishing that hope as we do, Japan is only too pleased to see the next session of our General Conference held in a friendly country not very far from us. With time-honoured cultures of immense profundity, India, as you know, is also establishing a solid position in the fields of science and education, and her contributions to the cause of Unesco have been very large. In these circumstances, I have every reason to believe that, in the event of a happy decision being taken at this Conference on this matter and of the next session of the General Conference being held in New Delhi, it will certainly be crowned with a signal success for Unesco.
(56) It is also of great significance that the first Unesco General Conference to be held on Asian soil will coincide with the tenth anniversary of Unesco, a very happy coincidence. Let us hope that it will open a new and propitious chapter in the history of Unesco and prove to be an important milestone on the road of progress and development of our Organization. It is in this belief that my delegation reiterates our warm support of the proposal of India to have the next session of our General Conference in the beautiful capital of that country.

(57) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Egypt.

(58) Mr. HUZAYIN (Egypt): Mr. President, ladies and gentlemen. My honourable colleagues who have spoken before me have come mostly from the West and the New World or from the Far East. It gives me very great pleasure indeed, and I feel this from the bottom of my heart and speak to you now as a delegate from the ancient East, to give very warm support to the acceptance of this cordial invitation from India.
(59) It has been said that the Conferences of Unesco have been held in different parts of the world, in different continents; I beg to submit that India, in a geographical sense, is not only a country, a Member State, but is a whole continent, a continent by the size of its population, by its diversified culture, by its great history in the past, and, I am sure, by its great history in the future. We all have something in common with India. India is the home of so-called South Asian culture, but that cultural civilization of India has come into touch with the various other cultures of the world. It has been in touch with the Mediterranean since the days of Alexander and his great campaigns. It came again into touch with Western Asia and with the Arab and Islamic world. It came into touch with the Chinese and the Far Eastern world, when the Mogula and their culture penetrated India. Finally, it has come into touch with the West in recent centuries. When we go to India, therefore, we shall find there something which belongs to every one of us.
(60) India has a claim to a Conference, not only in order that the Indian people may see Unesco and the work of this great world organization. India in her turn has a great contribution to make and has an important lesson to teach to all of us citizens of the world. In India we shall not only see the traditional spiritual fruits of Indian culture, but we shall also see a great nation working and applying scientific methods in order to rebuild itself. In India, therefore, there would be a great chance for all of us to see how the East is trying to implement its own peaceful methods of international understanding and co-operation. May I therefore be allowed, in supporting this motion, to couple it with the wish that we adopt it unanimously, with the feeling that we shall all be going to one of the cradles of human culture in the past and to one of the bright spots for human civilization in the future.

(61) The PRESIDENT (Translation from the Spanish): I call upon the delegate of the United Kingdom.

(62) Sir Ben BOWEN THOMAS (United Kingdom): Mr. President and fellow delegates. It is with very great pleasure that I rise, as a delegate of the United Kingdom, to associate myself, on behalf

of my fellow delegates, with this public profession of our deep satisfaction that the next session of the General Conference may be held in India. I am sure we shall all agree that this is in some measure a tribute to the work done amongst us over the last six, seven and more years by the members of the Indian delegation. No country has brought a stronger and more amply equipped delegation to the work of this Conference than India. And it is a measure of the sense of responsibility of a Member State towards this Organization that, in the selection of its delegation, it should choose wisely, amply and well. We know that that has been constantly done by India. There is full evidence of it in the fact that we have always been glad to use their talents in responsible Conference offices. We have been glad to ask their delegates to be, in turn, Chairman of the Executive Board, members of the Executive Board and the President of our General Conference.

(63) May I add that, as soon as it was known that India proposed to invite the next Conference to New Delhi, Her Majesty's Government immediately decided to give that invitation its whole-hearted support. We are members of one family. We are bound by ties which, though lighter than air, are stronger than steel, ties, both of the spirit and of the mind, that should grow stronger and stronger in bringing the Member States together. Finally, may I call your attention to the simple fact that this Organization was born in the heart of the Commonwealth and that, at the end of ten years, it will be holding its General Conference within the territories of another member of the Commonwealth. I can think of no more valuable precedent than that every ten years this Organization should decide to return to the source of its inspiration and there derive strength to go forward in its great work. I am sure that we all look forward with great satisfaction and prospective happiness to the meeting of the General Conference in New Delhi in two years' time.

(64) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Yugoslavia.

(65) Mr. MATIC (Yugoslavia) (Translation from the French): Mr. President, the Yugoslav delegation warmly and whole-heartedly supports the Indian Government's proposal that our next session should be held in New Delhi. I would also like to express our hope that a decision in this sense will be taken unanimously.

(66) The PRESIDENT (Translation from the Spanish): I call upon the delegate of France.

(67) Mr. LAUGIER (France) (Translation from the French): Mr. President, fellow delegates, a few days ago, when the Executive Board still consisted of independent members, I strove - and strove strenuously - in my purely personal capacity to get the next session of the Conference held in New Delhi, and I had the good fortune to contribute to the Board's unanimous decision which is now before you.

(68) Today, as my country's delegate and for once entirely in agreement with my Government, I can tell you of France's unreserved wish to see the next session of the Conference held in New Delhi.

(69) We believe that the exchanges of persons advocated in Unesco's programme constitute one of the most important, lively and effective factors in international understanding.

(70) Some years ago, at the United Nations, I strove to get one of the sessions of the General Assembly held in Paris. And I saw outstanding men arriving in Paris - men of exceptional culture, belonging to famous civilizations, who had never before set foot in France, nor even in Europe. It was a revelation to them.

(71) Now, I ask you who are assembled here, how many of you have seen New Delhi? It is very important that leaders in education, science and culture should make contact with India, that great country, with a stupendous past culture and civilization, which, for demographic reasons, and for reasons connected with its geography and its history, is now faced with extraordinary human problems. It is very important that some token should be given of world solidarity, and particularly of solidarity among leaders in education, science and culture, in favour of India. The French Government is therefore prepared to agree unreservedly, whatever the financial implications, to the holding of the next session of the Conference in New Delhi.

(72) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Belgium.

(73) Baron van der STRATEN WAILLET (Belgium) (Translation from the French): Mr. President, fellow delegates, in speaking for my Government I feel sure that I am also expressing the views of many neighbouring and friendly European countries, who will all be as delighted as we are to be able to accept the Indian Government's invitation to meet in New Delhi, two years hence, for the next session of the Conference.

(74) Like the delegate of Uruguay, we also believe in the advantages of Unesco's policy of moving about. Man's nature being what it is, he only likes what he is familiar with. It is surprising to note how much good a man who has travelled has to say about the countries he has visited. For myself, I am convinced that never have the praises of Uruguay been sung throughout the world as they will be after this eighth session of Unesco's Conference, and the same will undoubtedly happen after the ninth session, when we have been to New Delhi. Nor are these journeys fruitless for ourselves. There is a saying that travel broadens the minds of the young. Obviously we are all young or we should not be here, for on youth must fall the task of defending Unesco's ideals.

(75) Not only for ourselves, but for the Organization itself, there is no more effective way of making Unesco's usefulness and its merits understood than by putting it into direct touch with the different peoples of the world. We have sufficient proof of this in the interest aroused among the entire population of Uruguay by Unesco's meeting here. Like me, you have doubtless come across many enthusiasts - from the man at the petrol pump or the hotel keeper to passers-by in the street - who have asked you to let them have our Unesco emblem as a souvenir of this splendid Conference.

(76) I am particularly happy that this invitation should come from a country like India, which has given the world such a great cultural heritage. It is undoubtedly to the interest of all the cultural groups in the world to get to know India better and to make an effort - in the shape of this journey and the few dollars' cost it will involve - to contribute towards the achievement of our common aim, which is to seek for truth and to improve cultural and spiritual standards throughout the world.

(77) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Hungary.

(78) Mrs. JOBORU (Hungary): Mr. President, fellow delegates. Allow me in the name of the Hungarian delegation to echo the thoughts expressed so eloquently by the delegates who have preceded me. The Hungarian delegation also whole-heartedly supports the proposal for the seat of the next Conference. We all know, and we have all seen at this Conference, what an important rôle the Indian people play in human progress and in the fight for peace. We shall be very glad of the opportunity to become personally acquainted with the work and the fight for peace of the people of India.

(79) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Spain.

(80) Mr. RUIZ JIMENEZ (Spain) (Translation from the Spanish): Mr. President, fellow delegates, my Government has pleasure in supporting the proposal that the next session of the General Conference of Unesco should be held in New Delhi, for the same reasons that have been so well stated by other delegations and also because of the spiritual links which for centuries past have bound us to those regions where men of Spanish civilization also went to work for culture. There is a further reason, adventitious perhaps, that it was precisely in seeking a new road, a new road to the region of India, that Spain found the inestimable treasure of these American countries. For all these reasons, we shall vote with satisfaction and pleasure for the next session of the General Conference to be held in New Delhi.

(81) The PRESIDENT (Translation from the Spanish): As a result of the speeches we have just heard, and in the belief that this is in accordance with the feeling of the Conference, I propose that we vote on this question by acclamation.

(82) The proposal is adopted unanimously.

(83) I call upon the delegate of India.

(84) Dr. MUDALIAR (India): Mr. President, ladies and gentlemen. It would be ungracious on my part if I were not to crave your indulgence, and that of this Conference, while I express in a few words the thoughts uppermost in my mind and in my heart on this unique occasion. My delegation has listened with the greatest amount of respect, and with an amount of joy that it is not possible for us to express in words, to the various speeches that have been made by distinguished delegates from almost all parts of the globe, and we rejoice indeed that our humble invitation to hold the ninth session of this Conference in New Delhi has been received with approbation by this august assembly. When this proposal was mooted by our National Commission, our Prime Minister Pandit Jawaharlal Nehru, immediately gave us his unqualified support and asked us to place the request before this Conference, and I am sure that the result of this afternoon's proceedings will be acclaimed in my country and in the neighbouring countries of Asia with a satisfaction which it is difficult for me to express in words. When the heart is full, words somehow fail, as indeed they must. It has been a unique experience for my delegation to have so much of kindness, so much of consideration and so much of good feeling expressed on the floor from all quarters. We look forward with great rejoicing to the holding of the Unesco Conference in New Delhi, for we are convinced, as original members of this body and as a State which has participated in all these conferences, that, however little India can contribute to the success of this Conference, it will indeed be a great and unique event, not only for our country but for the many countries of the region. It will bring home to our people, to those forward looking millions who cherish the ideals of Unesco in their hearts, how Unesco can hold a Conference and thrill the imagination of the people of that part of the country.

(85) Mr. President, during the last few weeks we have had the unique privilege of holding this Conference in your great city and country and, believe me, we sometimes doubt whether we can ever match the delightful manner in which you have welcomed us in every sphere of activity and whether we shall be in a position correspondingly to fulfil the obligations that are put upon us in inviting you to our country. But I can assure you, Mr. President, the heart will be there and, whatever little defects there may be, we are sure the Conference will realize that India, in extending the invitation, had but one object in view - to spread the message of Unesco in all parts of the world and to make the people of the world more and more interested in the great mission which Unesco has undertaken. It is our heartfelt wish that, when the next conference meets in New Delhi, we shall have progressed much farther in building this, the global organizational State - that we shall have made more and more contacts, that we shall have come to realize that, all said and done, man can be the most immortal of persons in every sphere of mind and body.

(86) They say that gratitude is a lively sense of favours yet to come. I therefore express another hope - that it may be possible for the distinguished members who will assemble in New Delhi, not merely to open the Conference there but also to visit other parts of our country and some of our other Member States. You will realize that it will be a real interest of ours to get these great minds into touch with the people of our country. It is our hope, ladies and gentlemen, that all of you will be in a position to spend a few more days at the conclusion of the session in New Delhi visiting the

many worth-while scenes in that part of the world.

(87) The PRESIDENT (Translation from the Spanish): I call upon the Director-General.

(88) The DIRECTOR-GENERAL: Mr. President, I think that, if the Secretariat had been allowed to join in the acclamations accompanying the decision to go to New Delhi, you would have heard an even louder noise than you did. I promise the Government of India, on behalf of the Secretariat, that we shall do our zealous best to prepare well the work of the Conference in New Delhi. We shall work closely and continuously with the Indian Government, in order to make it possible for you to hold a very successful Conference there. Having visited India on two occasions, I can assure you that you who go to New Delhi will derive very great personal pleasure from attending the Conference there.

**ELECTION OF 22 MEMBERS OF THE EXECUTIVE BOARD**
(documents 8C/DIV/145, 8C/DIV/133)

(89) The PRESIDENT (Translation from the Spanish): The two ballot papers are ready for distribution to delegates. We can therefore proceed to the vote on the candidates for the Executive Board.
(90) In accordance with the Conference's decision, delegates may vote either for the list of 22 names proposed by the Nominations Committee, or for the names they choose from the list of thirty presented to the Conference.
(91) I call upon the delegate of Israel.

(92) Mr. KUDOVY (Israel) (Translation from the French): Mr. President, ladies and gentlemen, we should like to thank the countries which were good enough to vote for the Israeli candidate this morning. In face of the harsh realities of this world - from which Unesco, despite its high ideals, is not exempted - your vote was a great consolation to us. We would, however, ask the Conference to note that Israel has withdrawn its candidature; the name of the Israeli candidate should therefore not appear on the ballot paper containing thirty names.

(93) The PRESIDENT (Translation from the Spanish): I call upon the delegate of the Philippines.

(94) Mr. DE LOS SANTOS (Philippines) (Translation from the Spanish): Mr. President, fellow delegates, the Philippine delegation wishes to express its warm gratitude to all the delegations which voted for the Philippine candidate. Realizing, however, that the result of the preliminary vote taken this morning expresses the wishes of the heads of delegations here present, and acting as a people that recognizes democratic principles and accepts the opinion of the majority, we withdraw the candidature of our nominee and support the resolution presented by the Chairman of the Nominations Committee, who spoke at the beginning of the afternoon.

(95) The PRESIDENT (Translation from the Spanish): I call upon the delegate of France.

(96) Mr. CABOUAT (France) (Translation from the French): Mr. President, before we vote, the French delegation would be glad if the following facts could be confirmed:

(1) That, if neither list has priority over the other, the two ballot papers now in the possession of the different delegations have exactly the same legal value;

(2) That it is understood that, on the ballot papers distributed to delegations this morning, the names of the Israeli and Philippine candidates should be struck out by the delegations wishing to use this ballot paper, and that the fact of striking out these two names does not in itself invalidate the ballot paper.

(97) The PRESIDENT (Translation from the Spanish): I think that the delegate of France is right. The fact of striking out the candidatures of Israel and the Philippines, which have been withdrawn by their own delegates, will not invalidate the ballot papers; it has not been possible to correct these because the withdrawal of the candidatures was too recent. As far as the two ballot papers are concerned, the only difference between them is that one is the list recommended by the Nominations Committee while the other includes the names of all the candidates put forward. If the Conference has no objection, this procedure will be adopted.

(98) It is approved.

(99) I think that the plenary meeting should be suspended for a quarter of an hour, so that the vote can be taken in due order. I also ask for tellers to be appointed to count the votes, and propose for this purpose Mr. Ebbel, the Norwegian delegate, and Mr. Matic, the Yugoslav delegate. If there is no objection, we will proceed accordingly.

(The meeting was adjourned at 5.15 p.m. and resumed at 5.35 p.m.)

(100) The PRESIDENT (Translation from the Spanish): The meeting is resumed.
(101) I should remind delegates that, although two ballot papers have been distributed, only one is to be used for voting. Delegates who vote for the list proposed by the Nominations Committee need not place any mark against the names of candidates; those using the other list should place a mark opposite the names of the 22 candidates for whom they vote. I would remind you that the ballot is secret and that the papers should not be marked in any other way.
(102) The results of the voting are as follows: Number of Member States with the right to vote at this meeting: 72, with 4 absent, 1 abstention and 2 spoilt papers. Number of votes cast: 65. Number of votes constituting the majority required for election: 34.
(103) The following are the names of the candidates elected, with the number of votes secured by each:

Mr. Laugier (France): 65 votes;
Mr. Veronese (Italy): 65 votes;
Mr. Haguiwara (Japan): 64 votes;

Mr. Spilhaus (United States of America): 64 votes,
Mr. Awad (Egypt): 63 votes;
Mr. Ferrara Marino (Cuba): 63 votes;
Mr. Massaquoi (Liberia): 63 votes;
Mr. Raadi (Iran): 63 votes;
Mr. Sharif (Pakistan): 63 votes;
Mr. Bender (Netherlands): 62 votes;
Mr. Berredo Carneiro (Brazil): 62 votes;
Mgr Maroun (Lebanon): 62 votes;
Mr. Mudaliar (India): 62 votes;
Sir Ben Bowen Thomas (United Kingdom): 62 votes;
Mr. Secco Ellauri (Uruguay): 61 votes;
Mr. Martínez Cobo (Ecuador): 60 votes;
Mrs. Schlueter-Hermkes (German Federal Republic): 58 votes;
Mr. Estelrich (Spain): 54 votes;
Mr. Nielsen (Denmark): 51 votes;
Mr. Malakul (Thailand): 50 votes;
Mr. Johannes (Indonesia): 49 votes;
Mr. Solodovnikov (USSR): 48 votes.

(104) In addition, the candidates I am about to mention received the following number of votes:

Princess Souvanna Phouma (Laos): 25 votes;
Mr. Piaget (Switzerland): 24 votes;
Mr. Vo Van Lua (Viet-Nam): 18 votes;
Mr. Wierblowski (Poland): 18 votes;
Mr. Bardales (Honduras): 17 votes;
Mr. Paik (Korea): 15 votes.

(105) In accordance with the transitional provision in the Rules of Procedure of the Conference, we will now draw lots to choose, from among the 22 delegates who have been elected members of the Board, the 11 who will retire two years after taking office.
(106) I ask the Chairman of the Nominations Committee kindly to draw the lots.
(107) As a result of the lots drawn by the Chairman of the Nominations Committee, the following members of the Executive Board will retire in two years' time:

Mr. Bender (Netherlands)
Mr. Massaquoi (Liberia)
Mr. Solodovnikov (USSR)
Mr. Haguiwara (Japan)
Mr. Malakul (Thailand)
Mr. Mudaliar (India)
Mr. Sharif (Pakistan)
Mr. Ferrara Marino (Cuba)
Mr. Spilhaus (United States of America)
Mrs. Schlueter-Hermkes (German Federal Republic)
Mr. Estelrich (Spain).

The meeting rose at 7.15 p.m.

# SIXTEENTH PLENARY MEETING

*8 December 1954 at 3.45 p.m.*

*President:* Mr. ZAVALA MUNIZ (Uruguay)

CONTENTS

Consideration and adoption of the Report of the Committee on Reports of Member States (document 8C/REP/1) . . . . . 195
Consideration and adoption of the Report of the Administrative Commission (documents 8C/ADM/35 and Appendix) . . . . 197

**CONSIDERATION AND ADOPTION OF THE REPORT OF THE COMMITTEE ON REPORTS OF MEMBER STATES** (document 8C/REP/1)

(1) The PRESIDENT (Translation from the Spanish): We shall consider the report of the Committee on Reports of Member States. I call upon the Rapporteur, Mr. Hazoum.

(2) Mr. HAZOUM (Rapporteur) (Translation from the French): Mr. President, in addressing this Conference for the first time, I wish, first of all, to state my heartfelt conviction that this eighth session of the General Conference of Unesco is a landmark in the annals of the Organization - and, I might add, in the history of mankind - in that it has furthered Unesco's unfailing efforts to increase understanding and hence also friendship amongst men, and to extend that international co-operation which should lead to banishing the spectre of war forever and wiping out other scourges which enfeeble, when they do not actually decimate, the ranks of mankind.

(3) Yes, there is no doubt that this Conference will be a landmark. It is the first Conference at which, in addition to the 70 old Member States, 5 of which belong to the African continent, we have had representatives of two new countries in Equatorial Africa, ranking as Associate Members: Sierra Leone and the Gold Coast.
(4) As an African I cannot but rejoice at this. May the glow which I see today on the horizon of my beloved Africa grow soon into a dazzling light which will disperse the shades of illiteracy, of ignorance, the root, as we well know, of all too many prejudices and evils.
(5) The Head of my delegation has thanked the Uruguayan people for their warm welcome to the delegates of Member States, for the magnificent reception organized in their honour on the day of the opening of this Conference; and, finally, for all the solicitude displayed by the Government of Uruguay in order to make our stay in this city a pleasant one.
(6) Speaking for myself, my heart was won by your schoolchildren, at once the pride and the hope of your country, the young people who sang to us that beautiful Canticle to Hope. My heart was won, too, by your magnificent spirit of universality, which finds expression in deeds as well as in words. You are thus, all unwittingly, setting the world a noble example.
(7) I am aware that a country like yours has always inspired its sons to fine poetry, and that you do not lack talented poets. I am aware also that so sensitive a people must necessarily possess good composers. Your poets and musicians could have produced in honour of this Conference held in your capital words and music equal to the finest produced by the writers and composers of other nations. But you preferred to choose a poem by a French writer - Paul Claudel - and had it set to the music of a German composer - Paul Hindemith. That you elected to do this was proof of your spirit of understanding and of your fervent desire for the international co-operation which will engender an atmosphere of friendship among men and dispel the suspicion that paralyses our spontaneous goodwill, poisons our minds and creates the war psychosis which mankind has for the last few years been struggling in vain to throw off. This fervent desire for international co-operation does you great credit.
(8) I find further proof of your spirit of universality in the warm tribute paid in this city to the memory of Henri Poincaré. That tribute finally confirmed my conviction that, for all your attachment to your own country, you have a very deep interest in mankind in general, in the people of other countries, and that your spirit is universal. You admire the wide learning personified in that great French scholar.
(9) I have seen that you are deeply imbued with the spirit of democracy: that intelligent, tolerant democracy which suffers no sectarianism of any kind, and permits the free expression and clash of opinions. This true democracy, based on justice, has never despised or repressed the humble and the members of minority groups but, on the contrary, has consistently respected them.
(10) I found ample proof of this in your recent parliamentary elections which I have been able to witness in Montevideo. During the electoral campaign, I wandered freely through your capital and through some of your provincial cities, and was thus able to realize the extent of your attachment to the freedom of expression which alone makes Man truly Man. Your elections were marked by extraordinary calm and admirable dignity.
(11) This is surely incontestable proof of your great political maturity. Proof too of a true democracy, which never stoops to acts of violence against those who, in accordance with their rights, hold political opinions contrary to our own.
(12) It is no doubt this democracy, truly understood and conscientiously applied, which is at the root of the serenity of mind which I find so admirable in you, and which explains the domestic peace which other nations must envy you.
(13) But it is time for me to stop, and to come to the subject on which I am here to speak, in my capacity as Rapporteur
(14) The Report of the Committee on Reports of Member States contains four sections: the first section consists of the first seven paragraphs, and deals with the establishment of the Committee on Reports of Member States, set up at the fifth session of the General Conference, by resolution 30.214. it deals also with the purpose of that Committee, which is to examine the reports that Member States are required to submit under Article VIII of the Unesco Constitution. Eleven Member States are represented on this Committee - Austria, Cambodia, Dominican Republic, Ecuador, France, Iraq, Luxembourg, Turkey, Union of South Africa, United Kingdom and United States of America. Two Member States - Luxembourg and Austria - were absent. (Austria was able to send a representative to our first meeting only.)
(15) We also had four States represented by observers - Argentina, German Federal Republic, Haiti and Spain.
(16) At our first meeting, we elected our Officers, consisting of a Chairman, two Vice-Chairmen and a Rapporteur. The post of Chairman fell to Iraq, those of the two Vice-Chairmen to Cambodia and the Dominican Republic, and that of Rapporteur to France.
(17) We held in all eight meetings on 12, 13, 15, 18, 22, 23, 24 and 29 November.
(18) At the last meeting, the Director-General, the Assistant Director-General and the Acting Chief of the Division for Relations with Governments and National Commissions were present.
(19) At the other seven meetings the Chairman was accompanied by the Director of the Havana Regional Office, representing the Director-General. At all meetings we had our Secretary and a representative of the Division for Relations with Governments and National Commissions.
(20) That is a short summary of the first section.
(21) The second contains a general study of the reports submitted for the years 1952-53. The Committee was able to study 58 reports in all. These reports were submitted by the following Member States: Afghanistan, Argentina, Australia, Austria, Belgium, Brazil, Cambodia, Canada, Ceylon, Chile, China, Colombia, Costa Rica, Cuba, Denmark, Dominican Republic, Ecuador, Egypt,

El Salvador, France, German Federal Republic, Greece, Haiti, Honduras, India, Indonesia, Iran, Iraq, Israel, Italy, Japan, Jordan (Hashemite Kingdom of), Korea, Laos, Lebanon, Libya, Mexico, Monaco, Netherlands, New Zealand, Nicaragua, Norway, Pakistan, Panama, Philippines, Poland, Spain, Sweden, Switzerland, Syria, Thailand, Turkey, Union of Burma, Union of South Africa, United Kingdom, Uruguay, Viet-Nam, Yugoslavia.
(22) I will now read you the rest of the report and the draft resolution that follows it.*

(23) The PRESIDENT (Translation from the Spanish): Discussion of the report presented by the Rapporteur is open. If no delegate wishes to speak, I shall put it to the vote.

(24) The report and the draft resolution were adopted by 45 votes to 0, with 4 abstentions.

**CONSIDERATION AND ADOPTION OF THE REPORT OF THE ADMINISTRATIVE COMMISSION** (document 8C/ADM/35 and Appendix)

(25) I call upon Mr. Eriksson, the Rapporteur.

(26) Mr. ERIKSSON (Rapporteur of the Administrative Commission): Mr. President, fellow delegates, I shall not be able to make such an eloquent speech in presenting this report as the Rapporteur of the Committee on Reports of Member States. I will, however, mention some of the main points in the Report of the Administrative Commission.
(27) Before doing so, I will draw your attention to a few minor errors:
(28) On page 26, in the middle of the page, resolution No. 31 should read No. 32.
(29) On the last page No. 41, under (b) Part I, Chapter 2, number (v), comes a resolution or recommendation "That the Russian language be a working language of the General Conference". That paragraph should come under Part I, (a), as number (ii).
(30) I am also sorry to say that the names of the Vice-Chairmen from Egypt and Israel have been mis-spelt or wrongly typed, which of course will be corrected. I hope they will excuse those errors.
(31) I will not go into details, as all Member States had delegations on this Commission; I will simply present the report submitted to the General Conference for approval except for certain resolutions which have already been adopted by the General Conference in plenary session. I will mention those exceptions when I come to them.
(32) The Report contains six main Sections from A. to F. On page 2 you will find A. Financial Questions. I draw your attention there to the fact that the accounts and reports on Financial Business were not only accepted by the Commission, but that the Commission also congratulated the Director-General on the excellent state of the finances of the Organization, which congratulations, I feel, were particularly directed to the Comptroller of the Organization, Mr. Harper-Smith.

* The final text of the Report will be found in 8C/Resolutions (Annex 3).

(33) Let us now turn to page 3, which starts the chapter on Member States' Contributions. If you look under Scale of Contributions, you will find on page 5 a footnote saying that this resolution was adopted at the twelfth plenary meeting of the General Conference, so we do not have to take a decision on that part of the report at this meeting. We can pass directly to Currency of Contributions on page 6. You will find under Currency of Contributions that this resolution is similar to that adopted by the seventh session of the General Conference, except that Switzerland is no longer required to pay in Swiss francs, and that provision is made for the acceptance of national currencies for Member States where the Director-General considers that there is a foreseeable need for a substantial amount of that currency. I will not read the resolutions, you will find them under each chapter.
(34) The resolutions on Collection of Contributions are on pages 7 and 8. These have already been adopted by the General Conference at the twelfth plenary meeting. We can therefore turn to Administration of the Working Capital Fund - which covers page 11 and part of page 12. The Commission agreed to the various uses to which the Fund may be put during the years 1955-56 on the same basis as was approved for 1953-54, but with the addition of an item relating to any awards of compensation ordered by the Administrative Tribunal of the International Labour Organization. Certain delegates also expressed the hope that the Director General would examine the possibility of amending the Financial Regulations so as to incorporate in them the substance of the resolution proposed thereafter, instead of submitting such a resolution at each session of the General Conference.
(35) Turning to Amendments to the Financial Regulations (pages 12 and 13), the revised text that is proposed provides that cash surpluses shall not be credited to Member States who have not paid in full their contribution for the year to which the surplus relates. We also examined a resolution submitted by the delegate of Spain relating to amendments to and departures from the Financial Regulations, and considered that any departure from the Financial Regulations should be preceded by the preliminary suspension of the provision to which an exception is to be made, that no amendment to the Financial Regulations can be considered by the Conference unless the question has been placed on the agenda of the General Conference in accordance with the Rules of Procedure, and that it would be desirable to insert in the Financial Regulations a provision that the Regulations may not be amended, nor the application of one of the Regulations suspended, except by a decision taken by a two-thirds majority.
(36) On pages 13 and 14 you will find that Iran, Israel and Yugoslavia submitted requests for the writing off of losses incurred by the National Commissions of these States in acting as distributing agencies for Unesco Coupons. The Commission has agreed to these losses being written off.
(37) Methods of Financing the Budget are on pages 14 and 15 and were adopted at the twelfth plenary meeting of the General Conference.

(38) The next main Section is on Social Security Questions. This calls for little comment, but I want to mention especially that the Commission recommended the election of a Permanent Delegate to Unesco of the following Member States as representatives of the General Conference on the Unesco Staff Pensions Committee. They recommended as Members: Australia, France and Italy, and as Alternate Members: Japan, Lebanon and the United States of America.

(39) Staff Questions starts on page 19. I will first take up Personnel Recruitment Standards and Methods (pages 19 to 21). We noted there especially "... that the proposed amendments were aimed at maintaining the highest standards of efficiency, competence and integrity, affording the maximum security of tenure, and ensuring equitable geographical representation within the Secretariat." We also considered certain measures to enable the Director-General to improve the present situation. If you look at resolution 26.1 (and the same applies later to 29.1), you will find that we have left out the date on which these changes shall take effect. We had to do that as we were not quite sure when this meeting would take place, and it should be the date of this meeting, failing any other decision.

(40) I will then turn to page 21 - Personnel Policy, Obligations and Rights of Staff Members: Proposed Amendments to the Staff Regulations. We examined in detail the Director-General's proposals for amendments to the Staff Regulations, the purpose of which was to define more clearly the obligations and rights of staff members and to bring Unesco's personnel policy into closer conformity with that of the United Nations. In the course of the debate, the attention of the Commission was drawn to Article 13 of the Agreement between the United Nations and Unesco, which Article calls for close co-ordination in matters of personnel policy. Several delegates, while agreeing that close co-ordination was most desirable, maintained that this did not necessarily mean that the Staff Regulations of the two Organizations should be identical. Certain delegates were not sure that some of the changes were opportune and wondered if consideration of them should not be postponed until the ninth session of the General Conference. Some delegates were of the opinion that the existing Staff Regulations were adequate, but that, if the Director-General considered that certain points required clarification, it was the duty of the General Conference to clarify them. While there was some question whether there could be an exhaustive definition of the term integrity, it was pointed out that staff members had to observe certain overall standards of behaviour, and in this respect the particular attention of delegates was called to paragraph 4 of the report of the International Civil Service Advisory Board on Standards of Conduct in the International Civil Service. It was emphasized that staff members had duties and obligations as well as rights and that, although they were not required to give up their convictions, they were obliged at all times to regulate their actions in such a way as to put the interests of the Organization above their own personal interests.

(41) I also wish to mention specially that, in connexion with Regulation 9.1.1, the Director-General stated that he would make a Staff Rule providing for a Special Advisory Board, consisting of a Chairman and of four other members selected by himself in consultation with the Staff Association.

(42) On page 24 you will find that we considered a proposed resolution concerning the Statutes of the Appeals Board and one concerning recognition of the competence of International Administrative Tribunals.

(43) On page 25, we have Staff Regulations and Staff Rules as they appear in document 8C/ADM/27.

(44) The next main Section deals with Official and External Relations (page 26). We noted resolutions and recommendations of the United Nations organs concerning Unesco and discussed at some length the review by the Executive Board of the employment of subventions and also of the Directives concerning Unesco's relations with international non-governmental organizations. While approving the conclusions and recommendations of the Executive Board, the Commission decided to refer (with one exception) the proposed changes to the Directives contained in document 8C/ADM/21 back for further study by the Executive Board, with the request that it submit a report to the ninth session of the General Conference.

(45) On pages 27 and 28 you will find the results of our discussions concerning applications by international non-governmental organizations for admission to consultative arrangements with Unesco. You will find under item 33.1 the list of those which we suggest that the Conference approve, and on page 28 under 33.2, those which we suggest should be reconsidered at the ninth session of the General Conference. In that connexion the delegation of the Union of Soviet Socialist Republics informed the Commission that it would raise the question of item 33.2 again in plenary session.

(46) We can now turn to Legal Questions (pages 29 to 39). We considered amendments to Article II of the Constitution, relating to the withdrawal of Member States, and approved in principle the right of Member States to withdraw by unilateral action. You will find the draft resolution under 35.1.

(47) Amendments to Article V of the Constitution relating to the composition of the Executive Board (pages 30 and 31) have already been adopted by the General Conference. The amendments to Article V, 9 and VI, 3, of the Constitution, relating to the Director-General's reports on the activities of the Organization, were also considered and you will find the resolution under 35.23.

(48) You may then turn to page 32, where I especially want to mention draft amendments to the Rules of Procedure of the General Conference relating to the election of members of the Executive Board, which were adopted by the General Conference, on 22 November. The Conference adopted amendments to Rule 95, paragraphs 1 and 2, Rule 95A and Rule 98. Under (b) you will find draft amendments to the Rules of Procedure of the General Conference relating to Associate Members. The numerous changes made in the Rules of Procedure will be found on pages 34, 35 et seq.

(49) We also, as you will find on page 33 under (c), considered draft amendments to the Rules of Procedure of the General Conference resulting

from the adoption of Russian as a working language of the General Conference. Under (d) you will find some miscellaneous amendments to the Rules of Procedure of the General Conference. These latter amendments aim at clarifying certain points of drafting, at bringing certain rules into closer conformity with existing practice or at harmonizing the texts of certain other rules in the three languages.
(50) You may now turn to page 40, where you have General Questions under Section F. We considered and have suggested resolutions concerning the new Headquarters in Paris; but I do not think I have to go further into that.
(51) On page 41, you will find some recommendations which you had submitted to the Programme Commission, but we do not have to discuss that part here, since it will be presented to the plenary conference by the Rapporteur of the Programme Commission. I wish, however, to mention that the Union of Soviet Socialist Republics' delegation informed the Commission, in this connexion also, that it would take up the question of Russian as a working language of the General Conference and the Executive Board, at a plenary meeting of the General Conference.
(52) That is really all I have to say for the present about this report. I must, however, express the gratitude of all the delegations who participated in the work of the Commission to the Chairman - Dr. Beeby of New Zealand - for his excellent conduct of the Commission's work. We had some really difficult questions to deal with, and without his help we could not have disposed of them as we did.

(53) The PRESIDENT (Translation from the Spanish): I submit for your consideration the report which has been presented to the Conference. In view of its complexity, and the variety of subjects dealt with, I suggest that the Conference should discuss and vote on the resolutions chapter by chapter.
(54) If the Conference has no objection to this procedure, we will adopt this method, discussing each section separately and voting on the resolutions pertaining thereto. We shall therefore omit those sections containing resolutions already adopted by the Conference.
(55) I take it that this suggestion is accepted, and ask you to consider the first section of the report, dealing with Financial Questions, resolutions 15.1, 15.2, 17, 19, 20 and 21.

(56) Resolution 15.1 was adopted by 43 votes to 0, with 4 abstentions.

(57) Resolution 15.2 was adopted unanimously.

(58) Resolution 17 (17.1 to 17.3.5 inclusive): Currency of Contributions was adopted unanimously.

(59) Resolution 19 (19.1 to 19.5 inclusive): Administration of the Working Capital Fund was adopted by 46 votes to 0, with 2 abstentions.

(60) Resolution 20 (20.1 to 20.3 inclusive): Amendments to the Financial Regulations was adopted unanimously.

(61) Resolution 21 (21.1 to 21.3.1 inclusive): Losses on Exchange on Unesco Coupons was adopted by 46 votes to 0, with 2 abstentions.

Section B: Social Security Questions

(62) Resolution 23 (23.1 to 23.3 inclusive): Report by the Director-General on the Medical Benefits Fund was adopted by 47 votes to 0, with 1 abstention.

(63) Resolution 24 (24.1 to 24.4 inclusive): Report by the Director-General on the Staff Compensation Plan for service-incurred risks was adopted unanimously.

(64) Resolution 25 (25.1 to 25.3 inclusive): Report by the Director-General on the United Nations Joint Staff Pensions Fund was adopted unanimously.

Section C: Staff Questions

(65) The PRESIDENT (Translation from the Spanish): I call upon the delegate of France.

(66) Mr. CABOUAT (France) (Translation from the French): Mr. President, I merely wish to ask that the vote be taken item by item, i.e. that we vote on resolution 26.1, taking 26.11, 26.12, 26.13, 26.14 and so on; and then vote separately on resolution 26.2 and again on resolution 26.3.

(67) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Belgium.

(68) Mr. BAUGNIET (Belgium) (Translation from the French): Mr. President, ladies and gentlemen, I would like to make a comment about the date suggested by the Rapporteur for the entry into force of the changes in the Staff Regulations which we have to consider. There appear to me to be serious objections to deciding that these changes shall take effect as from today. No private employer can change his staff regulations and make those changes applicable overnight. No civilized State would act in this way, and I scarcely think that an international organization like ours can refuse to allow a certain delay before the proposed amendments enter into effect, especially as these amendments make considerable changes in the Staff Regulations. I therefore suggest that their application be postponed until three months after the staff has been given notice of them by the usual procedure.

(69) The PRESIDENT (Translation from the Spanish): Does anyone wish to speak? We have to consider the motion proposed by the delegate of Belgium and seconded by the delegate of Greece. I call upon the Director-General.

(70) The DIRECTOR-GENERAL: Mr. President, this would, I believe, constitute a clear departure from the practice of the General Conference. In the past you have adopted amendments concerning the Executive Board, you have passed amendments to Financial Regulations, you have changed the Rules of Procedure at this Conference and I believe in every case you made them effective immediately. I think that in the mind of the Administrative

Commission when it put this proposal before you, the only thing that needed to be written in was the date of your adoption of these Regulations, and I should like to recommend most strongly that you make them effective according to the usual practice.

(71) The PRESIDENT (Translation from the Spanish): If no delegate wishes to speak, a vote will first be taken on the item under discussion, namely the proposal of the Belgian delegate.
(72) In the opinion of the Commission, the motion presented by the Commission should first be put to the vote. I call upon the delegate of Belgium.

(73) Mr. BAUGNIET (Belgium) (Translation from the French): Mr. President, gentlemen, I feel obliged to speak again because I think we are making an error of procedure. My proposal constitutes, I think, an amendment to the proposal of the Rapporteur of this Commission, and should therefore, as I see it, be voted on before we vote on the report before us.

(74) The PRESIDENT (Translation from the Spanish): Very well. A vote will be taken on the amendment submitted by the Belgian delegate. It is understood that approval of this amendment will mean acceptance of a three months' delay.

(75) The amendment submitted by the Belgian delegate is rejected by 24 votes to 15, with 9 abstentions.

(76) We shall now take a vote on the proposal submitted by the Rapporteur - item by item - in accordance with the French delegate's request.

(77) Resolution 26.1 - 26.15 was adopted by 44 votes to 0, with 4 abstentions.

(78) Resolution 26.2 was adopted by 46 votes to 0, with 2 abstentions.

(79) Resolution 26.3 was adopted by 47 votes to 1, with no abstentions.

(80) Resolution 28: Salary Adjustments for Staff in the Principal Officer and Director, and Professional Categories was adopted unanimously.

Resolution 29 - 29.2: Personnel Policy, Obligations and Rights of Staff Members; Proposed Amendments to the Staff Regulations.

(81) The PRESIDENT (Translation from the Spanish): I call upon the delegate of France.

(82) Mr. JUVIGNY (France) (Translation from the French): Mr. President, gentlemen, the French delegation wishes to pay tribute to the important work done by the Administrative Commission, which had a particularly heavy agenda.
(83) Whilst the French delegation agrees with most of the decisions reached by the Commission, it is obliged to express its regret and state certain reservations with regard to one vital question.
(84) The fact is that the suggested changes in the Staff Regulations, affecting the articles dealing with the obligations and rights of staff members, were adopted by the Commission without its being possible to judge what their exact repercussions would be.
(85) The concepts mentioned, in particular that of integrity, should have been defined beforehand, as the Executive Board urged. There was, in our opinion, no question of drawing up a comprehensive and watertight code of the obligations of staff members; but you will agree with us that there was room for a middle course between drawing up an out-and-out catechism and providing no definition at all of an abstract, ambiguous and inevitably controversial concept. There is, perhaps, a tendency to lose sight of one fact - that the resolutions adopted by the Administrative Commission lay down rules of conduct not only for the staff members but for the administration as well. The staff member must know whether any action he is about to perform does or does not constitute a lapse from integrity. Similarly, the administration must know whether or not any action a staff member takes or proposes to take constitutes a lapse from integrity. And this necessitates, if not actually a code, at least a guide. We wished, in the interests not only of staff members but of the reputation of the Organization itself, to determine the general features of the notion of integrity, its meaning and its scope. This was particularly necessary, we thought, because some of the provisions adopted appear to be retroactive. Our hopes and expectations in this matter were disappointed, Mr. President. That is the reason for the reservations which we have expressed and which we now repeat before the General Conference. However, we have reason to hope that our fears will be allayed, principally because the Director-General has already shown that he appreciates our contention by withdrawing some of his original proposals which we opposed in the Administrative Commission and which, of course, we do not intend to raise again at this point; and also because the Director-General has undertaken, to use his own words, to make known for the guidance of the staff the principles and criteria on which his decisions are based, and to submit those principles and criteria for the approval of the Executive Board. We are hopeful, finally, because the appeals system will continue to provide basic guarantees of justice. In this connexion, we are very pleased to see that the Appeals Board now has Statutes which will ensure its stability, the stability of its organization and the impartiality of its rulings.
(86) There is one point, however, Mr. President, which we are in honour bound to mention and on which the General Conference should, we think, state its opinion: this is the amendment to Regulation 1.7 of the Staff Regulations. This Regulation, as adopted by the Administrative Commission, states that: "Staff members may exercise the right to vote but shall not engage in any political activity which is inconsistent with or might reflect upon the independence and impartiality required by their status as international civil servants". Mr. President, we entirely agree. It is one of the prime duties of an international civil servant to take no public part in political controversies and to refrain from giving public support, in word or writing, to any political party, for such action would, as the

International Civil Service Advisory Board has said, detract from the value of his contribution to the work of an international organization. But, while we approve of this principle, we cannot accept a form of words which, even though it may not be the intention of its authors, opens the door to discrimination on the grounds of an attitude of mind. The inclusion of the words "or might reflect upon", by endorsing and legalizing what has been called the notion of potential offence, would leave room for that kind of discrimination which should, in an Organization with ideals as lofty as ours, be entirely ruled out.

(87) The use of this wording, permitting penalization of staff members on the strength of a doubt, engenders - forgive me for saying so - doubts in the public mind about the use which might be made of this weapon, a weapon perhaps as dangerous to the wielder as to the victim. Another clause adopted by the Administrative Commission, Regulation 1.4, states that staff members are not expected to give up their religious or political convictions, or their national sentiments, but that they shall at all times bear in mind the reserve and tact incumbent upon them by reason of their international status. The combination of these provisions and the order in which they appear show them to be sufficient. Sufficient, firstly, to deal with any specific deviations from the political reserve incumbent upon international civil servants; and sufficient also to eliminate the possibility of arbitrary sanctions for potential misconduct.

(88) In any case, Mr. President, we consider that the contentious phrase "or might reflect upon" ("ou qui puisse en faire douter" in the French text) should be deleted from the regulations we are now amending.

(89) For all the above reasons, we request that the French text be altered to read as follows:

"Les fonctionnaires peuvent exercer le droit de vote, mais ils ne peuvent se livrer à aucune activité qui soit incompatible avec, ou porte atteinte à, l'indépendance et l'impartialité qu'exige leur qualité de fonctionnaires internationaux".

(90) In other words, the French delegation submits a formal amendment as follows: (1) in the French text add, after the word "avec" the words "ou porte atteinte à" and (2) delete the words "ou qui puisse en faire douter". This, I am told, would simply necessitate deleting the word might in the English text.

(91) That, Mr. President, is the amendment which my delegation wishes the Conference to adopt, for the honour and reputation of the Organization.

(92) In conclusion, I need hardly add that we request a separate vote on each paragraph introducing changes in the Staff Regulations; in other words, that separate votes be taken on paragraph 29.1, on Regulation 1.4, then on Regulation 1.7, Regulation 9.1, and Regulation 9.1.1; within Regulation 9.1.1, the French delegation also requests that each sub-paragraph be voted on separately.

(93) The PRESIDENT (Translation from the Spanish): We now have to consider the proposed amendment. I call upon the Director-General.

(94) The DIRECTOR-GENERAL: Mr. President, I listened with much interest to the statement of the French delegate. I am in agreement with what he has said about Regulation 1.7 contained in this document under 29.12.

(95) I should like to add that we discussed in the Administrative Commission the use of the Report of the International Civil Service Advisory Board as a guide to integrity, impartiality and some of the other terms that should be interpreted and defined. I have accepted that report as the guide which I shall follow in developing more precise statements of criteria for action in connexion with the application of some of these Regulations. The Report of the International Civil Service Advisory Board, which had not been prepared at the time the paper was developed for presentation to the Conference, will be distributed to all members of the staff, and they will be told what I have told you just now about my use of it as a guide. The French delegate wanted a guide, and that is, for the moment, the guide that I shall follow.

(96) This has been the practice of the Secretary-General of the United Nations, and I think it is a good practice to follow. In these circumstances, I have no objection to the amendment of this text as suggested by the French delegate.

(97) The PRESIDENT (Translation from the Spanish): The Director-General has expressed his approval of the French amendment. Will any delegate second it?

(98) The French amendment is seconded.

(99) I call upon the delegate of Belgium.

(100) Mr. BAUGNIET (Belgium) (Translation from the French): Mr. President, gentlemen, Perseverare diabolicum est. Even though I may seem diabolical, I am at least consistent and, just as I suggested a short time ago that the date to be inserted at the beginning of this resolution should not be today's date, so I now propose formally that the date to be added to paragraph 29.1 of the resolution before you be not 8 December 1954, but some later date. Why? The Director-General's explanations, which I did not think it necessary to take up when he first spoke, did not convince me. No doubt, when your Conference decides something, the resolution takes immediate effect, because as a rule your decisions bind only the Organization or the Member States, which are all represented here. But when it is a matter of amending the Staff Regulations, not only the Organization and the Member States are involved; there is the staff as well and, as the staff is a party to the agreement, it is only right that, if the Regulations are amended, the amendments should not take effect until reasonable notice has been given. This notice, which an industrialist gives his workmen or employees, which a State gives its officials, should also be given by an international organization of the standing of Unesco.

(101) For that reason, gentlemen, I must once more urge that the date to be inserted in paragraph 29.1 be later than today (8 December 1954), and be such as to allow sufficient time for the staff to be notified.

(102) Moreover, I note that, when the Director-General informs the staff of amendments to the Regulations, he takes care to leave a certain interval between the date on which the document is drawn up and the date on which it becomes effective. As proof of this, take document 8C/ADM/27, which

we have approved and which you will have to approve again in a few minutes. This document, which was printed and distributed to Member States in October 1954, stipulates: "These rules shall be effective 1 November 1954" (Rule 112.2). On this occasion, the Director-General found it necessary to notify the staff and give them a month's warning.
(103) It is, I think, only right to allow an interval to elapse between the adoption of our resolution and its coming into force.
(104) When a country passes a law, it does not become applicable until it has been published in the Official Gazette and until a certain period has elapsed after the date of that publication. I see no reason why our international organization should depart from a principle of public law which is accepted in all civilized legal systems.

(105) The PRESIDENT (Translation from the Spanish): I call on the delegate of the United States of America.

(106) Mr. KOTSCHNIG (United States of America): Mr. President, I first of all would like to state that my delegation supports the amendment introduced by the distinguished representative of France. The intervention of the honourable representative of Belgium, I regret to say, surprises us a little, for this very meeting only a few minutes ago made it clear that its vote on other Staff Regulations, and I repeat Staff Regulations, should become effective immediately, and we do not see why some of these changes in the Staff Regulations which you have just approved should become operative at once, while others, which we are still considering, should become operative later. It would create a situation which would be, to say the least, confusing. Moreover, it has always been our understanding that the adjustments which are being made to the Regulations now before us do little more than clarify the powers of the Director-General. For these reasons, we strongly support, for the sake of consistency and good administration, the views put forward by our Director-General and we hope that this plenary meeting of the Conference will not accede to the proposal made by the distinguished representative of Belgium.

(107) The PRESIDENT (Translation from Spanish): Has any delegate seconded the motion of the Belgian delegate?
(108) It has been seconded. We shall now take a vote on the amendment proposed by the Belgian delegate.

(109) The amendment is rejected by 25 votes to 15, with 11 abstentions.

(110) Accordingly, the date inserted will be 8 December.

(111) Paragraph 29.11, Regulation 1.4 was voted upon and adopted by 38 votes to 1, with 14 abstentions.

(112) Paragraph 29.12, Regulation 1.7, with the amendment proposed by the French delegate, supported by the Director-General and by other delegates, was adopted by 41 votes to 0, with 9 abstentions.

(113) Paragraph 29.13, Regulation 9.1, was adopted by 42 votes to 0, with 8 abstentions.

(114) Paragraph 29.14, Regulation 9.1.1, sub-paragraph (a), was adopted by 34 votes to 0, with 14 abstentions.

(115) Paragraph 29.14, sub-paragraph (b), was adopted by 31 votes to 7, with 12 abstentions.

(116) Paragraph 29.14, the last sub-paragraph, reading: "No termination ... shall take effect," etc. was adopted by 48 votes to 0, with 2 abstentions.

(117) Paragraph 29.15, Regulation 9.3, was adopted by 45 votes to 0, with 5 abstentions.

(118) Resolution 29.2 was adopted by 47 votes to 0, with 4 abstentions.

(119) Resolution 30: Statutes of the Appeals Board was adopted by 48 votes to 0, with 2 abstentions.

(120) Resolution 31 - 31.2: Recognition of the Competence of International Administrative Tribunals was adopted by 49 votes to 0, with 1 abstention.

Section D: Official and External Relations

(121) Draft resolution 32 (32.1 to 32.5 inclusive) was adopted unanimously.

Recommendations of the Executive Board regarding applications by international non-governmental organizations for admission to consultative arrangements.

(122) The PRESIDENT (Translation from the Spanish): I call upon the delegate of the USSR.

(123) Mr. SOLDATOV (Union of Soviet Socialist Republics) (Translation from the Russian): Mr. President, gentlemen, as regards draft resolution 33, submitted by the Administrative Commission, the Soviet delegation would like to dwell for a moment on two recommendations of the Commission, in connexion with the International Union of Students and the World Federation of Democratic Youth. These two organizations have applied for consultative arrangements with Unesco. The Administrative Commission, after considering the matter, took what we consider a wrong decision. The decision was to postpone consideration of the applications of these two organizations until the ninth session of the General Conference; I may mention, incidentally, that, during the discussion of this question in the Administrative Commission, those who proposed postponing decision until the ninth session adduced no arguments proving the need for so doing. In the opinion of the Soviet delegation, there are no grounds at all for postponement until the next session. It is common knowledge that the International Union of Students and the World Federation of Democratic Youth play an active part in the development of international co-operation in the very fields with

which Unesco also is concerned: the fields of education, science and culture. Accordingly, in view of the widely representative character of both these organizations and the contribution they can make to the achievement of Unesco's aims, the Soviet Union supports the applications of both organizations for consultative arrangements with Unesco.
(124) At the same time, I should like to recall that all those here present are well aware that both the organizations in question have already taken an active part in Unesco's work, and have had consultative arrangements. The Soviet delegation therefore submits for the consideration of the plenary meeting a proposal to the effect that the International Union and the World Federation be accepted for consultative arrangements.

(125) The PRESIDENT (Translation from the Spanish): The delegate of Czechoslovakia seconds the draft amendment submitted by the delegate of the USSR.
(126) If no delegate wishes to speak, a vote will be taken on the proposed amendment.

(127) The amendment is rejected by 35 votes to 6, with 9 abstentions.

(128) A vote will now be taken on the draft resolution as submitted by the Commission.

(129) Resolution 33 - 33.2 is adopted by 41 votes to 6, with 3 abstentions.

(130) Resolution 34 - 34.2: Renewal of formal agreements concluded with non-governmental organizations was adopted unanimously.

Section E: Legal Questions

(131) The PRESIDENT (Translation from the Spanish): We now come to resolution 35.1. This is an amendment to Article II, consisting of the addition of a new paragraph 6, and is given on page 30 of the English text. A two-thirds majority is needed for this amendment.

(132) The amendment is adopted by 48 votes to 1, with no abstentions.

(133) We now pass to paragraph 35.23: paragraph 9 of Article V will be replaced by the passage appearing on page 31 of the English text, reading as follows: "The Chairman of the Executive Board shall present, on behalf of the Board, to each ordinary session of the General Conference, with or without comments, the reports on the activities of the Organization which the Director-General is required to prepare in accordance with the provisions of Article VI.3.b.".

(134) This draft resolution was adopted unanimously.

(135) Resolution 35.3: Amendment to Article VI: paragraph 3 of Article VI to be replaced by the text appearing on page 32 of the English version of the document.

(136) The draft resolution was adopted unanimously, as was also resolution 36.

(137) Resolution 37 (37.1 to 37.31 and 37.35 to 37.38) was adopted unanimously.

Section F: General Questions: Reports of the Headquarters Committee on the progress of the project (document 8C/ADM/24)

(138) The PRESIDENT (Translation from the Spanish): I call upon the delegate of France.

(139) Mr. JUVIGNY (France) (Translation from the French): Mr. President, it is stated in the report of the Administrative Commission that the Commission took note of the Director-General's report on the Headquarters Agreement between the French Government and the Organization.
(140) Now that the first stone of Unesco's permanent headquarters building is about to be laid in the very heart of Paris, I should like to repeat, on behalf of the French delegation, how proud and happy our country is that the international palace of education, science and culture is being built on her soil.
(141) If the French Government, when signing the Headquarters Agreement, consented to substantial limitations on its national sovereignty, it was because it was fully conscious of the great compliment which 72 States were paying to France. I am able to confirm that the French parliament now has before it the text of the Headquarters Agreement signed on 2 July last by the Director-General and the Secretary of State for Foreign Affairs. The French delegation hopes that this agreement will very soon be ratified.

(142) The PRESIDENT (Translation from the Spanish): I call upon the Director-General.

(143) The DIRECTOR-GENERAL: Mr. President, I should like to thank the French delegate for what he has said and to assure this Conference that the Secretariat's relations with the French Government in this matter are a cause of great satisfaction to me. If you knew the details of our negotiations and the concessions which the French Government has made, you would be happy indeed and would applaud the wonderful spirit of co-operation and of hospitality which has been shown us by the French Government.

(144) The PRESIDENT (Translation from the Spanish): If no delegate wishes to speak, a vote will be taken on draft resolution No. 40 - 40.3.

(145) This resolution is adopted unanimously.

(146) I call upon the delegate of the USSR.

(147) Mr. SOLDATOV (Union of Soviet Socialist Republics) (Translation from the Russian): Mr. President, at the beginning of our work today on the report of the Administrative Commission, the Soviet delegation, as you remember, stated that it would submit two questions for consideration by the plenary meeting. The first question we have

already discussed; the second concerns the adoption of Russian as a working language of the Executive Board. I should like now to deal with this second question since, I understand, we have come to the end of our consideration of one section, so that I can now take up this matter without interfering with the rest of our work.

(148) The Soviet delegation thinks it very important, from the point of view of the Soviet Union's contribution to the work of the United Nations Educational, Scientific and Cultural Organization, that Russian should be, not only a working language of the General Conference, as has already been decided, but also a working language of the Executive Board. In this connexion, it is essential, apart from everything else, to bear practical considerations in mind, since the Executive Board will meet several times a year, i.e. five, or sometimes even six times in the period between the sessions of the General Conference, and discuss a whole series of important practical questions directly bearing on the work of our Organization.

(149) As you know, a representative of the Soviet Union, Mr. Solodovnikov, has been elected to membership of the Executive Board, which, I think, in itself gives a practical significance to the problem of making Russian a working language of the Board.

(150) Some people have said that attention must be paid to the financial cost which this step would involve. In my opinion, delegates, account must also be taken of another very important fact - namely that the Russian-speaking delegations (the delegations of the Soviet Union, the Ukrainian and the Byelorussian Republics) pay, in accordance with the scale of contributions laid down by the General Conference, the sum of $2,853,000 over the two-year period - a large sum, nearly $3,000,000 in two years. On the other hand, the cost of making Russian a working language of the Executive Board would be only $49,000 - $49,000 over two years. In other words, the cost of making Russian a working language of the Board would represent a mere fraction of the contributions paid by these three delegations. To say nothing of the fact that a number of other delegations, which also pay large contributions to our Organization, are interested in seeing Russian become a working language of the Executive Board, as they stated quite clearly when this question was discussed in the Administrative Commission.

(151) Thus, the financial costs, if it is a matter of that, are, as you see, very small. As regards the general importance of the Russian language and the development of world culture, I do not think I should waste the time of the delegates to this Conference by enlarging on the subject, since every person active in the fields of science, culture, literature and education knows very well, without any discourse from me, the importance of the part which the Russian language has played and is playing in the development of world culture. Moreover, we should take account of the fact that in the United Nations, for instance, Russian ranks as a practical working language along with the other official languages of the Organization. We are asking that the documents of the Executive Board be printed in the Russian language and that, at the meetings of the Board, there be interpretation into Russian and, when our representative speaks, from Russian into the other languages. All this is done in the United Nations, in all seven Committees and in the plenary meetings; it is also done in the United Nations councils, such as the Security Council, the Economic and Social Council and the Trusteeship Council, not to speak of the many commissions set up by the General Assembly itself and by the Councils of the United Nations. Thus, though we are told, as we often are, that we follow the example set by the United Nations, we are in fact, in this matter, lagging considerably behind the practices already adopted by the United Nations in regard to the Russian language.

(152) The delegation of the Soviet Union therefore hopes that the following draft resolution will be favourably received and adopted by the General Conference:

The General Conference,

"Decides that the Russian language shall be one of the working languages of the Executive Board."

(153) In this connexion, I do not need to make special mention of the fact that, when the question of making Spanish a working language of the Executive Board was being discussed, the Soviet delegation supported that proposal long before the question came up before the General Conference, i.e. in July of this year after the Soviet Union joined Unesco. Nor do I need to point out that a favourable decision on this question, i.e. on the question of making Russian a working language of the Executive Board, will constitute proof of the fact that the majority of the Member States of Unesco attach real and profound significance to the development of practical co-operation amongst the members of our Organization.

(154) The PRESIDENT (Translation from the Spanish): I was glad to call upon the delegate of the USSR to speak on this question, but the Secretariat informs me that the matter raised by the delegate of the USSR is already being studied by the Programme and Budget Commission, which will submit its report, when ready, to the plenary Conference.

(155) I therefore feel, if the Conference has no objection, that we must postpone discussion of this question until the Programme and Budget Commission submits its report for consideration by the plenary meeting.

(156) I call upon the delegate of Ecuador.

(157) Mr. TERAN ROBALINO (Ecuador) (Translation from the Spanish): Mr. President, ladies and gentlemen, with regard to the report which the Conference has been discussing this afternoon, the delegation of Ecuador wishes merely to mention one particularly important point - the resolution whereby Article V of the Unesco Constitution, concerning the composition of the Executive Board, was amended. Since the delegation of Ecuador was not present at the plenary meeting at which those amendments were passed, I would like to take this opportunity of stating the position of my country and my Government on this fundamental issue. The delegation of Ecuador earnestly requests that it be stated in the records of this meeting that Ecuador endorses the stand taken by those delegations which opposed the amendments to Article V of the Constitution.

(158) Ecuador wishes to add its voice to the wise and authoritative protests of those countries which opposed the amendments. The President of Ecuador, Dr. Velazco Ibarra, a statesman and a man of wide culture, interprets the spiritual values and the national genius of his country with real authority and fervent conviction. Ecuador and its Government have therefore, from the very first, held the view that the amendments to Article V might in practice compromise the principles for which this lofty institution of the United Nations was established.
(159) The delegation of Ecuador trusts that Unesco will, nevertheless, always stand fast by the true and genuine virtues of its early days and that, notwithstanding the political interests of the moment, the enduring values of culture, science and education will continue to guide the thought and action of the Organization.

(160) The PRESIDENT (Translation from the Spanish): I call upon the delegate of the USSR.

(161) Mr. SOLDATOV (Union of Soviet Socialist Republics) (Translation from the Russian): Mr. President, I should like to clear up the position as regards the use of Russian as a working language of the Executive Board. After I had spoken, you stated that this question is to be discussed by the Programme and Budget Commission. The fact is that the question of the use of Russian as a working language of the General Conference was discussed in the Administrative Commission and that, in accordance with the resolution adopted by that Commission, a decision was then taken by the plenary meeting of the General Conference. If the position now is that this question is being discussed or will be discussed, as the Secretariat states, by the Programme and Budget Commission, the Soviet delegation would like to know when that discussion is to take place.

(162) The PRESIDENT (Translation from the Spanish): Sir, according to the Secretariat, the procedure might be to refer the proposal to the Programme and Budget Commission.

(163) Mr. SOLDATOV (Union of Soviet Socialist Republics) (Translation from the Russian): Mr. President, if I have understood your explanation aright, you are proposing that the plenary Conference should refer this question for consideration by the Programme and Budget Commission. If this is the case, the Soviet delegation has no objection to this question first being considered by the Programme and Budget Commission, but would like to know when this will be done, and whether it can be done tomorrow.

(164) The PRESIDENT (Translation from the Spanish): Very well. I will transmit the request of the delegate of the USSR to the Programme and Budget Commission, which will discuss this question tomorrow, so that it can report immediately to the plenary Conference.
(165) I call upon the delegate of the United States of America.

(166) Mr. KOTSCHNIG (United States of America): Mr. President, I am sorry to have to raise a point of order on this matter, but it is one, I hope, that will not delay but may perhaps expedite our business. It seems to my delegation that some error was committed in the presentation of this report. The paragraphs on the last page of the report which deal with Working Languages are paragraphs which were fully discussed in the Administrative Commission, to which these questions had been referred. They were discussed, they were voted on and, as such, they should be presented to the plenary Conference as recommendations of the Administrative Commission and not as something that has to go to yet another committee - the Programme and Budget Commission. It is, in our opinion, obviously out of order and would lead to unending confusion if matters which had already been decided, and clearly decided, in one committee, were to be referred to another of the major committees before they can come to us here. This is the kind of duplication that we think should be avoided and, without taking any position on the substance of the issue, I would think that the distinguished representative of the Union of Soviet Socialist Republics would be as well satisfied as anybody else if this matter could be settled here and now.

(167) The PRESIDENT (Translation from the Spanish): I call upon the Chairman of the Administrative Commission.

(168) Mr. BEEBY (Chairman of the Administrative Commission): Mr. President, can I perhaps help to simplify this situation? It so happens that the question of working languages was referred to the Administrative Commission in two separate items of its agenda. If you take item 9.2 of the revised agenda, you find there, Examination of the Report of the Advisory Committee on Parts I, III and IV of the budget, and Report to the Programme Commission. Now, Part III of the budget included the item on working languages, presumably on the cost of those working languages, and since that was its first appearance before our Commission, we discussed it then and reported to the Programme Commission on it. You may remember that, when the Rapporteur of the Administrative Commission was presenting his report to the plenary meeting, it was decided that that portion should be postponed. But if you look at item 9.8 of our revised agenda, you will find the whole subject of a heading is Working Languages; thus we had to report directly to this body on working languages. So I think, Mr. President, that you will be quite in order in accepting a debate here, or a recognition here of the principle of working languages, since we had the right and the duty to report to you directly, although we also had to report to the Programme Commission under the other item of our agenda.

(169) The PRESIDENT (Translation from the Spanish): In accordance with the information we have now been given, I think that, as we are already in possession of reports from the Administrative Commission, we can study and vote on the Soviet delegate's proposal at this meeting, provided that the Conference agrees to this procedure.

(170) I call upon the delegate of Poland.

(171) Mr. MICHALOWSKI (Poland) (Translation from the Russian): In view of your decision, I should like, on behalf of the Polish delegation, warmly to support the Soviet delegation's proposal regarding the acceptance of Russian as a working language, not only of the General Conference, but of the Executive Board of Unesco as well. I should like to point out that the language of the great Russian nation is, at the present day, the international language not only of the peoples of the Soviet Union, but also of a large number of other countries; and serves as the vehicle of communication at many conferences for international co-operation and cultural relations. Many of the countries where the knowledge of Russian is widespread are now Members of our Organization. We therefore see no reason for putting Russian on a different footing from the other working languages of Unesco. On these grounds, the Polish delegation supports the Soviet proposal, and will vote for its adoption.

(172) The PRESIDENT (Translation from the Spanish): I call upon the delegate of China.

(173) Mr. CHEN YUAN (China): Mr. President, fellow delegates, the Chinese delegation was opposed to the adoption of Russian as a working language for the General Conference, and is still more opposed to its adoption for the Executive Board. The arguments advanced for adoption of Russian seem to us unconvincing and unjustified. One is that Russian is a great language. We do not wish to deny that. No one will deny that the language of Tolstoy and Turgenev, Dostoevsky and Tchekhov is a great language. But there are many great languages in the world. There is the language of Dante and Petrarch; there is the language of Goethe, Schiller and Heine, and there is the language of Confucius and Lao-Tsu, of Chuang-Tsu, of Chu-Yuan, of Li Po and Tu Fu. There are many other great languages. If all great languages were to be made into working languages of Unesco or the General Conference, the number would be very large indeed. It would be quite impossible to make the system work.

(174) Another argument is that Unesco should follow the United Nations. But five languages are used in the United Nations and there is no proposal to use all of the five in Unesco.

(175) The only justifiable argument in favour of adopting a language as a working language, is that it meets the convenience of a large number of delegates and delegations. That is why my delegation warmly supported the adoption of Spanish as a working language. It is not because the language of Cervantes and Calderón is a great language. It is not because Spanish is used in the United Nations. It was only for the reason that Spanish is the mother tongue of about 20 Member States of Unesco that we supported the proposal whole-heartedly.

(176) If the convenience of a number of delegations is to be the criterion, we believe that Arabic should take precedence of Russian, as there are, I believe 6 or 7 Member States whose mother tongue is Arabic and only 3 whose mother tongue is Russian.

(177) As for the Executive Board, we cannot see a shadow of a reason for making Russian a working language. It is true that, after the elections of yesterday, there is now a Russian member on the Executive Board, but he is the only member who speaks Russian. I find that at least 16 native languages are spoken by the 22 members of the Executive Board. Any one of the three working languages now adopted is spoken by a large number of members of the Executive Board - more or less perhaps. It is sheer arrogance to demand that one language out of the other thirteen, spoken by only one of the 22 members, should be singled out to be made into an additional working language. Apart from the large expense and the waste of time involved, the proposal cannot be accepted in principle on any grounds. Therefore, my delegation is strongly opposed to the proposal to make Russian a working language of the Executive Board.

(178) The PRESIDENT (Translation from the Spanish): I call upon the Rapporteur.

(179) Mr. ERIKSSON (Rapporteur of the Administrative Commission): I would like to suggest that the two paragraphs on page 41 concerning the Spanish and Russian languages can stand as they are. The text is as it was contained in the recommendations to the Programme Commission. But we can add to page 40, under the last section there, a new Section III, which would read: "Adoption of Spanish as a working language of the Executive Board", and then, as a draft resolution, take the text from page 41 "That henceforth, the Spanish language be one of the working languages of the Executive Board." That should, in that case, be resolution No. 41.

(180) Then we could add another Section IV "Adoption of Russian as a Working Language of Unesco". The resolution would become No. 42 and would read: "That the Russian language be a working language of the General Conference". I think that is the simplest way to settle this question.

(181) The PRESIDENT (Translation from the Spanish): I call on the Legal Adviser.

(182) Mr. SABA (Legal Adviser) (Translation from the French): Mr. President, gentlemen, I wish merely to point out that, so far as the use of Russian as a working language of the General Conference is concerned, you have already adopted texts amending the Rules of Procedure of the General Conference to make Russian a working language of the General Conference in the same way as French, English and Spanish. This point is already covered by the vote you have taken.

(183) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Czechoslovakia.

(184) Mr. HAYEK (Czechoslovakia) (Translation from the Russian): Mr. President, the Czechoslovak delegation wishes to support the proposal of the Soviet delegation to the effect that Russian be made a language of the Executive Board. For the peoples of the greater part of Europe, Russian constitutes

the first international language, the first language for international intercourse. For these peoples, therefore, participation in Unesco's work would be immensely facilitated if all the documents of the Organization, including those of the Executive Board, were issued in Russian. The Czechoslovak delegation therefore supports the request that Russian be made a language of the Executive Board.

(185) The PRESIDENT (Translation from the Spanish): The debate continues. I call upon the Director-General.

(186) The DIRECTOR-GENERAL: Mr. President: As you know, this is my first General Conference since becoming Director-General and I have not been able to find in the Constitution and in the Rules and Regulations of the Organization a clear definition of what the duty of the Director-General is in relation to political issues, as well as certain issues of substance which are not political, and many other issues that are before the Executive Board and the General Conference. Hence, if I am out of order in making a suggestion here, I assure you that it is for the purpose of trying to help this Conference make Unesco a unified, a harmonious, Organization; it is for the purpose of promoting coexistence, which all of you have approved as a principle, and it is also for the purpose of helping solve a budget problem. I feel sure that some of you who are thinking about this problem, are wondering what projects the Programme Commission would have to cut out in order to find $49,000. I therefore take the liberty of presenting to you for consideration a compromise text which may possibly facilitate the work of the Conference. It is as follows: "The General Conference authorizes the Director-General, subject to the approval of transfers for this purpose by the Executive Board, to provide the services of interpretation and translation from and into the Russian language, necessary for the effective participation of any member of the Executive Board in the work of the Board". Let me explain that the sum transferred should be less than the $49,000 and all money spent would be subject to the prior approval of the Executive Board. Now the Executive Board, under the Constitution, has the power - subject to the instructions of the General Conference - to make its own Rules of Procedure, so that it would have to do two things: it would have to change its Rules of Procedure and it would have to grant the necessary funds by transfer. This would leave the budget as it comes from the hands of the Programme Commission to you tomorrow, undisturbed. I understand that the Programme Commission has already voted the Appropriation Resolution and it would be difficult to get that matter reopened, but, by the means I have suggested, that would be unnecessary and the Board would be left to judge the matter on its merits before any action were taken.

(187) The PRESIDENT (Translation from the Spanish): I call upon the delegate of India.

(188) Dr. MUDALIAR (India): At this almost final stage of our Conference, which has ended in every one of its Commissions in a harmonious spirit, the delegation of India is most anxious that nothing shall disturb the tranquillity with which we have so far conducted our proceedings. It is with that conviction, and in the hope that what I have to say may appeal to all of you, that I have requested the President to allow me a few minutes to speak on this question. My task has been considerably lightened by the proposal that the Director-General has been pleased to make - a proposal with which my delegation fully agrees.
(189) If I may be permitted to say so, the position is one of difficulty, not because we do not recognize the importance of the language, not for any of those considerations that have unfortunately crept into this discussion, but because we feel, as the Director-General has already told you, that the Programme and Budget Commission has completed its labours, and that anything done at this late date would unfortunately disturb the programme and budget to a considerable extent.
(190) If you will permit me to use my experience in other international organizations where a somewhat similar situation arose, it has been found possible to satisfy the delegates of the Executive Board in the matter of interpretation by an interpreter sitting beside the person who spoke, and by providing all facilities for the interpretation of certain documents. This is not a final solution, nor do I suggest that the question should not be examined and submitted to the ninth session of the Conference. One thing I suggest is that, having accepted Russian as an official language of the General Conference under Rule 52 - Working Languages, this Conference should place Russian as one of the working languages at the General Conference beside English, French and Spanish. I would appeal to my friends who wish Russian to be introduced as a working language in the Executive Board, that they kindly consider the difficulties of the present situation and accept the proposal of the Director-General as a compromise. This would enable them to see later after the ninth session, whether they can have it as a working language for the Executive Board. In so saying I am trying to avoid a situation which may give rise to a feeling that there has been some lack of appreciation of the position adopted by the Soviet delegation. In that manner I would appeal to them to consider the possibility of accepting the suggestion by the Director-General.

(191) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Uruguay.

(192) Mr. SECCO ELLAURI (Uruguay) (Translation from the Spanish): Mr. President, ladies and gentlemen, I asked to speak before I knew that the delegate of India was going to make the speech he has just made; for our position resembles his so closely that we are actually working on a proposal similar to that submitted by the Director-General. The position, as we see it, is as follows: it is not a question of comparing Russian with other languages that might be used by Unesco. It is a case of striving for a realistic understanding of the question, in the light of the fact that Russian has been adopted as a fourth working language of the

General Conference. This, sooner or later, must have repercussions in other sectors of the administration of Unesco. It is my belief that, once a language has been accepted as a working language of the General Conference, it must inevitably, in the long run, end by making its way into the work of the Executive Board as well. This is a fact.

(193) And this is precisely what has happened with Spanish. There was a time when Spanish was a working language of the General Conference, but not of the Executive Board. We Spanish-speaking delegates have gradually, thanks to the understanding attitude of our colleagues on the Executive Board, secured full recognition of Spanish as a working language of the Board.

(194) I remember being present at the meeting of the Administrative Commission at which the question of Russian was discussed. It was said at that time that Russian would have to wait, as Spanish had done, to gain acceptance in the Executive Board. I must admit that this argument does not convince me. We who had to pay the price of passing through these slow stages do not wish to force any other working language to go through the same process.

(195) In our view, the fact that a language is used in the General Conference but not yet in the Executive Board in no sense implies any sort of slight on the country concerned. But we do, in this instance, think that the adoption of Russian as a language of the Executive Board should be facilitated.

(196) The Administrative Commission discussed this question at a time when it was still uncertain whether or not the USSR would be represented on the Executive Board; and I have no doubt that this circumstance influenced the views of many delegates. Now, the position has changed: we are faced not with a possibility, but with a fact. But there is a very serious financial objection to this claim for the use of Russian. There can be no question of our sacrificing important sections of our programme in order to find the sum of $50,000 which represents the estimated cost of the adoption of Russian.

(197) I consider, therefore, that the best solution at the moment, the most equitable one, and the one best calculated to avoid all difficulties, is to follow the course indicated in the motion which has just been submitted by the Director-General, and which we endorse.

(198) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Hungary.

(199) Mr. TAMAS (Hungary) (Translation from the Spanish): Mr. President, ladies and gentlemen, whilst entirely agreeing with the spirit of the remarks made by the Director-General and the delegate of India, I am deeply convinced that the adoption of Russian as a working language both of the General Conference and of the Executive Board would be most useful and conducive to the growth of co-operation and mutual understanding among the Member States of Unesco.

(200) The delegate of Cuba, amidst warm applause, expressed his pleasure that the Union of Soviet Socialist Republics, with its outstanding literary tradition, is here with us. We must, I think, draw the logical conclusions.

(201) Some delegates, in the Administrative Commission, suggested that the delegation of the USSR should speak in the languages of other Member States. But those delegates were forgetting that Russian is the medium of communication between dozens of nations and that there are among us many delegates who wish to take Russian as their working language.

(202) I myself am Hungarian, and it gives me pleasure to speak in Spanish; but there is no reason to thwart the many other delegates who wish to use Russian.

(203) We delegates to the eighth session of the General Conference of Unesco have said much about the universality of Unesco, the strengthening of ties between the peoples, and mutual understanding; in my opinion, the way to promote those ideals in Unesco is to open the doors to all science and culture worthy of the name, so that Unesco becomes a veritable focus for the lofty ideals of mankind. Russian culture, literature and science enshrine some of the greatest treasures of mankind, and I think it is incumbent on Unesco to see that those treasures are used. For all these reasons, I propose that the General Conference adopt Russian as a working language.

(204) The PRESIDENT (Translation from the Spanish): I call on the delegate of the United States of America.

(205) Mr. KOTSCHNIG (United States of America): Mr. President, on this stand fifteen minutes ago, I had the honour to suggest that we ought to tackle this question, which was reintroduced by the distinguished representative of the USSR, this very evening, and I am glad that you permitted the discussion to go on after that intervention.

(206) When I made the suggestion, it was, of course, on the understanding that we would vote on the concise proposal which had been discussed earlier in the Administrative Commission, and which had been reintroduced by the distinguished representative of Soviet Russia. We are now, however, confronted with a new situation. The Director-General has put before this plenary meeting a resolution, and a rather complicated resolution. Frankly, my delegation has not been able to grasp its full import. We do not know whether we are now talking about the Russian language, or whether we are talking about the language of any of the Executive Board who do not speak English, French or Spanish. Under these circumstances, Mr. President, it seems to us, again without taking a position on the Director-General's proposal, that this proposal should be presented to the Conference in writing and that the final vote be postponed until the next plenary meeting. That is the proposal I would like to put forward.

(207) The PRESIDENT (Translation from the Spanish): Since this is a procedural motion, it takes precedence. The motion is that the proposal be circulated in writing, and that the discussion on it be postponed until the next plenary meeting. I call on the delegate of the USSR.

(208) Mr. SOLDATOV (Union of Soviet Socialist Republics) (Translation from the Russian): Mr. President, I, evidently, am also speaking on a procedural motion; that is why I took the floor. To begin with, I would like to point out that, speaking on a point of order, I have in any case the right to reply before we take a decision on the question raised by the representative of the United States of America; and since I have that right, I shall continue to speak, in this instance, about the substance of the question, and not about the procedure to be adopted at this meeting.

(209) The Soviet delegation does not think it necessary here to dwell on the unworthy manoeuvres countenanced by a person who has no country and who is, naturally, indifferent to the fate of Unesco and to whether or not it is successful in developing and strengthening international co-operation in the realms of education, science and culture. We consider it unworthy to dwell on his speech, even as we consider it unworthy that this gentleman should be present in our Organization.

(210) I come now to the substance of the question. The Soviet delegation is grateful to those delegations which have spoken here in support of the proposal to make Russian a working language of the Executive Board of Unesco. We are grateful also to those delegations which have taken up an understanding attitude towards our proposal. I have in mind, firstly, the Indian and Uruguayan delegations. I would also like to make special mention, in this connexion, of the spirit of co-operation and goodwill displayed by the Director-General of Unesco who, in our view, is doing everything in his power to solve this problem on the basis of the real needs of the United Nations Educational, Scientific and Cultural Organization - which he is, of course, better placed to appreciate than are other persons who are not so closely and directly concerned with the practical work of our Organization. The Soviet delegation of course considers that the correct decision would be to accept Russian as a working language of the Executive Board, and no objections can be adduced against this perfectly legitimate arrangement. But at the same time we understand the practical difficulties in the way of an affirmative decision on this issue.

(211) In this connexion, I am empowered by the Soviet delegation to state that, in view of the fact that it is impossible, at the present moment, to take a final decision on the subject of the use of Russian as a working language of the Executive Board, the Soviet delegation is not opposed to the proposal which was submitted by the Director-General of our Organization and which, as we understand the text, refers quite clearly to the Russian language. It runs as follows:

"The General Conference

Authorizes the Director-General, subject to the approval of transfers for this purpose by the Executive Board, to provide the necessary services of interpretation and translation from and into the Russian language, for the effective participation of any member of the Executive Board in the work of the Board".

(212) It is thus absolutely clear, from this proposal, that it is a case of the Russian language: so that the doubts expressed by one of the delegates here are, as you see, completely groundless.

(213) Such are the comments I wished to make on the speeches which dealt with this subject. We consider that, at the present moment, a positive decision on the basis proposed by the Director-General would serve to promote the co-operation about which we have been talking so much at this meeting.

(214) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Australia.

(215) Mr. KELLY (Australia): Mr. President, on behalf of the Australian delegation, I rise to support postponement of the discussion of this question, and I do so for a number of reasons, one of the most important of which is this - that the speaker who immediately preceded me introduced for the first time into this Assembly a note of personal attack which I, for one, deplore. I speak as a citizen of a free country that has welcomed to its shores the free citizens of other lands, no matter what their home language.

(216) Secondly, I support the adjournment of this debate for the reason that my delegation has not had time to see the actual text of the motion initiated by the Director-General. I also support adjournment because I feel that such an alternative proposal might well have been placed at some stage before the Administrative Commission, which spent much time discussing this proposal. A suggestion not put before delegates in writing cannot now receive full consideration, and it is a proposal which requires consideration, not only as a gesture of sympathy towards a great people - and the Russian people are a great people - but chiefly and principally because we are not now discussing the extension of Russian as a medium of culture throughout the world. We are discussing simply the more efficient operation of our Executive Board. And I find that, on that Board, there is only one representative who can claim Russian as his home language. I wonder, speaking of this proposal, whether some other delegate may not propose that Portuguese be also adopted as a working language of the Executive Board, and thus pay homage to two great peoples, the peoples of Portugal and of Brazil. I look at the Executive Board, and I find on it many representatives, Moslem and Christian, of the Arabic-speaking peoples, and I wonder if at this late hour someone else may not propose the adoption of Arabic, partially or wholly, as a working language of the Executive Board.

(217) This is a practical issue which must be studied by delegates in the light of the actual working requirements of the Executive Board. The Director-General's suggestion requires further consideration, and I therefore invite you to support the proposal for the adjournment of this debate.

(218) The PRESIDENT (Translation from the Spanish): We shall now take a vote. Since one representative has spoken in favour, and one against, we shall now, in accordance with the Rules of Procedure, take a vote on the motion of

the United States delegate for adjournment of the debate on this question.
(219) For the information of the delegate of the USSR, I would point out that the Rules of Procedure require that motions which have precedence shall be voted on after one representative has spoken in favour, and one against. As this has been done, the President must take a vote on the motion. We shall now vote on the motion of the delegate of the United States of America, that the debate on the Director-General's proposal be adjourned until the plenary meeting tomorrow.
(220) I call upon the delegate of the USSR.

(221) Mr. SOLDATOV (Union of Soviet Socialist Republics) (Translation from the Russian): Mr. President, I evidently misunderstood the position, since in fact I was speaking not on a point of order, but in reply to the speeches which were made here on the subject of our proposal. Hence no objection was raised by the Soviet delegation to adjourning the debate on this subject.

(222) The PRESIDENT (Translation from the Spanish): We shall now take a vote on the motion for adjournment proposed by the delegate of the United States of America.

(223) The motion for adjournment is adopted by 48 votes to 0, with 4 abstentions.

(224) A vote will now be taken on the new resolution 41, dealing with adoption of Spanish as a working language of the Executive Board.

(225) Resolution 41 is adopted by 48 votes to 0, with 2 abstentions.

The meeting rose at 7.35 p.m.

# SEVENTEENTH PLENARY MEETING

*10 December 1954 at 10.45 a.m.*

*President:* Mr. ZAVALA MUNIZ (Uruguay)

CONTENTS

Consideration of draft resolution concerning the use of the Russian language at the Executive Board (documents 8C/DR/124 rev. and 126). . . . . 210
Consideration and adoption of the Report of the Administrative Commission (continued) . . . . . 214
Consideration and adoption of the Report of the Programme and Budget Commission (documents 8C/PRG/30 and 8C/BUD/6 rev. 2). . . . . 214
Need for making Unesco a global organization (documents 8C/DR/4 and Add., 8C/DR/120 and 8C/DR/128). . . . . 221

(1) The PRESIDENT (Translation from the Spanish): The General Committee announces that the newly elected Executive Board will hold its first meeting and elect its Chairman at 9.30 tomorrow morning, in Room 2.

**CONSIDERATION OF DRAFT RESOLUTION CONCERNING THE USE OF THE RUSSIAN LANGUAGE AT THE EXECUTIVE BOARD (documents 8C/DR/124 rev. and 126)**

(2) I call upon the delegate of India.

(3) Dr. MUDALIAR (India): Mr. President and fellow delegates: the draft resolution that my delegation has the honour to submit for the consideration of this plenary meeting, runs as follows:

"The General Conference authorizes the Director-General, subject to the approval of transfers for this purpose by the Executive Board, to provide the necessary services of interpretation and translation from and into the Russian language to the extent compatible with the efficient operation of the Board for the effective participation of any member of the Executive Board in the work of the Board."

(4) When we adjourned late on Thursday, it was felt that a document should be made available in all

the languages to the delegates concerned so that they might have the opportunity of studying it closely and noting its implications. We had then come to face two questions. The first was: should the Russian language, in some form or other, or interpretation into the Russian language, be made available at meetings of the Executive Board? The second and equally important question was: what would be the international implications if this suggestion were accepted?

(5) My delegation has given considerable thought to both these questions, and we feel that we may submit to you our tentative conclusions on each. With regard to the use of Russian in meetings of the Executive Board, we note that, on the recommendation of the Administrative Commission, the General Conference has already accepted the proposition that Russian should be one of the four languages for the General Conference. This important conclusion has been arrived at and accepted at a plenary meeting.

(6) The next point for your consideration is that, at the time when the Administrative Commission recommended this, and the Plenary Conference accepted the position, it was evident that no such conclusion could apply to meetings of the Executive Board. The elections to the Executive Board had not then taken place, and it would certainly not have been appropriate at that stage, even if it was not premature, to consider any other aspect of the use of the languages of the Executive Board. Since then, the new Executive Board has been constituted, and my delegation knows that there is one representative who speaks only Russian and would therefore not be in a position to understand any of the three languages. From a purely practical point of view, therefore, avoiding all sentiment, my delegation felt that, if the Executive Board were to work smoothly and satisfactorily, and that if every member of the Board was to contribute his best to the conclusions that are to be arrived at, it was necessary, nay, inevitable that some means must be provided to interpret, for the sake of the member concerned, the only language with which he was familiar. At the same time, we were certainly concerned about the implications, in so far as the programme and budget activities are concerned. We also noted that, at conferences where intergovernmental organizations met, the Russian language was used for this purpose in interpretation and translation, and the document that has been circulated to all the members will bear evidence of the fact that it has been so used. Apart from this we came to the conclusion that we should study the financial implications of the use of the Russian language. Here may I say that we appreciated the attitude of the Russian delegate, who accepted our position that it must, for a period of two years, be a limited use of Russian in regard to interpretation and translation from and into that language.

(7) The original estimate of the Secretariat was that this would amount to a sum very near $49,000. I am not in a position to state what the exact figures would be for the two-year period, but I can state with some amount of confidence, having noted the international implications when this procedure was adopted in a sister organization, that it will be considerably less than the figure quoted above. We have now been trying to see how this amount can be satisfactorily provided. On looking at the composition of the Executive Board, we find that, while a sum of $12,000 was provided for and accepted by the plenary meeting, two delegates have now been added to the original figure of twenty. In actual analysis we found that the Executive Board consists of the same number of members from the various regions, except for one region. The number of members from Latin America, from North America, from the Middle East, from South East Asia and from Africa below the Sahara desert, is exactly the same as in the twenty member Executive Board. We therefore assume that the travel cost of these delegates would not be more. We then come to the two additional members and we find that these are from Member States which are as near to Headquarters as is possible, and therefore, from that one point of view, we have deduced, on a rough calculation, that the saving will be something like $7,000, at least.

(8) I wish also to refer to another document submitted for the approval of this plenary meeting; it is 8C/ADM/35 Corr., which says: "That every effort shall be made by the Executive Board, in co-operation with the Director-General, to reduce, as far as possible, the number and length of sessions of the Executive Board". I am speaking as a member of my delegation, and not as a member of the new Executive Board, and it is my delegation's view that, if this resolution is accepted by the Executive Board, as it ought to be, there will be at least a 10% saving on the total amount budgeted for the Executive Board. We feel that it cannot be less, and I am sure that the Executive Board, having listened to the debates on this question in the Administrative Commission, and having seen the nature of the resolutions that have been passed by the plenary conference, will certainly take every step possible. I do not anticipate what the final saving will be, but I think I shall not be guilty of an error in calculation if I say 10%, which comes to about $15,000. On these calculations, therefore, we feel that a sum approximately between $20,000 and $22,000 will be available from the budget provided for the purpose of the functioning of the Executive Board.

(9) The Director-General referred to another point, and that is that he will probably be able, at the conclusion of the year, to transfer certain funds necessary for this purpose. We feel that these funds will be comparatively small in amount for the reasons that we have stated and we are satisfied that, so far as the financial implications of this proposal are concerned, they will in no way interfere with programme and budget activities, nor even with those anticipated savings which are likely to be devoted to other purposes, as suggested in the Programme and Budget Commission. When therefore the Director-General put forward the suggestion, my delegation in a rough and rather rapid mental calculation felt that he was not performing the trick of a magician, nor presenting us with something that was hidden by the Secretariat to be suddenly brought forward as a surprise at this Conference, but that he was dealing with practical suggestions for a very useful measure.

(10) I have dealt with the practical implications of this proposal. There are, however, some intangible but nevertheless highly significant results which cannot be equated in currency values. My delegation has attended every Conference since the inception of Unesco, and it is our firm conviction that at no time has there been in evidence such abundant measure of goodwill and appreciation of diverging points of view. The resolutions we have passed are eloquent testimony to the fact that the spirit and ideals of Unesco have been fully borne in mind, and that here, in your beautiful city of Montevideo, Mr. President, as well as in your State, we have sown seed which in the fullness of time will grow into a big tree, shedding its shelter upon all of us and yielding the luscious fruits of peace, goodwill, concord and harmony to be shared by all the people of the world.
(11) It is in a spirit of humility and hope that I move this resolution for the gracious acceptance of this assembly.

(12) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Korea.

(13) Mr. PAIK (Korea): Mr. President, fellow delegates, many able speakers have already spoken from this rostrum, giving reasons why we cannot and must not add Russian to the working languages of the Executive Board. The Korean delegation wish to make one or two observations on this question. The problem has arisen this year because of the election of a Russian delegate to the Executive Board. The addition of Russian to the working languages of the Board would commit this Conference to the perpetual membership of one of our Russian-speaking people on the Executive Board. The Korean delegation does not believe that we can make such a commitment, for the General Conference may elect any qualified member to the Executive Board from among the representatives of the Member States. Furthermore, when we elect a person who does not or is not willing to use the existing working languages of the Executive Board, the Conference should not provide in each case for the language he wishes to speak; that would create a most undesirable precedent. The Korean delegation therefore opposes the proposal to add Russian to the working languages of the Executive Board of the Organization.

(14) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Chile.

(15) Mr. ZAMORANO HERNANDEZ (Chile) (Translation from the Spanish): Mr. President, although it would have been timely and helpful to comment on the reasons leading to the adoption of English, French and Spanish as working languages, we feel that it would be rather difficult to do so at this moment. Such a study would naturally have helped us in reaching a decision on the request made by the delegates of the USSR and supported by the distinguished delegate of India.
(16) In our opinion, every language can provide a channel to the main stream of culture, and no language has a monopoly of what might be called the vitamin of culture. Nevertheless, certain persons and groups maintain that Latin and Greek, for instance, are essential to any person of culture. Though such assertions may be heard indulgently, there can be no doubt that they are false. This is not the place for an analytical discussion of this contention, which touches on a fundamental problem of the philosophy of culture, but it is worth mentioning that any given people or civilization that has meditated deeply on the eternal problems of man and his position in the universe, has always converted its thinking into the fabric of its own language.
(17) Various arguments have been brought forward in support of the adoption of Russian as a working language; reference has been made to the millions of dollars to be contributed by the peoples speaking that language; it has also been argued that Russian should be adopted for the convenience of Russian-speaking members of the Executive Board, etc. In our opinion, these are not factors to influence our decision. In the first place, there is one important fact to be taken into account: Russian is a working language of this Conference. In the second place, what matters is that the millions of children, young people and adults who speak this Slav language should have the opportunity of learning directly about the ideals of this international Organization. If the proposal in question will ensure that these people become familiar with our ideas and ideals, I feel that we should support the proposal for the good it will do. In the third place, there is, in my opinion, another very strong argument: the acceptance of this proposal would initiate that process of cultural unification in which we are all interested.
(18) I may add that the above could also be achieved through the use of other languages, such as Chinese and Japanese. I need not refer to the budgetary implications of the proposal, as the Indian delegate has already dealt with them in detail. For all these reasons, and many others which might be set forth at this Conference, the Chilean delegation supports the proposal for the adoption of Russian as a working language of the Executive Board.

(19) The PRESIDENT (Translation from the Spanish): I call upon the delegate of the Union of Burma.

(20) Mr. THA HLA (Union of Burma): Mr. President and fellow delegates, I wish to point out one or two small implications that should be very seriously considered in relation to this draft resolution presented by the delegation of India. We have had a very good session which is coming to an end, and Unesco from the beginning has meant international co-operation. The phrase has issued many times from very many mouths, and fittingly so. Do we mean it? On behalf of the delegation of Burma, I suggest that, if we do not support the draft resolution put forward by the delegate of India, we shall seem to be contradicting our own words. We speak continually of international understanding and mutual goodwill - how can we expect mutual goodwill if we contradict ourselves by ignoring the contribution of one of the most important countries, important because it can bring

so much to the enrichment of our ideas and to the achievement of our aims. Only a few days ago we, fellow delegates - you and I - of our own free will chose the delegate of the USSR to serve on the Executive Board. In other words, we want their contribution to the Executive Board. By contribution I do not mean money - of which however they are the second largest contributors; we do not mean that, we mean the contributions of culture and science. We have proved by our act that we want these contributions and, if we now decide not to have Russian on the Executive Board, we shall again be contradicting ourselves.
(21) As good and reasonable people, our acts and our words should be logical and, from the practical point of view, would it be wise to ignore the contributions to science, culture and education that might be forthcoming from the Soviet member of the Executive Board?
(22) Another consideration, that of finance, will be dealt with, has been very fully dealt with by the mover of the draft resolution, and by the Secretariat. I confine myself to general considerations. We have asked the Soviet Union to serve on the Executive Board and I feel, logically, we want to hear its views and we want to receive its contributions.

(23) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Japan.

(24) Mr. HAGUIWARA (Japan) (Translation from the French): Mr. President, ladies and gentlemen, during the discussions about Spanish in the Administrative Commission, I said that the use of a language was a question of internal convenience to be determined by the provisions of the Executive Board's Rules of Procedure. I was whole-heartedly in favour of the use of Spanish in the Board, but I added that the General Conference should not impose rules on the Board. Although the Board is responsible to the General Conference, I consider that the two bodies should be able to arrange their procedure as they think fit and should avoid unnecessary interference with one another. For that reason, I then proposed that the General Conference should simply make a recommendation to the Executive Board, leaving the latter to decide what languages it should use at its sessions. I should like to say the same with regard to the question now under consideration. I greatly appreciate the way in which the Indian delegate has dealt with the question of languages; since this question is a practical one and the object of the proposal is simply to facilitate the work of members of the Board, I fully agree that, if we are to meet tomorrow with our Russian colleague, we should be able to find a means of making things easier for him; but I feel that the decision should rest with the Executive Board.
(25) If the delegate of India is willing to amend his proposal, therefore, I shall certainly support it; but if he is unwilling to do so, I shall be obliged to abstain from voting.
(26) The amendment I should like to propose is as follows: "The General Conference authorizes the Director-General, should the Executive Board so decide, by making the necessary transfers, to provide ...".

(27) The PRESIDENT (Translation from the Spanish): Since the Indian delegation has not, as I gather, accepted the amendment proposed by the Japanese delegate, the discussion of the Indian delegate's proposal is still open.
(28) If no other delegate wishes to speak, I shall put the proposal to the vote.

(29) The Indian delegate's proposal is adopted by 25 votes in favour, 16 against and 14 abstentions.

(30) I call upon the delegate of the Union of Soviet Socialist Republics.

(31) Mr. SOLDATOV (Union of Soviet Socialist Republics) (Translation from the Russian): Mr. President, the Soviet delegation voted for the Indian delegation's proposal that interpretation and translation from and into Russian should be provided for in the proceedings of the Executive Board, as it feels that the adoption of this resolution will create the required conditions for the Soviet Union's regular participation in the work of Unesco's Executive Board. The Soviet delegation also wishes to state that, when the draft budget for 1957-58 is being prepared, the Soviet Union will again raise the question of the adoption of Russian as a working language of Unesco's Executive Board and will submit this question to the ninth session of Unesco's General Conference. The Soviet delegation takes this opportunity of thanking the delegations which were sympathetic towards our request and voted for the Indian delegation's proposal.

(32) The PRESIDENT (Translation from the Spanish): I call upon the delegate of China.

(33) Mr. CHEN YUAN (China): Mr. President, I have asked for the floor in order to enter a protest against the personal attack made upon me by the Soviet delegate at the last meeting, and to claim your protection. As the distinguished delegate of Australia pointed out, such personal attacks have never been known at any previous General Conference of Unesco. I have no intention of retaliating. I even refrained from retaliating when he made a gratuitous attack upon my country. I will only say this, that, although we have at the moment lost a great deal of our territory, thanks to Soviet machinations, our Government still stands firmly on our own soil. Our Government has the fervent support of millions of our nationals overseas, and the silent but no less fervent support of many more millions of our brethren who are writhing in the iron grip of alien rule. Mr. President, it is not we who are without a country, it is those who willingly look up to a foreign power as their father and master, who are really without a country. But the Soviet delegate's attack upon my country is not only an insult to my country and my delegation, which are used to such insults, but is an insult to the General Conference, which, in the face of Soviet opposition, accepted the credentials of my delegation by a large majority. It was a decision of the whole Conference and commands the respect of all delegations. Whatever their political or ideological differences, delegates who are now

members of the same Conference should refrain from recrimination and work, if not in harmony - as desired by some of the delegates and speakers - at least in a spirit of mutual respect. If someone offends against this spirit, he strikes a blow at the fundamentals of any international conference. Should such violent personal attacks be allowed? How can a delegate be protected from such attacks? According to the common parliamentary practice of many nations, when a member of an assembly makes a personal attack upon another member, the member attacked can request the offender to withdraw his words and apologize. I ask him to do so now, or, perhaps, Mr. President, you might consider ordering the offending remarks to be expunged from the records. My delegation is confident that you, in your wisdom, will decide rightly how to protect a delegate from being personally assaulted by another delegate and to prevent any recurrence of such offences.

(34) The PRESIDENT (Translation from the Spanish): As President, I must consider this regrettable incident closed. I shall endeavour to have the matter amicably settled between the two delegations, but I do not feel that the incident should engage the attention of the Conference any further.

**CONSIDERATION AND ADOPTION OF THE REPORT OF THE ADMINISTRATIVE COMMISSION** (continued)

(35) I call upon the Rapporteur of the Administrative Commission.

(36) Mr. ERIKSSON (Rapporteur of the Administrative Commission): Mr. President, fellow delegates, I want to introduce to you the Corrigendum to document 8C/ADM/35. According to it, you should delete Part III of Section F, page 41 in the report I presented to you the other day and take the document you have before you in 8C/ADM/35 Corrigendum, where you have the resolution on the working languages. We have adopted No. 41 concerning the Spanish language and No. 42 will be the resolution we have just adopted concerning the use of Russian.
(37) The last point will be resolution 43, which recommends that every effort shall be made by the Executiv Board, in co-operation with the Director-General, to reduce as far as possible the number and length of sessions of the Executive Board, and to request the Executive Board, in co-operation with the Director-General, to study ways and means of achieving this end and to submit recommendations to the ninth session of the General Conference.

(38) The PRESIDENT (Translation from the Spanish): The discussion is open. If no one wishes to speak, I shall take a vote on items 43, 43.1 and 43.2

(39) They are unanimously approved.

(40) I feel that, by way of conclusion, it would be well to take a general vote on all the items in the Administrative Commission's Report on which we have voted separately.

(41) The items in the Administrative Commission's Report are approved by 51 votes in favour, none against and 1 abstention.

**CONSIDERATION AND ADOPTION OF THE REPORT OF THE PROGRAMME AND BUDGET COMMISSION** (document 8C/PRG/30 and document 8C/BUD/6 rev. 2, Annex I)

(42) I call upon the Rapporteur.

(43) Mr. HOPE (Rapporteur of the Programme and Budget Commission): Mr. President, fellow delegates, the Programme and Budget Commission began its discussions on 17 November and finished yesterday afternoon, after a total of some thirty-three meetings. The substance of our deliberations and of our subsequent recommendations are in document 8C/5 with Corrigenda plus several amendments listed in the Annex to the report now before you. In addition to these amendments there are a few corrigenda which are provided with the same code no. of 8C/PRG/30 Addenda. The background of our report is the history of the past programmes of Unesco. Bearing these past programmes in mind, bearing in mind the need for their improvement and above all the urgent need for bringing to the attention of the peoples of the world the Organization of Unesco and its activities and aims, we turned to a deliberation of our present programme. Further, we had before us a report of the Executive Board known as document 8C/PRG/13, which makes recommendations for the future programme of Unesco under the title Remodelled Programme. The main points of this document, you will recall, are that the Board invites you to give further heed to the needs of Member States, to attempt to adopt in the future, instead of many small projects, a few major ones, and, in order to implement these major products to strike a balance between those general activities that continue from year to year and the special activities through which we hope to meet the needs of Member States.
(44) The framework within which our deliberations were fixed is the budget ceiling. When last our Commission came before you, the General Conference gave us its approval to work within a budget ceiling which roughly gives us for 1955 just under $10,000,000 and for 1956 just over $10,500,000. Having received that permission, the Commission proceeded to examine chapter by chapter the documents in the proposed programme and budget for 1955-56. We first examined, out of chronological order, the chapter on the expanded programme of technical assistance. Thereafter we followed from 1 through 8 the chapters in the grey book. I do not intend here to enter at length into the deliberations of the Commission or into the many amendments, the occasional deletions and rejections it made. I will summarize briefly some of the major modifications in the chapters one by one.
(45) Of the technical assistance programme I will only say that we adopted the resolutions in that document and call the attention of the Director of this programme to several constructive criticisms.

I say this now so that I do not need to repeat that in each chapter many constructive criticisms were made regarding the programme by delegates in the Commission and these are herewith called to the attention of the respective departmental directors. Without further modification, then, of the technical assistance programme, the resolutions which put this into effect were recommended for adoption.

(46) In the chapter on Education one of the most important parts was the new document 8C/DIV/80, containing the recommendations of the Committee of Experts on Education for International Understanding and Co-operation. This was placed in the Education chapter only for convenience; actually it is intended by the Commission that the recommendations contained in it shall have a bearing upon the implementation of projects in each chapter, in other words, the Commission urges the Director-General to make an effort in each part of the programme to carry out ideas of international understanding and co-operation.

(47) Subventions to international organizations in the educational field - and, I may add, in all of the substantive fields recognized in our programmes past, present and future - were enthusiastically supported, and I will anticipate the programme here to say that, in the discussion of the remodelled programme, doubt was expressed by certain delegations regarding the fixing or stabilizing of a level of general activities; it was the sense both of the Advisory Committee and of this Commission that general activities and special activities should at all times be interdependent. With that understanding we can go on to say that the Commission made a serious effort to increase the subvention offered to the group of international non-governmental organizations in each of these chapters, notably ICSU in the Natural Sciences chapter and the International Council for Philosophy and Humanistic Studies in the Cultural Activities chapter.

(48) To continue with Education, the programme puts strong emphasis upon fundamental education and primary education. In this respect the Commission approved the regional projects on fundamental education but indicated for the future that Member States should encourage the development of their own national centres. The proposal for an Advisory Committee on School Curriculum was accepted with reservations, with the understanding that further planning will precede the convening of the experts.

(49) Finally, there was an important modification in the aid to Member States, in the form of an increase in the allocation for emergency educational assistance to Palestine refugees, and here again, although the figure was fixed at somewhat less than was requested, it was the sense of the Commission that, should economies be made in the Education chapter, they could be added to the amount supplied to the United Nations Relief and Works Agency for this large and important project.

(50) In the Natural Sciences chapter I have already mentioned the Commission's interest in giving aid to ICSU. New elements in the programme are increased attention to arid zone and humid zone research, as well as the programme on oceanography. One of the most hotly debated projects in Natural Sciences was the campaign against cancer. It was accepted, rejected, then accepted again, under the new title Basic Research on Cellular Growths. Finally, a dramatic addition to this programme came with the adoption of a resolution, originally introduced by the delegations of France and Japan, on the utilization of atomic energy for peaceful purposes, the programme to be worked out in development with that now being planned by the United Nations. In view of the effort to change the direction of the science co-operation offices, there was some discussion about maintaining the Science Co-operation Office in New Delhi. It was agreed, however, to continue this Office under special circumstances. In the same way, the Office of Science Co-operation in Istanbul was voted to be closed so that the money could be used for other parts of this chapter. However, the Turkish delegate was assured by the Director-General that services to his country would be continued either through the Department of Natural Sciences at headquarters, or through the action of National Commissions, action made possible by a development in our programme which I shall refer to later.

(51) Under Social Sciences the programme was adopted very much as it stands in the book, with the important exception of projects under the heading: Problems of international understanding and tensions. It was felt that this part of the programme was weak, and the entire section was revised as document 8C/PRG/29. In this form it found the approval of the Commission and was adopted. Lastly, an important resolution introduced by the delegation of India, amended, and then jointly presented by Czechoslovakia, the United States of America and other countries on the subject of peaceful co-operation, was adopted unanimously.

(52) Under Cultural Activities I have already referred to the Commission's support of the International Council for Philosophy and Humanistic Studies. One should add to this the interest shown by the Commission in all organizations concerned with creative artists: musicians, writers, playwrights, architects, and their participation in international activities. Two subventions in this field were increased and many delegates expressed their wish to obtain further participation of creative artists in this Organization. An important addition to this part of the programme is the series of international regulations which were adopted by a working party of the Commission and further by the Commission itself. These refer to the Copyright Convention, the Convention for Protection of Cultural Property, the International Competition in Architecture and the desirability of establishing regulations with regard to archaeological investigations. An important new project in Cultural Activities was that of producing reading material for new literates. This project, of course, crosses the departmental line and is of as much interest to experts in education as to specialists in cultural activities. Again, the attention of the departmental director is called to the many constructive suggestions made by delegates on this point.

(53) Another new development is the recommendation to the Director-General that he shall have published a book in commemoration of the centenary of the great Polish poet Adam Mickiewicz.
(54) The Index Translationum, which had been recommended for a reduction in the budget, was reinstated at its 1953-54 level.
(55) A working party of the Commission studied the continuing project for a Scientific and Cultural History of Mankind and the programme as listed in this chapter was adopted.
(56) The Commission took note of a report on Esperanto (document 8C/PRG/3).
(57) Mass Communication. The most important development in this Department came from the Commission's acceptance of the recommendations of the working party, to the effect that the structure of the Department be organized according to its two operative functions. A few changes were made in the Mass Communication projects, as follows: the film budget was somewhat reduced, but money was provided for the addition of two posts in visual aids and for the making of a limited number of films and filmstrips. At the same time, the Commission felt that the Secretariat should not attempt to set up a film laboratory, but rather contract for films.
One of the most important acts of the Commission, and doubtless of this Conference, was the unanimous adoption of a resolution calling for measures to promote the use of means of mass communication to increase mutual confidence and understanding among the peoples of the world. This resolution was drawn up on the basis of proposals submitted by the delegation of the USSR and of amendments suggested by the delegation of the United States of America and other countries. The final draft of the resolution was submitted by twelve countries. In the supporting speeches much emphasis was given to the importance of implementing this resolution through the action of Member States.
(58) In the chapter on General Resolutions, several important decisions were taken which should have a bearing upon the future programme. These are largely contained in the report of our fourth working party, the party on decentralization (8C/PRG/25 (rev.)). Its recommendations in this respect were accepted with an important reservation, namely, that decentralization of the programme shall not mean decentralization of administration. We call to the attention of the Conference, therefore, that the basic principle of universality must not be forgotten in our adoption of this programme of decentralization. Then how are we going to go about decentralization? An important project in the paper is one brought forward by the delegation of India for the establishment of an Office of Co-operation with Unesco in that region. This project was viewed favourably by the Commission.
Secondly, important recommendations were made for developing the activities of National Commissions. This has been, as many of you know, a subject of much interest and of constant reiteration in past programmes. Here in these resolutions important budgetary steps are taken that will make it possible for National Commissions to receive further aid for such purposes as holding regional meetings among themselves, and other purposes.
(59) Another point to be made in decentralization is an important recommendation of this working party adopted by the Commission regarding the seat of future Unesco conferences. As we all know, the ninth session of the General Conference is to go to New Delhi, but this party, especially in view of the decentralization of activities, recommends that, by and large, conferences should be held at the permanent headquarters in Paris.
(60) I mention, in concluding my remarks on these chapters, that, in spite of every effort by the Commission to economize, the final total of expenditure came to perhaps a quarter of a million dollars above the ceiling. The Commission turned over this problem to the Advisory Committee and accepted its recommendations for bringing the programme back into line with the budget ceiling. The only important change was the one already referred to - the reinstatement of the campaign against cancer. This was made possible by economies in another part of the chapter on Natural Sciences.
(61) At our closing meeting yesterday, in fact in two meetings, the Commission deliberated on the recommendations received from the Advisory Committee regarding the remodelling of the future programme of Unesco. You will recall that the Conference in plenary session has already voted on this matter, and the substance of its deliberations were finally brought together in a resolution which bears the number 11.1.
(62) In conclusion, gentlemen, the Commission has certain observations to make to this Conference, observations many of which are well known to you, but which should be repeated here. In the first place, I think it is proper to say to you that this Commission holds very dearly to its prerogatives of deliberating and taking action upon the programme and budget. In doing so, it recognizes the great difficulties imposed upon it by the large number of delegations, each of which has the full right to speak. That number now reaches, in the Commission which has just completed its labours, 68 delegates of our 72 Member States, and we were aided and abetted by numerous observers from the international non-governmental organizations, whose support was considered one of the basic interests and needs of Unesco. But with this huge programme, 280 pages plus numerous addenda, plus the large number of supplementary documents, it was extremely difficult to do what the Commission felt it necessary to do, namely, make a close examination of each project in the programme. It therefore places on record the need, if the programme is to be a good programme, if Unesco indeed is to continue to exist and carry out its aims, for the reform of these procedures.
(63) What does the Commission specifically advocate for the consideration of the General Conference? We ask you, ladies and gentlemen, to consider some way of improving the time-table. I would remind you that it was not until the sixth day of the General Conference that this Commission was able to begin its deliberations. It was not until the twelfth day that we had a figure for the budget ceiling which made it possible to deliberate

with any degree of permanence. Furthermore, we were overwhelmed this year with draft resolutions, exceeding 120 in number. Some of these were of major importance to our programme and, as you have heard in the details of the various chapters, many have been adopted and will have an important effect upon our future programme. Others were of secondary importance, and we recommend to the Member States, to their National Commissions and to the Director-General that means be considered of getting these resolutions in ahead of time, and furthermore that they should be screened so that those which are not really appropriate for adoption or consideration by the Commission, can be handled in some other way. A resolution, even of minute importance, often required for its discussion from half-an-hour to an entire meeting.

(64) I will conclude with this observation. The Commission is deeply concerned with the need to improve the relationship between itself and the other important bodies of this Organization which have been set up to assist it, to advise it, to help in carrying out the programme, and particularly with its relationship to the Advisory Committee. We have no special recommendations to make to you there, other than the general urge that somehow this relationship be improved. I will add that throughout the meetings we found this advice, whether it came from the Advisory Committee, the Executive Board, or other Committees, very helpful, but often, it must be frankly admitted, it meant a duplication of effort, and the time could have been spent very effectively otherwise.

(65) Finally, it is appropriate, ladies and gentlemen, to thank the Executive Board, the Advisory Committee and the Secretariat for the many hours of hard work, sound advice and friendly assistance all have put into the planning of this programme.

(66) The PRESIDENT (Translation from the Spanish): The report we have just heard is now open to discussion. I think that, in order to facilitate the discussion and adoption of the report and its conclusions, we should take the different parts separately. Part I, which is short, can be considered as a whole, and Part II chapter by chapter, as we did when dealing with the Report of the Administrative Commission.

(67) We shall begin, then, by examining the first part of the Report and its resolutions.

Page 1 of the Annex. If no delegate wishes to speak, we will take a vote.

(68) Part I is unanimously adopted.

Part II. Chapter 1: Education

(69) I call upon the delegate of Colombia.

(70) Mr. BERNAL JIMENEZ (Colombia) (Translation from the Spanish): Mr. President, the Colombian delegation will approve this chapter, but asks that the following statement be included in the records.

"In approving Unesco's programme and budget for 1955-56 the delegation of Colombia regrets that, so far as the chapter on Education is concerned, it must record certain reservations and objections with regard to the Regional Fundamental Education Centre at Patzcuaro (Mexico). Reliable information in the delegation's possession about the working of this Centre has given cause for serious concern in matters of morality. This is the most important aspect of education and there seem to have been grave shortcomings in this respect.

The Latin American countries, for whose benefit the Patzcuaro Centre was established have always followed the highest moral principles in their education and culture, and it would be quite illogical and extremely regrettable if future teachers, while undergoing specialized technical training, were to be exposed to corrupting moral influences which would have a harmful effect on the children and young people who will later be in their charge.

Colombia, which has given CREFAL generous financial support and has sent a large number of carefully selected students to study at the Centre, in expressing these misgivings at the eighth session of the General Conference, earnestly hopes that the necessary moral reforms will be made to ensure that the Fundamental Education Centre at Patzcuaro, far from constituting a danger and a menace, will henceforth be a sound instrument for the promotion of good citizenship, education and culture among the peoples of Latin America.

The Colombian delegation requests the President to arrange for this statement to be included, in full, in the records of the session."

(71) The PRESIDENT (Translation from the Spanish): It shall be done.

(72) I call upon the Director-General.

(73) The DIRECTOR-GENERAL: Mr. President, I have discussed this matter with the delegate of Colombia, and also with the Director of the Patzcuaro Centre. I have also visited Patzcuaro on two occasions, in September of 1953 and October of 1954. I have been unable to find evidence of serious difficulty of the sort he mentioned. I have, however, asked the Director of the Centre to take any possible measure to increase the assurance that things are not as bad as they sometimes have been rumoured to be. I cannot, of course, give full assurance on this matter because the students there are adults, they are not under the kind of discipline that children are under in school and in their homes. Nevertheless, we will do everything we can to prevent occurrences of the kind which have been rumoured to exist and which have given concern to the Colombian delegate.

(74) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Viet-Nam.

(75) Mr. VO VAN LUA (Viet-Nam) (Translation from the French): Mr. President, ladies and gentlemen, I am addressing the meeting today in order to voice the Viet-Namese delegation's objections to the chapter on Education.

(76) We do not disagree with the Secretariat or with the Programme and Budget Commission, but

we feel that something should be added, if only that our attitude, which is common to all members of the great university family, may be noted in the records.

(77) I refer you to resolution 1.212, paragraph 114. This resolution reads as follows:

"The Director-General is authorized to assist Member States and appropriate international organizations to develop and improve school education, while at the same time orienting it towards international understanding and co-operation".

(78) When considering this improvement in national education systems, however, both the Secretariat and the Programme and Budget Commission have confined their attention to fundamental, primary and secondary education, leaving aside the question of higher education. All we can find about this question of university education is a simple reference by the Secretariat in paragraph 125: "the heading school education seems to exclude teaching and research at the university level. In this respect, most professional and educational problems relating to universities are the direct concern of the International Association of Universities, which will receive a subvention".

(79) And when I turn to paragraphs 45-48 relating to the International Association of Universities, to which the General Conference has granted a total subvention of $28,000 for the two years, all I find is:

"The Association established a documentation centre, maintains a permanent information service and publishes a quarterly bulletin and special studies on questions of interest to universities. Unesco is thus enabled to free itself of clearing house work in the field of higher education".

(80) This, then, is all we can hope to receive from the International Association of Universities, in return for $28,000.

(81) Paragraph 125 refers to professional and educational - that is, pedagogical - problems. Unesco is not interested in questions of this kind, particularly professional questions. At the most, pedagogical questions might have some repercussions in the life of the Organization.

(82) Pedagogics is concerned only with the formal side of education, the manner in which a science or subject is taught, but it has nothing to do with the content of the teaching.

(83) But it is a matter of great importance to us, the Member States of Unesco, that attention should be given to the content of teaching, for it is by that means that Unesco can achieve its aim of establishing understanding among the peoples and international concord.

(84) Thus, the question of university education remains unsolved. Only primary, secondary and fundamental education are dealt with by the programme of Unesco.

(85) In now pleading the cause of university education, I have no intention of creating other budgetary difficulties for the Organization, but simply wish to draw attention to the gap which has been left in this chapter on Education.

(86) With regard to university education and students, the delegate of Japan, in the Programme and Budget Commission, put forward a draft resolution on Friends of Unesco Clubs, organized by students. There again, however, Unesco is only on the steps of the faculties and universities. It would do much better to enter boldly by the main door instead of wandering round outside.

(87) I should like Unesco to make a direct approach to students themselves. Belonging as I do to the great university family, I have found that this is the only way to produce international understanding, for students come to play their part in the political life of their countries a few years after completing their studies; they guide public opinion in various capacities - as writers on current affairs, teachers or statesmen. Perhaps I may be allowed a personal reference: at present, three of my former students are Ministers in the Government of Viet-Nam, including the Minister of Justice and the Minister of Finance. You will thus see how important it is that we should give some thought to the student body if we wish to do anything for the good of Unesco.

(88) As a practical suggestion and to avoid taking up too much of your time, I shall make the following proposal: the International Association of Universities should be made to appreciate the need for it to co-operate with Unesco in order to bring Unesco into the universities, and first of all into the Faculties of Arts, by instituting special degree certificates for studies relating to all the cultures of the world: Hindu, Arab, Chinese, Japanese, Latin American, etc. These diplomas would not be taken into account for the degrees required of secondary teachers (like the French licence d'enseignement), but they would give all students a knowledge of intellectual, cultural and, above all, spiritual developments in the Arab countries, in Japan, in Montevideo, etc. When all students throughout the world have a clear idea of what is going on among their neighbours, they will have more sympathy for the countries on their borders and even for countries which lie some 15,000 miles distant from their own, as Viet-Nam does from Montevideo. The only people we like are those whom we know and understand. And it is this which offers the best hope of establishing lasting peace throughout the world.

(89) But there is no reason to stop at the graduate level; there is also the doctorate. I am not thinking of the higher degrees, like the French doctorat d'état (which is very difficult and not within the powers of all intellects) but of those corresponding to the doctorat d'université. What is there to prevent Unesco from encouraging the preparation of theses on the modern humanities, dealing, for instance, with Mexican-Spanish and Uruguayan-Spanish literature, or Chinese philosophy, Indian philosophy, Japanese literature and philosophy, etc? All these theses would be defended before the faculties and universities of all countries and would constitute veritable monographs, which Unesco would undertake to publish. In that way, we should soon build up a collection of Unesco works which would assist in the development of international understanding or, in other words, in the establishment of international peace.

(90) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Mexico.

(91) Mr. SANDOVAL VALLARTA (Mexico) (Translation from the Spanish): Mr. President, the Mexican delegation deeply regrets that the Colombian delegation has felt obliged to criticize the Regional Fundamental Education Centre for Latin America, at Patzcuaro.

(92) Furthermore, as I have already said in the Programme and Budget Commission, the Mexican Government wishes to state once more to the Conference that it will always comply strictly with the terms of the contract which it has signed with this Organization, governing the operation of the Centre concerned.

(93) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Lebanon.

(94) Mgr MAROUN (Lebanon) (Translation from the French): Mr. President, ladies and gentlemen, in connexion with resolution 1.222 - page 3 of the Annex concerning Education - I should like to take this opportunity of thanking Unesco, all the Member States and the Secretariat once again for the kindly interest they have always shown in the situation of Palestine refugees. I should like to emphasize that when the resolution, after being examined by the Programme and Budget Commission, was approved, an increase was made in the amount of assistance to refugees. When the Commission was obliged to readjust the budget, it cancelled that increase, but the Director-General promised that if, in the future, he found he could restore it, he would certainly do so. I should have liked this to be mentioned in the report, and I would ask the Conference whether it has any objection to its being noted in the records.

(95) The PRESIDENT (Translation from the Spanish): The proposal is approved and it will be done. If no other delegate wishes to speak, we will take a vote on the Education chapter.

(96) The chapter on Education is unanimously approved.

Chapter 2: Natural Sciences

(97) If no one wishes to speak, we will take a vote.

(98) The chapter on Natural Sciences is unanimously approved.

Chapter 3: Social Sciences

(99) I call upon the Secretary.

(100) Mr. CHEVALIER (Secretariat) (Translation from the French): Mr. President, ladies and gentlemen, in this chapter, I have to ask you to refer to the new resolution 3.53. The text shown under this number, with the reference 8C/DR/8 amended, is not the right one. It is not the wording that was approved. The text approved is contained in document 8C/DR/105 (rev.), which is in fact the amendment to document 8C/DR/8. With the President's permission, I shall reread the text actually approved by the Commission.

"Bearing in mind that discrimination, as enumerated in Article 2 of the Universal Declaration of Human Rights, on the basis of race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status, is one of the greatest dangers to peace and to human dignity; noting that Unesco has already taken some commendable steps in producing excellent publications on the subject of race and race relations; regretting that discrimination in very ugly forms continues to vitiate relations between human beings in certain areas of the world; the General Conference calls upon all Member States and National Commissions for Unesco to eradicate in all possible ways the evil of discrimination and authorizes the Director-General, in carrying out the programme of Unesco, to give special attention to measures designed to eliminate all such discrimination and, more particularly, in 1955 to measures calculated to eradicate race prejudices."

(101) The PRESIDENT (Translation from the Spanish): We shall continue the discussion, subject to the correction just indicated. If no delegate wishes to speak we will take the vote.

(102) The chapter on Social Sciences is approved.

Chapter 4: Cultural Activities

(103) Approved unanimously.

Chapter 5: Mass Communication

(104) Approved unanimously.

Chapter 6: Exchange of Persons

(105) Approved unanimously.

Chapter 7: General Resolutions

(106) Approved.

Chapter 8: Publications Fund and Seal and Emblem of Unesco

(107) Approved unanimously.

Chapter 9: Expanded Programme of Technical Assistance

(108) The PRESIDENT (Translation from the Spanish): I call upon the delegate of France.

(109) Mr. LAUGIER (France) (Translation from the French): Mr. President, fellow delegates, now that you are about to vote on the budget and resolutions relating to technical assistance, the French delegation wishes to make its position perfectly clear: it considers that the programme of assistance provided by the United Nations and the Specialized Agencies is the greatest and most generous instance of men's endeavours to help their

fellow men ever known in all the history of the world. We have already said, and say once more, that those in charge of this programme have in their hands the hopes of mankind. France is resolved to bring the support of all its intellectual, technical and material resources to this great project; it is ready to share all the sacrifices which Member States may one day be asked to make in order to add to the means available for promoting this great cause. But, just because it has faith in this work and ardently desires its success, it feels obliged to submit the texts referred to it, and the administrative machinery which will serve or hinder the progress of technical assistance, to a fair but searching criticism. The French delegation does not share the general optimism which burgeons forth so trustingly on every page of the report on technical assistance; it feels that rigorous self-criticism would produce better results than the expressions of mutual admiration so lavishly bestowed upon each other by the various administrative services concerned with the distribution of technical assistance funds and services. It fully appreciates the efforts made and the results achieved, but it does not consider that technical assistance has already brought about any notable improvement in the standard of living of the vast numbers of people who have placed their hopes in it.

(110) Lastly, the French delegation wishes the serious reservations which it is obliged to make with regard to the administrative machinery for the conduct of technical assistance, and which it has already indicated briefly to the Programme and Budget Commission, to appear verbatim in the records of the proceedings, and accordingly has to restate them at this plenary meeting.

(111) The French representative has maintained, without contradiction, that, if the international authorities which have to consider technical assistance projects were counted up, the total number would be at least 24; I shall not give you a list of them, for I should probably leave some out, but, after passing through the various services in Unesco - the Technical Assistance Department and the other programme Departments, the Bureau of Personnel and Management, the Travel Bureau, the Bureau of Programme and Budget, the Office of the Director-General, the Executive Board, the General Conference's Advisory Committee on Programme and Budget, the Programme and Budget Commission, and the General Conference itself - after surmounting all these hazards, as I say, the projects, on reaching the United Nations, come before TAB (United Nations Technical Assistance Board with its sub-committees and working parties); they must then be examined by TAC (Technical Assistance Committee of the Economic and Social Council), by the Economic and Social Council itself, then by the various Committees of the General Assembly and, finally, by the General Assembly itself. Nor is that all: successively, concurrently or simultaneously, the ACC (Administrative Committee on Co-ordination) with its preparatory committee and subsidiary bodies must also consider them. At least 24 international bodies are thus concerned with the administration of this programme, and yet we are now told that new committees - committees for the evaluation of the results - are to be set up at the United Nations and in the Specialized Agencies.

(112) Will these headquarters committees draw up central reports on the local reports, or will they send out inspectors as missi dominici to collect additional information? Only the future can tell.

(113) Ladies and gentlemen, there is no sense in this. No business undertaking could possibly survive such a proliferation of parallel or superimposed machinery. Unless international co-operation takes a ruthless axe to the strangling tentacles of bureaucracy, unless it can break free, there is a danger that it will one day stand arraigned before the wrath and indignation of the peoples of the world. The task is a great one, and it is urgent; it must be carried out by the champions of concentration, who have made drastic cuts in the programmes but, as far as we know, have refused to do the same in the sacrosanct bureaucracy which threatens to hinder technical assistance from carrying out its mission of humanity. France has done its duty by saying what it thinks of the present situation; it will vote for the budget and resolutions submitted to you, subject to the serious reservations which I have just set forth.

(114) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Brazil.

(115) Mr. BERREDO CARNEIRO (Brazil) (Translation from the French): Mr. President, ladies and gentlemen, while supporting the documents dealing with technical assistance which are now before us, the Brazilian delegation wishes to record its approval of the comments made by the French representative. We are convinced that we should all gain if the procedure for the provision of technical assistance were simplified. We should gain by ensuring that the Specialized Agencies, and more particularly in our case, Unesco, carry more weight in the Technical Assistance Board and the subsidiary bodies of the United Nations when final decisions are being made on subjects which are of interest to us as an educational, scientific and cultural organization. We need greater latitude in our own special fields, greater flexibility in the machinery and procedure for channelling requests from Member States, and also, in my opinion, closer attention to the special features of each State when their requests are submitted.

(116) We sometimes fear that there is a tendency to make the procedures which lead from a Member State's request to the final grant of technical assistance by TAB too uniform and too rigid.

(117) We would therefore urge the Director-General and the Executive Board to see that the machinery by which the needs of Member States and the resources provided by the United Nations and the Specialized Agencies are brought together is made as simple and as flexible as possible.

(118) The PRESIDENT (Translation from the Spanish): If no other delegate wishes to speak, we will take a vote.

(119) The chapter on the Expanded Programme

of Technical Assistance is unanimously approved.

Chapter 10: Miscellaneous Resolutions

(120) Approved by 50 votes in favour, none against and 2 abstentions.

Chapter 11: Resolution concerning the Future Programme

(121) Approved unanimously.

Appropriation Resolution for 1955 and 1956 (document 8C/BUD/6 (rev. 2), Annex 1)

(122) Approved by 47 votes in favour, none against, and 5 abstentions.

(123) Having approved all the chapters separately, we shall now take a vote on the report as a whole.

(124) The report is unanimously approved.

NEED FOR MAKING UNESCO A GLOBAL ORGANIZATION (documents 8C/DR/4 and Add., 8C/DR/120 and 8C/DR/128)

(125) I call upon the delegate of India.

(126) Mr. WADIA (India): Mr. President and fellow delegates, it is my proud privilege to move the resolution that stands in the name of the Indian delegation, as found in document 8C/DR/4:

"Realizing that Unesco cannot fulfil effectively its great task of establishing the foundations of peace upon the intellectual and moral solidarity of mankind without becoming truly global in its membership, character and scope,

The General Conference

Expresses the wish that all States which have not yet become members of Unesco, will do so as soon as possible, and

Authorizes the Director-General to invite all such States to join the Organization."

(127) My delegation has found it necessary to amend it by adding the words which are found in document 8C/DR/4, Addendum "in consultation with the Economic and Social Council".

(128) If the Indian delegation now sponsors this resolution with pride, it does so not without considerable regret, for the resolution on the face of it should be superfluous; the very essence of Unesco, as clearly enunciated in its preamble, is the recognition of "full and equal opportunites for all in the unrestricted pursuit of objective truth and in the free exchange of ideas and knowledge". If, in spite of this open and unambiguous declaration, we feel constrained to move a resolution, it is a clear sign that "there is something rotten in the State of Denmark", that Unesco has not risen to a full realization of its responsibilities or of its potentialities.

(129) In the light of our experience of what has happened at this session in Montevideo, it would be worth refreshing our memory of the conditions which brought Unesco into existence. The world was dark with war clouds when the Great Powers conceived the noble idea of the United Nations, and it was welcomed as the last desperate means of saving the world from the ravages of modern warfare. But it was conceived at the political level. Politics has its obvious limitations, it cannot bypass fears and suspicions, the will to power and the wish to get the best of existing conditions. In such a soil, the will to peace cannot effectively flourish. And so on a great day the idea was conceived of bringing into being another organization which could work for peace and towards peace without the limitations of politics. That organization was Unesco. The United Nations was rooted in the present, and was content to solve world problems as and when they arose, in makeshift fashion, in the spirit of compromise, but Unesco aimed at a long-range policy, it wanted to sow the seeds of peace in the minds of men, it wanted to tackle the problems of peace through education, science and culture, it recognized the supreme worth of culture as a broadening concept, it aimed at producing men and women of culture who could understand one another. The mark of a cultured man is always his lack of fanaticism, he emphasizes the will to understand and sympathize, to tolerate, nay, even to appreciate standpoints other than his own, in recognition of the great axiom politics divides - culture unites. It is clear, therefore, that, while Unesco is a child of the United Nations and owes certain loyalties to the fundamental principles of the United Nations, it is nevertheless, an autonomous organization. It was never intended to be a mere carbon copy of the United Nations. Surveying the work of Unesco during the few years of its existence, we all recognize that its foundations were well and truly laid, that it has carried light to the darkest corners of the earth, that it has honestly aimed at raising the level of the underdeveloped countries in their education and culture. The world has awakened to a new sense of human dignity, whether humanity be white or black, yellow or brown; it implies a consciousness that the weakest link in the chain of human relations constitutes the greatest danger to peace, and to eliminate this weakest link requires that all the nations of the world, big and small, all find a home in the warm bosom of Unesco.

(130) Has this hope been fulfilled? The other day, as I was listening to the speech by the honourable delegate of the United States of America, playing the rôle of counsel for the prosecution, whether against China, or Rumania, or Bulgaria, I thought to myself how much better this world would be if countries in Europe and America took to heart the simple but great biblical precept "Judge not that ye be not judged". The ideal of Unesco is so lofty that there is hardly a country in the world today that can say with a clear conscience that there is no skeleton in its cupboard. I feel that the wisdom of Ovid can apply to organizations as well as to individuals: Meliora video, pejora sequor.

(131) The very ideals of Unesco as embodied in its Constitution should make it impossible for any nation willing to accept the ideals of Unesco, to be excluded. The triumphs of Unesco should be judged not by its capacity to convert the converted, but by

its capacity to convert the unconverted. There have been countries that kept aloof from Unesco. Today, for the first time in this very hall, we find the delegates of the Union of Soviet Socialist Republics and of Spain, sitting together, intent, like everyone else, upon solving the problems of humanity through dissemination of education and culture.

(132) To keep out the representatives of 600 million Chinese weakens Unesco, to keep out even for two years small countries like Rumania and Bulgaria, countries pulsating with life and keen to play their part in the cultural renaissance of humanity, is to repudiate our faith in Unesco as the one organization in the world of today which may be trusted to achieve an enduring peace. Beati pacifici - whether they come from the East or the West.

(133) We in Unesco today are faced by a dilemma, and it can be resolved in only one way. If China, Rumania and Bulgaria are as cultured as they claim to be, if the records of their achievements in education and science are as great as they are claimed to be, they should be welcomed to Unesco with open arms, for they, too, have something precious to give to the world. If, on the other hand, they are still so backward as their critics point out, in the elementary principles of justice and international morality, it is all the more the duty of Unesco to admit them as members, for they need help, they need enlightenment. Unesco exists, not so much for the developed as for the under-developed; not so much for the strong as for the weak, for it has taken upon its shoulders the burden of the world as a keeper of its brothers in every corner of the world. Nothing at this session of our Conference has impressed me more than the wonderfully eloquent speeches that came from the lips of the representatives of our new Associate Members, the Gold Coast and Sierra Leone, Malaya and Borneo. They were learned and impassioned, they mark the birth of a new consciousness of freedom and culture in the countries of Africa and Asia that were not so long ago lagging behind in the race of life. Unesco has given them a status which they value and are proud of, that is what Unesco itself can be proud of.

(134) We in India have come most into contact with the West, we are grateful to the British and the Americans for having made us lovers of freedom. We still wish them to be leaders in the world of freedom. If there is anything noble in Unesco, that inherent nobility must infect all its members, whatever political creed they may follow. If they find a country within the Unesco fold not keeping to the mark, they can hope to bring all the pressure that a peaceful, global organization like Unesco can bring to bear on it as a brother member. But if a country is kept out of our great Organization, we have no hold on it, we cannot argue with it, we cannot hope to improve it.

(135) Mr. President and fellow delegates, I hope I have even partially succeeded in making clear the imperative needs to have Unesco function as a truly global organization. If it is not global, it is false to itself; it can fulfil its mission as a great organization for peace only if it admits all to its ranks; every country that seeks admission to Unesco does so with open eyes and a clear knowledge that Unesco is for peace and for all. If there are countries in the world that still shun our fellowship, and unfortunately there are some, we should try to get them in, and that is why our resolution calls upon the Director-General to invite all such nations to join Unesco.

(136) Fellow delegates, we commend this resolution for your acceptance. If I am not out of order, I should like to refer in brief to the amendments of which notice has been given. We have considered these amendments. We regret that we do not find it possible to accept the amendment proposed by the delegation of China, for it differs essentially and in spirit from our resolution, but, in the amended resolution as put forth by the Advisory Committee, we find that the central principle of our resolution is accepted, and to that extent the Indian delegation is prepared to accept that amendment.

(137) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Denmark.

(138) Mr. NIELSEN (Denmark): Mr. President, if I have asked for the floor it is not because, as the honourable delegate of India said: "There is something rotten in the State of Denmark". There is not a single word in what the honourable delegate of India has just said to which I would not subscribe, except his last words - that we should adopt the resolution. I will tell you why.

(139) No delegation in this hall would be more in favour of the aim of this resolution than the Danish delegation. We are as prone as anybody to urge the universality of Unesco, and we hope that every nation of the world will join us. I trust that it is evident from our attitude at this General Conference that we mean what I have just said. Nevertheless, I have some doubt about the wisdom of adopting the Indian resolution as it stands, for one single reason. The Indian resolution, in its last words, "authorizes the Director-General to invite all such States (as have not yet joined) to join the Organization". Since this resolution was circulated early in October, the Indian delegation, in the light of deliberations in the Executive Board, has added "in consultation with the Economic and Social Council" on the grounds, of course, that the Economic and Social Council has to give its opinion on new applications. But, my fellow delegates, it is not only the Economic and Social Council which has to give its opinion on a new application, it is the General Conference of Unesco in the end. We have seen at this very Conference that an application was made, and was supported by the Economic and Social Council, and by the Executive Board of Unesco and was rejected at this General Conference. I suggest for your consideration that we do not place the Director-General and our Organization in the position of inviting States to join us at the risk that they may be rejected by a vote of the General Conference. We cannot do that and for this reason I cannot accept the Indian resolution as it stands. I know that two further amendments have been submitted - DR/120 and DR/128. Let me deal with the latter. It is, of course, more acceptable because it does not invite the Director-General to

take the initiative. It welcomes the admission of all States not yet members of Unesco which have demonstrated that they are willing and able to abide by the obligations of the Unesco Constitution. While I feel that I cannot vote against that resolution, I have some doubt in my mind regarding this restriction and how it would be interpreted, but I would rather abstain from voting on it. As far as the Indian resolution is concerned, I do not think that we can put this responsibility on our Director-General.

(140) The PRESIDENT (Translation from the Spanish): I call upon the delegate of China.

(141) Mr. CHEN YUAN (China): Mr. President, fellow delegates, my delegation is wholly in favour of universality. Indeed, universality has always been a dominant creed in our philosophy. More than 2,500 years ago our great sage Confucius preached the commonwealth of mankind, and a common saying of our people is: "All men are brothers within the four seas"; four seas, meaning the world. Therefore, any call for universality has an appeal to our very nature, to our instincts. But however much we welcome universality, we must not lose sight of the fact that Unesco is not a garden party, Unesco is an organization for common action, an action with a definite purpose. The purpose of Unesco is laid down in our Constitution, it is for furthering universal respect for justice, for the rule of law, for the human rights and fundamental freedoms which are affirmed for the people of the world. We have regretfully to admit that not all people in the world have shown their willingness to serve. Indeed the actions of some States are not only at flagrant variance with these purposes, but their actions are a complete negation of our purpose. Much was said in a previous debate in this Conference against the admission of certain States and many facts were given. We do not intend to repeat them, to enlarge upon them here. Suffice it to say that, while all delegations are in favour of universality, the Conference, with the exception of small minorities, is against the admission of States which are to all intents and purposes in conflict with our aims. For that reason we propose an amendment to the Indian resolution. We propose merely to add a single phrase, that is: "... which have demonstrated their willingness to fulfil the purposes of the Organization..." in the second and third lines of the second paragraph. But we are also in favour of the draft of the Advisory Committee on the Programme and Budget, which we think has the same object in view. We do not wish to complicate matters or to bring in too many amendments and, if this General Conference wishes to accept that amendment, my delegation is perfectly willing to withdraw our own.

(142) The PRESIDENT (Translation from the Spanish): I call upon the delegate of the United States of America.

(143) Mr. KOTSCHNIG (United States of America): Mr. President, my delegation accepts, with previous speakers, the principle of universality of membership of an organization such as Unesco. We are, at the same time, very happy to note that the delegation of India, which has initiated this hopeful resolution, has agreed to accept the amendment which was worked out after considerable discussion by the Advisory Committee on Programme and Budget. We are glad also to note that the Chinese amendment has been withdrawn so that we have only got one resolution before us at present. We believe the amendment is hopeful; it is hopeful for two reasons. First of all it makes clear what I believe all of us can agree to, that membership of Unesco requires the fulfilment of certain conditions. It is quite clear that States can be admitted, can co-operate usefully in our Organization, can help us constructively, only if they are willing and able to abide by the obligations of the Unesco Constitution. That is in keeping with the amendment which has been accepted, and makes it easier for many of us to support this resolution. Obviously the question of which countries ought to be admitted under this resolution is not before us at this present time. That is a matter for the Conference, and the Conference, in its wisdom and on the basis of its interpretation of its own Constitution, will, I hope, take the right decision when an application comes to this Organization.

(144) The second point is that, under the amendment, the difficulties so clearly pointed out by the distinguished representative of Denmark have disappeared. Under this draft amendment, the Director-General will never find himself in the awkward position of possibly inviting a State to become a member, only to be told later by the Conference that it is not willing to accept such member. For these reasons, we feel that the resolution as now amended offers a very happy solution, and I would like to add on behalf of my delegation that we very much hope that, in the spirit which has prevailed in this Conference up to the last day, we shall be able to vote for this important resolution unanimously.

(145) The PRESIDENT (Translation from the Spanish): Since no one else wishes to speak, I put to the vote the draft resolution contained in document 8C/DR/128: Need for making Unesco a global Organization, presented by the Advisory Committee on Programme and Budget.

(146) The draft resolution was approved by 38 votes in favour, none against, and 7 abstentions.

The meeting rose at 1.15 p.m.

# EIGHTEENTH PLENARY MEETING

*10 December 1954 at 4.45 p.m.*

*President:* Mr. ZAVALA MUNIZ (Uruguay)

CONTENTS

Organization of work of the Ninth Session of the General Conference (documents 8C/DR/118, 119 and 129). . . . . 224
Tribute to Juana de Ibarbourou . . . . . 226
International petition in favour of Esperanto (document 8C/DR/116). . . . . 228
Commemoration of the Universal Declaration of Human Rights . . . . . 228
Consideration and adoption of the Report of the Nominations Committee (document 8C/NOM/41). . . . . 229
Vote of thanks by the General Conference to the Uruguayan Government (document 8C/DR/125). . . . . 230
Closing speeches . . . . . 233

**ORGANIZATION OF WORK OF THE NINTH SESSION OF THE GENERAL CONFERENCE** (documents 8C/DR/118, 119 and 129)

(1) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Denmark.

(2) Mr. NIELSEN (Denmark): Mr. President, it is the impression of a good many delegations that the working methods of our General Conference have not proved altogether satisfactory. I may remind you that the Rapporteur of the Programme and Budget Commission underlined the fact in his speech this very morning. It is not my intention to suggest that we should at this present Conference debate or go into the details of all these difficulties. Let me only point out one single fact: if we try to calculate the net amount, and I underline, the net amount of time which the Programme Commission has been able to devote to the discussions of the particular items of the programme, we arrive at something less than one week in a four-weeks' Conference. Many delegations feel that we might have gone into more detail if we had had the time to do so, instead of being under the pressure of having to reach the deadline by means of fatiguing night meetings.
(3) This is no reproach to our able Chairman of the Programme Commission, to whose patience we have all paid tribute. Nor do we propose that we should, at this session start discussing how the situation might be improved, although some means might very well be suggested. This because - and it is a point I want to stress - we see a danger of the General Conference being thwarted at the last moment by innumerable draft resolutions to which it cannot devote the necessary study. That might bring with it haphazard decisions which may, in some cases, well bind the hands of the Director-General and the Executive Board in a manner not always to be foreseen, and which might well make their work more difficult in the coming two-year period. It is quite natural that some such revision of working methods should become necessary at a time when the number of Member States is about double the number in Unesco's first years, always assuming that we do not want to extend the length of sessions. That is why a group of Scandinavian delegations, on the one hand, and that of the United Kingdom, on the other, put forward resolutions earlier in the Conference, proposing that the Executive Board, together with the Director-General, be invited to go into these matters and to make them an object of their study in the coming two-year period.
(4) As you know, these different draft resolutions have now been combined in one: DR/129, which replaces those numbered 118 and 119.
(5) I take great pleasure in moving the adoption of DR/129.

(6) The PRESIDENT (Translation from the Spanish): I call on the delegate of France.

(7) Mr. LAUGIER (France) (Translation from the French): Mr. President, fellow delegates: France whole-heartedly supports the draft resolution now before you. The French delegation hopes that the revision carried out by the Executive Board will be as thorough, far-reaching and

unhampered as could possibly be imagined.
(8) Revision of the working methods of the General Conference: what exactly does that mean? It does not mean deciding whether speeches shall be limited to two or three minutes in committees, commissions or plenary meetings, or whether the President should have beside him a red light, a green light or a bell to warn speakers. I have seen the Executive Board, which has already gone thoroughly into these matters, decide whether or not a blackboard showing the times of meetings should be placed at the entrance to the Conference building, or whether it was enough for the times to be announced in the Journal. That is not what revision of working methods means. It really means reconsidering the whole question of how far the Conference should check the work done by the Secretariat in preparing and implementing the programme and budget. There must be no more of those debates - depressing, to say the least - in which 72 governments, after the matter has already been discussed by the Commission of the Executive Board, by the Executive Board itself and by the Advisory Committee on Programme and Budget, decide whether, in order to carry out a project, a mission of experts should be sent on one short journey, two medium-length journeys or one long journey. All that, I repeat, should be reconsidered with the following idea in mind: the executive powers of the Secretariat should be extended. Few delegates, I believe, have criticized the Secretariat more violently than I, but I know its work, often unnoticed, its good faith and its devotion to Unesco's aims. We should therefore trust the Secretariat; Unesco will not function efficiently unless we allow the Secretariat greater freedom, both in preparing and executing the programme.
(9) How can this be done? The Conference should first discuss the Organization's policy at a high level; it should then divide up the money available into large sections or chapters and, within those limits, during the two-year period, the Secretariat, supervised by an Executive Board henceforth closely controlled by the governments represented at the General Conference, would be free to steer the Unesco ship along a broad river like the Rio de la Plata, and not along a small stream, hemmed in by the banks of detailed budgetary decisions taken by the General Conference.
(10) Moreover, we have examples before us. Some of the big Specialized Agencies vote their budgets in large sections in less than a week, thus demonstrating their confidence in their secretariats. It is in this spirit that the French delegation will vote for the resolution now before you.

(11) The PRESIDENT (Translation from the Spanish): I call upon the delegate of the German Federal Republic.

(12) Mr. BERGSTRAESSER (German Federal Republic): Mr. President, fellow delegates, I am asked to support, in the name of the German delegation, the proposal contained in DR/129. I think that this proposal, supported by the delegates of Denmark and France, carries even more weight than other suggestions and criticisms which have been made in private and in public during this Conference, for it is a constructive suggestion. We admire the spirit of collaboration which has governed the deliberations of this Conference. We consider that this shared experience in designing and deciding upon practical undertakings in the realm of education, science and culture constitutes a step in its own right towards international understanding and co-operation. However, we feel that the General Conference, the Executive Board and the Secretariat might contemplate for the future, and in particular for the next General Conference, additional means by which this world organization could exercise its influence, its counsel and its authority. We believe that the peoples themselves look at Unesco as at a unique world forum. It is here that world problems may come up for international debate, problems of intellectual and spiritual significance on the cultural plane, problems the discussion of which will mean much even in the preparation of common action in the future, and it is in this sense that we believe in a free discussion of the philosophic bases of Unesco's undertakings. We may also add to what has been said by the delegates of France and Denmark some suggestions both to the Secretariat and to the Executive Board. We hope that these agencies will consider ways in which, at the ninth session of the General Conference, discussions can be arranged on questions relevant to the thinking of all of us and fundamental to the practical work of Unesco; and on questions which, because they are of universal character, are not likely to be debated in any other organization with an equally stimulating effect, or with the same impact on thought all the world over.
(13) I will refrain from making any more detailed suggestions. We shall hope to submit proposals in collaboration with any National Commission which wants to share in this thinking, to the Executive Board and to the Secretariat, but we think that panel discussions, a discussion, for instance, of the main points of similarity and difference between Indian and Occidental thought, might be a theme appropriate for the Conference to be held in New Delhi. Unesco, through all its departments and work projects, devotes itself to furthering practically our mutual knowledge of each other's cultures, and to promoting international understanding on the cultural plane. A thorough discussion here during the General Conference of the philosophic bases and methods of this understanding should produce substantial results. It will give all delegates added insight into the work done or to be done by Unesco in the coming years, and into the work to be done by those whom Unesco at this General Conference has supported by its decisions. Such a discussion may constitute of itself a promising step, preliminary to practical action, and thereby help keep alive the hopes of the peoples of the world in Unesco. The people believe that Unesco is supposed to be the pioneer of community thinking, and they expect from this forum here intellectual and spiritual leadership. We are happy to support the resolution, because it testifies to the fact that very many among us see in it a unique chance for Unesco to do this pioneer work of stimulating mutual respect, and of thinking ahead in terms of the cultural concerns of mankind.

(14) The PRESIDENT (Translation from the Spanish): If no delegate wishes to speak, a vote will be taken.

(15) The draft resolution was approved unanimously.

TRIBUTE TO JUANA DE IBARBOUROU

(At this point Señora Juana de Ibarbourou entered the hall.)

(16) The PRESIDENT (Translation from the Spanish): I call upon Mr. Jaramillo Arango, the delegate of Colombia.

(17) Mr. JARAMILLO ARANGO (Colombia) (Translation from the Spanish): Mr. President, Señora Juana de Ibarbourou, ladies and gentlemen: this eighth session of the General Conference of the United Nations Educational, Scientific and Cultural Organization has appropriately decided to pause in its arduous labour in order to pay a well-deserved tribute to the distinguished Uruguayan poetess Juana de Ibarbourou.
(18) Poetry is in general one of the loftiest pursuits of the human mind, requiring the exercise of the most varied talents. To perceive and capture the emotions of nature, the feelings of love, the ecstasy of the mystic, the fire of passion, the harmony of music, the cadence, the significance and colour of words, is among the most astonishing of human achievements. Verse is thus meet to express thought with singular clarity and to preserve and give lasting life to the production of genius.
(19) The works of Juana de Ibarbourou or Juana of America, as she is fittingly called, occupy an outstanding place in the literature of the Spanish language. Her poems have awakened a wide response among the American peoples and are recited in other continents and other languages, for there is something vital in their true poetry that transcends the limits of form and fills the spirit, irrespective of time or latitude.
(20) When, therefore, Unesco met in this city of Montevideo, in this country of Uruguay where culture flourishes, where the intellect finds a congenial atmosphere and the air of freedom breathes, this nation-wide Conference - perhaps the largest at which sovereign States have been represented - marked the presence here of our illustrious poetess and desired to pay her homage. Honouring the most eminent of its children also means honouring the land that gave them birth, for it has been recognized since Greek and Roman times that poets largely personify the finest qualities of their native land. Therefore, Señora, this well-deserved tribute and welcome, though it may add nothing to your fame, nevertheless gives the delegates who approved it the satisfaction of expressing their gratitude in a fitting manner. May I also, although this may seem superfluous, reiterate in the name of the Colombian delegation here present, our great admiration for your work.

(21) The PRESIDENT (Translation from the Spanish): I call upon Mr. Barrenechea Pino, the delegate of Chile.

(22) Mr. BARRENECHEA PINO (Chile) (Translation from the Spanish): Mr. President, fellow delegates, Señora: the finest sentiments so far expressed at this great Conference were voiced by the distinguished Colombian delegation when they suggested paying this tribute to Juana de Ibarbourou, that precious Uruguayan diamond in the crown of Spanish America.
(23) In this same place, at another memorable moment in her life, her praises were sung by a Mexican, Alfonso Reyes, when he proclaimed her Juana de América. Today it is an assembly of the intellect, a refined élite of the world, that makes Juana de América a part of our universal inheritance, confirming her renown and bestowing on her gifted poetry a laurel of pure gold.
(24) We know well that fame does not spoil her, that her triumphs are to her as the triumphs of a stranger and that only in creative work does she find the reason for her existence and the possibility of happiness. That was how her great poetic output was achieved, from the Barca de Caronte to Serenidad, without any seeking after fame, for she knew, as all rare souls know, that fame is autonomous and chooses its elect only from those who are worthy.
(25) But today's glory is shared by all Latin America, for this universal recognition of her worth as an artist and a woman, illumines this whole part of the earth's face and thereby Juana de Ibarbourou is made one again with the original fount of her poetry and gives back with interest to her American land the glory it had thought to grant to her. Through the transparent genius of this woman can be seen the new America, ever present in her poetry, with its verdant strength, its golden health and shimmering youth.
(26) In this America of hers, Juana de Ibarbourou has felt at one with the earth itself and has even seen the flowering of her hands. Here in her own country her poetry, in emulation of Uruguay itself, grew up simple and natural as the winds that blow across the pampas towards the wide and ever clear horizons of freedom. Here in this country she watered the hands she now raises aloft, seeking the secret root of light. Aware of the transitoriness of life, she accepts the sorrows that come like great gusts of wind from the irrecoverable past. But Juana de Ibarbourou did not waste her youth, she eternalized it in her verse: youth become poetry is the burden of her song; her art is a fountain of Castalia and this is the source of its magic and its true wonder.
(27) But today, the great poetess becomes as it were a symbol, for by this mark of respect the cultural world exalts in her person the value of the intellect, and in the anxious hours of this world of fear we, in the land of Rodó, can think more optimistically about the triumph of Ariel.
(28) Juana de Ibarbourou: we who know you intimately, have heard that you, like Darío, loved your hands and were glad that the artist found them dovelike.
(29) That makes you, today, even more of a symbol, because the cultural world that is paying you tribute has met here, in this concourse of races and nations, to seek for human understanding and peace.

(30) In your fine city, along the beaches of the Rio de la Plata, I see your hands lifted up like doves, as if in prayer that the political world may hear the voice for peace of the cultural world which honours you today.

(31) The PRESIDENT (Translation from the Spanish): I call upon Mr. Hope, delegate of the United States of America.

(32) Mr. HOPE (United States of America): Mr. President, fellow delegates and the distinguished poet in our presence. It is in every sense appropriate that in the name of the United Nations Educational, Scientific and Cultural Organization we should offer tribute to Juana de Ibarbourou. We who are of the Western Hemisphere could not think of leaving the home of Juana de América without showing her once more, although she knows it well, that she lives in the thoughts and hearts of our nation as a bright and gracious presence, her work as an indispensable element in the living literature of our international community. In my country her poems are being more and more widely published and appreciated. They are increasingly known to the children of the United States of America, through their school books, and to our intellectuals and the general public through anthologies and in the great periodicals that circulate so widely among us. When in 1953 the Union of American Women proclaimed her Woman of the Americas, we responded to their inspiration with special pleasure, because it seemed to us that the work of Juana de Ibarbourou in its radiance, hopefulness and youthful zest gives authentic expression to something that is in the very nature of the new world. But she belongs to all peoples everywhere who value the life of the spirit, and it is with that consciousness that we join in Unesco's Act of Homage. Here indeed, is ground for mutual understanding. Here, as with one voice we praise and thank a great poet, we are reminded again of the meaning and value of our harmonious collaboration and find fresh confidence in our mission.

(33) The PRESIDENT (Translation from the Spanish): I call upon Señora Juana de Ibarbourou.

(34) Mrs. DE IBARBOUROU (Translation from the Spanish): Mr. President, Mr. Director-General, delegates, Dr. Jaramillo Arango, the Colombian Minister, Dr. Julio Barrenechea, Mr. Henry Hope, Colombians, ladies and gentlemen. For the second time in my life I come to the Legislative Palace of my country, to receive an undeserved honour which transports me with emotion, gratitude and wonder. For the second time I tread this solemn and memorable Salon de los Pasos Perdidos as if hypnotized and walking in a dream. I am encompassed by the world. A humble woman who writes poems is today the centre of a throng of men and women magnificently representative of universal culture. And for no other reason than that I write poems. This is the revenge of the rose over the golden menhir. The august shade of Plato, though perchance irascible and doubting, may come to our aid today. But that cannot disturb my dream, nor today's happiness. I receive this honour more for my country than for myself, for it is certain I was chosen that my country might be honoured through one of the Uruguayan women whose dreams and longings are most strongly fixed on the brotherhood of all the nations of the world. I receive it also in the name of my literary colleagues, the writers who make up our largest guild, the AUDE, and among whom are many far more deserving than I to receive this signal mark of honour.

(35) Born as an agency of the United Nations, the powerful Organization of Unesco has accomplished the splendid task of extending culture and peace without regard to frontiers. May it please God to defend and preserve it for ever.

(36) From Spain that gave birth to Unamuno and which has sent us a valuable group of young thinkers, from the England of Bernard Shaw, and the France of Jean Cocteau and Paul Valéry, from the Sweden of Pär Lagerkist, the Russia of Pushkin, the Germany of Hermann Hesse and the Belgium of the immortal Maurice Maeterlinck, with the Portugal of Antelo de Quental and Eca de Queiros, and ever living Italy in her second Renaissance, stamped with the illustrious name of Giuseppe Ungaretti, to the young countries of the American continent: the United States of America, among whose heroes, liberators and builders there stands out clearly the massive figure of a poet, Walt Whitman; the Mexico of Amado Nervo and Alfonso Reyes, and my Cuba protected by the stainless spirit of Martí, the apostle of liberty; and the beautiful countries of Central America and the Antilles lighted by the starry brilliance of Darío; and Panama with the Isthmus for its backbone, and Colombia the home of Nieto Caballero, of great men, great artists and great patriots; and the "sweet, wide and well-loved Venezuela" of the Liberator, always in my heart; the sturdy Ecuador of Montalvo, with the Peru of Don Ricardo Palma, our continental forefather; the Bolivia of Alcides Arguedas and José Galver, eminent men from the Andes; the luxuriant and dramatic Chile of Gabriela Mistral; the bewitching, dazzling Brazil of Euclydes da Cunha and Olavo Bilac; the mighty Argentina of Sarmiento, saint and roaring lion of San Juan; Sweet Paraguay our foster brother and all the other nations of Europe, Asia, Africa and the Pacific, which I cannot enumerate here because of the only tyrant we endure in this land of true freedom, democracy and poetry - time ... All these countries are present today in this brilliant gathering of their men of creative intellect and executive capacity. They have come to our Republic to unite the powerful forces of science, education and art on behalf of mankind and for the honour of humanity.

(37) In the company of such men, I am filled with simple pride and unlooked for happiness.

(38) I thank you all, especially Dr. Jaramillo Arango, Dr. Julio Barrenechea, the international spokesman of poetry victorious, Mr. Henry Hope who let me feel the heart-beat of his great country, and Dr. Bernal Jimenez, a poet over and above his weighty treatises on law, who, with his brilliant companions, by a generous and unanimous motion, approached my semi-darkness to lift it towards the light.

INTERNATIONAL PETITION IN FAVOUR OF ESPERANTO
(document: 8C/DR/116)

(39) The PRESIDENT (Translation from the Spanish): I call upon the Mexican delegate.

(40) Mr. SANDOVAL VALLARTA (Mexico) (Translation from the Spanish): Mr. President, my delegation presented to the Programme and Budget Commission a few days ago a draft resolution which appears in document 8C/DR/116, regarding a petition in favour of Esperanto. The discussions in that Commission were concluded in full accordance with the provisions of the Regulations. However the voting then took place in a rather unfavourable atmosphere. Without giving his judgment on the fundamentals of this question, the Chairman of the Programme and Budget Commission has asked me to submit this draft resolution again at this plenary meeting. I therefore take this opportunity of doing so. Unless the President requests otherwise, I do not think it necessary to read through the draft resolution again. In presenting it, I should like to state that this time it is put forward with paragraph 4 deleted.

(41) The PRESIDENT (Translation from the Spanish): The draft resolution is now open to discussion. I call upon the delegate of Switzerland.

(42) Mr. BOURGEOIS (Switzerland) (Translation from the French): Ladies and gentlemen, I am speaking to you now, not as Chairman of the Programme and Budget Commission, but as delegate of Switzerland. In that capacity, I wish to second the Mexican proposal and I would ask you merely to vote on it, without discussion. It is a question of repairing, as it were, a blunder which has clouded the atmosphere, and I believe that, if we pass this resolution, it will clarify the situation a great deal and will attract support which we were in danger of losing. I therefore recommend that the resolution, with the deletion of paragraph 4, be adopted without further discussion.

(43) The PRESIDENT (Translation from the Spanish): Notwithstanding the request of the delegate of Switzerland I have to call upon the delegate of the United Kingdom.

(44) Sir Ben BOWEN THOMAS (United Kingdom): Mr. President and fellow delegates, the United Kingdom delegation is moved to comment upon this draft resolution, for several reasons, first of all, in the light of the statement made by the delegate of Denmark, when he introduced the general resolution about the organization of our work at this Conference and at previous conferences. You will remember that he questioned the wisdom of bringing in general resolutions at a late stage, when due examination and consideration of them is not possible. I submit that this is the case here. More than that, in this case you have a draft resolution that was considered very carefully, and was obviously, from what the delegates of Mexico and Switzerland have said, the subject of considerable feeling. And, after a full discussion, and after a good deal of feeling, it was not accepted by the Commission. Now it is presented to us in this form for our acceptance, under conditions that make due consideration impossible. I would like my fellow delegates to know that the United Kingdom is not unsympathetic, but it is concerned about the propriety of this, and it is also anxious not to commit the Organization, without due thought, to steps that it would find very difficult to justify. For that reason I would like to move the omission, in addition to paragraph 4, as has already been suggested by the delegate from Mexico, of all the words following field in the fourth line from the end. I think, if it were possible for us to take the resolution in that form, the Conference would find itself uncommitted and, consequently, the matter could be examined afresh if presented to a future conference.

(45) I gather from the expression of my friend and colleague, the delegate of Mexico, that he agrees with my suggestion. I take it for granted that that would also be true of the delegate of Switzerland. If that is so, I have very much pleasure in supporting the resolution, on the assumption that it ends at the word field. The new paragraph 5 would then read "Takes note that several Member States have announced their readiness to introduce or expand the teaching of Esperanto in their schools and higher educational establishments, and requests those Member States to keep the Director-General informed of the results attained in that field".

(46) The PRESIDENT (Translation from the Spanish): I shall now submit the resolution to the vote, with the deletion proposed by the delegate of the United Kingdom and accepted by the delegates of Mexico and Switzerland.

(47) The draft resolution, as amended, was adopted by 30 votes to 5, with 17 abstentions.

COMMEMORATION OF THE UNIVERSAL DECLARATION OF HUMAN RIGHTS

(48) The PRESIDENT (Translation from the Spanish): I call on Mr. Laugier, the delegate of France, who will speak to you on behalf of the Executive Board.

(49) Mr. LAUGIER (France) (Translation from the French): Mr. President, fellow delegates: as I take my place on this rostrum to speak to you, on behalf of the Executive Board, in celebration of the Universal Declaration of Human Rights, I am not very sure what my credentials are. I do not know if I represent the old Executive Board - now dead and buried yesterday - or the new Executive Board which is to come into being tomorrow. I owe this honour in the first place, I believe, to a friendly gesture of Sir Ronald Adam, but I am sure that, in associating the old Board and the new with this event, I am speaking for them both.

(50) Gentlemen, if the principles proclaimed in the Paris Declaration were universally observed, the world would be enjoying an era of justice and peace based on respect for the dignity of man; with the

world in its present uneasy state, however, the Universal Declaration is not a declaration of peace, but a call to arms, a universal declaration of war on all injustice, inequality, ignorance, tyranny and despicable racial discrimination. As such, it is a powerful spur to the nations in their pursuit of justice. May the governments which signed this declaration of principles bind themselves as soon as possible by powerful and far-reaching agreements guaranteeing universal respect for those principles.
(51) Moreover, whether you will or no, whether you rejoice in it or deplore it, the fact is that the Universal Declaration of Human Rights has created throughout the world a profound conviction that there must be a way of setting up some machinery of appeal to the highest international courts against all local or national violations of Human Rights. Such procedure for petitions, however difficult to devise, must be established if the peoples of the world are not to lose hope and confidence in international co-operation.
(52) In tackling this immense problem affecting the whole of mankind, Unesco is shouldering an unusual responsibility, placed upon it by its Constitution and by specific resolutions of the United Nations in which its duties are defined. You may rest assured that the future Executive Board, like its predecessor, will do its utmost to help Unesco to accomplish this task worthily.
(53) Having had the great honour and responsibility of directing, from beginning to end, the vast amount of preparatory work done by the United Nations Secretariat before the final texts were adopted, I can assure you that this is one of the achievements of the United Nations most deserving of respect.
(54) Success has been achieved, thanks not to a small group of men, but to the work of thousands and thousands of people in non-governmental organizations, government administrations, the Secretariat and legal circles. They worked to achieve a declaration which would not be regional in scope, but truly universal, defining the rights which are man's from birth, simply because he is a man, whatever his country or colour, or the beliefs and philosophies of his social background.
(55) To ensure the inclusion of the principles of the Declaration of Human Rights in statute law and common law is a major project - it is one of the first tasks of education, science and culture throughout the world.
(56) Let us reflect upon the hope placed in us by suffering multitudes who are still victims of all the forces of oppression that weigh upon mankind.

(57) The PRESIDENT (Translation from the Spanish): I call upon the delegate of India.

(58) Dr. MUDALIAR (India): Mr. President, fellow delegates, ladies and gentlemen. Today commemorates an epoch making event: the Declaration of Human Rights was signed on this day and has been ratified by practically all the members of the family of the United Nations. It is for us of Unesco peculiarly appropriate that we are in session on such a day, so that we can recapitulate with pleasure and profit the ideals that were the mainspring of those who, after long discussion, drew up this Declaration of Human Rights. I am sure there is no one in this assembly who does not believe in the dignity of man, in the nobility of the human race and in the purposefulness of human life. To all those who attach great value to the eternal verities of humanity, this day marks a turning point, and it is well for us to recapitulate that, on this day, we have more or less dedicated ourselves to follow the great truth, the messages that have been given by the great Messiahs of our religions, and that humanity at last - whatever may be the differences in race, in colour, in nationality, even in religion - are united with one voice to maintain human rights in all parts of the world; with that faith, therefore, we whole-heartedly dedicate ourselves once more on this day to that famous Declaration of Human Rights.

**CONSIDERATION AND ADOPTION OF THE REPORT OF THE NOMINATIONS COMMITTEE** (document 8C/NOM/41)

(59) The PRESIDENT (Translation from the Spanish): I call upon the Chairman of the Nominations Committee to present his report.

(60) Dr. MUDALIAR (Acting Chairman of the Nominations Committee): Mr. President, the Nominations Committee met this afternoon for the last time at 3.30 p.m. and, in the absence of the Chairman, Mr. Kabir, who had regretfully to leave earlier for India, the General Committee asked me to preside.
(61) The Nominations Committee met and discussed the composition of the three Commitees: the Legal Committee, the Advisory Committee on Programme and Budget and the Committee on Reports of Member States. The Nominations Committee recommends for your favourable consideration the following names for each of these Committees.
(62) The Legal Committee will consist of fifteen members and the States to be represented are: Argentina, Czechoslovakia, Colombia, France, Italy, Japan, Laos, Lebanon, Mexico, Netherlands, Pakistan, Union of South Africa, United Kingdom, United States of America and the Union of Soviet Socialist Republics.
(63) The Advisory Committee on Programme and Budget, according to a resolution accepted by the Plenary Conference this morning, on the recommendation of the Programme and Budget Commission, consists of seventeen members, the majority of whom should be non-members of the newly elected Executive Board. The Member States represented on this Committee are: Australia, Burma, Chile, Egypt, France, Guatemala, India, Israel, Norway, Philippines, Poland, Switzerland, Turkey, United Kingdom, United States of America, Union of Soviet Socialist Republics and Yugoslavia. I may say that, of these seventeen names, six are represented on the new Executive Board.
(64) The Committee on Reports of Member States is to consist of fifteen members, and the panel drawn up for your consideration by the Nominations Committee includes the following names: Austria, Cambodia, Ceylon, Costa Rica, Denmark, France, Honduras, Hungary, Iran, Jordan, Korea, Spain,

United Kingdom, United States of America and the Union of Soviet Socialist Republics. The Nominations Committee recommends these names for your favourable consideration.

(65) The PRESIDENT (Translation from the Spanish): The report is submitted to the Conference for consideration. I call upon the delegate of the United Kingdom.

(66) Sir Ben BOWEN THOMAS (United Kingdom): Mr. President and fellow delegates, we of the United Kingdom have listened to the Report of the Chairman of the Nominations Committee with very great interest, and I am sure that we appreciate the work that he and his Committee did and we listened with great interest to the names that he read out. But I wish to be allowed to ask that one name be withdrawn from the Committee on Reports of Member States and that another be substituted for it. I have every confidence in asking you to withdraw the one name and that is the name of the United Kingdom, and I hope you will allow me to suggest that, instead of the United Kingdom, we invite Turkey to take our place. I look at these lists that we have before us of Member States who have previously served on this Committee and I notice that Turkey has been a faithful member. I also remember that on one occasion, when I had the pleasure of serving on this Committee, the delegate of Turkey was a most efficient and devoted Chairman of that Committee. I understand further that Turkey would be very glad to serve, so with your permission, Mr. President, I should like to withdraw the name of the United Kingdom and to substitute the name of Turkey.

(67) The PRESIDENT (Translation from the Spanish): The list presented by the Chairman of the Nominations Committee will then be examined, with the alteration proposed by the delegate of the United Kingdom, to the effect that Turkey should take the place of the United Kingdom.
(68) A vote will now be taken.

(69) The report is approved by 53 votes in favour with none against and one abstention.

VOTE OF THANKS BY THE GENERAL CONFERENCE TO THE URUGUAYAN GOVERNMENT (document 8C/DR/125)

(70) I call upon the delegate of Italy.

(71) Mr. VERONESE (Italy) (Translation from the French): Mr. President, ladies and gentlemen, the fact that the Head of the Italian delegation has, to his regret and mine, been obliged to return to Italy, confers upon me the pleasant duty and honour of presenting the resolution of thanks to the country which has given us hospitality. I am all the more pleased to do this, because I have been entrusted with the task both by the delegations which signed the resolution and by others who wished to be associated with it, particularly the delegation of Spain.
(72) The time has come to reflect for a moment, to take stock of the work achieved and then express our common feeling of satisfaction and gratitude, and in so doing manifest the deep sincerity and conviction behind this expression of our thanks and pay tribute to the people of Uruguay and their leaders.
(73) We can be all the more pleased with the moral balance sheet of this General Conference in that we have seen the reasons for fear (which we all shared at the outset) diminishing from day to day and the reasons for hope increasing in like measure.
(74) Despite difficulties, not yet finally solved, relating to the structure and organs of the Conference, it is comforting to observe that a great deal of practical work has been done by the Conference, its Commissions, Committees and working parties, and in a very favourable atmosphere.
(75) We are leaving Montevideo with an appreciably higher budget, but also with increased work for the Executive Board and the Secretariat; and this has been achieved with a minimum of sacrifice on the part of Member States, thanks to wider co-operation and the entry of new Member States.
(76) Montevideo also marks an important step forward in Unesco's life, the opening of a new chapter. The reform of the programme is today far more than a hope, and the appeal sent out to the National Commissions, now more numerous and better established, ensures the Organization of the effective co-operation of the free forces of education, science and culture.
(77) In expressing our thanks to our Uruguayan friends, we do not overlook the great efforts made in the preparation, conduct and success of this General Conference by the Chairman of the Executive Board, Sir Ronald Adam, from whom we part with great regret and profound gratitude, by the Director-General and the entire Secretariat, both permanent and temporary auxiliary staff, who have had the responsibility for carrying out tasks ranging from the most brilliant to the most humble, but all working for the achievement of a lofty aim. Nor must I forget the interpreters who devotedly and successfully enable us to understand one another.
(78) But, as we all well know, none of this would have been possible without the cordial welcome and generous hospitality of the people and the Government of Uruguay. Addressing myself especially to you, Mr. President, and to our friends of the Uruguayan delegation, and speaking more directly to the vote of thanks proposed in the name of Italy and of the other delegations, I take the liberty, which I intend as a tribute, to speak a language to which I am unaccustomed, and whose beauty I hope I shall not obscure.

(Translation from the Spanish)

(79) Mr. President, I am expressing sincere emotion and not simply performing a conventional but necessary act of courtesy when I say in Spanish, a language brother to my own and born of the same mother tongue, how deeply grateful we all feel towards this happy Republic and towards yourself, Mr. Zavala Muniz, for having so decisively contributed to the success of this eighth session of the General Conference.

(80) There can be no doubt that the atmosphere in which our work has been carried on - an atmosphere of calm and cordial collaboration in which the host country has shown a zeal constantly allied to great delicacy, confirming once more, in the sphere of international solidarity, the value of such a sound and eloquent democratic tradition in the national sphere - there can be no doubt, I say, that this atmosphere has been a decisive factor in enabling our Conference to get through its work smoothly and punctually.

(81) But this quiet and hospitable atmosphere, created by a people at once friendly and active, could not in itself have produced the right conditions for a highly complicated international meeting, if the collective expression of interest in and respect for culture had not been supplemented by the individual efforts of a man versed in cultural values and respectful of the liberty of others, such as you, Mr. President, have shown yourself to be so often during this Conference, with a selflessness equalled only by the worth of the cause we all have at heart.

(82) Nor can I refrain from mentioning the lively and human personality of our friend and distinguished member of the Executive Board, Mr. Secco Ellauri. To his tireless and fraternal care for all of us, we are largely indebted for our pleasant sojourn in Uruguay.

(83) Moreover, Mr. President, the democratic atmosphere that reigns in the Republic of Uruguay is something much more - as we have all realized during our stay - than the formal values of parliamentary practice and technique: it is a stable element in the minds of all the inhabitants of this beautiful country, and even in the minds of those apparently least concerned with the complicated machine of public life.

(84) Democracy is a living and spontaneous force, capable for that very reason of being injected promptly and with sincerity into the spiritual energies of civilization, not only when it takes the form of a tradition linked to particular interests and factors of a political nature, but also when it is in complete and free accordance with the dictates and guidance of its own reasoning and of its own moral conscience.

(85) It is therefore significant that these same qualities of swift and intuitive understanding of events, realism and faith in the future, which are typical of this hospitable country, should have been reflected in the proceedings of this eighth session of the Unesco General Conference, which will stand as an example from three very characteristic points of view: the fast rate of work, the sound practical attitude towards the subjects discussed and the resolutions adopted, and the diverse and generous prospects and hopes held out on the road to New Delhi and the future. And, Mr. President, it is excellent, just and salutary for mankind as a whole and for each one of us considered separately in his unmistakable and invincible dignity as an individual, as a free and conscious being, that once again, culture - the highest expression of human dignity - should have given the representatives of the whole civilized world an incomparable opportunity to demonstrate their solidarity and progress, linked with the names of Montevideo and Uruguay.

(86) The field in which so many unforeseen and ever more abundant harvests have ripened could not be more fertile than the soil itself of your country. On behalf of every one of us I offer our best wishes and undying gratitude to this small, bright country of the Americas.

(Translation from the French)

(87) I now have the honour to read the draft resolution submitted by the delegations of Bolivia, Brazil, Egypt, France, India, Italy, Japan, New Zealand, the United Kingdom and the United States of America:

"At the conclusion of its eighth session, held in Montevideo from 12 November to 11 December 1954, the General Conference of the United Nations Educational, Scientific and Cultural Organization, deeply moved by the warm welcome accorded to it and by the incomparable hospitality extended by the Legislative Authority in allowing the meetings of the Conference to be held in the Parliament building, symbol of the liberties of the Uruguayan people, conscious of the unanimous interest taken by public opinion in the work which Unesco is doing on behalf of international understanding, and of the ungrudging help afforded by the cultural and educational institutions of the Republic towards ensuring the complete success of the Conference, expresses its profound gratitude to H.E. Mr. Andres Martinez Trueba, the President, and the other members of the National Council of Administration, to H.E. Mr. Alfeo Brum, Speaker of the General Assembly, and to Mr. Armando Malet, the Municipal Intendant of Montevideo, who honoured the opening meeting of the General Conference with their presence and who have given so many proofs of their thoughtful interest, and

Expresses its warmest thanks to the Uruguayan Government, and in particular to H.E. Mr. Justino Zavala Muniz, Minister of Education, for the invaluable assistance and unstinted support given to the work of the Conference."

(88) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Pakistan.

(89) Mr. SHARIF (Pakistan): Mr. President, fellow delegates, ladies and gentlemen; I consider it a great privilege to have this opportunity to pay my homage to you, Sir, as President of this Conference, and to your country, the Government and people of Uruguay. This Conference could not have met under better auspices than that of the Government of Uruguay, and in the city of Montevideo. Mr. President, the Republic of Uruguay has already established a fine tradition of enlightened democracy, of tolerance and of social justice, qualities which appeal particularly to Unesco. This beautiful city of Montevideo shows evidence all round of an enlightened culture. The large number of spacious parks, the youth centres, the universities, and museums, the art galleries are the measure of the interest of your people and of your Government in the sphere of education and culture.

(90) Mr. President, at the last session of the Conference in Paris I was one of those who strongly advocated acceptance of the gracious invitation from the Government of Uruguay, an invitation presented most persuasively by my distinguished colleague, Professor Secco Ellauri, and ably supported by almost all the Latin American countries. I did this in the hope that this Conference would bring people from distant lands into close contact with the people of Latin America. My hope, Mr. President, has been fully justified. We, from the distant lands of the East, came here with a message of greeting, of goodwill, and we have been received here with warmth and affection, with kindness and grace. I have no doubt that this Conference will cement these bonds, comparatively new bonds, into firm friendships. Mr. President, I feel very happy that this Conference has given us an opportunity to visit some of the other Latin American countries. We have come in contact with a large number of Latin Americans at this Conference. It has given us an opportunity to understand the problems of this continent, to appreciate your hopes and aspirations. If you will permit me to say so, your continent is a continent of great promise. It has abundant natural resources, it has a people who are determined to develop those resources, and, with their strong attachment to moral values, I have no doubt that this continent will play a great historical rôle in the future of the world. I hope and pray that this rôle will be for the benefit of mankind, for peace, goodwill and harmony in the world.

(91) Mr. President, may I offer you my warmest felicitations on the sagacity, prudence and cheerfulness with which you have steered this Conference to a successful conclusion. May I also offer the thanks of all of us to your Government and to your people for the generous hospitality and the warmth of their affection.

(92) The PRESIDENT (Translation from the Spanish): I call on the delegate of the Philippines.

(93) Mr. DE LOS SANTOS (Philippines) (Translation from the Spanish): Mr. President, fellow delegates, ladies and gentlemen, I shall be very brief, because all that I could say in support of this resolution before us today, would be of little value.

(94) Although I come from a country that is small and poor, our voice necessarily carries equal weight with those of the most honourable delegations from rich and powerful nations; but what we lack in might and eloquence, we can redeem by the warmth and sincerity of our gratitude for the kindness and extreme friendliness of Uruguay and the Uruguayans.

(95) In Uruguay we have felt completely at home, as if we were in our own country. The sun, the sea, the breezes, the authorities and the population in general have all made us forget we are in a different, faraway land. Here we have not suffered from the deep nostalgia which our national poet, on a visit to Europe, expressed in the following lines:

"Dulces son las horas en la propia patria,
donde es amigo cuanto alumbra el sol,
vida es la brisa que en sus campos vuela,
grata la muerte, más tierno el amor".

("How sweet the hours our mother country yields,
Where all are friends who walk beneath the sun,
Where living breezes blow across the fields,
Where death is sweet and love does softer come").

(96) Here we have found all that our poet missed when he was away from his own country. But apart from the sentimental aspect, there is also a very good and practical reason why the choice of Uruguay for this eighth session of the Unesco General Conference has been fortunate and most successful. At the present time humanity as a whole is passing through a very serious crisis; we are faced with a problem of such enormous importance that upon its solution will depend the fate of generations to come. Unesco is one of the organizations making determined efforts to find the right solution to this problem which affects us all directly: I mean, the problem of our own survival in an atmosphere of freedom compatible with human dignity.

(97) Uruguay is a country - and there are not many like it - which, in a certain way and within its geographical limits, has managed to channel its social, political and economic life towards the solution of the universal problem which is of such great concern to us all. Uruguay has taken a considerable lead in solving problems arising from a false concept of racial differences; it has solved the problem of general, free education from the primary school to the university; it has given no less attention to the spiritual aspect of education, recognizing that the best system of government is that which renders unto God the things that are God's, and unto Caesar the things that are Caesar's. Thus it has taken pains to ensure that every man, by the sweat of his brow and his love of work, can secure economic independence, and over and above all these considerations the deep attachment of Uruguay to democratic institutions is an example which all Member States of Unesco should emulate and, if possible, surpass.

(98) The delegation of the Philippines is not only honoured but happy to have had this most welcome opportunity of taking part in the eighth session of the General Conference in this fine and beautiful city, and would like once more to express most heartfelt thanks for the courtesy and kindness we have received from the people and authorities of Uruguay.

(99) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Libya.

(100) Mr. FATHY KEKHIA (Libya) (Translation from the French): Mr. President, ladies and gentlemen, this is the second time a delegate of Libya has spoken at Unesco. The first time was in 1952, when we thanked you for the honour you did us by admitting us as a Member State.

(101) As the only delegate of Libya at this eighth session of the General Conference, I did not think fit to speak during the discussion of the Director-General's report, for one simple reason: having no faith in Unesco assistance to small and poor countries, I had nothing to say and nothing to ask. I was convinced that this assistance was never adequate to

meet the economic and social needs of these countries.
(102) But after attending the various Commissions for four weeks, more as an observer than an active member, I must admit that if we have not obtained what we want, it is often partly our own fault. I have noticed that very frequently requests put forward by the representatives of small countries were listened to sympathetically and were given consideration. I hope that in the future my country will take a more active part in the General Conference.
(103) I have come to this rostrum today because I have a pleasant duty to perform. I wish to speak in the name of my country to this young land of Uruguay which has been such a cordial and generous host to us all, and to tell them how we admire and thank them.
(104) This vote of thanks also has a very special meaning for us. Uruguay is a young country which Libya would be proud to take as an example because, despite its difficult beginnings, it has had faith in its star; it has had confidence in itself and in the great possibilities open to its people. Despite its youth Uruguay has always been in the van; it was a quarter of a century ahead of the great countries of Europe and of the world in the field of important social reforms designed to ensure the welfare of the people, thus setting an example.
(105) It would be hard, therefore, to find better words in which to pay tribute to this young and great people than to say with Corneille: "Aux âmes bien nées, la valeur n'attend pas le nombre des années". (For the noble soul, virtue is not reckoned by the sum of years.)

(106) The PRESIDENT (Translation from the Spanish): I call upon the delegate of Ecuador.

(107) Mr. ZEVALLOS (Ecuador) (Translation from the Spanish): Mr. President, fellow delegates, it is a source of real pride to the countries of Spanish descent, that this great little Republic of Uruguay, an authentic mirror of Latin America should have been a meeting ground for men of all races and languages to work for the fellowship of man along the paths of culture.
(108) And there is no country more free and democratic than Uruguay. It is a country from which all mystic of hatred and all doctrines of force have been banished; it is a free republic which throughout its history has shown that it is possible in this world of dust and sorrow in which we dwell for men to live together as brothers. No country could be better suited for an assembly of thinking people than this land of intellectuals which had the good fortune to give birth to a real genius: José Enrique Rodó, the writer who expressed better than anyone else the anguish of being intelligent: real reformers like José Batlle y Ordoñez; women who sing of life, like Juana de Ibarbourou; powerful thinkers and orators like Zavala Muniz or Secco Ellauri.
(109) The delegation of Ecuador ventures to ask the plenary meeting to accept an addendum to the proposal put forward by the Head of the delegation of Italy, to the effect that our sentiments may be permanently recorded by affixing at a convenient place in this Palacio Legislativo, a bronze tablet bearing the following inscription: "The eighth session of the General Conference of the United Nations Educational, Scientific and Cultural Organization, Unesco, in token of gratitude to Uruguay for its generous hospitality."

(110) The PRESIDENT (Translation from the Spanish): I call on the delegate of China.

(111) Mr. LI YU-YING (China) (Translation from the French): Ladies and gentlemen, I come here to express our thanks to Uruguay and Montevideo, to the people and the Government. I already spoke on this subject at the opening meeting of the Conference and I quoted facts. I do not wish to repeat what has already been said; we shall never forget what this country has done for us.
(112) I therefore thank and compliment Uruguay, not only as other speakers have done, but in a quite special way. I congratulate our Conference on the work it has done. I cannot say that the Conference has been absolutely perfect. Nothing is perfect in this world. I am an optimist and I do not like to criticize. However, I must admit that on certain points the Chinese delegation has been rather disappointed. There is no need for me to repeat this: it is not the moment. Let us end our work happily and congratulate ourselves on what we have done.
(113) Meanwhile, Uruguay and Montevideo, where we are setting up permanent institutions, bring us compensation; if we have lost on certain points we have gained still more on others. We thank Uruguay and Montevideo not only for their hospitality, but also for their freedom and their sense of justice. I can only repeat those words to thank Uruguay, like all the delegates who have worked for the true cause of Unesco.

(114) The PRESIDENT (Translation from the Spanish): If no delegate wishes to speak, voting will now take place on the resolution which has been read out, together with the addition proposed by the delegate of Ecuador.

(115) The resolution is carried unanimously.

(116) I call upon the Director-General.

(117) The DIRECTOR-GENERAL: Mr. President, I know you would not want the session to end without a few words from me.
(118) I wish to associate the Secretariat with the thanks that have been given to Uruguay and to Montevideo. I wish to thank also the Uruguayan employees who have worked so well for us for such long hours and in such a friendly spirit. I wish to thank the press and the other media of communication which have made it possible for us to communicate the work of the Conference to the outside world.
(119) Of course we all thank our President, and I think I know more than most of you what a great rôle he has played, for I have had to work very closely with him

in the management of the work of the Conference.
(120) Let me end by thanking you, the delegates, for the way in which you have made the work of the Secretariat much simpler than it has been in the past. You have responded to my very great satisfaction to a number of the proposals that we placed before you. I wish that our proposals, indeed, had been as good as the decisions which you, the delegates to this Conference, have taken. You have given us clearer guidance for the next two years than the Secretariat has ever before had from the General Conference. For that we are deeply thankful. You have put heavy responsibilities upon us for the next two years, but, I assure you, even at the weary end of a long Conference, we are full of enthusiasm and zeal for the work ahead. We shall tackle it with energy, enthusiasm and hope.
(121) I should also like to say that we welcome your insistence that, in so many of the jobs which we shall be doing in the coming two years, we work in the closest collaboration with the Executive Board. I think we have demonstrated in the past two years that we can work in the closest kind of collaboration with the Executive Board.
(122) You have put a responsible task upon us, I think greater than in the past, in connexion with the execution of the programme resolutions. You have given us wide latitude in the implementation of many of its items. We shall try to carry out your wishes in the execution of these resolutions and in doing so we shall have to rely a great deal on the guidance of the Executive Board.
(123) You have placed upon us many heavy responsibilities in preparing for the ninth session of the General Conference. You have asked us to make many studies of very great importance; you have, in a very friendly spirit, given us additional money only for some of those tasks, but we are glad to assure you that, without commensurate additional resources we shall make these tasks high priority assignments.
(124) I wish to thank all of the delegates here for the fine spirit of collaboration they have shown. We shall try, in carrying out your wishes, to respond in the same spirit.

(125) The PRESIDENT (Translation from the Spanish): Mr. Chairman of the Executive Board, Mr. Director-General, delegates: I am indeed moved to be present, in the name of my people, my country and my Government and in my private capacity, at this final meeting of the General Conference. I am happy to think that when I proposed, in the name of Uruguay, to the Conference held in Paris in 1951, that it should meet in Montevideo, although I knew that you would discover nothing particularly striking in our country, I was nevertheless sure that the Unesco Conference would find there a suitable atmosphere for its deliberations and the utmost friendliness on the part of our people.
(126) I feel happy and proud, and shall be proud all my life, to have presided over this assembly, whose results will be so fruitful in the world of the intellect: I am glad that this illustrious assembly of the world's thought should have met in this Parliament building, where, in freedom, we seek to achieve justice, to show men the paths of peace, brotherhood and liberty.
(127) I am happy to think that, even when we were intimately stirred by our electoral struggles, our people always contrived to follow attentively the deliberations of this Conference, and that was why, one night, men and women from every corner of the countryside came to the city of Montevideo, which was offering the homage of its friendship; and these men and women came to sing because we are a people who believe in peace, in progress and in the brotherhood of men.
(128) I thank you most profoundly for having conferred upon me the honour of presiding over your deliberations. I thank the Director-General and all the members of his Secretariat for having enabled me, with my lack of experience, to direct the work of this Conference. I thank you for all you have said about my country; I thank you for your generosity and, at the hour of parting, I should like to tell you, and I am sure I speak in the name of the Republic as a whole, that it is with a feeling of happy nostalgia we see you go, nostalgia at your departure, and joy at having won your friendship. At this hour of leave taking, thanks and heartfelt wishes for your personal good fortune and for the welfare of your countries.
(129) I now declare the eighth session of the Unesco General Conference closed.

The meeting rose at 6.55 p.m.

# SUMMARY RECORDS

# CHAPTER III

# GENERAL COMMITTEE

## FIRST MEETING

*13 November 1954 at 9 a. m.*

*Chairman:* Mr. ZAVALA MUNIZ (Uruguay)

(1) The CHAIRMAN opened the meeting and read the list of members of the General Committee, which consisted of the Vice-Presidents elected by the General Conference and the Chairmen of commissions and committees, with the exception of the Headquarters Committee, which was not represented. He requested the Chairmen of those commissions or committees to arrange to be represented by the Vice-Chairman or, in his absence, by the Rapporteur, if for any reason they could not attend a meeting. He referred to Rule 36 of the Rules of Procedure of the General Conference concerning the functions of the General Committee and proposed the approval of the programme as set forth in document 8C/BUR/AG/1. In conclusion, he announced that the Committee was to hear the report of the Chairman of the Executive Board.

**PROPOSED ORGANIZATION OF WORK OF THE EIGHTH SESSION (Document 8C/BUR/1) TIMES OF MEETINGS**

(2) Introducing document 8C/BUR/1, Sir Ronald ADAM recalled that the Board had been instructed by the General Conference at its seventh session to review the Conference's working methods and suggest improvements. He requested the General Committee to consider the Board's suggestions, point by point.

(3) The first suggestion was that the General Conference be requested to reverse its decision to suspend the application of Rules 58, paragraphs 1 and 59, paragraph 1 of its Rules of Procedure for the eighth session of the General Conference. The approval of the Board's suggestion would mean that verbatim records of plenary meetings of the Conference would be drawn up and circulated to delegations for correction as soon as possible.

(4) Approved.

(5) Sir Ronald Adam then requested the Committee to consider points (a), (b) and (c) at the bottom of page 1 and the top of page 2 of document 8C/BUR/1.

Sub-paragraph (a)

(6) Approved.

Sub-paragraph (b)

(7) Mr. BEEBY, as Chairman of the Administrative Commission, requested the right to hold the first four of the working party meetings. He intended to ask the Commission to set up a working party that afternoon, and it could meet at once.

(8) Agreed.

(9) As Chairman of the Advisory Committee on Programme and Budget, Mr. GARDNER DAVIES announced that the Committee intended to propose the establishment of two working parties, one on decentralization and the other on the reorganization of the Department of Mass Communication.

(10) Sub-paragraph (b) was approved.

Sub-paragraph (c)

(11) Approved.

(12) Sir Ronald ADAM requested the Committee to consider the Board's next suggestion, which was that the Board's report on the remodelling of the programme be examined by the Advisory Committee on Programme and Budget, after the latter had completed its examination of the draft programme and budget for 1955-56.

(13) Approved.

**ORGANIZATION OF THE GENERAL DISCUSSION ON THE REPORT OF THE DIRECTOR-GENERAL**

(14) The next point concerned the organization of the general discussion on the Report of the Director-General. The Board's suggestion was that speakers should be requested to focus their remarks on the salient features of the Report, and that the whole

discussion should be speeded up. To give effect to the suggestion, it was proposed that the discussion be limited to six plenary meetings, each lasting a maximum of three hours, and that each speaker be limited to a quarter of an hour.

(15) It seemed to Mr. KABIR that delegations would concentrate on the points in the Director-General's Report which they themselves considered to be the most important. He did not see how the Executive Board or the General Committee could define the "salient features" or how the President could oblige speakers to focus their remarks on them. As for the length of speeches, it had been suggested that there be six plenary meetings of three hours each, making a total of eighteen hours. As fewer than thirty-six speakers had so far been inscribed, it might be possible to allow them a longer time each, for example, twenty-five minutes.

(16) Sir Ronald ADAM reminded the delegate of India that the list of speakers was not yet closed, as some heads of delegations, the Head of the United Kingdom delegation, for example, had not yet arrived.

(17) Mr. BERNAL JIMENEZ considered the proposal of the Chairman of the Executive Board the sounder. He had thought of proposing a shorter time-limit for speakers, twelve minutes, for instance, but, considering that fifteen minutes was the customary time-limit and a judicial one, he accepted the proposal of the Chairman of the Board. That limit should be strictly adhered to, as many other speakers were sure to ask to have their names put down.

(18) Mr. AWAD and Mr. SAWADA seconded Mr. Jimenez' remarks.

(19) The Executive Board's suggestion was approved.

(20) Sir Ronald ADAM drew the Committee's attention to the Board's next suggestion, set forth in paragraph 1.1, sub-paragraph (b), pages 2-3 of document 8C/BUR/1. He pointed out that it was a difficult question, as most delegations wished to speak on the last two days of the session and often, on the second day of the session, there were not enough speakers on the list.

(21) The Board's suggestion was approved.

(22) Sir Ronald ADAM observed that the rest of the document was submitted mainly for information. He would, however, draw attention to the last paragraph of 5.2. The Board suggested that commissions and committees should not wait until their Chairmen arrived from the General Committee, but should proceed to business at the appointed time under the presidency of their Vice-Chairmen.

(23) The suggestion was approved.

(24) The whole of document 8C/BUR/1 was approved.

(25) The CHAIRMAN stated that the whole of the document submitted by the Executive Board had been approved. He asked for the list of speakers inscribed to be read out.

(26) With regard to the list of speakers, Mr. MONTAGNIER requested members of the Committee to refer to document 8C/DIV/73 and to add the delegation of Iran to those already listed in the document as due to speak on Saturday morning, 13 November.

(27) Mr. COWELL stated that, as the Chairman of the Executive Board had already mentioned, the Head of the United Kingdom delegation had been delayed at sea. His name was therefore not yet on the list of speakers. His delegation wished to apply for inscription on the list and would consult Mr. Montagnier regarding the most appropriate time.

(28) The list of speakers was approved.

**USE OF RUSSIAN DURING THE EIGHTH SESSION** (document 39 EX/DIV/2)

(29) The DIRECTOR-GENERAL explained that he had received an informal request from the Soviet Embassy in Paris that the Secretariat estimate the cost of the various services required for the use of Russian during the General Conference. On the basis of that request, the Executive Board had adopted a resolution in private meeting on 20 July 1954, authorizing him to make the necessary preparations up to a maximum of $50,000. In anticipation of a favourable decision of the General Conference, he had accordingly arranged for a minimum number of services, which had so far resulted in commitments which would cost approximately $25,000.

(30) Sir Ronald ADAM stated that the Board assumed full responsibility for what it had done. Its decision had been taken in private, because the Board had been anxious not to raise too many false hopes.

(31) Mr. STOLETOV announced that his country had every intention of participating actively in Unesco's constructive work, but felt that it would be unable to do so unless Russian were accepted as an official working language at Unesco's conferences and meetings. He drew attention to the fact that Russian was one of the official working languages of the United Nations; it seemed to him inconceivable for an organization like Unesco, devoted to education, science and culture, to take a decision other than that which had been adopted by the United Nations.

(32) As for the financial aspect of the question, he assured the Committee that the Soviet Union wished to do everything possible to minimize expenditure. His delegation considered the following to be the minimum services required: (1) interpretation into and from Russian at plenary meetings of the General Conference and at meetings of its commissions and committees; (2) interpretation into and from Russian at meetings of the Executive Board; (3) translation into Russian of the main official documents and publications.

(33) In conclusion, Mr. Stoletov requested the General Committee to support his delegation's request at the plenary meeting of the General Conference.

(34) Mr. NUFER regretted that his delegation could not approve the decision taken by the Executive Board in private meeting. His delegation felt that it had been

presented with a "fait accompli". He proposed that the whole question be thoroughly examined by the Administrative Commission and that the Secretariat be asked to submit detailed estimates of the cost of the various services that would be required.

(35) Mr. BERREDO CARNEIRO pointed out that for many years past Unesco had been hoping that the USSR would take part in its work and that the Organization's ideas had not hitherto been as widely disseminated as it would have wished among the Soviet people. In his opinion, therefore, everything possible should be done to bring within that people's reach not only the documents produced by the current Conference, but also all documents dealing with projects or achievements that Unesco considered of special importance for the development of education, science and culture. He therefore urged the General Conference to give sympathetic and very thorough consideration to the question of adopting Russian as a working language.

(36) The CHAIRMAN reminded the meeting that the Executive Board's proposal under discussion referred exclusively to the partial use of Russian at the present session of the General Conference.

(37) At the request of Mr. BEEBY, the DIRECTOR-GENERAL gave details of the services for which he had made preparations: (1) interpretation into and from Russian at all meetings during the Conference at which there was simultaneous interpretation; (2) translation of the main documents of the session and of draft resolutions from and into Russian; (3) translation of speeches made in Russian in the records of plenary meetings; (4) translation into Russian of reports of commissions and committees; (5) translation into Russian of the final text of the resolutions and decisions of the General Conference after the close of the eighth session. The total cost would be approximately $50,000, of which $25,000 had already been expended or committed to some extent; that was to say, Russian interpreters and translators had been asked not to take on any other work which would prevent their coming to Montevideo until the Conference's decision was known. If the Conference's decision were favourable, those people would be sent for; if not, they would have to be paid an indemnity.

(38) Mr. COWELL stated that, in the opinion of his delegation, the Executive Board had acted wisely in anticipating its responsibilities. Moreover, under the Constitution, the Board was empowered to act for the General Conference between sessions. The United Kingdom delegation fully expected that the General Conference would grant the Soviet request. He therefore moved that the General Committee adopt the proposal concerning the partial use of Russian during the eighth session and that it approve the action taken by the Executive Board. The question of the future use of Russian in Unesco would be considered by various organs of the General Conference.

(39) The motion was seconded by Mr. KABIR, who welcomed the presence of the Soviet delegation and noted with pleasure that it was their wish to keep expenditure as low as possible.

(40) The motion was adopted, with 2 abstentions.

(41) Referring to a remark made by the delegate of the United Kingdom, Mr. GARDNER DAVIES said that the Advisory Committee on Programme and Budget had given preliminary consideration to the proposal of the Soviet delegation regarding the use of Russian in future. The Committee had decided to ask the Soviet delegation for further information, and the Secretariat for budgetary estimates. Until it received that information, the Committee did not feel able to discuss the matter further.

(42) In reply to a question from Mr. STOLETOV, the CHAIRMAN said that the question of the use of Russian during the eighth session would come before the plenary meeting of the Conference that same day.

**VOTING RIGHTS OF COUNTRIES IN ARREARS IN THE PAYMENT OF THEIR CONTRIBUTIONS**

(43) Mr. BERNAL JIMENEZ stated that the report of the Credentials Committee, which had been approved the previous day, included a list of the States which were in the position referred to and to which Rule 70 of the Rules of Procedure applied. The problem should be considered with reference to paragraphs (2) and (3) of the said Rule.
(44) He asked the Secretariat for more detailed information on that question and would like to know the opinion of the Legal Adviser.

(45) Mr. BEEBY suggested that the matter might be referred to the Committee on Contributions, which the Administrative Commission would be setting up that day. That Committee could report back on Monday or Tuesday.

(46) The motion was seconded by Mr. NUFER and adopted.

**DRAFT RESOLUTIONS HAVING BUDGETARY REPERCUSSIONS SUBMITTED TO THE SECRETARIAT AFTER THE DEADLINE LAID DOWN IN RULE 78, PARAGRAPH 2 OF THE RULES OF PROCEDURE**

(47) Mr. MONTAGNIER said that two draft resolutions which might have budgetary repercussions had been received after the deadline (documents 8C/DR/63 and 64). They had been submitted by Poland and France respectively. If the Rules of Procedure were strictly applied, those two proposals would not be eligible for consideration. At the seventh session of the General Conference, held in Paris, the General Committee had been consulted on whether draft resolutions received after expiry of the time-limit could be considered.

(48) Mr. BERREDO CARNEIRO pointed out that the draft resolutions in question did not affect the budget to a very great extent. Since the Conference was meeting that year in a country rather far away from Europe, he hoped that they should not take too strict an attitude towards the proposals in question.

(49) Mr. COWELL seconded the motion, but with some reluctance, as he was a member of the Advisory Committee on Programme and Budget, which had to examine all the draft resolutions. The French and Polish proposals brought their number up to 64. He hoped that, in future, delegations would not submit draft resolutions after the deadline.

(50) Mr. BERNAL JIMENEZ supported Mr. Berredo Carneiro's proposal and agreed with the interpretation given by the United Kingdom representative. He thought that the question should be treated as an exceptional case for the reasons given by Mr. Carneiro.

(51) Mr. BOURGEOIS agreed with the United Kingdom delegate. He would like to see special stress laid on the exceptional character of the treatment it was proposed to give to the draft resolutions in question.

(52) Mr. GARDNER DAVIES announced that the Advisory Committee on Programme and Budget would include in its report a recommendation that, in future years, Member States should be asked to submit new draft resolutions at a time when the Director-General could take them into consideration in preparing the draft programme and budget for the next two years.

(53) The motion proposed by Mr. Berredo Carneiro was adopted.

The meeting rose at 10.35 a.m.

# SECOND MEETING

*15 November a. 9 a. m.*

*Chairman:* Mr. ZAVALA MUNIZ (Uruguay)

(1) The CHAIRMAN informed the General Committee that the Republic of Cuba had paid a sufficient proportion of its arrears to enable it to take part with full voting rights in the General Conference. The delegation of Venezuela, on the other hand, would not be attending the eighth session of the General Conference.

(2) The DIRECTOR-GENERAL drew attention to the fact that Venezuela's failure to send a delegation to the eighth session of the General Conference meant that the Headquarters Committee was without a Chairman. He suggested that the General Committee might wish to appoint as Chairman Mr. Berredo Carneiro (Brazil), who had served on the Headquarters Committee for a long time. In order not to lose a Latin American seat on the General Committee, he suggested that a delegate of a Latin American country be appointed Vice-Chairman.

(3) Mr. RUIZ-GIMENEZ concurred in the Director-General's proposal.

(4) Mr. BERNAL JIMENEZ also agreed with the proposal that Mr. Berredo Carneiro, delegate of Brazil, be appointed Chairman of the Headquarters Committee and that the vacancy created by that appointment among the ten Vice-Presidents of the General Conference be filled by a representative of Latin America.

(5) Mr. BERREDO CARNEIRO accepted that proposal.

(6) The agenda having been completed, the CHAIRMAN called upon the Chairmen of commissions and committees to report on the progress of work in their respective bodies.

(7) Mr. GARDNER DAVIES announced that the Advisory Committee on Programme and Budget had completed its detailed examination of the Director-General's draft programme and budget for 1955-56. Further, it had completed, with two exceptions, its examination of draft resolutions submitted by delegations to the eighth session of the General Conference. The Committee would be considering its report that evening, and it should be ready for distribution sometime the following day. In accordance with its terms of reference, the Committee's report was to go to the Programme and Budget Commission and to the Administrative Commission. The Advisory Committee hoped that the Administrative Commission would examine the two following points as soon as possible: (1) the scale of contributions for 1955-56; (2) the method of financing the budget for 1955-56. Until the Administrative Commission had taken a decision on the first point, the General Conference could not consider the question of the total budget figure for 1955-56. With regard to the second point, by special decision of the General Conference, the budget surplus of previous years had been used in 1953-54 to finance the current budget.

(8) Mr. BEEBY stated that the Administrative Commission had held its first meeting on Saturday afternoon, when it had elected its officers and set up a Committee on Contributions. The Committee was to meet in the afternoon and the whole of the next day

(Tuesday, 16 November) to discuss means of financing the budget, and it was hoped that it would be able to report back to the Commission on that subject by Wednesday morning at the latest. With regard to the Commission's own agenda, it would first examine the Auditor's Report and would then go on (on Tuesday morning, 16 November) to consider the important question of the structure of the Executive Board.
(9) Mr. Beeby asked the Chairman if the question of China's contribution was to be referred to the Administrative Commission.

(10) The CHAIRMAN replied in the affirmative.

(11) In reply to a question from Mr. KABIR, Mr. BEEBY said that the Secretariat had already drawn up a tentative scale of contributions for 1955-56.

(12) Mr. GARDNER DAVIES asked if the Administrative Commission could consider the means of financing the budget and the question of budgetary surpluses within 48 hours.

(13) Mr. BEEBY replied that, in his opinion, it would be better for the Commission to consider that question on the basis of the report of the Advisory Committee. He therefore suggested that the item be taken by the Commission on Wednesday afternoon.

(14) Mr. GARDNER DAVIES agreed.

(15) Mr. VERONESE reminded the meeting that 3 December was the date scheduled for the election of the Executive Board. The procedure for that election would depend on whether the General Conference accepted the proposed amendment to Article V of the Constitution. Mr. Veronese would therefore be glad to know whether the Administrative Commission would soon be able to submit a preliminary report on the problems raised by that draft amendment (item 9.3.1 of agenda of the Conference).

(16) Mr. BEEBY replied that he expected the Commission to be able to make an interim report including that item. He did not share the fears of certain delegates, who believed that the debate on the structure of the Executive Board would last three or four days; he very much hoped that it would be possible to conclude it on Tuesday afternoon. The question would then have to be referred to the Legal Committee. It was important to report on the matter to the Conference in plenary meeting as soon as possible, as the Secretariat had informed him that there would be a fortnight's work to be done between the Conference's decision and the election of members of the Executive Board.

The meeting rose at 9.35 a.m.

# THIRD MEETING

*17 November 1954 at 9 a.m.*

*Chairman*: Mr. ZAVALA MUNIZ (Uruguay)

(1) The DIRECTOR-GENERAL announced that the Secretariat had some suggestions to make regarding the sequence of work of the General Conference. He requested the Assistant Director-General to explain what the Secretariat proposed.

(2) Mr. MAHEU pointed out that the time-table of work depended mainly on when the Programme and Budget Commission fixed the provisional budget total. It could do so only after it received the Report of the Administrative Commission on:(1) the scale of contributions, and (2) the financing of the projects included in the programme.
(3) Mr. Maheu thought that the Administrative Commission would be able to submit its report on Monday, 22 November, so that on Tuesday morning, 23 November, the Programme and Budget Commission could consider the problem of fixing the provisional budget total.

(4) Mr. BEEBY replied that he thought it a fair estimate. The Administrative Commission would start on financial questions that afternoon and he was sure that it would be in a position to report on Monday morning at the latest.

(5) Mr. MAHEU submitted the Secretariat's proposals concerning the sequence of work of the Programme and Budget Commission. The Commission would not start discussing its agenda proper until the morning of 18 November, but might be holding its first meeting in the afternoon of 17 November to appoint its officers and consider some organizational questions. By Monday, 22 November, the Commission would have to consider three major questions and Mr. Maheu indicated the order proposed by the Secretariat for those discussions:
(6) (1) General discussion of the Proposed Programme and Budget for 1955-56. The draft programme would be presented by the Chairman of the Executive Board and the Director-General on 18 November at the morning meeting. At the same meeting the Chairman of the Advisory Committee on Programme and Budget would submit his report.
(7) (2) General consideration of the document prepared by the Executive Board on the Remodelling of

the Future Programme. It seemed logical to link those two items, even though they were the subject of separate reports by the Advisory Committee. Following that preliminary discussion, the item might be sent back to the Advisory Committee for further study; the Programme Commission would then take its final decision after that first consultation.
(8) (3) Technical Assistance. The Commission would complete its discussion of that item, whereas it would undertake only a general discussion of points (1) and (2), leaving detailed discussion of the draft programme and budget until the budget ceiling had been fixed and a general attitude determined towards (2).
(9) That work would occupy the period from Wednesday 17 to Tuesday 23 November, as a plenary meeting was to be held in the meantime to consider the Administrative Commission's proposals on the amendments to the Constitution; that meeting could be held between the consideration of points (2) and (3) indicated above.

(10) Mr. GARDNER DAVIES formally moved adoption of the Secretariat's proposals.

(11) Mr. KABIR asked whether it would be possible, in order to save time, for the Programme and Budget Commission to combine the first two items, namely, the discussion of the draft programme and budget for 1955-56 and the discussion of the Executive Board's Report on the Remodelling of Unesco's Future Programme.

(12) Mr. MAHEU thought that it might be wiser to leave it to the Commission itself to decide that point.

(13) Mr. GARDNER DAVIES observed that the Advisory Committee would be submitting a separate report on each of those items.

(14) Mr. BOURGEOIS endorsed the Secretariat's proposals, which for the time being were the most satisfactory, since the discussions would be based on two separate reports. He thought that the report of the Chairman of the Advisory Committee would clarify the line to be followed in those discussions.

(15) Mr. GARDNER DAVIES explained that the report of the Advisory Committee on its examination of the draft programme and budget had already been printed, but the Committee had not yet approved the final draft of its Report on the Remodelling of the Future Programme. Therefore, if the Programme and Budget Commission met the following day (18 November), it would be able to examine the first report only.

(16) In reply to Mr. HAGUIWARA, Mr. MAHEU explained that the decision concerning the budget total was taken at a plenary meeting on the recommendation of the Programme and Budget Commission.

(17) Mr. HAGUIWARA enquired whether a plenary meeting would be held immediately after the Programme Commission had decided the budget total in order to approve that total. He gathered from the Secretariat's affirmative reply that the plenary meeting could be held on Tuesday 23 or Wednesday 24 November.

(18) The General Committee approved the Secretariat's proposals concerning the organization of work.

(19) Mr. MAHEU pointed out that the Chairman of the Advisory Committee would present that Committee's report to the Administrative Commission that very afternoon and to the Programme Commission the following morning and would draw the attention of each Commission to the subjects within their respective competence.

(20) Mr. BEEBY stated that the Commission had three urgent matters to settle: (1) the method of financing the budget (on which it would report by Monday, 22 November); (2) the structure of the Executive Board; and (3) arrears of contributions of Member States. The Commission had held a whole day's discussion on the constitution of the Executive Board, but had decided not to vote on it until Thursday afternoon (18 November). With regard to arrears of contributions, the Committee on Contributions was almost ready to report back to the Commission, but Mr. Beeby did not know exactly when the latter would be able to present its own report on that subject.

(21) Sir Ronald ADAM asked if it would be possible for the Executive Board to meet the following morning (18 November) at 9 a.m., instead of the General Committee, to discuss applications of international non-governmental organizations for admittance to consultative arrangements with Unesco.

(22) It was agreed that the Board should meet at that time.

(23) Mr. GARDNER DAVIES asked the Chairman of the Headquarters Committee when he was expecting the Committee to meet.

(24) Mr. BERREDO CARNEIRO said that no decision had yet been taken as to when his Committee would meet. The date would depend on consultations which were proceeding with the Secretariat.

(25) The DIRECTOR-GENERAL thought that there was no great urgency. Mr. Callison of the Headquarters Office was arriving in Montevideo the following week, and the Committee might decide to meet then.

(26) In reply to a question from Mr. MAHEU, Mr. BEEBY said that the Commission intended to discuss the directives concerning subventions to international non-governmental organizations immediately after it had settled the three urgent matters he had already mentioned. It would then discuss staff questions later in the following week.

(27) Mr. MAHEU explained that it would facilitate the work of the Programme and Budget Commission if, before discussing subventions, it could have

the report of the Administrative Commission on that subject.

(28) Mr. BERNAL JIMENEZ announced that he was going to raise a different subject from those under discussion. Uruguay was a country that had always been in the van of Latin American civilization owing to the wealth and vigour of its national culture. In earlier days Uruguayan culture had been represented by such famous writers and poets as José Enrique Rodó, Herrera y Reissig and Zorrilla de San Martín. Today, that culture was personified by the poetess Juana de Ibarbourou, who was famed all over the continent.
(29) He thought that Unesco should pay homage to the Uruguayan poetess by inviting her to a plenary meeting at which one of the delegates would pay a tribute to her intellectual eminence. The ceremony would not last more than five minutes and would be held at the time considered most convenient.

(30) The CHAIRMAN said he had been deeply moved by the words of the representative of Colombia. The proposal filled him with pride and joy, especially as Juana de Ibarbourou, besides being his compatriot, came from his own part of the country and was a personal friend. He accepted the tribute as an honour paid to Uruguay.

(31) Mr. RUIZ-GIMENEZ supported Mr. Bernal Jimenez' proposal and expressed his gratification at the tribute to be paid to "Juana de America" at a session of a Unesco General Conference held in America.

(32) The CHAIRMAN said that, if there was no objection, the General Committee would take the proposal into consideration and would consult with the Director-General on the arrangements to be made.

(33) Mr. BADINI CONFALONIERI supported Mr. Bernal Jimenez' proposal and referred to the precedent of the Florence Conference. There a similar tribute was paid to Madame Montessori, who had been invited to speak at a meeting of the Programme Commission.

(34) The CHAIRMAN announced that the General Committee would make arrangements for the tribute to be paid to Juana de Ibarbourou and thanked members on behalf of Uruguay for having approved the proposal.

(35) Mr. BEEBY requested the advice of the General Committee on whether or not to include two new items on the agenda. He recalled that the Commission had already adopted a resolution recommending the granting of a request from the Government of Iran for the writing off of the sum of $4,915.15, being a loss incurred by the Iranian National Commission acting as a distributing agency for Unesco coupons. Just before the Conference, a similar request had been received from the Government of Yugoslavia and, since the Conference had started, another from the Government of Israel. If so desired, those two items could be added to the agenda.

(36) The DIRECTOR-GENERAL stated that the Secretariat could see no objection to the inclusion of the two items.

(37) Mr. MONTAGNIER pointed out that the inclusion of additional items on the agenda of the Conference had to be approved by a two-thirds majority of the Conference, on the recommendation of the General Committee.

(38) In reply to a question from Mr. GARDNER DAVIES, Mr. BEEBY said that the Administrative Commission had not voted on the principle involved, but only on the specific case of Iran. However, the Commission had been informed by the Secretariat that, as other arrangements had since been made, it was practically impossible for the situation to recur.

The meeting rose at 9.50 a.m.

# FOURTH MEETING

*19 November 1954 at 9 a. m.*

*Chairman:* Mr. BADINI CONFALONIERI (Italy)

**PROGRESS REPORTS BY THE CHAIRMEN OF COMMISSIONS**

(1) Mr. BEEBY said that the Administrative Commission hoped that day to finish its preliminary consideration of amendments to Article V of the Constitution (composition of the Executive Board). The matter would then be referred to the Legal Committee, and he hoped that the Administrative Commission would be able to reach a decision and to submit a resolution by the evening of the 20th.
(2) He hoped that his Commission would be able to present a report on the scale of contributions and methods of financing the budget by the evening of the 20th, provided there was a meeting in the afternoon.

(3) Mr. BOURGEOIS said that the Programme and Budget Commission had embarked the previous day on the general discussion of the programme, which would probably still take up part of the morning. As it was impossible to discuss the Proposed Programme and Budget for 1955-56 in detail with no indication given of the provisional budget ceiling, the Commission would proceed to consider the report of the Executive Board on the future programme of the Organization (document 8C/PRG/13). It would still have time enough on Monday, 22 November, to deal with technical assistance and to settle general questions before embarking on the substance of the programme, which the Commission was intending to discuss on the basis of the proposals submitted by the United States delegation.

**SUGGESTION OF THE UNITED STATES OF AMERICA ON THE PROCEDURE FOR STUDYING THE PROPOSED PROGRAMME AND BUDGET FOR 1955-56** (document 8C/BUR/2)

(4) Mr. Bourgeois proposed the following procedure, suggested by conversations he had held with various delegates after the Commission's meeting. On the first proposal - to the effect that delegations should notify the Secretariat by Monday morning of the items in the programme which they wanted discussed - he suggested accepting that time-limit for Chapters 1, 2 and 3, and accepting proposals concerning Chapters 4 and 5 up to the evening of Thursday, 25 November. He thought all delegations would agree to that proposal. It had further been agreed to drop the proposal for the establishment of working group of specialists. Mr. Bourgeois added that it would be a good thing if delegations arranged for their specialists to get into touch, between meetings, with the directors of Unesco's various departments, who would certainly be very glad to see them.

(5) Mr. KOTSCHNIG said that his delegation would not insist on its second proposal and could agree to the plan proposed by the previous speaker.

(6) The DIRECTOR-GENERAL assured the Committee that the Secretariat would be very ready to co-operate with the experts mentioned and to work out a schedule of meetings to fit in with the programme of the Conference.

(7) Sir Ben BOWEN THOMAS feared that by the time the heads of delegations had informed the Secretariat of the matters on which they wished to speak, every item in the existing programme would have been called in question, and the proposal would merely put delegations to a lot of unnecessary work.
(8) Experience of previous Conferences had shown how exceedingly difficult it was to work to a schedule. Sometimes discussion of an apparently contentious notion petered out with but a single speaker; at others there were floods of eloquence. The only way effectively to shorten discussion was to limit the time allowed to speakers - a solution which was unlikely to be acceptable. There was one practical recommendation that might be made, namely, that delegations absent themselves from the Palacio Legislativo as little as possible and that they regularly ask the Secretariat whether matters of interest to them are likely to be raised at any particular meeting.
(9) It was significant that the proposal under discussion came from what was numerically the largest delegation at the Conference, and that it was largely supported by the smaller delegations, which, while deeply conscious of their rights, found it difficult to meet their responsibilities. A workable procedure had already been evolved and he was in favour of maintaining it.

(10) Mr. VERONESE, after paying tribute to the intentions underlying the United States proposal, made a general statement. The procedure so far adopted was based on experience; it had evolved gradually and been accepted in plenary session and he would be reluctant to change it at that stage. He then went on to comment on the first part of the proposal before the Committee, the second having already been withdrawn. He asked the United States delegate whether the fact of certain delegations having submitted as many as 70 new proposals did not already provide the kind of information he wanted. Together they constituted a list of problems which delegations wished to have discussed over and above the proposed programme. He was somewhat alarmed also by the third paragraph of the proposal, to the effect that only those projects should be

discussed which, in the opinion of any Member State, needed to be substantially modified. That idea would exclude the minor adjustments that might be made to projects by the Secretariat, in consultation with specialists from delegations. That brought them to the second part of the proposal, which had just been withdrawn. If one tried to give a definition of "substantial modification", the Commission would be liable to be drawn into fresh discussions on the actual evaluation of projects. Mr. Veronese recommended that the General Committee adopt the United States proposal interpreted as meaning a consultation, but without deciding in advance what would emerge from the consultation.

(11) Mr. BERREDO CARNEIRO said that, although the delegation of Brazil had, in the meeting, supported the proposal put forward by the United States delegate, that did not mean it was deaf to the arguments of other delegates.
(12) He thought some kind of compromise could be reached to the effect that any proposal to amend a project, either in substance or in form, should be submitted by delegations in writing to the officers of the Programme Commission. Those proposals would be fully discussed by the Commission, whereas programme projects for which no proposal for amendment had been received, could be considered as approved, and the Commission could go through them quickly so as to give more time to points which needed detailed discussion. That procedure would have the merit of meeting both the United Kingdom delegate's request for free discussion and the United States delegate's desire to avoid bouts of eloquence on proposals which were accepted by Member States. Mr. Carneiro had not attended the previous day's discussions, but he gathered from what he had been told that they had not made any specific, practical contribution to the improvement of the programme. On the other hand, he would like to see the Commission or the working parties dwell on points for which substantial amendments had been proposed. He asked the United States delegate to refrain from making a formal proposal and to leave it to the Chairman and other officers of the Commission to bear the underlying intention in mind.

(13) Mr. HAGUIWARA said that the aim of the Programme and Budget Commission's discussions was to produce a better and more concentrated programme. That aim could be achieved only by abolishing certain appropriations and increasing others. A procedure had been worked out for the consideration of draft resolutions with budgetary implications; 70 or so draft resolutions had been considered by the Executive Board and the Advisory Committee. It was the abolition of appropriations which caused the greatest difficulties. He wondered whether a delegation could propose abolishing certain appropriations without knowing the total figure of savings to be made. Mr. Haguiwara thought it difficult to reach a firm conclusion at a meeting of the General Committee, without even knowing the provisional budget ceiling. He thought that it lay with the Commissions, with full knowledge of the facts, to form their own conclusions.

(14) Mr. BOURGEOIS said that there was no question of drawing up hard-and-fast rules for the discussions. The main idea of the United States proposal was to see that the Programme Commission did not cover the same ground as the Advisory Committee and to make use of the latter's report. What was wanted was not draft amendments to the proposed programme but an indication of the points on which delegations wished to speak, on the understanding that they agreed with the Director-General's other proposals and the Advisory Committee's findings. In any case, the Commission had to submit to the Conference a draft programme on which a formal vote would be taken.

(15) Mr. GARDNER DAVIES paid tribute to the intentions behind the United States proposal. It had indeed been the hope of the Advisory Committee that the Programme and Budget Commission would not have to cover the same ground.
(16) At the same time he was inclined to agree with the delegates of the United Kingdom and Italy in doubting the practical value of the proposal. Perhaps the suggestion by the delegate of Brazil, being more flexible, had more to commend it. Delegations might be asked to submit to the General Committee, in writing, any amendments they might wish to propose to the programme and budget documents and to the recommendations of the Administrative Commission. In that way there would be a clear indication of the points likely to be taken up and the work of the Chairman of the Programme and Budget Commission would be facilitated.

(17) Mr. KOTSCHNIG felt that agreement was very close. He agreed with the Chairman of the Programme and Budget Commission that it would be most useful to know beforehand what points were likely to lead to discussion. Delegations might simply be asked to let the Secretariat know what were the points on which they had definite ideas, so that the Secretariat might then be able to issue a general document listing those points.

(18) Sir Ben BOWEN THOMAS (United Kingdom) said that the delegate of Japan had raised an important point. If the Programme and Budget Commission could start work as soon as ever a decision had been taken on the budget ceiling, there would be some point in delegations listing the questions they were anxious to raise.

(19) Mr. BERREDO CARNEIRO thought it possible to work out a system which would enable the Chairman to tell his Commission how it could best avoid proposals that would distract attention.

(20) Mr. VERONESE thought that to judge by the vote taken in the Commission the day before it had been left to the General Committee to draw up a work plan. He also thought that agreement was practically reached on the procedure of consultation advocated by the United States delegate and the submission of findings to the officers of the Programme Commission, who would base their final proposals for the conduct of work on those findings.

(21) The delegate of Spain supported that proposal.

(22) Sir Ben BOWEN THOMAS was ready to support the suggestions made by the delegate of Italy, provided the General Committee approached the problem in a flexible manner.

(23) Mr. STOLETOV said that, as he understood it, two points had been made clear about the procedure for discussion of the report by the Administrative Commission. Firstly, if any delegation wanted a draft proposal submitted, it could raise the matter in the Commission without prior notification. Secondly, any delegation should be free to explain, without prior notification, the reasons for its vote on any draft resolution submitted. He was, in fact, in favour of keeping the normal procedure for discussion of the Commission's report.

(24) Mr. KOTSCHNIG said that the delegate of Italy had spoken of consultation of delegations. If that meant that delegations would be asked to inform the Secretariat of any points of especial interest to them, in order that the Secretariat might prepare a general paper on the question, he could agree.

(25) Sir Ben BOWEN THOMAS considered that delegations should merely be asked to indicate what points were of particular interest to them, and that they should not be required to outline their exact position on those points.

(26) Mr. KABIR was now less sure of the advantages of the United States proposal. At the same time, if the Committee adopted the United Kingdom suggestion that delegations should merely be invited to indicate points of interest to them, things would be left much as they were. The Commission was losing a good deal of time and the sooner it passed to a discussion of the programme, the better.

(27) Mr. BEEBY said that a similar discussion had taken place at the Mexico City Conference, and the only conclusion reached had been that the Chairman of the Commission had to be trusted to direct the debates as he thought fit. He would suggest that, in the Commission, delegations be informed that they could expedite matters by indicating points of interest to them, perhaps with a statement of their position. Then the Commission would have to trust the Chairman.

(28) Mr. KOTSCHNIG could agree with that suggestion, provided it were made clear to delegations that they should, rather than could, expedite matters by so doing.

(29) Mr. BEEBY agreed.

(30) Mr. BOURGEOIS explained that in his view that procedure should serve for the Commission's guidance but should not be restrictive. Each delegation should still be entitled to speak on any item in the programme. The idea of the procedure proposed was solely to avoid repetition and duplication of the Advisory Committee's work.

(31) The CHAIRMAN asked if members agreed to delegations being asked to notify the Chairman of the Programme Commission, by a date to be indicated by the latter, on what points they wished to speak. The request would be made merely in order to obtain information.

(32) Agreed.

(33) Sir Ben BOWEN THOMAS said his agreement was subject to the schedule indicated by the Chairman of the Programme and Budget Commission being observed.

(34) Mr. STOLETOV asked whether the two assumptions he had made in his earlier statement were correct.

(35) The CHAIRMAN confirmed that they were.

**RESOLUTION ON THE CREATION OF AN INTERNATIONAL CULTURAL FUND (document 8C/DR/69)**

(36) It was agreed that this matter should be the first item for discussion at the meeting to be held on Monday, 22 November.

**OTHER BUSINESS – PROBLEM IN CONNEXION WITH THE WORK OF THE EXECUTIVE BOARD**

(37) Mr. BEEBY said that the Advisory Committee had referred the problem of reducing the amount of work to be done by the Executive Board and the length of its sessions, to the Administrative Commission. Could the Administrative Commission refer that problem to the Executive Board through the General Committee?

(38) Sir Ronald ADAM thought it would be better to wait until the new Board had been elected.

(39) The DIRECTOR-GENERAL said that the question had been considered in the Secretariat. No such reform was possible without amendments to the Constitution and the Regulations. All that could be done now was that the Conference might call on the Director-General and the Board to study the matter with a view to submitting proposals at the next session of the Conference.

(40) Mr. BEEBY said he would report back to his Commission to that effect.

(41) Mr. GARDNER DAVIES said that that would meet the wishes of the Advisory Committee.

(42) Mr. HAGUIWARA suggested that the General Committee place on its agenda for the meeting on 22 or 23 November the question of budget levels, which was to be discussed by the Administrative Commission and on which it would be most valuable to have a preliminary discussion in a small committee.

(43) The CHAIRMAN explained that there could only be an informal discussion, on matters of procedure and not of substance. With that reservation, he was prepared to place the item on the agenda of the General Committee's next meeting, which was to be held at 9 a.m. on Monday, 22 November 1954.

The meeting rose at 10.30 a.m.

# FIFTH MEETING

*22 November 1954 at 9 a. m.*

*Chairmen:* Mr. HAGUIWARA (Japan)

*later:* Mr. ZAVALA MUNIZ (Uruguay)

(1) Opening the meeting, Mr. HAGUIWARA announced the death, at Punta del Este, on 20 November 1954, of Mr. de Thibault, Governor-General of the Belgian Congo; the announcement so made would be repeated in all Commissions and in plenary meeting in the course of the afternoon.

**PROGRESS OF THE WORK OF THE SESSION: REPORTS BY THE CHAIRMEN OF COMMISSIONS AND COMMITTEES**

(2) Mr. MONTAGNIER said that, after hearing the progress reports of chairmen of commissions and committees, he would be able to indicate the work arrangements for two or three days ahead.

(3) Mr. BEEBY announced that the Administrative Commission had practically completed its work on amendments to Article V of the Constitution and would be ready to report thereon to the plenary meeting in the afternoon. That morning, the Commission would be taking financial questions, but could not expect to finish them. He hoped it would be possible for the Administrative Commission to meet in the afternoon after the plenary meeting.
(4) On Saturday, twenty-three Member States had unfortunately been absent from the meeting of the Administrative Commission, so that many of its decisions, carried by a narrow margin, might well be reversed in the plenary meeting.
(5) In conclusion, Mr. Beeby hoped that it would be possible for the Administrative Commission to meet the following morning.

(6) Mr. BOURGEOIS reported that the Programme and Budget Commission concluded its general discussion of the programme for 1955-56 by Friday evening, 19 November 1954. At its meeting on Saturday morning, the Commission decided not to discuss the proposals regarding the division of resources between permanent and special activities until it had gone through the proposed programme and budget in detail and received the Advisory Committee's report on the point. That day the Committee proposed to take the technical assistance questions and the following day, when the report of the Administrative Commission would be before them, the question of the provisional budget ceiling for 1955-56.

(7) Mr. GARDNER DAVIES recalled that most of the questions relating to the Executive Board's report on the remodelling of Unesco's future programme had been referred to the Advisory Committee. The Committee intended to study those questions at four meetings starting on Wednesday afternoon, but he feared that its work would be greatly retarded by the fact that simultaneous interpretation would not be available. In view of the heavy tasks devolving upon the Committee, he asked the General Committee if one of the three following solutions could be envisaged: (1) the Advisory Committee might hold more than four meetings; (2) it might be possible to have simultaneous interpretation after all; (3) if only consecutive interpretation were available, it might be possible to use only English and French as working languages. If none of those solutions were possible, he feared that the Committee would have to hold night meetings, which it was naturally reluctant to do.

(8) Mr. MONTAGNIER pointed out that in the plan for the organization of its proceedings approved by the Conference it was stipulated that only two meetings with simultaneous interpretation and two with consecutive interpretation could be held at one and the same time; thence the Advisory Committee could be provided with simultaneous interpretation only when there were no meetings of the Administrative Commission. He emphasized the great practical difficulty of providing simultaneous interpretation at three meetings staged concurrently.

(9) Mr. GARDNER DAVIES reminded the Committee that he had not received an answer to his question concerning the possibility of restricting the working languages in the Advisory Committee to English and French.

(10) Mr. BERNAL JIMENEZ thought that interpretation into Spanish should not be dispensed with in the Advisory Committee on Programme and Budget. The use of Spanish caused very little loss of time and facilitated the work of Spanish-speaking delegates.
(11) Speaking as Chairman of the Credentials Committee, he had to report to the General Committee of the Conference that a number of States had now lodged their respective representatives' credentials in due form and a further report would be prepared for the afternoon's plenary meeting. Under the powers delegated by the Committee to its Chairman, he himself would be able to draft the report in question in the course of the forenoon without having to call the Credentials Committee together.

(12) Speaking for one of the smaller delegations, Mr. SHARIF expressed regret that meetings of the Plenary Conference, the Programme and Budget Commission and the Working Party on Decentralization should all be scheduled for that afternoon. He had understood it to be a rule that, when the Plenary Conference was

meeting, no other organ of the Conference should meet to discuss questions of importance. As the Executive Board was preparing a paper on decentralization, he suggested that the meeting of the working party might be postponed until that paper was ready.

(13) The DIRECTOR-GENERAL explained that, although the Plenary Conference and the Programme and Budget Commission were to meet simultaneously, the latter would be holding a general discussion only on technical assistance. As for the Working Party on Decentralization, he would ask the Chairman of the Board to reply to that question.

(14) Sir Ronald ADAM explained that the Board's paper was on the National Commission aspect of decentralization. Although it would not be ready until that evening at the earliest, the working party could, nevertheless, meet to discuss other aspects of the problem.

(15) Mr. SHARIF observed that the National Commission aspect was inseparably connected with other aspects. He did not, however, wish to make a formal proposal and, if the majority of the General Committee thought that the working party should meet that afternoon, he would accept their opinion.

(16) Mr. BOURGEOIS supported Mr. Sharif's suggestion. The Working Party on Decentralization could be suspended for the duration of the plenary meeting to meet the difficulties of the smaller delegations without that entailing the sacrifice of one of the meetings planned for the working party, which had only a very limited time for its work.

(17) Mr. GARDNER DAVIES again asked for the Committee's advice on the subject of working languages and interpretation at the forthcoming meetings of the Advisory Committee.

(18) Mr. MONTAGNIER reminded the Committee that the Rules of Procedure were very definite: Spanish was a working language of the General Conference on the same footing as English or French and interpretation into Spanish could only be dispensed with if all the Spanish-speaking members of the committee concerned agreed.

(19) Mr. HAGUIWARA confirmed that interpretation and pointed out that in a small committee the Chairman could often get members to agree to dispensing with interpretation into one or even two of the working languages for that meeting only. However, before taking any decision he thought they should hear what the Secretariat suggested about the programme of work for the next two or three days.

(20) Mr. MONTAGNIER said that the Programme Commission would be meeting daily up to Wednesday, 24 November. That day (22 November) a meeting of the Administrative Commission could be fitted in during the afternoon by cancelling the meeting of the Committee on Reports of Member States. For Tuesday morning, 23 November, meetings of the Administrative and Programme Commissions and of two of the Programme Commission's working parties were planned. As it was necessary to make the best possible use of the means and time available, it was desirable for four of the subsidiary bodies of the Conference to meet simultaneously. For the afternoon of the 23rd, meetings of the Programme Commission, of the Committee on Reports of Member States, of the Working Party and possibly of the Advisory Committee, were proposed. On Wednesday, 24 November, there was to be a plenary meeting in the morning to take item 14 of the agenda (examination of the report of the Programme and Budget Commission and provisional decision on the maximum assessment level and on the total budget figure for 1955-56), plus meetings of the Programme Commission's two working parties and of the Committee on Reports of Member States. Should a decision on item 14 be reached at the morning's plenary meeting, the Programme Commission could begin the detailed study of Part II of the proposed programme and budget in the afternoon and three other subsidiary bodies of the Conference could also meet; those might be the Administrative Commission, the Advisory Committee and one of the Programme Commission's working parties. On Thursday, 25 November, it was proposed to hold a meeting of the Advisory Committee in the morning and of the Headquarters Committee in the afternoon.

(21) Mr. HAGUIWARA (Japan) asked whether the meetings of the Programme and Administrative Commission on the 25th, would last the whole day.

(22) Mr. MONTAGNIER said that he did not know yet what the Administrative Commission would want to do that day. Generally speaking, though, the Commission could hold daily meetings except when the Legal Committee was sitting. If the latter Committee did not meet on the 25th, the Programme and Administrative Commissions could hold two meetings each that day in addition to the proposed meetings of the Advisory and Headquarters Committees and, possibly, two working parties.

(23) The time-table submitted by the Secretariat was approved.

International Cultural Fund (draft resolution submitted by the delegation of Brazil) (document 8C/DR/69)

(24) Mr. BERREDO CARNEIRO, introducing the resolution, recalled that the Brazilian delegation in its comments on the Director-General's Report had suggested the establishment of an International Cultural Fund. At the moment the Conference was not being asked to approve the actual establishment of the Fund, but simply to authorize the Director-General to have the proposal studied in consultation with the Executive Board and Member States; very careful preliminary study was essential and there had also to be contacts and consultations, not to mention the essential concurrence of the few States favoured by fortune and of the numerous States for which the provision of substantial help under Unesco's programme was becoming increasingly necessary if their aspirations and needs were to be met and the provisions of the Constitution complied with.

(25) In view of the recent changes adopted regarding the membership of the Executive Board, the speaker suggested amending the draft resolution submitted by amplifying the opening sentence to read "Authorizes the Director-General to arrange for a study, in consultation with the Executive Board and Member States ...." and striking out the second sentence, which had become pointless.

(26) In Mr. Carneiro's view it would be difficult to refuse to commend this text to the Conference; after all, Unesco was meeting in a region of underdeveloped countries to which it had not given much help and had just decided to hold its next session in another underdeveloped region. He felt it was most important not to leave Latin America without giving it grounds for hoping that Unesco was exercised about its problems and was trying to solve them nor to arrive in India without having given that preliminary indication of interest. He hoped that the project would secure the unanimous approval both of the wealthy countries and of the very numerous countries which were less favoured. Finally, could he be told to what commission the project should be submitted?

(27) Mr. KABIR, while entirely in sympathy with the proposal of the delegate of Brazil, thought it more appropriate for it to be discussed in the Programme and Budget Commission than in the General Committee, which was concerned with procedural matters only.

(28) Although Mr. COWELL was sure that no one would contest the fact that the Brazilian proposal was entirely in line with Unesco's aims, he felt that some order of priority should be established for all the appeals for funds being made to governments. His own Government, for example, was already contributing to the Expanded Programme of Technical Assistance and the Colombo Plan; then there was at present before the United Nations a proposal for the establishment of a Fund for Economic Development; there was also the question of the Educational Development Fund. He therefore suggested that a resolution in broader terms than that of the Brazilian delegation was required; it might, for example, read: "The General Conference authorizes the Director-General to arrange for a study of the utility and practicability of including among the resolutions of the General Conference appeals for extra-budgetary funds for the execution of Unesco's objectives".

(29) In reply to a remark by the DIRECTOR-GENERAL, Mr. BERREDO CARNEIRO said that the referral of his proposal to the Programme and Budget Commission would be satisfactory to his delegation.

(30) Mr. KOTSCHNIG would agree to that solution on the understanding that members of the Programme and Budget Commission would be able to suggest amendments to the Brazilian delegation's resolutions such as that proposed by the delegate of the United Kingdom.

(31) Mr. LEROY agreed with the measures adopted but said that a point of procedure arose. In its comments on Part II, Chapter 1, Education, paragraph 143 (8C/BUD/1, p. 5) the Advisory Committee had made a recommendation that, if the work plans submitted by the Director-General for the establishment of an International Fund needed to be expanded, the General Conference should give him any instructions it considered necessary to enable him to undertake activities in connexion with the matter in the light of the decisions taken by the General Assembly of the United Nations. The question arose whether that recommendation did not clash with the proposal of the Brazilian delegation.

(32) Mr. BADINI CONFALONIERI thought that the General Committee should simply refer the draft resolution to the Programme Commission, which could study it in detail.

(33) Mr. BERREDO CARNEIRO suggested that, to meet the point raised by the delegate of France, the amendment of the first phrase might be further amplified as follows: "Authorizes the Director-General to arrange for a study, in consultation with the Executive Board, Member States and the United Nations.....".

(34) Mr. BOURGEOIS pointed out that the proposal of the delegation of Brazil was connected with another proposal by the same delegation to instruct the Director-General to consider what major projects Unesco could undertake under future programmes. As the latter proposal had been referred to the Advisory Committee, it would probably be a good idea to send the Committee Mr. Berredo Carneiro's latest proposal as well.

(35) Mr. KOTSCHNIG moved that the Brazilian proposal be referred to the Programme and Budget Commission and not to the Advisory Committee, which had already been obliged to refer the question of the Educational Development Fund to that Commission.

(36) Mr. GARDNER DAVIES strongly supported this motion.

Legal guarantees to be provided nationally for the staff of the Secretariat (draft resolution submitted by the delegation of Italy) (document 8C/DR/74)

(37) Mr. MONTAGNIER explained that the resolution was being put before the General Committee because it was not expressly included in the agenda, unless it could be read into item 9.5.1 of the revised agenda (Personnel Recruitment Standards and Methods), which would be dealt with in the Administrative Commission.

(38) Mr. BADINI CONFALONIERI explained that the purpose of the draft resolution was to make it easier to secure outstanding and highly qualified persons for certain important posts in the Secretariat by removing any fears they might have as to the security of their careers in their own countries.

(39) The referral of the draft resolution to the General Conference was approved.

**PROCEDURE TO BE ADOPTED FOR THE DISCUSSION OF ITEMS 8.3 AND 14 OF THE REVISED AGENDA**

(40) Mr. MONTAGNIER pointed out that that matter had just been settled by the Committee's approval of the proposed work plan for the next three days submitted by the Secretariat. The Administrative Commission would have to report on the financing of the budget and the scale of contributions and its report would be forwarded to the Programme Commission; the Conference could decide about item 14 in plenary meeting on the morning of the 24th.

(41) This procedure was approved.

**AMENDMENT TO THE WORDING OF ITEM 15 OF THE REVISED AGENDA, AND PROCEDURE TO BE ADOPTED FOR THE ELECTION OF TWENTY-TWO MEMBERS OF THE EXECUTIVE BOARD**

(42) Mr. MONTAGNIER said that, when the agenda was drawn up, it provided for the election of 10 members only. Arising out of the proposal adopted by the Administrative Commission, the number of members now to be elected to the Board was 22. The Chairman was going to make a statement on the procedure for those elections, and the dates had still to be fixed.

(43) The CHAIRMAN read the draft of a statement which would be made in plenary meeting after the amendments to Article V of the Constitution had been approved. The text of the statement would appear in the verbatim record of the eleventh plenary meeting (8C/VR/11).

(44) Mr. KABIR remarked that the meeting of the Nominations Committee had originally been scheduled for 3 December. It was now proposed to hold it on 7 December, and he asked if it would be possible to advance it one day, so that it would meet on 6 December.

(45) Mr. BERREDO CARNEIRO pointed out that the Member States who had nominated candidates before the Administrative Commission had decided to change the membership of the Executive Board, would have to confirm or amend their nominations in the light of those changes; on the other hand, the States which had proposed the changes would presumably not have to supply such confirmation.

(46) The DIRECTOR-GENERAL informed the Committee that a number of governments, anticipating the possible adoption of the proposed amendment to Article V of the Constitution, had already nominated candidates before the opening of the eighth session. It would therefore be unnecessary to call upon them again for nominations.

(47) Mr. RUIZ-GIMENEZ asked whether, in view of the new method of election, the list of nominations should show the names of the candidates or the names of the countries which they would represent. He felt that the Committee would have to draw up lists giving the names of countries, not of individuals.

(48) The CHAIRMAN thought it was a reasonable question to ask. In his view, as the principle governing representation on the Board had been changed, countries - not individuals - should be nominated for election.

(49) Mr. BERNAL JIMENEZ said that the system of representation had been changed but certain criteria in the Constitution still remained, more particularly, those relating to the personal qualities of prospective Board members. Article V, paragraph 2, of the Constitution still held good and required that candidates, although they had now become the representatives of their governments, should possess certain specific qualifications in the arts, letters, the humanities, the sciences and education. For an adequate response to the Spanish delegate's point, the two types of criterion had to be combined.

(50) Mr. RUIZ-GIMENEZ indicated his agreement with Mr. Bernal Jimenez's statement.

(51) Mr. KOTSCHNIG, replying as first sponsor of the motion to amend Article V of the Constitution, explained that the election was to be an election of individual persons nominated by their governments and responsible to the latter. Although it was possible under the Rules for a government to nominate a candidate who was not one of its own nationals, he did not believe that the case was likely to arise.

(52) Mr. SHARIF pointed out that the usual procedure was for the elections to be completed in one day, the Nominations Committee meeting in the morning and the Plenary Conference in the afternoon. He considered it better to follow that practice, and proposed that the Nominations Committee meet on 7 December in the morning and the Plenary Conference in the afternoon.

(53) Mr. KABIR seconded the remarks of the delegate of Pakistan on the point of procedure, but proposed that the meetings be held on 6 December and that Saturday, 4 December, be fixed as the last day for the submission of nominations.

(54) Mr. MONTAGNIER pointed out that that proposal did not quite square with the Rules of Procedure, under which nominations could be submitted up to the opening of the plenary meeting at which elections would be held unless the Rules of Procedure were amended by the Conference. Delegations could, however, be asked to do their best to lodge their nominations before the end of the day of 4 December.

(55) Mr. HAGUIWARA thought that the delegate of Pakistan was right in urging that the interval between the meeting of the Nominations Committee and of the plenary meeting of the Conference should be as short as possible. He suggested that the Nominations Committee sit in the afternoon of 6 December and the morning of 7 December, with the plenary meeting in the afternoon of 7 December.

(56) Mr. MONTAGNIER thought that the proposal was perfectly practicable but emphasized the need

for an interval of two or three hours at least between the meetings of the Nominations Committee and the plenary meeting, as the material for the latter would have to be got ready.

(57) This proposal was approved.

(58) The CHAIRMAN, summing up the proposals made by members of the Committee, said that the proposal was to have a first meeting of the Nominations Committee during the afternoon of 6 December, a second meeting of the Committee in the morning of 7 December and the plenary meeting to deal with the question in the afternoon of the same day. Did the General Committee approve that arrangement?

(59) Mr. SHARIF agreed on the understanding that the Nominations Committee would make its nominations on the same day as the election.

(60) The CHAIRMAN announced that the General Committee would meet again on Wednesday, 24 November, at 9 a.m.

The meeting rose at 10.25 a.m.

# SIXTH MEETING

*24 November 1954 at 9 a.m.*

*Chairman:* Mr. SHARIF (Pakistan)

**PROGRESS OF WORK**

(1) Mr. MAHEU reminded the meeting of the procedure decided upon. The Programme and Budget Commission was to discuss that morning the provisional assessment level for 1955 and 1956 and to draw up recommendations in the light of those submitted by the Administrative Commission. Those two series of recommendations were to have been presented to the plenary Conference for final decision on the morning of 25 November, but certain delegations had spoken to the Secretariat of their misgivings: they feared that members of the Programme and Budget Commission, not knowing what had been recommended by the Administrative Commission, would start discussing matters on which they were not qualified to speak. For those reasons, the Secretariat proposed the following changes in procedure.

(2) That morning a short plenary meeting would be held to take a final decision on the recommendations of the Administrative Commission concerning: (1) arrears of contributions and voting powers of the countries concerned; (2) scale of contributions; (3) financing of the budget.

(3) Those decisions would then be communicated to the Programme and Budget Commission that afternoon; the Commission would be free to make any recommendations it wished on the provisional budget total, and they would be submitted to the plenary meeting for approval on the morning of 25 November.

(4) While agreeing with the recommendations of the Secretariat, Sir Ben BOWEN THOMAS proposed that, if possible, there should be a meeting of the plenary Conference that evening at 6 p.m. to fix the provisional budget total, on the recommendation of the Programme and Budget Commission. If that could be done, the Programme and Budget Commission would be able to continue its work without interruption the following morning.

(5) Mr. MAHEU saw no objection to the proposal, provided that the Programme and Budget Commission were able to complete its discussion by 6 p.m.

(6) The procedure proposed by the Secretariat, as amended by the delegate of the United Kingdom, was approved.

(7) The CHAIRMAN called upon the Chairman of the Programme and Budget Commission to report on the Commission's work.

(8) Mr. BOURGEOIS said that on the previous evening the Programme and Budget Commission had completed its discussion of the chapter on technical assistance and had unanimously adopted the resolutions contained in document 8C/5, Annex VIII, with a few amendments of form rather than substance.

(9) Mr. BEEBY reported that the Administrative Commission had dealt with the question of the voting rights of certain countries and would be ready to report thereon to the plenary meeting that morning. Further, its recommendations on the scale of contributions and methods of financing the budget were to be found in a document before the Committee.

(10) Mr. GARDNER DAVIES announced that the Advisory Committee's consideration of the Final Report of the Committee of Experts on Education for International Understanding and Co-operation was well advanced, and that it was hoped to complete that item during the morning.

(11) Mr. MAHEU indicated the relative urgency of the working parties' business:

(1) Working Party on Decentralization;

(2) Working Party on International Regulations;

(3) Working Party on the Structure of the Department of Mass Communication.

(12) Mr. BOURGEOIS reminded the meeting that it had been decided, on the proposal of the United States delegate, to ask delegations to state in writing the points on which they wished to speak. As proposals had been received on practically all points in the first three chapters of the proposed programme, Mr. Bourgeois wondered whether it was any use adhering to that system and suggested dropping it for the following programme chapters, as it involved extra work for the Secretariat.

(13) The CHAIRMAN remarked that, if the General Committee agreed, the Programme and Budget Commission would have to be asked to reverse its procedure.

(14) Mr. KOTSCHNIG asked how many comments there were and whether it would be possible for the Secretariat to produce a consolidated document.

(15) Mr. CHEVALIER said that the system did not entail a great deal of work for the Secretariat; it meant preparing a document of some 10 pages, in which the replies of 22 delegations would be set out in the order of the chapters of the proposed programme. It was therefore not an impossible task.

(16) Mr. MAHEU explained that the document would be only a synopsis and would not include the actual text of the proposals.

(17) Mr. CHEVALIER added that hardly any of the proposals submitted were accompanied by a statement of reasons and in only very few cases had any priority rating been requested.

(18) Mr. MAHEU inferred that the document would really amount to a list of the delegations which had submitted proposals, set out under each item in the programme.

(19) Mr. KABIR was against altering the procedure adopted and especially against setting a time-limit for the submission of such comments, as he feared that that would encourage delegations which might not otherwise have done so to submit further comments.

(20) Sir Ben BOWEN THOMAS seconded the delegate of India, but hoped that, in communicating the material to the Programme and Budget Commission, it would be made clear that the procedure was not considered useful; in that manner, the Commission might be persuaded to discontinue it.

(21) Mr. BEEBY was against the continuation of the system.

(22) Mr. BOURGEOIS did not himself expect there would be any fewer speakers for the last chapters of the programme, but he was in favour of abiding by that procedure. It might induce delegates to think over what they would say at the meeting.

(23) Seconding the delegates of India and the United Kingdom, Mr. KOTSCHNIG expressed the opinion that the comments nevertheless had a certain value, as they enabled delegations to know what other delegations thought about various points, and the necessity for five-minute breaks for consultation during meetings might thus be avoided. He therefore seconded the proposal to continue the system.

(24) It was agreed not to alter the procedure.

(25) Referring to the calendar of work, Mr. GARDNER DAVIES requested that the Advisory Committee and the Headquarters Committee should not meet simultaneously on Thursday afternoon (25 November), since it would make his own position very difficult as Chairman of the Advisory Committee and Rapporteur of the Headquarters Committee.

(26) It was agreed that the Advisory Committee on Programme and Budget should not meet at that time, but that instead there should be a meeting of the Working Party on Mass Communication.

MISCELLANEOUS DRAFT RESOLUTIONS (8C/DR/74 to 83)

(27) Mr. MAHEU said that a number of draft resolutions had been submitted by the Italian delegation. Preliminary perusal by the Secretariat showed that some of them had budgetary implications and could not therefore be considered under Rule 78 of the Rules of Procedure. However, if the Italian delegation agreed, those proposals could be considered as the Italian delegation's indication of the items in the programme on which it wished to speak.

(28) Mr. BADINI CONFALONIERI accepted that interpretation. Those proposals were merely intended to draw attention to the points which the Italian delegation wanted discussed. It would, if need be, withdraw any proposals with budgetary implications.

(29) Mr. KOTSCHNIG asked for an explanation of the procedure to be followed in discussing the provisional budget total. He assumed that the discussion would start with a presentation by the Director-General or the Chairman of the Executive Board of the higher budget level proposals.

(30) The DIRECTOR-GENERAL thought that the procedure suggested would be satisfactory. The Chairman of the Executive Board might speak first, followed by himself; thereafter, the consideration of motions from delegations would be in order. Motions farthest from the original proposal by the Chairman of the Board and the Director-General would, in accordance with the Rules of Procedure, have to be put to the vote first.

(31) The above procedure was approved.

(32) Mr. BERNAL JIMENEZ wished to know whether the decision about the budget total was to be taken

before or after the discussion of all the chapters of the programme. He wanted that point cleared up.

(33) The DIRECTOR-GENERAL explained that, in accordance with the agenda of the General Conference, the decision on the assessment level and the provisional budget total had to be taken before the Programme and Budget Commission discussed the various chapters of the budget. The order of business would thus be as follows: (1) the General Conference in plenary session would meet that morning to consider the report of the Administrative Commission on arrears of contributions and voting rights of certain countries, the scale of contributions and methods of financing the budget; (2) on the basis of the plenary Conference's discussions, the Programme and Budget Commission would meet as soon as possible to discuss the provisional budget total; that meeting would start with the presentation by the Chairman of the Board and the Director-General of the higher budget proposals; the Commission would then report back to the plenary Conference, if possible by 6 p.m., so that the latter could fix the provisional budget total. The next morning, the Programme and Budget Commission would be able to start considering Part II of the budget. It would still be free to propose a change in the budget total at a later stage, if it so desired.

The meeting rose at 9.55 a.m.

# SEVENTH MEETING

*26 November 1954 at 9.15 a.m.*

*Chairman:* Mr. ZAVALA MUNIZ (Uruguay)

**PROGRESS OF WORK OF THE GENERAL CONFERENCE**

(1) The CHAIRMAN asked members of the General Committee if they had any reports to submit. He called upon the Chairman of the Programme and Budget Commission.

(2) Mr. BOURGEOIS said that the Programme and Budget Commission had begun its consideration of the chapter on Education and had reached paragraph 159 under the heading of Education and Child Development. It would continue its discussion and would complete the Education chapter, either at the end of the afternoon meeting or more probably at the following morning's meeting.
(3) Few alterations had been made in the points already discussed. The main change was the cancellation of the appropriations provided under paragraph 146 for the International Educational Development Fund.

(4) The CHAIRMAN submitted the report of the Chairman of the Programme and Budget Commission for discussion. As there were no comments, he declared it approved.

(5) Mr. COWELL pointed out that, as a consequence of the decision taken on the budget ceiling, there would have to be slight adjustments to the budget and asked what procedure was envisaged for the discussions on the budget in the Programme Commission.

(6) The DIRECTOR-GENERAL said that he had discussed the matter with the Chairman of the Programme and Budget Commission and a procedure had been agreed which seemed to deal with the matter in a fair and orderly way. The Chairman of the Programme Commission would inform the Commission from time to time of the position with regard to budget cuts. At the end of each chapter, the situation concerning cuts and increases would be summarized and the Director-General be asked if he had any proposals to make before the chapter was finally approved Each chapter would be subject to reconsideration before final approval was given to the Programme and Budget as a whole.

(7) Mr. BOURGEOIS agreed to the remarks made by the Director-General.

(8) The CHAIRMAN asked the delegate of the United Kingdom if he wished to recommend the adoption of the procedure outlined by the Director-General. The delegate of the United Kingdom agreed with that procedure. The Chairman then called on the Chairman of the Administrative Commission.

(9) Mr. BEEBY said that the Administrative Commission was well advanced. Its work on Official and External Relations had been completed, the work on legal questions had been completed and the Commission was waiting for the draft amendments to be forwarded to it by the Legal Committee. All questions of finance had been settled except the currency of contributions, which question was being discussed by the Contributions Committee. With regard to headquarters matters, the Commission would have to await the recommendation of the Headquarters

Committee on the supplementary report of the Director-General. The questions concerning working languages had been settled. The only work which remained outstanding was that on staff questions, which would be dealt with by the Administrative Commission during the following week. The Commission had been able to allocate the remaining meetings of the current week to the work of the Legal Committee.

(10) As there were no comments, the CHAIRMAN declared the report of the Chairman of the Administrative Commission approved. He then called on the Chairman of the Advisory Committee on Programme and Budget

(11) Mr. GARDNER DAVIES said that the Committee had completed its examination of the report of the Expert Committee on Education for International Understanding and Co-operation, modifying specific points. The Committee's report was ready and he hoped to present it to the Programme Commission at the beginning of its morning meeting.

(12) The Advisory Committee had still to consider various points on the remodelled programme and would require, for that purpose, three or four meetings in the following week.

(13) In the absence of the Chairman of the Headquarters Committee, Mr. Gardner Davies reported that that Committee had discussed the main item on its agenda at its last meeting, namely, the supplementary report on the installation of an office of the International Civil Aviation Organization at the permanent headquarters of Unesco. One point had emerged clearly from the discussion, which was that the new headquarters building must remain wholly a Unesco building. The Committee had, however, agreed in principle to recommend that the Director-General should negotiate a contract with the International Civil Aviation Organization for the building of a block for its use and had agreed that the Headquarters Committee should discuss plans for such a building.

(14) Mr. HAGUIWARA wished to know whether the Headquarters Committee had fixed a date for the completion of the new headquarters building. That date was bound to influence the decision concerning the meeting place of the next General Conference. However, he gathered that the Administrative Commission had already taken a decision on that last point.

(15) Mr. GARDNER DAVIES replied that the Headquarters Committee expected the building to be completed by December 1956 or January 1957.

(16) The CHAIRMAN called for comments. As there were none, he declared the report of the Chairman of the Advisory Committee on Programme and Budget approved. He then called on the Secretary to outline the programme of work for 27 and 29 November.

(17) Mr. MONTAGNIER, after listing the meetings of 27-29 November, added that the Headquarters Committee would need to hold another meeting to consider the report it would be submitting to the Administrative Commission; that meeting would probably be scheduled for the afternoon of Wednesday, 1 December.

The meeting rose at 9.35 a.m.

# EIGHTH MEETING

*29 November 1954 at 9 a.m.*

*Chairman:* Mr. ZAVALA MUNIZ (Uruguay)

(1) Opening the meeting, the CHAIRMAN called upon the Chairman of the Administrative Commission to make a progress report.

(2) Mr. BEEBY announced that, as the Commission had not met since the General Committee's last meeting, the position was still as he had stated it on Friday morning (26 November). In the course of the day (Monday, 29 November), the Commission would first consider reports from the Legal Committee and would then go on to staff questions, which would probably require four meetings.

(3) The above verbal report was approved.

(4) Mr. BOURGEOIS reported that the Programme and Budget Commission had concluded its scrutiny of the Education chapter. He would not at the moment describe in detail the changes made but they were substantial, more particularly in the item on Palestine refugees, for whom a considerably higher appropriation was being recommended. In all, the Commission had approved additional appropriations of $97,000 in chapter 1 as a whole. Could the Director-General say whether that figure could be offset within the chapter pending the general redistribution between all parts of the programme which would follow on completion of the examination of the remaining chapters? In conclusion he had to report that a large majority of the Commission had not seen its way to accept the proposal for an International School. At its meeting that morning the Commission

would be beginning its scrutiny of chapter 2, Natural Sciences.

(5) The DIRECTOR-GENERAL drew attention to a difficult question of procedure in the Programme and Budget Commission. He recalled his earlier suggestion that, when the Commission had concluded its examination of the chapter on Education, he should propose all the cuts which he was willing to foresee at that time, reserving additional cuts to be made when all the programme chapters had been considered. The Commission would then adopt, reject or change the cuts he had proposed, with the aim of getting back to the budget level in document 8C/5. Even if all programme chapters were reduced to the 8C/5 budget level, there would still be an excess of $200,000 over the approved provisional budget figure. If that sum were distributed over all the programme chapters in accordance with the percentages allocated to them, a cut of some $60,000 would have to be made in the Education chapter. As a result of the work of the Programme and Budget Commission, however, the Education chapter was already $97,000 in excess of the 8C/5 budget level, so that, if the percentage for each chapter were strictly followed, a total cut of some $150,000 would have to be made in the chapter on Education. The Programme and Budget Commission might wish to redistribute the percentages, but, if the Education chapter were allowed to exceed the 8C/5 budget level by $150,000, other programme chapters might be penalized.
(6) Two alternative procedures were therefore possible: (1) the Director-General could refrain from proposing any cuts in the Education chapter until all chapters of the programme had been considered; or (2) as already suggested, he could propose cuts forthwith, with the intention of reducing the Education chapter to the 8C/5 budget level before the other programme chapters were examined. He added that the Department of Natural Sciences had a very important proposal to make in connexion with the United Nations scheme for the use of atomic energy for peaceful purposes.

(7) Mr. BOURGEOIS felt offhand that, as the understanding was that all the changes made in the programme were provisional, it might be worth waiting until the remaining chapters had been examined and then reviewing the whole programme with a view to a judicious redistribution within the prescribed budget ceiling; probably it would be an easier matter then. He would also like to make a personal suggestion to the Director-General and the General Committee of the next Conference. It might be worth following the example of the Advisory Committee and not scrutinizing the various chapters of the programme always in the same order. He would, in conclusion, tell the Programme and Budget Commission that the figures it had adopted would remain provisional until the whole programme had been examined, at which time the Commission could make the necessary adjustments.

(8) Mr. BEEBY thought it essential that the Programme and Budget Commission should be as conscious as its Chairman of the need to keep within a budget ceiling. If the Commission thought of increasing any items, it should at the same time think of other items which it was prepared to propose for suppression.

(9) Mr. BOURGEOIS asked whether the Director-General agreed to his telling the Commission that, in principle, each chapter should be kept more or less to the percentage laid down in the proposed programme and budget and that large transfers between chapter and chapter were undesirable.

(10) The DIRECTOR-GENERAL considered that one of the Conference's most important tasks was to decide whether or not the percentage allocated to each programme chapter was appropriate. The existing percentages were only his own proposal and he was anxious, not only for the Conference to take a decision in respect of the programme for 1955-56, but also to give him guidance for the preparation of the programme for 1957-58.

(11) Sir Ben BOWEN THOMAS wondered whether the two suggestions made were not compatible, that was to say, the Chairman of the Programme and Budget Commission might make the statement he had suggested, and the Advisory Committee on Programme and Budget, working parallel to the Programme and Budget Commission, might study the cuts proposed by the Director-General and make a statement to help the Commission when the latter came towards the end of its work.

(12) Mr. GARDNER DAVIES agreed that the Advisory Committee could consider the Director-General's proposals for adjustments in the programme chapters, but, having seen how little the Committee's advice was followed in the Programme and Budget Commission, he doubted if it would serve any useful purpose.

(13) Sir Ben BOWEN THOMAS sympathized with the feelings of the Chairman of the Advisory Committee on Programme and Budget, but pointed out that the position had changed since the Chairman of the Programme and Budget Commission had undertaken to inform the Commission that it must work within a budget ceiling. As it was the Advisory Committee's task to help the Commission to do that, the experience of the Chairman of the Committee might thenceforth be happier.

(14) Mr. KABIR thought that the difficulty which had arisen was inherent in the procedure followed: if every item of the programme was brought before the Programme and Budget Commission, it was impossible to ensure that percentages were adhered to. He agreed with the Director-General that the Commission should decide upon the overall percentages, but it should not go into every detail. He therefore suggested that the Director-General, in consultation with the Executive Board, might be asked to work out a better procedure for the ninth session of the General Conference, providing, for instance, for an initial general debate in the Programme and Budget Commission, when the overall percentages for the programme chapters would be laid down.

(15) Referring to the proposal of the delegate of the

United Kingdom, the DIRECTOR-GENERAL did not think it possible for the Advisory Committee to work parallel to the Programme and Budget Commission. However, when the Commission had terminated its consideration of all the programme chapters, it could refer the matter of cuts to the Advisory Committee for advice, giving it a number of general considerations for its guidance. The Advisory Committee could then work as an expert working party, and the Director-General could be invited to make proposals to it for cuts. The Advisory Committee might undertake that task for a day and a half during the election of new members of the Executive Board and, during that time, the Programme and Budget Commission might adjourn.

(16) Mr. BOURGEOIS fully approved the general lines of the proposed procedure, always assuming that the Commission had time to follow it. If the Advisory Committee was to meet meanwhile and report back thereafter to the Programme Commission, the latter would be obliged to complete its scrutiny of all chapters by Wednesday, 8 December.

(17) Mr. GARDNER DAVIES said that the Advisory Committee would accept the task, if it were possible for the Programme and Budget Commission to complete its first examination of the programme chapters in time.

(18) Sir Ben BOWEN THOMAS moved that the Committee approve the procedure suggested by the Director-General, even if it meant that the Programme and Budget Commission was obliged to hold night meetings.

(19) Mr. BOURGEOIS had no objection to night meetings and had warned his Commission that they might be necessary if there were too many speakers and they talked too long.

(20) Sir Ben BOWEN THOMAS said that his delegation had been much concerned at the length of speeches in the Programme and Budget Commission. He suggested that members of the Commission be asked to limit their speeches to ten minutes.

(21) Mr. BOURGEOIS asked whether the delegate of the United Kingdom would be willing to ask delegates to limit their speeches to five minutes, with ten minutes as the outside limit. Scientists might reasonably be expected to be more terse than educationists. Besides, the earlier discussions had been a sort of running-in process; they could now hope for greater concentration. While he did not at that stage wish to lay down a hard-and-fast rule, he himself was not losing sight of the fact that a strict time-limit might have to be imposed on speeches.

(22) The CHAIRMAN announced that the procedure would be as follows: first, provisional decisions by the Programme and Budget Commission; next, reference of these to the Advisory Committee; lastly, return of the items to the Commission, with the Committee's comments, for final approval. In addition, speeches in the Programme and Budget Commission would be limited to a maximum of ten minutes.

(23) Agreed.

(24) Mr. LEROY (France) asked leave to submit a draft recommendation on natural disasters. The Committee would recall the damage recently caused by the hurricane "Hazel", the sympathy of the United Nations with the sufferers and their invitation to the Specialized Agencies to associate themselves with those sentiments. It was much to be feared, however, that such an expression of sympathy would remain empty words unless some funds were provided. The French delegation had therefore felt that the logical step was to work out a proposal involving neither an increase in the budget nor the appropriation of any part of the present budget. It consisted essentially (1) in asking the Director-General to give absolute priority to forwarding to the technical assistance services requests from victims of natural disasters for help to restore the economic situation and alleviate the sufferings of the victims; (2) in asking the Director-General to request the technical assistance services to give similar absolute priority to the examination of such requests.
(25) What procedure should be followed in submitting such a draft recommendation?

(26) The DIRECTOR-GENERAL remarked that it was for the Chairman of the Programme and Budget Commission to say whether the Commission could revert to the Technical Assistance chapter. If it could not, the proposal of the French delegation might be included in the General Resolutions, which had yet to be considered.

(27) Mr. BOURGEOIS said he would find it difficult to reopen chapters which his Commission had just finished discussing; several requests to that effect had already been made to him and he had always turned them down.
(28) He felt that the Director-General's concluding suggestion might well provide an answer. The Commission could examine that project as a general resolution, if it had no budgetary implications, while the Advisory Committee embarked on a general survey of the programme.

(29) Mr. LEROY (France) admitted that the project was being submitted rather late and quite agreed to its being discussed at the end of the session.

(30) It was agreed to refer the French delegation's proposal to the Programme and Budget Commission, with a view to its possible inclusion in the General Resolutions.

(31) Mr. BEEBY asked if the Spanish delegation's proposal, contained in document 8C/DR/90 and concerning amendments to the Financial Regulations and Rules of Procedure, was to be referred to the Administrative Commission.

(32) It was agreed to refer document 8C/DR/90 to the Administrative Commission.

The meeting rose at 10 a.m.

# NINTH MEETING

*1 December 1954 at 9.15 a.m.*

*Chairman:* Mr. MALAKUL (Thailand)

(1) The CHAIRMAN asked the Chairmen of Commissions and Committees to report on the progress of the work of the various organs of the Conference.

(2) Mr. BOURGEOIS said that the Programme and Budget Commission had completed its study of the Education chapter (item 8.4.1 of the agenda), and of the Natural Sciences chapter (item 8.4.2) except for one question which could not be decided until the Secretariat supplied certain figures. He intended to convene the Commission at 3 p.m. that same day, in order to complete the study of the Natural Sciences chapter and begin that of the Cultural Activities chapter.

(3) Owing to the limited time available, it had been necessary to restrict the number of speakers, and he envisaged the possibility of having to curtail the number of speakers on each question.

(4) Budget questions would be dealt with on the following Tuesday, 7 December, after the Advisory Committee on Programme and Budget had first met in order to adjust the programme to the budget ceiling fixed by the Conference. He expected that the Advisory Committee would find it difficult to meet all the wishes of the Programme and Budget Commission.

(5) Mr. BEEBY said that the Administrative Commission had begun to examine the proposed amendments to the Staff Regulations; it was difficult to estimate how long those discussions would last. When they had been completed, the headquarters question would be taken up. He was of opinion that, after consideration of the Staff Regulations had been completed, the Commission could conclude its work in two meetings.

(6) Mr. AL-HANI stated that the Committee on Reports of Member States had set up four working parties on a linguistic basis, one for each language of the General Conference; he read out the draft resolution adopted by the Committee, appearing at the end of document 8C/REP/1.

(7) Mr. AWAD said that the Legal Committee had only one or two supplementary items left to examine, and would need to meet once during the next few days for that purpose.

(8) After consultation with the Secretariat, it was decided that the meeting in question could be held the following morning.

(9) Mr. BERREDO CARNEIRO said that he would present the report of the Headquarters Committee to the Administrative Commission on Thursday afternoon.

(10) Mr. KABIR, referring to the coming election of the Executive Board, stated that he would like to receive directives from the General Committee with regard to two problems which would confront the Nominations Committee: that of the geographical distribution of posts and the procedure to be followed for the election.

(11) The DIRECTOR-GENERAL felt that the General Committee should send the Nominations Committee a communication on the matter; the Secretariat could inform the General Committee, at its meeting on Friday, of the policy adopted in previous years with regard to geographical distribution.

(12) Mr. SABA (Legal Adviser), referring to the method of election, pointed out that there was a contradiction between Rule 89 of the Rules of Procedure of the General Conference, permitting pluralities in the case of a second vote, and Article IV of the Constitution, according to which all decisions of the General Conference required an absolute majority vote. He felt that the Article of the Constitution should prevail in the matter.

(13) Mr. KOTSCHNIG did not think that the problem envisaged by the Legal Adviser would arise in practice.

(14) Mr. BEEBY did not see how it would be possible to resolve the geographical distribution problem at a plenary meeting, unless the Nominations Committee presented a list of the candidates which it proposed.

(15) Mr. KABIR said that that was why he had raised the question before the General Committee.

(16) Mr. BERNAL JIMENEZ felt that the General Committee should take a decision on the application of Rule 89. With regard to the method of election, the principle so far adopted was that each candidate had to be proposed by one or more delegations other than his own; Mr. Bernal Jimenez asked whether it would not be possible to group candidates by geographical regions.

(17) Sir Ben BOWEN THOMAS felt that the Legal Committee should be consulted on the method of election and that on the following Friday the General Committee should examine the memorandum, to be drawn up by the Secretariat, on the policy previously adopted with regard to geographical distribution.

(18) Mr. HAGUIWARA raised the problem of the validity of ballot papers containing fewer names than

there were persons to be elected to the Board. He also asked whether candidates not proposed in plenary session by the Nominations Committee would be eligible.

(19) Mr. RUIZ-GIMINEZ felt that the General Committee should decide and give a clear indication concerning the form of the election. With regard to geographical distribution, he thought that the best distribution possible should be aimed at but that no mathematical formula could be established. That was more a matter for the Nominations Committee than for the General Committee, as all Member States were represented on the former but not on the latter.

(20) Mr. SHARIF, referring to geographical distribution, also thought that it concerned the Nominations Committee rather than the General Committee, and that the former should be given all possible information (e.g. as to precedents), with a view to assisting it in its work. As for the method of election, he felt that the Legal Committee's opinion should be sought, having regard to the problems which had been raised by the Japanese delegate.

(21) Mr. KABIR recalled that it would be difficult to consider in advance the best form of geographical distribution, seeing that candidates could be nominated up to the last moment in the plenary meeting itself. He expressed the hope that on the following Friday ideas could be clarified and a practical decision arrived at.

(22) Mr. AWAD asked what kind of report was expected from the Legal Committee. If it were simply a question of the legal aspect of the method of election, he saw no great difficulty. In any case, he asked that the request should be expressed in a concrete form.

(23) Mr. MIGONE, with a view to avoiding a debate by the Nominations Committee, proposed an unofficial meeting of heads of delegations in order to deal with the matter of the Board's election.

(24) Mr. SABA (Legal Adviser) recalled that, for Friday's meeting, the Secretariat would supply the information for which it had been asked concerning the question of geographical distribution.

(25) The questions which the General Committee referred to the Legal Committee were as follows:

(a) Validity of ballot papers containing fewer names than there were persons to be elected (Rule 14 of the Rules for the Conduct of Elections by Secret Ballot);

(b) Eligibility of candidates not nominated by the Nominations Committee (Rule 95, paragraph 2, of the Rules of Procedure of the General Conference);

(c) Discrepancy between Article IV 8(a) of the Constitution and Rule 89 of the Rules of Procedure of the General Conference, with regard to the majority required for election on a second ballot.

The meeting rose at 10 a.m.

# TENTH MEETING

*3 December 1954 at 9 a.m.*

*Chairman:* Mr. ZAVALA MUNIZ (Uruguay)

**REPORTS OF THE CHAIRMEN OF COMMISSIONS AND COMMITTEES**

(1) Mr. BOURGEOIS said that the work of the Programme and Budget Commission was proceeding slowly. In fact, the Commission was at the moment in a very difficult position and its only possible course was to hold night meetings. Although the time allowed to speakers had been reduced to three minutes, the study of Part II of the programme was still far from finished, and the discussion of chapter 4 (Cultural Activities) had not been completed. The situation was due to the fact that the Commission had been unable to begin its work until the provisional budget ceiling had been adopted and the report on methods of financing the programme drawn up. A week had passed at the beginning of the session without the Commission's being able to hold a meeting. Mr. Bourgeois stressed that appropriate measures should be taken to enable the Commission in future to begin its work not later than three days after the opening of the Conference. It was very unfortunate that it should be necessary, as at present, to limit the time allowed for speeches, when the purpose of delegates' attending the Conference was to make known their views. Everything possible should be done to ensure that a similar situation did not arise in the future.

(2) Mr. Bourgeois also mentioned that the Commission had unanimously adopted, by acclamation, a draft resolution on peaceful co-operation, presented jointly by the United States of America, India and Czechoslovakia (document 8C/DR/115).

(3) Finally, he said, the Commission would like to refer project 3.4 (Social science and problems of international understanding and tensions) back to the Advisory Committee on Programme and Budget. The

Commission considered that the budget estimates and plans for the project were not satisfactorily balanced.

(4) Mr. GARDNER DAVIES said that the Advisory Committee had completed its work in connexion with the remodelling of the future programme, and the report it had prepared would probably be considered by the Programme and Budget Commission early in the following week.
(5) The Advisory Committee would also meet early in that week to adapt the programme to the approved budget. He assumed that the Secretariat would submit a certain number of proposals on the matter.
(6) Turning to the request made to the Advisory Committee by the Chairman of the Programme and Budget Commission, he recalled that the Committee had already expressed its views. Those views had not, it appeared, met with the Commission's approval, and it was hardly logical for the Commission to turn again to the Advisory Committee for more advice.

(7) Mr. KABIR said that all delegations were concerned at the slow progress being made at the Conference. In order to expedite matters at the present session and more particularly at future sessions of the General Conference, he wished to make the following suggestions:
(a) the budget ceiling should be established at the beginning of the Conference so as to ensure that full use was made of the advice of the Advisory Committee on Programme and Budget;
(b) there was no need to vote on all the paragraphs of the programme and budget: voting should be confined to the amendments to resolutions and budgetary items;
(c) delegates should be requested to keep to the agreed time-limits for their statements, which would thus become clearer and more relevant to the matter under discussion;
(d) it should be possible to discuss certain activities, for example, mass communication and cultural relations, simultaneously.

(8) Mr. BOURGEOIS pointed out to the General Committee that it might be helpful to set up working parties like that established the previous day to deal with the scientific and cultural history of mankind.
(9) He also wished to mention that the secretarial and interpreting staff available for Russian was very limited. That staff was consequently overworked, and something should be done to avoid a repetition of the difficulty at later sessions.
(10) Mr. Bourgeois agreed with the Chairman of the Advisory Committee on Programme and Budget that it was scarcely possible to have the same questions studied by the Committee several times. The Programme and Budget Commission would therefore discuss the decisions to be made with regard to project 3.4 without referring back to the Advisory Committee.
(11) Finally, he said if it was considered desirable to limit the time allotted to speakers in a particular Commission, delegates should be informed, at the opening of the Conference, about the decisions made.

(12) Mr. SHARIF said that the question of future procedure had already been discussed on several occasions and there were many conflicting views on the subject. In his opinion, the Secretariat should prepare a note with proposals for the best and most expeditious form of procedure and circulate it to Member States with a view to its being adopted at the earliest opportunity.
(13) With regard to the present session, he proposed that the number of delegations wishing to speak should not be restricted, but that they should speak only on resolutions and specific paragraphs; no more general discussion should be allowed.

(14) Sir Ben BOWEN THOMAS said that he had had occasion to be present at several meetings of the Programme and Budget Commission and had noted a subtle correlation between the work of that Commission and the prospect of election to the Executive Board. In order to remedy that situation, it might be useful, he thought, to make the work of the Nominations Committee precede that of the Commission.
(15) Secondly, he submitted the following draft resolution:

"That the General Conference instructs the Executive Board to study the problem of the organization of the ninth session in order to determine ways of curtailing the length of the Conference as a whole and of improving the efficiency and expediting the work of the main Commission".

(16) The preamble to the resolution could contain a tribute to the Chairman of the Programme and Budget Commission and to the interpreters serving with it.

(17) Mr. BOURGEOIS considered that it would be unwise to try to fix a final budget ceiling at the beginning of the Conference. Such a course would involve the danger of having to give up highly important projects for the lack of a few hundred dollars. The disadvantages of fixing too rigid limits at the beginning of a session had been experienced in the past.
(18) Mr. Bourgeois urged once again the advisability of distributing work among several study groups.
(19) It was not always possible to avoid general discussions on the whole of a chapter or section. Certain delegates might have views to express on adjustments that they thought should be made between the different sections in one chapter, or the projects in one section.

(20) Mr. VERONESE seconded the United Kingdom delegate's proposal that the Executive Board be invited to consider means of avoiding, at later sessions of the General Conference, the current difficulties due to shortcomings in the organization of the work. He also hoped that the Executive Board would be invited to undertake the study in the near future, before the recollection of the difficulties had had time to fade.
(21) As far as the current session was concerned, Mr. Veronese considered that the only means of helping the Programme and Budget Commission out of its difficulties was to give the Chairman all the powers he required to speed up the discussions as he thought fit.

(22) Mr. KABIR supported the proposal of the representative of the United Kingdom and again emphasized the desirability of fixing the budget ceiling at the beginning of the Conference.

(23) Mr. HAGUIWARA asked the meeting to confine itself for the moment to discussing the organization of work at the current session and to leave until later any proposals about the organization of work at future sessions.

(24) The CHAIRMAN called for a vote on the report of the Chairman of the Programme and Budget Commission and on the motion, proposed by the United Kingdom and seconded by Italy, that the Executive Board be instructed to draw up regulations for the conduct of the Programme and Budget Commission's debates.

(25) Both motions were approved.

**PROGRAMME OF WORK FROM 2 TO 12 DECEMBER**
**(document 8C/BUR/3)**

(26) Referring to document 8C/BUR/3, which in his opinion required some amendment, Mr. MAHEU gave the Secretariat's views on the conduct of work up to the end of the session. He explained that, although Parts I, III and IV of the draft programme had already been discussed by the Administrative Commission, it was logical that they should also be submitted to the Programme and Budget Commission for consideration, since that Commission had to prepare the appropriation resolution.
(27) The Secretariat had thought that time could be saved by having the budgetary adjustments examined by the Advisory Committee on Programme and Budget, which would then report to the Programme Commission. With regard to the report on the future programme, in the opinion of the Secretariat it should not be considered by the Programme and Budget Commission until all the discussions about the draft programme for 1955-56 were over.
(28) Finally, the Secretariat suggested that the report of the Legal Committee be submitted direct to the General Conference in plenary meeting without passing through the Administrative Commission.

(29) Document 8C/BUR/3 was adopted, with the amendments suggested by Mr. Maheu.

**REPORT OF THE LEGAL COMMITTEE ON THE PROCEDURE FOR THE ELECTION OF MEMBERS OF THE EXECUTIVE BOARD**
**(document 8C/JUR/5)**

(30) Mr. AWAD said that the question which had been referred to the Legal Committee was that of the legal aspects of election procedure. The Committee had noted an obvious disparity between the provisions of the Constitution and the Organization's Rules of Procedure in that matter, and had decided to alter the Rules of Procedure in accordance with those of the United Nations.

(31) Mr. SABA commented briefly on the report.

(32) Following a remark by Mr. HAGUIWARA, a discussion began on whether the report should, as Mr. Maheu had suggested, be submitted to the plenary meeting without first being studied by the Administrative Commission.

(33) Mr. KABIR observed that the General Committee had already taken a decision on that point, and there was no need to go back to it.

(34) As Mr. Kabir's statement was contested, Mr. MAHEU pointed out that the Legal Committee was not a subsidiary organ of the Administrative Commission. It had sometimes reported to that Commission on certain questions, but that was because of the nature of the questions concerned and not because of any obligations resulting from precise links. There was therefore no reason of principle why the Committee's report should not go direct to the plenary meeting, and the Secretariat considered that it would be preferable to have only one discussion on the report.

(35) The question was put to the vote, and it was decided that the report of the Legal Committee should be sent direct to the plenary meeting.

(36) Mr. MONTAGNIER said that the plenary meeting at which the Legal Committee's report would be studied could take place on Monday, 6 December, at the beginning of the afternoon, before the Nominations Committee met.

The meeting rose at 10 a.m.

# ELEVENTH MEETING

*6 December 1954 at 9 a.m.*

*Chairman:* Mr. ZAVALA MUNIZ (Uruguay)

(1) Mr. MONTAGNIER submitted document 8C/BUR/3 (rev.) containing the work plan for 4-12 December 1954, and pointed out that it would require some slight modification.
(2) The Advisory Committee on Programme and Budget would meet that afternoon, 6 December, if the Programme and Budget Commission had completed consideration of Part II, Chapter 7 of the proposed programme and budget in the morning.
(3) The election of the 22 members of the Executive Board was to take place at the plenary meeting of 7 December in the afternoon. If only one ballot were required, the Conference could pass to item 16 of its agenda - decision on the place of the ninth session of the General Conference - and commence study of the report of the Committee on Reports of Member States.
(4) Mr. Montagnier then stated that, at its final plenary meeting, the Conference would have to consider draft resolutions 8C/DR/4 and 8C/DR/120, submitted by India and China respectively (item 20 of the agenda).

(5) Mr. BEEBY announced that the report of the Administrative Commission, an extremely voluminous document, had not yet been distributed to its members. If, as a result, the Commission did not finish its consideration of the report that morning, he asked if it would be possible for it to hold a short meeting in the afternoon.

(6) Mr. MONTAGNIER suggested that the Administrative Commission should meet between 3.30 and 4.30 p.m. during the plenary meeting, and before the meeting of the Nominations Committee, which was to take place, also in Room 2, at 4.30 p.m.

(7) Approved.

(8) Mr. KABIR proposed that there should be only one and not two meetings of the Nominations Committee, and that its nominations should be submitted straight to the plenary Conference, without any interval. The Nominations Committee might meet the following morning, 7 December at 9.30 a.m., reporting to the plenary Conference at 12.30 p.m. He proposed that, if possible, the Nominations Committee meet in the main Conference Hall, where there was more room for balloting.

(9) Mr. SHARIF fully endorsed the views of the Chairman of the Nominations Committee regarding the desirability of eliminating any interval between the meetings of the Nominations Committee and the plenary Conference. However, referring to the two procedures outlined in No. 2 on page 2 of document 8C/NOM/40, he pointed out that the procedure proposed was materially different from that of previous years; as the whole list was automatically open, he did not see why there was any need for the Nominations Committee to meet at all.

(10) Mr. BOURGEOIS preferred the system proposed in document 8C/NOM/40, and did not think that the votes of the Nominations Committee and of the General Conference duplicated each other. It seemed, moreover, desirable that delegations should be able to exchange views between the two ballots.

(11) Replying to the delegate of Pakistan, the DIRECTOR-GENERAL explained that, if his proposal was to be effective, the Rules of Procedure would have to be changed. The whole purpose of the Nominations Committee was that it should reduce the number of candidates before the elections took place in plenary Conference. Although it was true that the work of the Nominations Committee was only partially effective, since the plenary Conference could take up and adopt rejected candidacies, the Nominations Committee was obliged, under the Rules of Procedure, to meet and make nominations. As for the interval between meetings, he pointed out that, on previous occasions, the two operations had taken longer than half a day. With regard to the suggestion that the Nominations Committee meet in the main Conference Hall, the Director-General reminded the delegate of India that it was a closed meeting and limited to one representative of each delegation. He thought that it would be difficult to exclude the public from the main Conference Hall.

(12) In view of the Director-General's explanations, Mr. SHARIF said that he would not press his proposal, but might make a suggestion to the General Conference at its ninth session.

(13) Mr. HAGUIWARA asked how long it would take to count the votes. He pointed out that 22 names would have to be read each time from the 60 odd voting papers of the delegations. He suggested, therefore, that the Nominations Committee should meet that afternoon solely for discussion, and vote the following morning. In that way the interval between its vote and that of the General Conference could be reduced.

(14) The CHAIRMAN replied that, in the Secretariat's estimation, the voting procedure would take about an hour and a half.

(15) Mr. KABIR was perfectly willing to accept the decision of the Secretariat, if it considered

it unsuitable to hold the meeting of the Nominations Committee in the main Conference Hall.

(16) With regard to the remarks of the delegate of Japan, Mr. Kabir urged the General Committee to support him in ruling that discussion in the Nominations Committee be limited to matters of procedure. He was most anxious that the Committee should not embark upon a discussion of the merits of the various candidates and countries. As far as geographical distribution was concerned, Unesco had already established a workable formula, and he would be loth to see it disturbed. Members of the Nominations Committee might simply be asked to bear in mind that Latin America, Eastern Europe and Asia all had strong claims to the two additional seats. He therefore requested the delegate of Japan to withdraw his proposal for a discussion.

(17) Mr. HAGUIWARA fully sympathized with the wishes of the Chairman of the Nominations Committee. He hoped there would not be too much discussion about the merits of candidates; the Chairman of the Nominations Committee might appeal to the Committee in that sense. But he considered that a discussion on geographical distribution and on the election procedure was more or less inevitable. If two ballots proved to be necessary, it would be difficult to finish in one morning.

(18) Mr. BOURGEOIS agreed with Mr. Haguiwara's suggestion. He also pointed out that in the main Conference Hall each speaker had to go to the rostrum, which slowed down debates considerably.

(19) Mr. VERONESE did not think that the General Committee could settle beforehand how the discussions within the Nominations Committee should be conducted. Whatever the General Committee might desire, it was difficult to foresee how those discussions would proceed. He considered that it was for the Nominations Committee to decide, at the suggestion of its Chairman or one of its members, not to engage in a discussion on this or that point.

(20) Mr. SPILHAUS seconded the proposal of the Chairman of the Nominations Committee that the latter's discussions be limited to matters of procedure.

(21) Mr. HAGUIWARA asked the Chairman of the Nominations Committee whether he was prepared to accept the following programme:

Meeting of the Nominations Committee on 6 December at 4.30 p.m., it being understood that the Committee would not vote until its meeting on the morning of 7 December.

(22) Mr. KABIR pointed out that, until the voting actually started, new names could be submitted; any discussions beyond that of matters of procedure would therefore be inconclusive. He had been startled to hear a suggestion that, to some extent, personalities could be discussed. The curriculum vitae of each candidate would be before the Committee and all the candidates were very distinguished people, so that there was no need for the Committee to waste time in eulogizing. He therefore asked the General Committee to agree that he move from the Chair that no individual candidates should be discussed.

(23) Mr. LEROY associated himself with the Indian delegate's request. A discussion of the various candidates' merits would occupy more than an hour; and as the candidatures were already known to the Conference, such a discussion was unnecessary.

(24) Mr. SHARIF seconded the proposal that the Nominations Committee meet in the afternoon to hear the Chairman and the Legal Adviser explain the procedure, and to consider the matter of geographical distribution. A discussion limited strictly to procedural matters could then be held. The candidates would then be elected the following morning, the plenary Conference meeting immediately after the Nominations Committee had completed its work.

(25) Mr. KABIR replied that the procedure outlined by the delegate of Pakistan was entirely acceptable to him.

(26) The CHAIRMAN, summing up, said that the General Committee was agreed that the discussion within the Nominations Committee should deal with procedure and not with the personalities of candidates.

(27) The General Committee would make a recommendation to the Nominations Committee accordingly.

(28) There remained for further discussion the proposal of the Pakistani delegate that the Nominations Committee should hold a first meeting and, after the first ballot, suspend it for twenty minutes, continuing afterwards until it finished its work.

(29) Mr. MONTAGNIER pointed out that delegates had already been informed that the plenary meeting for the election of the Executive Board would take place in the afternoon of 7 December. As certain delegates were absent, it would be difficult to inform them in time if the meeting were to be held in the morning.

(30) Mr. KABIR observed that there was great force in what the Secretary had said. He did not believe however that, even if three ballots were necessary in the Nominations Committee, the meeting would last more than three and a half hours. He therefore proposed that the plenary Conference meet in the afternoon at 3 p.m.

(31) The CHAIRMAN proposed that the Committee should conclude its work in the morning and that the plenary meeting be held early in the afternoon. He asked if there were any objections and, there being none, that proposal was unanimously adopted.

(32) Mr. HAGUIWARA thought that arrangements might well be made for two plenary meetings on 11 December; but, as several delegates had already arranged to leave Montevideo, it seemed desirable for the session to end before 1 p.m. He accordingly suggested that the Nominations Committee meet in the afternoon of 10 December, instead of in the morning of 11 December, to make recommendations on the composition of the smaller committees for the ninth session.

(33) Mr. MONTAGNIER thought that, having regard to the decisions which had just been taken with a view to expediting the work, Mr. Haguiwara's suggestions could be accepted.

(34) The CHAIRMAN announced that the Director-General had received the sum of $5,503, being the amount of Bolivia's contribution in 1952. Consequently, Bolivia was fully entitled to vote at the General Conference and in all its Commissions.

(35) Mr. MONTAGNIER reminded the Committee that the French delegation had withdrawn draft resolution 8C/DR/114. The Colombian delegation now intended to assume sponsorship of that draft resolution; but, under Rule 78 (3) of the Rules of Procedure, that proposal should have been submitted before the end of the seventh day of the session. It was therefore for the General Committee to decide whether the provision should be waived.

(36) Mr. RUIZ-GIMENEZ was in favour of the provision being waived. It was most desirable to encourage international friendship among children, such a welcome proposal should not be obstructed for mere reasons of procedure.

(37) Mr. KABIR seconded the proposal of the delegate of Spain, particularly as it had no budgetary implications. Any project designed to bring children of the different countries closer together was welcome. He recalled that a competition of children's paintings, in which seventy countries had participated, had been organized in India.

(38) Mr. BERNAL JIMENEZ said that most delegations had, since 1950, made great efforts to secure Unesco's acceptance of that move in favour of children. He himself had done no more than sponsor it, and was in no way responsible for it; that being so, he invited the General Committee to arrange for such procedure as would enable it to be adopted, although it might involve difficulties, particularly of a budgetary nature.

(39) The Committee could deal with the proposal in the way best calculated to secure its approval, an approval which would be a fitting reward for the generosity and tenacity of its proposer.

(40) Mr. HAGUIWARA enquired whether the draft resolution in question had any budgetary implications. If, moreover, the General Committee agreed to waive the provisions of Rule 78 (3), the proposal should be studied either by the Administrative Commission or by the Programme and Budget Commission.

(41) Sir Ben BOWEN THOMAS pointed out that it was not for the General Committee to discuss the merits of the proposal and that it was too late in the session to refer it to the appropriate organ of the Conference.

(42) Mr. BEEBY was sure that all members of the Committee were much in sympathy with the Colombian proposal, but he agreed with the delegate of the United Kingdom that it was too late to submit it to the Advisory Committee or to either of the big Commissions. Moreover, it was not a new proposal, since a resolution on the subject had been adopted by the General Conference at Florence in 1950. It was therefore not an urgent matter, and he proposed that it be deferred until the ninth session of the General Conference.

(43) Mr. BOURGEOIS moved that the resolution be transmitted to the Secretariat as a suggestion, under the procedure already applied in the case of a number of proposals which had arrived late.

(44) Mr. Bourgeois' proposal was adopted.

(45) Mr. MONTAGNIER said that the representative of the YMCA had asked to address the plenary Conference on the occasion of his Association's centenary. The General Committee had already decided not to permit representatives of non-governmental organizations to speak at plenary meetings, unless it was on a matter within their competence.

(46) It was decided not to grant the YMCA representative the authorization requested.

(47) Sir Ben BOWEN THOMAS enquired what was proposed with regard to draft resolutions 8C/DR/4 and 8C/DR/120.

(48) Mr. MONTAGNIER replied that they would be considered at the final plenary meeting.

The meeting rose at 10 a.m.

# TWELFTH MEETING

*8 December 1954, at 9 a.m.*

*Chairman:* Mr. RUIZ-GIMENEZ (Spain)

(1) Mr. MONTAGNIER proposed a programme of work for Wednesday, 8 December and Thursday, 9 December. If the Advisory Committee and the Programme and Budget Commission completed their work the following day, 9 December, the Conference could devote its two last plenary meetings, on Friday, 10 December, to considering the Programme and Budget Commission's report, a draft resolution submitted by India and amended by China on the necessity of making Unesco a universal Organization (documents 8C/DR/4 and 8C/DR/120), and a draft resolution submitted by Denmark, Norway and Sweden (DR/118) on the organization of the work of the ninth session. The Conference would adopt a resolution, expressing its gratitude to the host country, and would also celebrate Human Rights Day, which, falling on 10 December, happened to coincide with the last day of the session.

(2) Mr. KABIR pointed out that the United Kingdom delegation had submitted a resolution (DR/119) calling on the Executive Board to study the problem of the ninth session of the General Conference and suggested that, as the new Executive Board had a new Constitution which would give it greater authority in relationship to governments, it would be better to leave it to the new Executive Board to set up any necessary committees after it had considered the United Kingdom resolution.

(3) Replying to a remark by the DIRECTOR-GENERAL that the Executive Board had no powers to set up committees of the General Conference, he said that the General Conference could give it the necessary powers.

(4) Mr. SHARIF expressed satisfaction that the General Conference would finish its work on 10 December and hoped that definite information would be given on that point in the course of the day so as to enable delegates to make the necessary preparations for departure.
(5) With regard to the point under discussion, he did not think that it would be correct for the General Conference to give powers to the Executive Board to do work which it should undertake itself.

(6) Mr. MONTAGNIER reminded the Committee that, during its current session, the Conference had amended Rule 30 of its Rules of Procedure in order to enable the Nominations Committee to appoint the members of the various small committees.

(7) Mr. VERONESE asked for further information on the proposals regarding the organization of work of the ninth session. He appreciated that the Executive Board might be given the right to appoint members of the Advisory Committee. He nevertheless shared the doubts expressed in that connexion by the delegate of Pakistan.
(8) As the new Executive Board would represent only 22 of the Member States, it was a matter of doubt whether it should be given the power to set up the Advisory Committee. Moreover, the Advisory Committee might be regarded as superfluous, in view of the changes made in the structure of the Executive Board. The question could be studied at the same time as the Administrative Commission's report.

(9) Mr. MONTAGNIER pointed out that there were in fact two draft resolutions regarding the organization of work of the ninth session: document 8C/DR/118, submitted by the Danish, Norwegian and Swedish delegations, which requested the Executive Board to revise the organization and methods of work of the General Conference in collaboration with the Director-General, and document 8C/DR/119, submitted by the United Kingdom delegation, making the Executive Board responsible for determining ways of expediting the work of the ninth session and rendering it more efficient.
(10) Mr. Montagnier considered, moreover, that the desirability of retaining the Advisory Committee should be discussed by the Programme and Budget Commission.

(11) Mr. FRAGA IRIBARNE drew attention to the distinction between: (a) the Legal Committee and the Committee on Reports of Member States, which were appointed in accordance with normal procedure, and (b) the Advisory Committee on Programme and Budget and the Contributions Committee, the desirability of whose appointment by the Executive Board had been questioned.

(12) Mr. GARDNER DAVIES did not share the view expressed by the delegate of Spain. The Contributions Committee was a committee of the Administrative Commission and could be set up by that Commission. The other three committees should be treated alike.
(13) A brief discussion had already taken place in the Advisory Committee on the future of the Committee, and some delegates had expressed the view that it could still play a very useful part despite the governmental structure of the Executive Board. Other delegates had been of the opinion that an Advisory Committee would be unnecessary. The matter would be discussed again at the afternoon meeting of the Advisory Committee.
(14) In his opinion, the Advisory Committee should be

allowed to discuss the question and to make recommendations to the Programme and Budget Commission in due course.

(15) Mr. SHARIF said that the question of an Advisory Committee was tied up with the two resolutions concerning the reorganization of the work of the ninth session of the General Conference. If the General Conference set up an Advisory Committee, the Executive Board would be faced with difficulties when studying the problem of reorganization.
(16) He suggested that it should be left to the Executive Board to decide whether it was necessary to set up an Advisory Committee. If the Executive Board decided that it was necessary to have such a committee, the ninth session of the General Conference could set it up.

(17) The DIRECTOR-GENERAL pointed out that the essential value of the Advisory Committee was that it studied the programme and budget in advance and was ready with its first report when the Programme and Budget Commission began its work.
(18) One solution was that the members of the Advisory Committee should be elected at the current session of the General Conference and that it should be left to the discretion of the Executive Board to decide when the Advisory Committee should meet.

(19) Sir Ben BOWEN THOMAS pointed out that any recommendations to the General Conference at the current session would be subject to recommendations made by the new Executive Board after it had considered the organization of the work at the ninth session of the General Conference. He emphasized the necessity of mentioning the transitional nature of any recommendations being made to the present session.

(20) Mr. BOURGEOIS entirely agreed with the Director-General's proposal and was strongly against any suggestion that the Executive Board should designate the members of the Advisory Committee on Programme and Budget. That responsibility devolved upon the General Conference alone. He therefore agreed that the Advisory Committee should be set up at the current session - the Executive Board being responsible for convening it when the time came.

(21) Mr. GARDNER DAVIES agreed with the solution proposed by the Director-General. The General Conference would have to decide whether or not it wanted to have an Advisory Committee on Programme and Budget.

(22) The General Committee adopted the solution proposed by the Director-General.

(23) Mr. MONTAGNIER thought that, in that case, the Nominations Committee might meet at the beginning of Friday afternoon, reporting immediately to the Conference during the plenary meeting, which would no doubt be the last of the session.

(24) Mr. KABIR said that he would be unable to be present at the meeting of the Nominations Committee and asked if he should send a substitute from his delegation.

(25) Mr. MONTAGNIER reminded the Committee that, according to paragraph 4 of Rule 29 of the Rules of Procedure, the Nominations Committee elected a chairman only.

(26) Mr. BOURGEOIS thought that it would be more appropriate to allow the Nominations Committee to choose another chairman itself, in the absence of Mr. Kabir, rather than to impose upon it a chairman designated by the General Committee.

(27) The DIRECTOR-GENERAL said that he was unable to give a firm date for the end of the Conference. The plans made by the General Committee had increased the possibility of the necessity of holding a plenary meeting in the morning of 11 December. He assured the delegate of Pakistan, however, that most of the important business of the Conference would have been completed by the evening of 10 December.

The meeting rose at 9.40 a.m.

# THIRTEENTH MEETING

*10 December 1954 at 9 a.m.*

*Chairman:* Mr. ZAVALA MUNIZ (Uruguay)

(1) Mr. MONTAGNIER gave some explanations concerning the programme of work appearing in the Journal of the General Conference.
(2) At the last plenary meeting of the previous day, the General Conference had almost concluded its examination of the Administrative Commission's report. The meeting had been presented with two draft resolutions on the use of Russian as a working language, and a draft amendment to Part III of section F (page 41) of the Commission's report, changing the section into resolution form (document 8C/ADM/35 corrigendum).
(3) A corrigendum to the Programme and Budget Commission's report had also been issued (8C/PRG/30 corrigendum and addendum).
(4) With regard to item 20, an amendment to the Indian delegation's draft resolution (document 8C/DR/4) had been proposed by the Chinese delegation (document 8C/PRG/120). The draft resolutions had also been submitted on the organization and working methods of the General Conference (documents 8C/DR/118 and 119).
(5) The discussion of item 19 would have to be postponed, pending receipt of the Nomination Committee's report.

## COMMEMORATION OF UNIVERSAL DECLARATION OF HUMAN RIGHTS

(6) Mr. LEROY, recalling the proposal that there should be one or two speeches commemorating the Universal Declaration of Human Rights at the plenary meeting in the afternoon, asked which delegations were to be asked to speak. He added that Mr. Laugier was prepared to do so.

(7) Mr. VERONESE, without denying that such a commemoration was timely, considered that it should be as restrained as possible. Too many speeches could not fail to detract from the solemnity of the occasion.

(8) Mr. SHARIF recalled that, on the last occasion, the only two speakers designated to speak on human rights had been the President of the General Conference and the delegate of France. He thought it wiser once again to limit the number of speakers on that subject to two.

(9) Sir Ben BOWEN THOMAS remarked that, since speeches on human rights had become a biennial event, it would be advisable to establish some standard procedure. The Conference should avoid informality and should not recognize any vested right in a particular State to speak on human rights. He therefore proposed that the Executive Board be asked to present a resolution, which would be moved by the host country - in the present case Uruguay - and seconded by the next host country, namely India. The resolution would then be put to the vote without any further speeches.

(10) The CHAIRMAN proposed that, instead of speaking himself as President of the General Conference, the Chairman of the Executive Board should speak, in accordance with the United Kingdom proposal.

(11) Sir Ronald ADAM hoped that the General Committee would allow him to depute his right to speak to a member of the Executive Board. He moved that Mr. Henri Laugier be authorized to speak on human rights as representative of the Executive Board.

(12) Mr. LEROY was sure that Mr. Laugier would be very happy to speak, not only on behalf of the French delegation, but also as representative of the Executive Board.

(13) The proposal of Sir Ben Bowen Thomas, as amended by the Chairman of the General Committee and the Chairman of the Executive Board, was adopted.

## REQUEST TO ADDRESS THE PLENARY CONFERENCE

(14) Mr. MONTAGNIER announced that the representative of the Universal Esperanto Association had asked to speak at a plenary meeting on the Programme and Budget Commission's report.
(15) Under Rule 68 of the Rules of Procedure, the General Committee could grant that authorization, but, in order not to set a precedent, it had never yet done so.

(16) Mr. BOURGEOIS did not wish either to support or oppose the granting of the authorization, but he felt bound to remind the General Committee that the speeches made against the Association's proposal had been made in terms that were hardly fitting That, together with the fact that speakers were allowed only three minutes each, explained why the Association's representative might have some cause for dissatisfaction and might wish to express himself more fully in a calmer atmosphere.

(17) The DIRECTOR-GENERAL observed that,

normally, he would not intervene in such a matter, but he felt it his duty to call attention to the fact that the speeches to which the Chairman of the Programme and Budget Commission had referred, had given rise to a somewhat difficult public relations problem vis-à-vis a large, influential and determined Organization. Moreover, it seemed that there was some basis for a grievance. He therefore proposed that, in order to ease Unesco's relations with the Universal Esperanto Association, an exception be made in the present case.

(18) While sympathizing with the Director-General's point of view, Sir Ben BOWEN THOMAS pointed out that, if the test were to be public relations and the removal of a sense of grievance, there were several other organizations which had lost their case before the General Conference and would carry their sense of grievance to the ends of the earth. He felt that to allow the representative of the Universal Esperanto Association to speak, would create a very dangerous precedent.

(19) In view of the difficult situation which had arisen, Mr. ZAMORANO HERNANDEZ thought that the Director-General's proposal should be adopted, but that it would be still more appropriate to authorize the General Committee, if it so agreed, to allow the representative of the Universal Esperanto Association to speak, only on condition that time was available.

(20) Mr. BROWNELL fully appreciated the Director-General's problem and was glad that Unesco realized that its usefulness was dependent upon the support of organizations in sympathy with its aims. The Universal Esperanto Association had undoubtedly done much to further Unesco's aims. At the same time, the request of the representative of the Association did not seem to be in Unesco's interests, as it would be liable to alienate the sympathy of certain other groups. The United States delegate therefore proposed, as a possible solution, that a small committee be formed to assist the Director-General to solve the public relations problem by talking over the Association's case with its representative.

(21) Mr. LEROY considered that the question of working languages was of vital importance to an organization like Unesco. However, in supporting the Director-General's proposal, he hoped that the General Committee would stress the exceptional nature of the authorization granted.

(22) The DIRECTOR-GENERAL agreed with the delegate of the United Kingdom that a dangerous precedent would be created if the representative of an organization whose case had been rejected were allowed to speak on the merits of his case at a plenary meeting. In the present circumstances, however, there was no question of reopening a discussion on the merits of the resolution; it was simply that the representative of the Universal Esperanto Association felt that he had been the victim of a procedural injustice. The Director-General appreciated the suggestion made by the delegate of the United States of America, and proposed that the Chairman of the Programme and Budget Commission, one of the Vice-Presidents of the General Conference and the Director-General form a committee to listen to the case of the representative of the Universal Esperanto Association.

(23) Mr. VERONESE was in complete agreement with the solution proposed by the United States delegate and accepted by the Director-General, but he would have preferred less emphasis on the aspect of righting an injustice, the procedure followed at the meeting in question having been perfectly in order.
(24) He suggested that the representative of the Universal Esperanto Association, after his talks with the Director-General and the Chairman of the Executive Board, be given the opportunity to circulate a document amongst the delegations, if he desired to do so.

ITEM 19 OF REVISED AGENDA

(25) In connexion with item 19 of the agenda, Mr. HAGUIWARA wanted to know whether the Acting Chairman of the Nominations Committee had been appointed, whether the list to be presented to the Committee had already been drawn up, and what decision had been taken about the nomination of members of the Advisory Committee on Programme and Budget.

(26) The DIRECTOR-GENERAL explained that the usual procedure was for the Chairman of the Nominations Committee, with the assistance of the Secretariat, to prepare a list of States for submission to the Committee. In the present case, however, the Chairman of the Committee had been obliged to leave, and there was no Vice-Chairman. Either the Nominations Committee or the General Committee would, therefore, have to appoint an Acting Chairman. The Secretariat had already prepared a tentative list of States.

(27) Mr. VERONESE considered that, although the election of a new Chairman for the Nominations Committee was legally entirely in order, the most elementary justice demanded that the Indian delegation be asked to choose a deputy from amongst its members. He wished to propose that as a formal motion.

(28) The DIRECTOR-GENERAL stated that the Programme and Budget Commission had recommended to the General Conference that the Advisory Committee on Programme and Budget be elected that day, 10 December, that it consist of 17 members, a majority of whom should belong to Member States not represented on the Executive Board. The Secretariat had prepared a list of States, of which six were represented on the Board and the rest were not.

(29) The Indian delegation having agreed to nominate another member of the delegation to replace the Chairman of the Nominations Committee, the proposal of the delegate of Italy was adopted.

(30) Mr. HAGUIWARA asked whether the number of members to serve on the three committees had been definitely fixed. It happened only too often that certain delegations not represented on them proposed that the committees should be enlarged, which was not conducive to efficient work.

(31) The DIRECTOR-GENERAL announced that, under Rule 31 of the Rules of Procedure, the Legal Committee consisted of 15 members and that the membership of the Committee on Reports of Member States had been raised to 15 members; if the Conference adopted the proposal of the Programme and Budget Commission, the Advisory Committee on Programme and Budget would have 17 members; the Headquarters Committee had 14 members. Although the members of the Headquarters Committee had already been elected, its membership should perhaps be reviewed from the point of view of geographical distribution.

Draft resolutions 118 and 119

(32) Referring to item 4 (1) on page 2 of the Journal of the General Conference (No. 24, Montevideo, 10 December 1954), Sir Ben BOWEN THOMAS thought that the phrasing of the proposal was too casual. He proposed that there be a rider to draft resolutions 8C/DR/118 and 119, requesting delegates, on return to their own countries and in consultation with their governments and National Commissions, to formulate their ideas on the organization of the General Conference and to submit them in good time to the Executive Board.

(33) The DIRECTOR-GENERAL welcomed the proposal of the delegate of the United Kingdom.

(34) Mr. VERONESE moved that the United Kingdom delegation, responsible for draft resolution DR/119, contact the Danish, Norwegian and Swedish delegations, which had submitted draft resolution DR/118, with a view to combining the two proposals in one, since they were identical in substance and very similar in form.

(35) Mr. Veronese considered that the revision of the methods of work of the General Conference should be studied as soon as possible, so that the experience gained at the current session might be used to the best advantage.

(36) Adopted.

(37) The CHAIRMAN thanked members of the General Committee for their co-operation, which had enabled the Committee's work to be brought to a successful close.

(38) Sir Ben BOWEN THOMAS moved a vote of thanks to the Chairman of the General Committee. He himself had been a member of the General Committee at three or four sessions of the General Conference and had never known a happier atmosphere in the Committee; that was certainly due to the Chairman's skill and wisdom in guiding its work.

(39) The motion was adopted by acclamation.

The meeting rose at 10 a.m.

# CHAPTER IV

# PROGRAMME AND BUDGET COMMISSION

## FIRST MEETING

*17 November 1954 at 5.30 p.m.*

*Chairman:* Mr. BOURGEOIS (Switzerland)

**ITEM 8.1 OF THE REVISED AGENDA: ELECTION OF THE THREE VICE-CHAIRMEN AND THE RAPPORTEUR**

(1) The CHAIRMAN expressed his gratitude for the honour to his country which his appointment as Chairman of the Programme and Budget Commission implied.
(2) The first meeting, which would be a purely business one, would be devoted to arranging the Commission's work. The first item on the agenda was the election of three Vice-Chairmen and a Rapporteur. The Chairman did not intend to impose a list of nominees for the election; the suggestions he was about to put forward had been collected from delegations before the meeting and the Commission was perfectly free to make any changes it wished.
(3) The three countries which had been suggested for the offices of Vice-Chairmen - the Byelorussian Soviet Socialist Republic, Union of Burma and Uruguay - seemed satisfactory from the point of view of geographical representation.

(4) Mr. SECCO ELLAURI (Uruguay) expressed the gratitude of his delegation for the honour of the invitation to act as Vice-Chairman, but said that Uruguay had already received the still greater honour of having the Head of its delegation elected President of the General Conference; he therefore declined the new honour offered to his country and proposed Ecuador in its place.

(5) The CHAIRMAN found the Uruguayan delegate's suggestion acceptable and proposed that the delegates of the Byelorussian Soviet Socialist Republic, Burma and Ecuador be appointed Vice-Chairmen of the Commission by acclamation.

(6) Unanimously approved.

(7) The CHAIRMAN said that it had been proposed that the office of Rapporteur be offered to a member of the delegation of the United States of America.

(8) Mr. ARSENAULT (Canada) proposed that Mr. Henry Hope be appointed from that delegation.

(9) Unanimously approved.

(10) Mr. HOPE (United States of America), after expressing his thanks, mentioned that he had no experience of such duties but would perform them to the best of his ability.

**ORGANIZATION OF THE COMMISSION'S WORK AND ESTABLISHMENT OF WORKING PARTIES**

(11) The CHAIRMAN explained that, as the work of the Advisory Committee on Programme and Budget and the plenary meetings had taken longer than had been expected, the Commission could hold only 34 meetings instead of 35.
(12) He proposed that the meetings should be apportioned as follows: 4 for the discussion of the reports of the Advisory Committee on Programme and Budget, the Chairman of the Executive Board, and the Director-General; 2 for the discussion of the provisional budget ceiling and the provisional figure for Member States' contributions; 23 for consideration of the programme; 1 for discussion of Parts I, III and IV of the Budget; and 2 for the discussion of the future programme. The Commission would then devote a meeting to the examination of its report and would hold the last meeting in reserve for any unforeseen business. Should there be too many unforeseen items, meetings might have to be held at night.
(13) The Commission also had to set up working parties. The Chairman emphasized that there should not be too many of these, as the delegations were smaller than at the previous session of the General Conference and the practical problems of organizing meetings might make the work difficult. The accommodation and technical staff available would not allow for more than 20 meetings, which would have to be apportioned between the working parties of the Programme and Budget Commission and those of the Administrative Commission. It therefore seemed to the Chairman advisable to set up no more than three working parties, the first on the organization and structure of the Department of Mass Communication, the second on the

decentralization of Unesco's activities, and the third on draft international conventions relating to cultural activities and mass communication.

(14) Mr. SUZUKI (Japan) proposed that a working party be set up to study the question of Unesco book coupons and gift coupons.

(15) The CHAIRMAN said that it would probably be better to wait until the subject came up for general discussion before deciding whether such a working party was necessary, and Mr. SUZUKI (Japan) agreed.

(16) Mr. SAMBURSKY (Israel) hoped that a working party would be set up to study problems connected with atomic energy, marine biology and cancer research.

(17) Mr. LAUGIER (France) considered that such important and far-reaching questions of such world-wide interest were beyond the competence of a working party and should be seriously discussed by the full Commission.

(18) Baron van der STRATEN WAILLET (Belgium) thought that the protection of nature should be included among those major problems.

(19) Mr. BUSTAMENTE (El Salvador) agreed with the views of the French delegate. There were other subjects more appropriate for working parties. Those mentioned by the delegate of Israel were wider and of more general interest.

(20) Mr. SUZUKI (Japan) mentioned that his delegation had suggested two of the three projects for which the Israeli delegate proposed a working party and the Japanese delegation therefore had great sympathy with the proposal. But the French delegate's proposal seemed to him a wise one, and he wished to second it.

(21) The French proposal was also supported by the delegates of Lebanon and the United Kingdom.

(22) Mr. VERONESE (Italy) thought that the Commission should first set up the three working parties for the purposes indicated by the Chairman; it would always be at liberty to add others if the need for them became apparent during the discussions.

(23) Mr. SAMBURSKY (Israel) withdrew his proposal.

(24) The CHAIRMAN advocated that the working parties be limited to twelve or fifteen members, to ensure maximum efficiency.

(25) He proposed that the meeting proceed to set up the first working party, to deal with the organization and structure of the Department of Mass Communication. The names of the following countries had been suggested: Belgium, Egypt, France, German Federal Republic, Iran, Italy, Japan, Mexico, Poland, Switzerland, Thailand, United Kingdom, United States of America, Uruguay, USSR.

(26) He added that, in addition to the general problems which were to be submitted to it, the working party would have to consider two specific questions: (1) Was the press clipping service in its right place in the Department of Mass Communication? (2) Was the Unesco Courier indispensable or could it be replaced?

(27) Mr. AWAD (Egypt) mentioned that his country was particularly interested in the question of decentralizing Unesco's activities, and would like one of its representatives to take part in the discussions of the working party dealing with that problem. The Egyptian delegation was quite prepared to nominate one of its members to serve on the working party to study the organization and structure of the Department of Mass Communication also, but if it were to have only one representative on the working parties, the delegation would prefer to withdraw its candidature for the latter.

(28) The CHAIRMAN agreed to bear Egypt in mind when the working party on the decentralization of Unesco's activities was set up, and proposed that the Committee approve the suggested membership of the first working party, without Egypt.

(29) Approved.

(30) The CHAIRMAN pointed out that each of the working parties would appoint its own officers.

(31) Mgr MAROUN (Lebanon) was sorry that Egypt had withdrawn from the first working party, thus depriving the Arabic-speaking countries of a representative on such an important group. He proposed that the Egyptian delegate nominate another country to take his place.

(32) Mr. AWAD (Egypt) suggested that a representative of Lebanon be made a member of the first working party.

(33) His suggestion was seconded by the delegate of France.

(34) Mgr MAROUN (Lebanon) accepted the proposal in principle, but said that he could not give a definite commitment until he was sure that a member of his delegation would be available.

(35) The CHAIRMAN noted his acceptance in principle, and requested the Commission to pass on to the establishment of the second working party, which was to study the question of the decentralization of Unesco's activities. Only one nomination, that of Egypt, had been made for that working party, and the Chairman asked delegates to suggest others.

(36) Mgr MAROUN (Lebanon), referring to certain work carried out during the past two years in connexion with decentralization, proposed Italy and, in particular, Professor Veronese.

(37) The proposal was seconded by the delegate of France.

(38) Mr. VERONESE (Italy) recalled that his country was already a member of the first working party, but, so long as he was not thereby debarred, he would be willing to serve on the second party.

(39) The CHAIRMAN explained that what mattered was to appoint representatives of the countries interested in the problems to be discussed.

(40) Mr. ESTELRICH (Spain) said that his delegation was particularly interested in the working party on decentralization.

(41) The CHAIRMAN requested the representatives of all countries interested in the problem to offer their services and noted the names of India, Turkey, Union of Burma, Liberia, Uruguay, Pakistan, El Salvador, Indonesia, United Kingdom, Chile, German Federal Republic, Israel, Brazil and Australia.

(42) Mr. ANGELL (United States of America) proposed that the procedure which had been adopted with regard to nominations for the first working party should be adopted for nominations for the other two parties. It would be preferable to be able to consider nominations overnight with a view to selecting representatives from countries particularly interested in the work of those two working parties and to obtaining a suitable geographical distribution of members.

(43) Mr. CLEGG (United Kingdom) and Mr. KABIR (India) supported the United States proposal.

(44) The CHAIRMAN agreed that it would be best to adopt that procedure; he asked delegates to submit lists of approved nominations for the two working parties still to be set up to the next day's meeting.

(45) Mr. BERREDO CARNEIRO (Brazil) asked that, when the final choice was made, preference should be given to the countries which, either because of their geographical situation or because of special circumstances, were remote from the central administration.

(46) The CHAIRMAN took note of the suggestion. He requested countries interested in the draft international conventions relating to cultural activities and mass communication to put forward their names for membership of the third working party.

(47) The following countries entered their names: France, Spain, the United States of America, United Kingdom, India, Netherlands, Argentina, Philippines, Italy, Poland, Liberia.

(48) At the suggestion of Mgr MAROUN (Lebanon), Mr. WEILENMANN (Switzerland) agreed to add his country to the list.

(49) The CHAIRMAN asked the Commission to appoint the members of the drafting committee which would be responsible for preparing the report; the committee should consist of three members, one English-speaking, one French-speaking and one Spanish-speaking.

(50) Mr MARTINEZ (Ecuador) proposed that Spain be appointed to the drafting committee for the Spanish version of the text. He took the opportunity of thanking the delegate of Uruguay for his proposal that Ecuador be appointed to one of the offices of Vice-Chairman, and all the members of the Commission for adopting that proposal.

(51) The proposal of the delegate of Ecuador was approved.

(52) Baron van der STRATEN WAILLET (Belgium) proposed that the delegate of France be appointed for the French text.

(53) Approved.

(54) Mr. JOSEPH (British Caribbean Group) proposed that the English-speaking representative should be the delegate of the United Kingdom.

(55) Approved.

(56) Mr. HAYEK (Czechoslovakia) asked that the membership of the drafting committee should include a Russian-speaking representative, and proposed the delegate of the USSR.

(57) Mr. CHEVALIER (Secretary of the Commission) stated that, although there was no objection to having a Russian-speaking delegate on the drafting committee, very few members of the Secretariat were able to work in that language.

(58) Mr. LAUGIER (France) seconded the Czechoslovak delegate's proposal.

(59) The proposal was approved.

The meeting rose at 6.30 p.m.

# SECOND MEETING

*18 November 1954 at 10 a.m.*

*Chairman:* Mr. BOURGEOIS (Switzerland)

**ITEM 8.3 OF THE REVISED AGENDA: CONSIDERATION OF THE REPORT OF THE ADVISORY COMMITTEE AND GENERAL DISCUSSION OF THE DRAFT PROGRAMME AND BUDGET FOR 1955-56** (documents 8C/5, 8C/5 Corr. and Add., 8C/PR3/20 to 22, 8C/BUD/1)

(1) The CHAIRMAN recalled that, in accordance with the decisions taken at the first meeting, the three vice-chairmanships had been allotted to the Soviet Socialist Republic of Byelorussia, which had nominated Mr. Imreyko; to the Union of Burma, which had nominated Mr. Tha Hla, and to Ecuador, which had nominated Mr. Martinez.
(2) He announced that the Commission's officers had, on the basis of proposals received the previous day, established its working parties with the following membership:
(3) 1st working party (reorganization of the Department of Mass Communication): Belgium, France, German Federal Republic, Iran, Italy, Japan, Mexico, Pakistan, Poland, Switzerland, Thailand, USSR, United Kingdom, United States of America, Uruguay.

(4) Approved.

(5) 2nd working party (decentralization of the Organization's activities): Brazil, Egypt, German Federal Republic, India, Indonesia, Israel, Italy, Japan, Liberia, Pakistan, Spain, Turkey, Union of Burma, United Kingdom, United States of America, Uruguay.

(6) Approved, with the addition of Chile, at the request of that country's delegation.

(7) 3rd working party (international regulations): Argentina, Chile, Czechoslovakia, France, India, Italy, Laos, Liberia, Netherlands, Philippines, Poland, Spain, Switzerland, United Kingdom.

(8) The CHAIRMAN having suggested that one of the Arabic-speaking countries should be added to the list, Lebanon was included.

(9) The membership of the 3rd working party, with the addition, at his request, of the delegate of Burma, was then approved.

(10) Sir Ronald ADAM (Chairman of the Executive Board) said that hitherto the preparation of programme and budget had been the joint responsibility of the Executive Board and the Director-General. Document 8C/5 was the first which had been prepared by the Director-General under the amended Article VI, 3 of the Constitution. The Executive Board's comments had already been published in document 8C/5 Add. 1, and, accordingly, in presenting the proposed programme and budget, he wished only to select certain points for emphasis.
(11) The Executive Board considered that the programme and budget and the report on the remodelling of the future programme of Unesco (document 8C/PRG/13) were closely related. The Director-General's original draft programme had been discussed by the Board in March 1954, and during its November 1953 meeting it had given him preliminary ideas on remodelling. It had proposed that he should endeavour in 1955-56 to complete certain minor projects, make an initial test of technical aid to Member States, and evaluate past work, provided that the Conference approved the ideas in the remodelled programme. He wished to pay a tribute to the Director-General and the Secretariat for having within a short time substantially transformed the programme in the light of the Board's suggestions. He hoped that the Conference would find the document as great an improvement on previous ones as had the Board. A great deal was owed to the brilliance of the late Mr. Hodson, whose death was a loss both to Unesco and to the United States of America.
(12) The programme for 1955-56 placed increasing emphasis on the activities in, and consequent responsibilities of Member States. The view had been expressed during discussions in the Board that many National Commissions were not as effective as they might be. A document setting out the Board's views on that question and on decentralization was in preparation.
(13) In connexion with activities in Member States, he wished to draw special attention to technical aid - a term which he, personally, hoped would be replaced, since it was too often confused with technical assistance. Technical aid was an integral part of Unesco's programme. Unlike technical assistance, it was not related to social and economic needs and was not restricted to underdeveloped countries; there was in fact a two-way traffic between the developed and the underdeveloped countries. It was not a new activity, but the Board wanted more emphasis to be given to requests and contributions from Member States.
(14) Finally, the Executive Board had had some difficulty over the form of the budget. The seventh session of the General Conference had instructed the Director-General and the Executive Board, in preparing and discussing the 1955-56 programme, to take account of the report of the Working Party on the future programme and

development of Unesco and also of the comments of Member States. The Working Party had recommended establishment at two levels and, in the absence of adverse comment from Member States, the Board had felt bound by that recommendation. The method of working out the budget was the Director-General's responsibility and had the Executive Board's approval. The Board also supported the whole programme and budget, including the lower and higher level.

(15) The DIRECTOR-GENERAL said that the Secretariat considered that the main task of the Conference was to decide on the kind of programme it wanted for 1955-56 and for subsequent years. The problems, although different, were closely linked, but he proposed at the present time to comment only on the draft programme and budget for the coming two years.

(16) The Chairman of the Executive Board had pointed out the respective responsibilities of the Director-General and the Board, and had referred to the two important meetings of the Board: in November 1953 to discuss policy and in March 1954 to discuss details. He (the Director-General) worked in close co-operation with the Board, considering it in the Organization's interests to take the Board fully into his confidence at various stages, and he looked on the Board as the Secretariat's partner in the work. The practice of giving the Director-General final responsibility for deciding what should be included in the programme and budget was a good one, since such decisions were difficult to make in a committee.

(17) In presenting the programme and budget to the Conference the Secretariat had deliberately raised certain questions requiring a decision by the Conference on future policy and trends. In making recommendations for the preparation of the programme and budget for 1957-58 the Conference would do well to bear in mind a comment, made by one of the delegates, that it would be necessary to think clearly on the machinery for developing programmes and activities in various domains between the eighth and ninth sessions of the General Conference.

(18) During the general debate on the Director-General's Report, many delegates had urged consultation with Member States in the formative stages of the programme and budget and also with groups of States linked by common bonds and purposes, and he was ready to take all possible action in that direction. A general consideration in the minds of those preparing the programme and budget was that Unesco was a member of the United Nations family; and references would be found throughout the documents to requests and observations from the Economic and Social Council and other bodies of the United Nations and also from other Specialized Agencies. Far from infringing Unesco's sovereignty, co-operation with the family of the United Nations would increase efficiency and achievements.

(19) As well as consulting the Executive Board on the preparation of the programme, the Director-General had consulted many Member States. He had visited seven States in each of the continents of Latin America and Asia, and had been in touch with European governments frequently and with the United States Government at the time of the meetings of the National Commission in September of the previous year. The Chairman and other members of the Executive Board had accompanied him on some of his journeys and many valuable ideas and suggestions had been acquired. The impression gained was that the main trend of Unesco's work in the future must be in the direction of responding to the requirements of Member States, *not only* by technical aid, but in the permanent services. He instanced Member Governments in so-called underdeveloped areas who had stipulated that technical aid should not be given at the expense of permanent services. Many governments too had made it clear that their needs went beyond the concept of economic aid, mechanized civilizations or increasing competence in technology, and some had indicated that their highest priorities lay in the cultural and spiritual fields.

(20) An important characteristic of the programme and budget was the division into two parts - originated by the Assistant Director-General. The Secretariat would welcome any comments and suggestions for improvements. In that connexion he emphasized that the two parts were not isolated, but had a mutual bearing and value. Terminology had presented difficulties, and it had not always been possible to be as precise as was desirable. "Permanent Services", for example, were not fixed and might be subject to change; the use of the word "project" sometimes led to confusion.

(21) With regard to technical aid, he stressed that it was a service given to countries which might be either recipient or donor countries under the United Nations programme of technical assistance. The system of Special Projects had brought out two ideas to which he was opposed: first, that response to needs of Member States should lead towards regionalization; and secondly that the new emphasis would detract from the intellectual activities that were the lifeblood of the Organization. The stabilization of Part 1 of the programme and the increase of Part 2 was a provisional measure for a period of two years and subject to revision.

(22) Some progress had been made in the important direction of concentration, though no extreme measures had been proposed. The Secretariat was ready to accept guidance from the Conference.

(23) Finally, a cautious move was being made towards evaluation, which hitherto had been supported more in theory than in practice. Evaluation was a difficult process, needing a careful and planned approach; if the Conference supported the idea, the Secretariat would present further proposals to the ninth session.

(24) The Director-General then turned to the separate chapters of the programme and budget.

(25) Education. One of the chief problems was that of education for international understanding; everyone believed in its importance, but the difficulty was to put it into practice. In that connexion he referred to a recent meeting of the Expert Committee on Education for International Understanding and Co-operation, whose report would shortly be available, and to a proposal made by the United

States delegate for the establishment of an inter-departmental committee headed by the Director-General. He himself was not opposed to the idea but did not wish to commit himself before it had been discussed.

(26) Another important problem, and one on which many Member States had asked for assistance, was that of the school curriculum. There was a need to study machinery for advising countries on a continuing service basis.

(27) With regard to fundamental education, two centres had been established with technical assistance support, and Unesco had now taken over the main responsibility under the normal programme. He was opposed to establishing others, on an international basis, because the principal areas where language and homogeneous culture provided a basis for success had been exhausted. There was no objection, however, to centres being formed nationally or by two or more countries with common interests. Emphasis had also been placed on the development of Associated Projects.

(28) An important development in fundamental education was assistance to Member States in training rural teachers.

(29) Other activities were co-operation with the United Nations in community development; literacy campaigns based on methods of teaching adults to read and write, and assistance to countries in the preparation of reading material; support for the Unesco Institutes in Germany; assistance for educational reconstruction in Korea and for Arab refugee children.

(30) Natural Sciences. Unesco was interested in co-operating with the United Nations in the use of atomic energy for peaceful purposes. A full report would be submitted later.

(31) It was also hoped to find a way of providing assistance to the International Geophysical Year; and the importance of oceanography and marine sciences had been stressed.

(32) With regard to the Arid Zone work, contrary to certain views, it was Unesco's and not FAO's responsibility, since the project was one of scientific research.

(33) Social Sciences. The need to increase geographical coverage in non-governmental organizations, while of concern to all departments, had been especially stressed with regard to the Department of Social Sciences.

(34) Cultural Activities. Co-operation was envisaged with the Department of Education on reading material, museums and libraries. Emphasis had been placed on cultural exchanges and translations. An important achievement was the successful conclusion of two conventions: one on Copyright and the other on the Protection of Cultural Property in the event of Armed Conflict. Of especial interest to the former was the acceptance of the Convention by the United States of America, which had not ratified the earlier Berne Convention on copyright.

(35) Mass Communication. One of the most difficult problems facing the Department was whether its objectives should be aid to Member States in developing their own means of mass communication or publicity for the activities and objectives of Unesco and the United Nations family. The Secretariat would welcome discussion of the question. Mr. Tor Gjesdal, who it was hoped would accept the position of Director of the Department, would be present at the end of the week and would assist in this discussion.

(36) One of the paths it was hoped to explore was extension of the Department's work with the United Nations. Much of the work on international understanding was carried out in the Department of Mass Communication, and it was also fostering understanding and attachment to the principles of Human Rights through publications, press services, and radio.

(37) Exchange of Persons. Great success had been achieved in workers' travel and exchanges. Useful collaboration was established with the programme departments.

(38) Technical Assistance. The Conference was being asked for the first time to undertake a detailed review, as a result of the Economic and Social Council decision that that part of the programme, although financed by the United Nations, should be evaluated by the participating organizations rather than by the Technical Assistance Board or the Economic and Social Council. The Conference was therefore responsible for reviewing its quality and its usefulness to Member States in the same way as if it were financed by the Organization.

(39) Publications. Sales were rising and were expected to reach $100,000 for the current year as against $73,000 in 1953. Improved criteria were being used for selection and review of publications.

(40) Administration. It had been suggested that the new tendency in the programme would result in a new basis for organizing the Secretariat. The Director-General, however, could not foresee a change in the present organization based on intellectual disciplines. Views had been expressed on the need for co-ordinating machinery to handle large programmes, but the Secretariat was quite capable of planning special machinery and organizing task forces when needed. Such task forces, however, could only be set up under the existing organization and he hoped that the Conference would not bind the Secretariat too rigidly in the matter of administration.

(41) Budget. After deciding on a programme, the next step was to provide the funds for executing it. The higher and lower levels had been conceived by the previous Conference and not by the Director-General and he hoped the practice would not be followed in future years. It was difficult to relate the two levels to priorities, because the programme was envisaged as a whole and it was impossible to eliminate projects on the basis of a level. He had tried to retain the old-established continuing services at the lower level, but projects could be exchanged between levels if required.

(42) Finally, the Secretariat, working as a team, was responsible for the programme and budget and would endeavour to implement the wishes of the General Conference and of individual States. It was proud of the programme but ready to accept criticism or new proposals. The Secretariat had worked loyally and would continue to do so in an effort to help the Conference in its decisions.

(43) In conclusion, it had been an inspiration to the Secretariat to hear the statements at the plenary meetings on the enlarged vision and new hope which Member States saw in Unesco's work. Those views would be before the Secretariat as it pursued its work in collaboration with Unesco's Members.

(44) Mr. GARDNER DAVIES (Australia) (Chairman of the Advisory Committee on Programme and Budget) presented the Committee's First Report (document 8C/BUD/1), and drew attention to the main recommendations and conclusions which might help the Programme and Budget Commission in its work.
(45) The Committee, which had devoted the past fortnight to a detailed examination of the Director-General's programme and budget proposals for 1955-56 and the draft resolutions submitted by Member States, had unanimously agreed that the lucid drafting of document 8C/5 had made it a very much better working document than in previous years. The Committee also wished to express its warm appreciation of the co-operation it had received from the Secretariat. Collaboration between the Secretariat and delegations had been helped by the widening of the Committee's terms of reference to enable it to deal with the programme and budget aspects of the proposals at the same time.
(46) While the Committee had not taken the total size of the budget into consideration, it had, in view of the introduction contained in the programme and budget document, recommended that the Conference should not fix the total budget until it had received the Administrative Commission's report on the scale of contributions for 1955-56 and on methods of financing the budget.
(47) The Committee had borne in mind the need to examine projects in the light of the Director-General's conception of the programme as transitional leading to increased concentration of the Organization's activities. It had already prepared a report on the Executive Board's proposals on the remodelling of the future programme.
(48) On the basis of the Director-General's opinion that the division of projects into "higher budgetary level" and "present budgetary level" did not imply a differentiation in priority, the Committee had agreed to make recommendations to the Conference on the relative importance of various projects and of the draft resolutions submitted by Member States. The projects were divided into four categories:
(49) Category 1. Projects to which the Committee attributed priority, with a total appropriation of $533,377. The projects listed constituted a small part of the Organization's major activities, but the Summary Records indicated that the Committee attached importance to certain major spheres of activity for which it was not considered necessary to specify priorities.
(50) Category 2. Projects approved by the Committee for the 1955-56 programme, but for which no special recommendation was made. Draft resolutions of Member States retained for insertion in the 1955-56 programme represented a total expenditure of $99,217.
(51) Category 3. Projects which could be approved only to the extent that funds provided exceeded the appropriations required to operate the first two categories; those projects represented an expenditure of $320,752.
(52) Category 4. Projects to be dropped or deferred until later programme and budget periods: $218,669.
(53) The Committee had also recommended the following two draft resolutions, which had considerable budgetary implications: acceptance of the Government of India's invitation for the ninth session of the General Conference to be held in New Delhi, which would involve an additional budgetary provision in 1956 of $314,042; the use of Russian as a working language of the General Conference, entailing an additional expenditure of $141,350 in 1955-56 if the Conference were held in New Delhi.
(54) The Committee also drew attention to the difficulties caused by belated submission of draft resolutions by Member States, and recommended that Member States be asked in future to submit the substance of their proposals in time for them to be taken into account by the Director-General when framing the draft programme.
(55) Other decisions were: to recommend that two working parties should be set up by the Programme and Budget Commission, the first on the general question of decentralization of the Organization's activities and the second to examine the administrative structure of the Department of Mass Communication; and to express the hope that the Organization would endeavour to evaluate the results obtained in various fields of activity as a basis for future planning.
(56) The Committee considered that the proposed programme and budget was well balanced in respect of appropriations among chapters and between the two sections into which each chapter was divided; the document also maintained the continuity of the Organization's activities and met the frequently expressed wish for concentration of activities. In the last respect it was noted that the number of projects had been reduced from 242 in 1953-54 to 69 for 1955-56.
(57) In conclusion, the report was intended to help the Programme and Budget Commission in its work and, although it reported only the Committee's recommendations, the Summary Records contained many useful discussions and gave the reasons on which the recommendations were based. It was hoped that the Programme and Budget Commission would not need to repeat the Committee's examination, but would be able to accept the programme as recommended, taking advantage of experts in the various delegations represented to assure itself that the work plans for each project were the most effective and economical possible.

(58) The CHAIRMAN felt sure that the tremendous amount of work done by the Advisory Committee would greatly facilitate the Commission's work.
(59) He thought, however, that it would be easier to define the tasks of the various working parties in more detail after the general discussion.

(60) Mr. SPILHAUS (United States of America) said that the Advisory Committee had already worked through the programme and budget in great detail, and his impression was that the majority of projects

had already been approved by the plenary meetings of the Conference. He therefore proposed that the Programme and Budget Commission should not attempt to go over the same ground as the Advisory Committee, but should limit its discussion to those projects needing substantial modification either in substance or in terms of the budget. If Member Governments would submit recommendations on precise points in the programme and budget before noon on 22 November, the work of the Commission would be speeded up considerably.
(61) The time thus saved should be used by working parties composed of specialists and experts within the Commission, which, with the help of the Secretariat, would concentrate on improving and refining the programmes approved by the Commission.
(62) The procedure outlined would not restrict general debate, but would direct it towards matters of most concern to Member States.

(63) Mr. BERNAL JIMENEZ (Colombia) asked the Chairman to allow him to speak after a vote had been taken on the United States proposal, which he supported. He added that he wished to speak, whatever the result of the vote.

(64) Mr. BERREDO CARNEIRO (Brazil) supported the proposal made by the United States delegate; he considered it useless to go into the details of projects which had already been carefully examined by both the Executive Board and the Advisory Committee.
(65) It seemed to him that the moment had come to leave purely material matters aside and get down to basic problems, in order to determine what methods and procedure should be adopted in order to achieve the aims proposed.

(66) Mrs. PINTO DE VIDAL (Uruguay) supported the United States proposal, as she thought it would save time. She recalled that the Chairman had explained on the previous day that it would take the Commission thirty-five meetings to complete its study of those matters, which would mean that, at the end of the General Conference, it would still not be in a position to make its report unless it held night meetings. She believed that, if it approved the United States proposal, the Commission would have more time to deal with the section relating to education, for instance, to which the Director-General had alluded.

(67) Mr. VERONESE (Italy) was surprised that the United States delegate, by suggesting the establishment of new committees of experts, should wish to return to a working method which had already been severely criticized at the seventh session of the General Conference, and which was also contrary to the previous day's decision to limit the number of working parties to three.
(68) Moreover, although decisions taken by small groups might carry a certain weight, on questions of such great importance they could not be binding upon all delegations.
(69) The delegate of Italy was therefore in favour of holding a general discussion immediately before the vote on the United States proposal.

(70) Mgr MAROUN (Lebanon) was of opinion that there was much to be gained by setting up working parties to examine the programme.
(71) He hesitated, however, to agree entirely with the United States proposal, for it seemed to him that the Programme and Budget Commission should discuss not so much specific points in the draft programme, but rather broad plans of campaign designed to meet both the requirements of Unesco's own particular fields of activity and the felt needs of Member States.
(72) Otherwise, he did not see that there was any contradiction between the United States proposal and the Chairman's suggestion that the Commission briefly survey the problems which were of interest to all delegations.

(73) The CHAIRMAN thought that it would clarify the debate if the United States delegate would explain his ideas on the new working parties which he wished to see set up.

(74) Mr. SPILHAUS (United States of America), referring to the statement of the delegate of Italy, said that "working parties" was perhaps an ill-chosen term; he had in mind groups of experts or consultants. His idea was to eliminate discussion on projects on which delegates were in agreement and to restrict it to those which Member States considered needed alteration.

(75) Mr. NIELSEN (Denmark) supported the proposal of the delegate of the United States of America, but wished to raise two points. First, the time limit suggested for submitting proposals was too short: he would prefer to see it extended to the following Monday or Tuesday. Secondly, where a delegation had not itself raised a point, he would like to know whether that delegation could participate in discussion if the point were raised by another delegation.

(76) Mr. SHARIF (Pakistan) shared the United States delegate's wish to save time and help the Commission, and would support any practical method of achieving that end. The setting up of additional working parties, however, would preclude the participation of small delegations, who were already finding difficulty in manning the existing working parties. A more practical procedure would be for the Commission to give moral approval to projects on which there was general agreement and limit discussion to those on which delegates had raised specific questions.

(77) Mr. MENDIS (Ceylon) supported the United States proposal for the very reason that his was a small delegation - consisting of two members. If discussion were limited to specific points raised by Member Governments, his delegation's task of participating as widely as possible in the proceedings of the Conference would be facilitated.

(78) Sir Ben BOWEN THOMAS (United Kingdom) was opposed to the hasty abandonment of well-tried

practice; there were more important considerations than time. The Executive Board and the Advisory Committee had done very valuable work, the results of which appeared in the documents before the Commission; but a general discussion in the Commission would give the opportunity for exchange of ideas and the impact of minds, which was so important in an organization such as Unesco. With regard to the use of experts, he did not agree with the implication that acceptance of a project was any less a matter for experts than was refinement of a project.
(79) Finally, he considered that the United States proposal should have been discussed with the Chairman and submitted to the General Committee.

(80) Mr. BERNAL JIMENEZ (Colombia) pointed out that, if the United States proposal concerning the formation of groups of experts were approved, it would still be necessary to have a general discussion before a final decision could be taken; he did not believe that the United States delegate had intended otherwise. If the proposal were not approved, he thought that the general discussion should take place forthwith.
(81) Mr. Bernal Jimenez recalled that the Director-General, with the wisdom of experience and the impartiality which were characteristic of him, had reviewed the different chapters of the programme and had made extremely interesting comments. So also had the Chairman of the Executive Board. Both had agreed that the whole programme should fall within a budgetary framework in which programme activities were subordinate to whatever criterion the General Conference might adopt with regard to the budget. There then arose a point which he wished to explain to the Commission.
(82) He had understood that the General Conference, at its present session, was to choose between two budgetary solutions: the first, which might be called the static solution, would consist of maintaining the present level; and the other, the dynamic solution, would result in an increase in the total budget figure, due to contributions from new Member States. From what he had heard, however, he gathered that that was not the case, and that the dynamic solution was the only one to be taken into account. Perhaps there was only a difference of opinion as to when that dynamic solution should take effect.

(83) The CHAIRMAN pointed out to the delegate of Colombia that a question of procedure, and not the basic problem, was at present under consideration; he would therefore request him to restrict his remarks to procedure.

(84) Mr. BERNAL JIMENEZ (Colombia) had understood - as the Chairman himself had said - that a general discussion could be held, without a vote being taken on any proposal; and indeed it seemed to him that various delegates had already referred to questions of a general nature. It would therefore be advisable to decide definitely whether the general discussion was to be postponed, or whether the United States proposal regarding procedure was to be discussed and put to the vote as soon as possible.

(85) Mr. PHOTIADES (Greece) feared that the establishment of working parties might lead to a dividing up of the work, with the serious consequences that had already been noted (particularly at the Mexico session of the Conference).
(86) He therefore seconded the proposal of the delegate of Italy.

(87) Mr. LAUGIER (France) agreed with the delegate of the United Kingdom that the delegate of the United States of America had not submitted his proposal in accordance with the correct procedure.
(88) The French delegation was strongly opposed to increasing the number of expert committees to deal with questions which had already been debated on many occasions or were sufficiently important to be discussed by the General Conference in plenary meeting.
(89) As it was extremely difficult for small delegations to be represented on many committees, Mr. Laugier suggested that the Commission approve only the first part of the United States proposal, to the effect that delegations should inform the Commission's Officers of the subjects which they would like to have discussed, or the points on which they wished to speak.

(90) Mr. FLORKIN (Belgium) dealt separately with the two aspects of the United States proposal.
(91) If the discussion were limited to questions suggested by the delegations, the Commission might lose the benefit of the information which the Secretariat could supply on each item of the programme.
(92) If, however, the United States proposal were accepted, in order to gain time, could not a date be fixed for the discussion of the first part of the programme and another date for the second?
(93) With regard to the second aspect of the proposal concerned, Mr. Florkin was sure that the United States delegate intended the experts to meet after, and not before, the general discussion, in order to help the Secretariat to determine methods of action.

(94) Mr. KABIR (India) said that, if the following interpretation were correct, he would support the proposal of the United States delegate:
(95) 1. There was to be a general discussion of the whole programme and budget, bearing in mind the statements of the Chairman of the Executive Board and the Director-General, which would provide for the meeting of minds on broad issues. The Belgian delegate's proposal would not be out of place, because, as the Director-General had explained, the two levels were integrated parts of the whole programme.
(96) 2. To prevent repetition of discussion, the Commission would concentrate on aspects where differences of opinion and misunderstandings needed clarification.
(97) 3. As the United States delegate had himself explained, there was no question of setting up working parties: the intention was, after approval of the programme and budget by the Commission and the Conference, to bring to the Secretariat's notice any specific issues in which delegations were interested.
(98) The Conference had never intended to commit the Secretariat to a rigid programme and, in making

improvements and modifications - provided they did not conflict with the general outline and principles - assistance from experts would be invaluable. (99) Finally, he supported the delegate of Denmark's proposal to extend the time limit for submission of proposals by delegates.

(100) Mr. SANDOVAL VALLARTA (Mexico) observed that one of the main difficulties with which the Organization had always had to contend was the disparity between the funds available and the programme. In the present case there was a disparity between the amount of time available and the programme. Considering that the United States proposal would reduce that disparity, he would support it and moved that it be put to the vote.

(101) Mr. FAUBLAS (Haiti) suggested that, before a vote was taken, the two parts of the United States proposal be separated, since, as the French delegate had pointed out, at least one part deserved consideration.

(102) In view of the short time available to the Commission, Mr. ARSENAULT (Canada) did not see what advantage there could be in reconsidering projects which had already been thoroughly examined. He would vote therefore for the proposal of the United States delegate.

(103) Mr. ANGELL (United States of America) thanked the delegate of India for his clarification. He approved the proposals of the delegate of Denmark and said that he would have no objection to the discussion of the programme in two parts.

(104) Mr. FLORKIN (Belgium) reminded the meeting that he had suggested fixing two dates for discussion, corresponding to the two groups of chapters.

(105) The CHAIRMAN suggested that noon on Monday, 22 November, be fixed as the deadline for delegations to submit their requests to speak on the first three chapters - Education, Natural Sciences and Social Sciences.

(106) Sir Ben BOWEN THOMAS (United Kingdom), on a point of order, said that a vote should first be taken on his proposed amendment, which was as follows: first, the Commission should proceed with a general discussion; and, second, the United States delegate's proposal should be referred to the General Committee of the Conference to consider, in the light of the discussion, its practical application and its effect on the time schedule of the Conference.

(107) A vote was taken, and the result was 23 votes in favour, 23 votes against, with 6 abstentions.

(108) Mr. KABIR (India) pointed out that the first part of the amendment was not in fact amending any proposal, since no objection had yet been made to the holding of a general discussion.

(109) It was agreed that the second part of the amendment was the point on which a decision was needed.

(110) Sir Ben BOWEN THOMAS (United Kingdom) reformulated his proposal as follows:

"That the United States delegate's proposal be referred to the General Committee of the Conference to consider, in the light of the discussion, first, its practical application and, secondly, its effect on the time schedule of the Conference."

(111) The proposal was adopted by 25 votes to 19 with 4 abstentions.

The meeting rose at 12.45 p.m.

# THIRD MEETING

*18 November 1954 at 3.30 p.m.*

*Chairman:* Mr. BOURGEOIS (Switzerland)

**ITEM 8.2 OF THE REVISED AGENDA: CONSIDERATION OF THE REPORT OF THE ADVISORY COMMITTEE AND GENERAL DISCUSSION OF THE DRAFT PROGRAMME AND BUDGET FOR 1955-56** (continued)

(1) Sir Ben BOWEN THOMAS (United Kingdom) thanked the Chairman and the Executive Board for the excellent documentation supplied to the Commission and the Director-General for the extremely helpful statement he had made at the morning meeting, and commended the report of the Advisory Committee. Assuming that the Commission was ready to start on a general discussion, he would make some brief comments.

(2) Firstly, the opinion of the United Kingdom delegation with regard to the proposed programme was based on the fact that it considered that the Unesco Secretariat, in association with the Member States, was trying to carry out the aims to which the Organization was pledged in its Constitution. In that connexion, he thought that, if success was to be achieved, the most important contribution

must come from Member States themselves.
(3) Secondly, in its comments on the various projects, the United Kingdom delegation, while appreciating the proposals made on both the higher and lower budget levels as well as those contained in the various resolutions which had been submitted by Member States, would apply only one standard. That standard would be one of merit. He had been heartened by the statement that no priority would be attached to the location of any proposed project.
(4) Thirdly, the United Kingdom delegation would apply the criterion of relevance to the aims and objectives of Unesco. It would not consider projects relevant if they covered a field of activity which was in the sphere of another Organization.
(5) Fourthly, his delegation was interested in maintaining the balance between fundamental education and intellectual co-operation. He warned against accepting new cultural responsibilities at the expense of neglecting Unesco itself. It was important to the work of Unesco for the staff of the Secretariat to have contact with the best in human intellect and intelligence.
(6) Fifthly, the United Kingdom delegation would approach with a critical eye the grants to non-governmental organizations. In its opinion, Unesco should only give assistance to those non-governmental organizations which could prove that their existence was justified and which had the support of their members.

(7) Mr. RIVET (France) wished to make a few remarks on behalf of his delegation.
(8) He recalled that Unesco had made substantial progress in co-ordinating previously disjointed efforts in the fields in which it was interested, and went on to stress that Unesco should above all act as an instigator or catalytic agent. It could and must intervene in countries where deficiencies had been noticed, but it should not assume responsibilities which fell within the competence of autonomous organizations playing a rôle which Unesco could not fulfil entirely; in every instance where Unesco's efforts had failed, it was because attempts already made had been abandoned too quickly.
(9) The delegate of France saw no reason why the Unesco programme should not be divided into two parts, permanent activities and technical aid activities, provided that those who drew the programme up did not lose sight of the vital link between the two categories. Those responsible for permanent activities could give very useful help to those dealing with technical aid, and vice versa.
(10) On the other hand, Mr. Rivet thought it extremely regrettable to reserve no more than 33% of the Unesco budget for permanent activities, while any additional resources would be devoted to technical aid. He recalled that Unesco's most substantial achievements had been in the fields of the Natural Sciences, the Humanities and Social Sciences. In his view, certain organizations, such as the International Council for Philosophy and Humanistic Studies, should not have the same credits but be given increased funds.
(11) With regard to the second part of the programme, the delegate of France considered that the term "technical aid" was ill-chosen, "aid" implied "charity". But, as the Director-General had pointed out, the needs of underdeveloped countries were not only of a material kind, but were considerable at the social and intellectual levels. Mr. Rivet thought that the term "human solidarity" would be more appropriate.
(12) Furthermore, the delegate of France wished to know whether Unesco would give ear to Member States' requests, or whether it would itself make suggestions to them. He considered that, in order to help the States concerned to the greatest extent possible, and to avoid wasting money, Unesco should make a careful, impartial and all-embracing choice excluding all political considerations.
(13) In addition, Mr. Rivet regretted that two of Unesco's vital tasks, education for international understanding and education for living in a world community, had not been sufficiently stressed in the programme.
(14) The delegate of France favoured the creation of an international school. The public must be made to understand that great hopes lay in Unesco as a means of securing lasting peace.

(15) Mr. THA HLA (Union of Burma) welcomed the new presentation of the budget and indicated his general agreement with the Director-General's remarks. He supported the higher budget level but did not consider that it was sufficiently high for the work of Unesco to be truly effective. There was too much concentration of effort and not sufficient concentration of resources. He hoped that the great nations, such as the United States of America and the United Kingdom, would approve the higher budget level and, in so doing, take over the responsibilities of the less fortunate nations, which could not find the means to undertake the urgent tasks facing them. He outlined the points in the programme which his Government considered important, namely, cultural exchange, the pooling of technical knowledge in the building of cultural institutions all over the world, the translation of literary and philosophical works and participation of the masses in the highest forms of culture. Emphasis on such features would make for international understanding and peace. Burma, although having only very small economic resources, upheld the philosophy of kindness, helpfulness and peace.

(16) Mr. KABIR (India) thought that the crucial point raised by the Director-General was decentralization. If decentralization or regionalism was to be interpreted as dividing the offices of Unesco amongst the various regions of the world, it would be harmful, but, if it was to be interpreted as meaning regionalizing the programme of Unesco, it would be beneficial. Priorities were not the same in each country and should be determined by the requirements of each individual country. Referring to the two resolutions submitted by India on the subject of decentralization, he said that objection had been made to the setting up of "regional offices", and explained that what the Indian Government wanted to see established were area offices under any name.
(17) Referring to the remark by the delegate of Burma that the budget was not sufficient to meet

the needs of Unesco, he pointed out that, however big the budget was, it would never be big enough to do all that Unesco would like to do or ought to do. The question of remuneration of primary school teachers should be treated as one of great urgency, but, as long as the budget was inadequate to meet the urgent programme requirements of Unesco, it would be impossible to tackle such a task. The programme had of necessity to be selective and Unesco should use its resources to stimulate interest in projects which, once started, would be carried on by their own momentum and the interest of the communities affected. He fully supported the higher budget level and pointed out that the additional money required to carry out the programme under that level could be found from the contributions of the new Member States.
(18) With regard to the permanent services, he warned against economizing at the expense of efficiency. He advocated greater use of National Commissions in carrying out projects.
(19) He agreed with the Director-General that greater efforts were required, but asked the Commission to remember that it took time to see and evaluate results and advised against too stringent criticism of work in hand.
(20) He did not think that the subject of international understanding should be treated under a separate heading in the programme. International understanding should be the controlling spirit of Unesco in all branches of its work starting with the very young. The same spirit should permeate all work concerning the exchange of persons.
(21) Finally, he wondered if it might be advisable to consider the question of priorities area by area.

(22) Mrs. PINTO DE VIDAL (Uruguay) said that she would be speaking more in her capacity as a school-teacher with wide experience than as government delegate. She wished to comment on a few points raised by the Director-General at the morning meeting. In the first place she considered that international understanding had been watered down in all spheres. The idea should be started in the home and continued at school. In Uruguay, streets were named after outstanding foreigners or foreign achievements, children were taught to sing the songs of other countries and in the schools learned about other countries' heroes. The Junior Red Cross was very active and included millions of young people throughout the world. In that field, Unesco had given assistance in various forms. International understanding was the responsibility of every country. It was better to work along those lines than to found an international school, from which only a few pupils would draw benefit.
(23) Secondly, with regard to school curricula and an advisory committee thereon - a theme raised by the Director-General - she considered that education was a national responsibility. Each country knew its own problems and needs. An advisory committee on curricula would have to take into account the particular characteristics of each people, for example, the large number of children living in rural areas in many countries.
(24) Thirdly, she did not know exactly what the Director-General had said about the centres at Patzcuaro and Sirs-el-Layyan. But the speaker considered that those centres must be given more help than they had received up to the present. They had a great deal of work and their usefulness was incalculable.
(25) Very often school-teachers in rural areas had neither good schools nor appropriate equipment. They were not paid as they should be. Their material position must be improved and their training and professional prestige raised. Uruguay had set up a teachers' training school for rural school teachers. It was in the heart of the country and was thus in touch with the surroundings in which those teachers would later work.
(26) The Director-General's statement had emphasized the importance of literacy and fundamental education. It was a great misfortune to be unable to read or write. Unesco must devote large resources and show more interest in that field. It served to raise the living standards of the people. Uruguay had been asked to send school material and to help repair the damage caused by war, notably in Korea. They had done all they could to reply to that call and continued to take interest in the matter.
(27) The speaker said that in her view cultural exchanges were useful and would bear fruit. But a watch should be kept over the way in which they functioned; it would be desirable to organize and make a close study of the time which fellowship holders should give up to their travel and studies. She mentioned the case of a group of teachers who had arrived in Uruguay and had stayed there three months; later they had gone on to Argentina where they remained six months. The length of those stays was perhaps excessive, and it might be that detailed and carefully studied preparation would help to avoid drawbacks of the kind. The speaker recalled how she had taken part in the San Francisco Conference, when there were great hopes in the work of the United Nations. Today it could be affirmed that those hopes were well-founded and as far as concerned the cultural undertaking embodied in Unesco had borne fruit.

(28) Mr. CHEN CHI-PAO (China) considered that the new programme was an improvement on past programmes and that it pointed the way to even better future programmes. The Chinese delegation felt that Unesco was overburdened with different types of activities and it would welcome simplification in that respect. Unesco should only undertake the type of activity which it alone could discharge and should act as a co-ordinating body for other types of activity which could be handled by other agencies, for example, non-governmental organizations assisted by Unesco, or National Commissions. The impression should be avoided that Unesco was omnipotent and had unlimited resources. Other agencies receiving assistance from Unesco, which could carry out work for Unesco, should be called upon to do so. A fairer distribution of tasks would lead to better co-operation and relationship between the agencies of Unesco.
(29) More emphasis should be put on three groups of people - teachers, youth and women. At present

insufficient attention was given to mobilizing those three groups to carry out the objectives of Unesco.
(30) He would also like to see more emphasis put on the universality of culture. It was necessary to emphasize eastern culture as being equal to western culture. The East showed more readiness to study Western culture than did the West, Eastern culture. Western culture formed the core of the present programme and Eastern culture was only being used for reference purposes. The East was underdeveloped from a technical point of view but had much to offer the world in matters of ethics, philosophy, etc. The fault was on both sides, the West being unwilling to study the culture of the East and the East failing to present its case to the West.
(31) With regard to technical aid, he thought that the word technical was inadequate, as a two-way traffic was essential. Material aid was of more value than personal aid.

(32) Mr. PAIK (Korea) said that he had been moved by the remarks made by the delegate of Uruguay concerning his country and thanked the Director-General for the references he had made in his statement. He pointed out that an emergency was of the highest priority but that Korea was not included in the emergency assistance programme. Korea had only consultative relations with the United Nations Korean Reconstruction Agency, but Korea as a Member State of Unesco had a right to participate in the programme. He asked whether the Commission would recommend providing the United Nations Korean Reconstruction Agency with a new impetus for implementing its rehabilitation programme in Korea by including Korea in the programme for emergency assistance. The Korean delegation thanked all Member States for the help which they had extended to Korea.
(33) He supported the higher budgetary level for the programme for 1955-56.

(34) Mr. ABDEL-RAHMAN (Egypt) pointed out that the work of the Programme Commission consisted of putting the proposed programme into a form which would be acceptable to the General Conference, and suggested that the Commission should limit itself to that field. The programme had gone through various important stages before appearing in its present draft form. The Secretariat, Director-General and Executive Board had considerable experience in the execution of previous programmes, and had contacted Member States in their preparation.
(35) The process of consulting Member States was an important stage, without which the General Conference could not properly discharge its responsibilities. The Director-General had already obtained information regarding the requirements of the various Member States before putting his programme into draft form; which being so, the programme should be acceptable to the General Conference.
(36) On that understanding, a programme acceptable to the General Conference would be a coherent reflection of views which came from decentralized areas, and which had been channelled through the central body of Unesco. The problem of regionalization or decentralization was not purely a matter of administration or of rearranging the programme, but essentially determined the efficiency of the General Conference and of Unesco.

(37) Mr. WIDDOWSON (Union of South Africa) congratulated the Director-General on the compilation of the programme. With regard to the projects affecting South Africa, he pointed out that the Committee for Technical Co-operation in Africa south of the Sahara had already built up a good record of work in co-operation, and he wondered whether Unesco would not be advised to channel its proposed projects through that committee. In the interests of economy and efficiency Unesco should consult the committee before undertaking any projects in Africa south of the Sahara. The South African Government considered it undesirable to start activities unless it was certain that they could be implemented. His Government was not opposed to projects being undertaken in the South Saharan region, but felt that the resources would be better used, if consideration were given to the desirability of consulting with the Committee for Technical Co-operation in Africa south of the Sahara.

(38) Mr. SILLER (Mexico) said that his Government, the Ministry of Education and the National Commission believed that the proposed programme and budget presented by the Director-General for 1955-56 should be supported, because of its structure, and because of the balance it maintained between general and special activities. The Mexican Government had helped and would continue to help in projects carried out by Unesco in Mexico, and would above all assist the Fundamental Education Centre at Patzcuaro. In the speaker's view, the success of programmes depended upon a good choice of experts and fellowship holders. Technicians and experts should be selected who had a good knowledge of the country that they were visiting, and who were acquainted with its special conditions, possibilities and limitations. It was not enough that an expert be competent unless he had a due knowledge of his field of work. The Mexican Government was favourably impressed by the interesting and important chapters dealing with general activities. There was no reason for reducing the budget; it should on the contrary be increased wherever the importance and urgency of the programme required it. His delegation would therefore support the "higher budgetary level".

(39) Mr. ABEYWICKREMA (Ceylon) associated himself with the remarks already made with regard to the clarity of the programme. He regretted that the studies of the school curriculum and of the humid tropical zone had been postponed on the recommendation of the Advisory Committee, and hoped that the Commission would reverse that decision.

(40) The DIRECTOR-GENERAL, referring to the intervention of the delegate of Uruguay, said that there appeared to be some misunderstanding. The policy of the Secretariat was to put more funds

from the normal budget at the disposal of the two existing fundamental education centres. The Secretariat did not think Unesco should start centres of that type elsewhere, but was ready to support national efforts. It would also support a centre serving two or three countries having the same language. That was his recommendation.
(41) The Director-General assured the delegate of South Africa that it was the policy of the Secretariat to consult the Committee for Technical Co-operation south of the Sahara. He would be pleased to follow the suggestion to channel certain projects through that Committee, if it was for comments only.

The meeting rose at 5.20 p.m.

# FOURTH MEETING

*19 November 1954 at 10 a.m.*

*Chairman:* Mr. BOURGEOIS (Switzerland)

**ITEM 8.2 OF THE REVISED AGENDA: CONSIDERATION OF THE REPORT OF THE ADVISORY COMMITTEE AND GENERAL DISCUSSION OF THE DRAFT PROGRAMME AND BUDGET FOR 1955-56 (continued)**

(1) The CHAIRMAN stated that the General Committee had examined the proposal of the United States delegation, submitted to it by the Commission the previous day. The General Committee had requested delegates to let the Chairman of the Commission have a list, for his guidance, of the items which they wished to discuss; delegates could tell how to assign priorities to those various items, by referring to the classification system adopted by the Advisory Committee on Programme and Budget.
(2) The Chairman also called on the specialists concerned to communicate with the appropriate Directors of Departments in person, in order to arrange informal talks with them, during which they might consider ways of carrying out resolutions in the draft programme.

(3) Mr. LAUGIER (France) wanted an assurance that the questions which had not been given a high priority would not be overlooked altogether. He thought that it would be best to assign priorities in order of time.

(4) The CHAIRMAN emphasized that the priorities mentioned by delegates were intended for guidance only, and should be in no way restrictive. All that it was required to know was how much importance delegates attached to a particular question.

(5) Replying to a question from Mr. PANNETON (Canada), the CHAIRMAN explained that delegates were in no way bound to observe the priorities suggested by the Advisory Committee.

(6) After a statement by Mr. FAWZI (Egypt), the CHAIRMAN remarked that he saw no reason to set a time-limit for speeches during the morning's discussion.

(7) Mr. SPILHAUS (United States of America) expressed his delegation's great appreciation of the work done by the Director-General, the Secretariat, the Executive Board and the Advisory Committee, particularly on the difficult problem of achieving a balance between general and special activities in the programme. While sharing the general approval of the programme expressed by the majority of members, he had the following comments to make on behalf of his Government.
(8) The first point he wished to stress was the desirability of seeing the remodelled programme put into operation. With regard to the programme of 1955-56, he believed that it could be strengthened and that the increased services necessitated by the addition of Member States could be provided with little or no increase in the total assessment as compared with 1953-54, and perhaps even some reduction. He supported the opinion expressed by certain delegates that broadened participation in Unesco would strengthen support for the programme. He was anxious to see a concentration on fewer projects with better results. While most Unesco projects were worth while, some were superior to others, and it was essential to apply Unesco's resources in staff, time and money, to the most effective. It would be well to bear in mind the five criteria for selection suggested by the United Kingdom delegate, and the method of evaluation referred to by the Director-General.
(9) He welcomed the opportunities given by the programme for cultural exchanges between countries, and was especially pleased to see Asia and Africa included in such activities. The United States of America was interested and active in that field.
(10) He supported whole-heartedly the delegates of France and other countries who had referred to the need for developing Unesco's work for

international understanding. Mutual understanding and respect among the peoples of the world was the fundamental purpose of Unesco and should be borne in mind by all who were connected in any way with the Organization's work.

(11) Mr. DE SALIS (Switzerland) had some general comments to make on the Proposed Programme and Budget for 1955-56. While he realized that the total budget figure would not be fixed until a later debate, he wished to mention that his delegation considered that an increase would undoubtedly be necessary.

(12) After hearing the statements of the previous day by the delegates of France and the United Kingdom, the Swiss delegation had come to the conclusion that Unesco's general policy should be outlined by the Commission. He drew attention to the importance of recognizing the essential unity of Unesco's work, however disguised it might be by the number and diversity of the Organization's projects. That unity of action, which should be based on unity of thought, was all the more necessary since Unesco's aim was to give every country in the world a share in its work, irrespective of differences of language, culture, social and technical development or even political systems. That diversity need cause no alarm since the majority of Unesco's projects could only be carried out on a world scale. The Swiss delegation had thus always attached primary importance to the universal aspect of Unesco and continued to believe that the Organization should welcome as many as possible of the nations and peoples of the world.

(13) It was in that spirit that the Swiss delegate wished to support the remarks made the previous day by the delegate of France. Whatever it was finally decided to call it, the part of the programme dealing with technical aid should be in keeping with the notion of human fellowship. Switzerland, while maintaining her independence in foreign policy, attached great importance to that notion of human fellowship and never ceased to be conscious of her responsibilities as a member of the family of nations. Switzerland placed the interests of mankind as a whole before those of any one part of the world, or any one political or ideological group. The French sociologist, André Siegfried, had remarked that the Swiss were accustomed by their own constitution to regard other nations as partners, rather than potential enemies. Mr. de Salis thought that that remark reflected a very profound feeling on the part of the Swiss nation, whose one endeavour was to be, as far as it could, the partner of all those in Unesco who were engaged in furthering the fellowship of mankind.

(14) Unesco could not be expected entirely to forget international politics and their resultant divisions. The Swiss delegation was nevertheless convinced that all the Member States of Unesco were united in their desire for peace. Under its Constitution, they were pledged to collaborate in the work of advancing the mutual knowledge and understanding of peoples in the interests of peace.

(15) While agreeing entirely with the delegate of the United Kingdom that it was wisest to steer a middle course between heaven and earth, Mr. de Salis thought that, in the present troubled time, to seek a way to better understanding between nations was eminently realistic and practical. He therefore believed that the promotion of international understanding should be regarded as the clue to the labyrinth of Unesco's varied activities. The Swiss delegation was in favour of setting up an office to give tangible form to the desire for human fellowship and peaceable understanding which should underlie all Unesco's work. That office could be entrusted with the task of ensuring that the true aims of Unesco were never forgotten. As the Uruguayan delegate had said the previous day, a serious endeavour should be made in every country and at every educational level to accustom children - the scientists, writers and politicians of the future - to the idea that other races of men, other nations and other cultures had the same right to respect as their own. The point was to explain to them and make them understand why other nations behaved as they did, but without glossing over the difficulties with which they had to contend. All that was needed was intellectual honesty and tolerance.

(16) The Swiss delegation was also glad to note the trend in the Commission towards better concentration and co-ordination of the Organization's work.

(17) It was essential to divide the programme into various chapters according to subject, provided that those different aspects formed a whole.

(18) Criteria should be laid down for the examination of the many requests which Unesco had received from all sides. The Swiss delegation hoped that the Director-General and the Executive Board would see that Unesco's subventions policy was as coherent as possible. Such coherence was one aspect of the underlying unity of the programme, and the Swiss delegation shared on that point the views expressed by the delegate of the United Kingdom.

(19) Whether dealing with fundamental education, intellectual co-operation or technical aid, or with any other branch of Unesco's activity, it was essential always to bear in mind certain basic ideas which served the real aims of Unesco. On the basis of the foregoing general ideas, the Commission would be able to take detailed decisions and fix the final budget total.

(20) Mr. AVIDOR (Israel) said that the structure of the proposed programme and budget for 1955-56 would be more clearly understood when considered in conjunction with the report on the remodelling of the future programme of Unesco. He proposed to comment on the two outstanding characteristics: concentration and increased aid to Member States. With regard to concentration, too much had been said from the budgetary angle and it had been claimed that concentration was necessary because of Unesco's limited resources. Yet those who advocated concentration were at the same time recommending higher levels for Unesco's budget. The idea of concentration had emerged at a time of growing expansion in the fields of activity and in the activities within Unesco, due chiefly to a desire to find the ideal projects which would fulfil Unesco's aims. Years of experience, through success and failure, had taught Unesco what to

discard and how to concentrate. But there was a danger that the conception would become an end in itself. It was impossible to set numerical targets in respect of major projects. The correct method was to examine each one on its merits, in the light of experience, and the resulting concentration would be not for the purpose of economizing, but in the interests of greater efficiency and achievement. It was essential to be as ready to embark on new and promising activities as to discard unsatisfactory projects: the process should be not a diminishing and freezing of activities, but a concentration and stabilization.

(21) Turning to the second principle: increased aid to Member States, Mr. Avidor favoured it as being the most effective means of implementing Unesco's aims. Here, again, it was a method and not a goal, since Unesco was also concerned in helping Member States to help themselves. In giving aid, it should be Unesco's aim not only to train local leaders in the fields of education, science and culture, but to endeavour to build up national efforts into pilot projects for other countries. Thus the Organization's general activities and its aid to Member States, though appearing as separate parts in the programme and budget document, were in fact an integrated whole, wherein general, regional and national activities complemented one another. He gave an example in the field of workers' education.

(22) Mr. Avidor then referred to the important subjects of decentralization and evaluation.

(23) The former subject would be coming up for discussion on another occasion, and he wished only to point out that the working party had drawn a clear distinction between decentralization of activities, which his delegation favoured, and decentralization of Unesco's administration, to which it was strongly opposed.

(24) Evaluation required a careful approach and, as the delegate of India had pointed out, there could be no exact standard for measuring activities in the realms of education, culture and even most of the sciences. It was important to plan carefully, and to check and criticize activities from time to time, but evaluation must not be pursued at the expense of the programme.

(25) The Director-General had asked for clear-cut instructions; but, while the Conference could lay down broad policies and give general instructions, there would inevitably be issues for which there were no hard-and-fast rules, and the Director-General must be left with the difficult but challenging task of finding the solution to such problems himself.

(26) Mr. FLORKIN (Belgium) first of all added his own congratulations to the Director-General and his assistants for the clear and thorough way in which the draft programme and budget had been prepared. He had a few comments to make, however, on points of detail: (1) the "Index" to document 8C/5 should have appeared at the end of the document when it was distributed to Member States; (2) it would be useful to be able to refer rapidly to the corresponding passages in the Director-General's report; (3) a brief summary of previous work should precede each item; (4) lastly, it might be well to state briefly at the beginning of each of the main chapters why certain activities had been abandoned. It would then be easy to see where, in preparing each new programme, the Secretariat had attempted to achieve concentration.

(27) The Belgian delegation was also in agreement with the views so forcibly expressed by the delegates of France and the United Kingdom. It did not consider Unesco as an international ministry of education, but as a great and noble undertaking whose aim it was to pool the achievements of human intelligence and use them for the good of all mankind.

(28) The Belgian delegation therefore most warmly approved the idea of adapting Unesco's programme to meet the needs of Member States on a wider scale than hitherto. It hoped that increasing resources would be available for that purpose.

(29) Mr. Florkin went on to say that, whether Unesco concerned itself with their fate or not, thinkers, artists and scientists would continue to enrich the cultural heritage of mankind; but it was essential for the future of Unesco that the Organization should be able to rely implicitly upon the international collaboration of creative workers.

(30) The Belgian delegation would therefore view with anxiety the stabilisation of Unesco's general activities at their existing level. The Director-General had pointed out the previous day that it was a question of a transitional two-year period. The Belgian delegate hoped that it was not a case of what lawyers called a "deferred judgment".

(31) The activities planned in the chapters on education, natural sciences, social sciences and cultural activities seemed to maintain a very high level and the Belgian delegation hoped that important international organizations such as IBE, ICSU and CIPSH, the International Social Science Council and the International Association of the Visual Arts would play an increasingly large part in them.

(32) One of the main distinctions between Man and the animal world was that Man could inherit a wealth of masterpieces, knowledge and high moral principles from his forebears. It had been said that every man saw further than his ancestors, because he was borne on the shoulders of a giant, who symbolized the entire intellectual heritage of the past, and its extension in the present. That giant had lived in every part of the world and had been fed by them all. It was greatly to be hoped that he would wax in strength, so that there would soon be room on his broad, firm shoulders for all the peoples of the world.

(33) Mr. SAWADA (Japan) expressed great appreciation of the Director-General's statement on future programme and policy and of the report of the Advisory Committee on Programme and Budget. Since most questions covered by the two reports had been studied by the Executive Board, he hoped the Commission would, in its discussions, bear the Board's views in mind.

(34) During the discussions prior to the acceptance of the idea of remodelling the programme, much attention had been given to regionalization. While he did not like the word and hoped that it would be

possible to find one which better expressed the aims in mind, he was in favour of Unesco giving more help to Member States. He also agreed with the view expressed by many delegates in plenary meetings that the rôle of the National Commissions should be extended. National Commissions had an important part to play in educating the masses concerning Unesco; the Organization could not achieve its objectives without the goodwill and help of the people. For that reason the Japanese delegation had presented a proposal to encourage the development of Friends of Unesco Clubs, which he hoped would receive support.

(35) In the field of natural sciences, Japan was interested in scientific research to raise standards of living and improve economic conditions. That was why Japan was anxious to see oceanographic studies developed by Unesco, and he desired that the draft resolution submitted by his delegation to the present Conference on the establishment of an advisory committee on oceanographic research be adopted at that juncture. He also welcomed the resolution of the Indian delegation on the peaceful use of atomic energy and referred to his own delegation's proposal for scientific research on injuries and harm caused by radioactive material. A resolution on the subject was at present under discussion at the United Nations, and he looked forward to the report on the situation promised by the Director-General.

(36) The Japanese delegation was especially interested in fundamental education and technical aid, which subjects had been studied by the Japanese National Commission. His country was anxious for help from Unesco, but also ready to give whatever assistance it could by intellectual and moral co-operation. Much had been achieved by Unesco in fundamental education, but there was still room for improvement. Every effort must be made to accomplish the objects for which Unesco had been set up, and he anticipated good results from the discussions in the Programme and Budget Commission.

(37) Mr. MENCEL (Poland) stated that, in his delegation's opinion, the principle of universality was fundamental to Unesco, the prime condition for its success and the very justification for its existence. Yet, the General Conference at its present session had decided by a majority vote to exclude certain countries.

(38) The Polish delegation considered that absent countries should not be discouraged, but that, on the contrary, they should be included in at least part of the programme, and should be invited, even if they were not for the moment Members of Unesco, to co-operate with the Organization in useful cultural activities.

(39) With regard to the question of priorities, it had been said that the difficulty lay in the diversity of the countries concerned, and particularly in their cultural, political and economic differences. The Polish delegation considered however, that there was one criterion for priority which undoubtedly held good for every nation; that of safeguarding peace. The Polish delegation therefore urged the Commission to give priority, among the numerous draft projects listed, to those likely to make the most immediate and practical contribution to the reduction of international tension and to the creation of a spirit of understanding and co-operation between the nations.

(40) To that end, the Polish delegation would suggest that priority, from the point of view of time, effort and expenditure, be accorded to action in the field of mass communication, with a view to abolishing war and hate propaganda, and fostering an atmosphere of tolerance and understanding likely to stimulate international cultural and economic exchanges.

(41) In the field of the social sciences, the Polish delegation would also support any research on the lessening of tensions, on the principle of negotiation in international relations and particularly on the problem of building up a system of collective security between all nations both in Europe and the rest of the world.

(42) The Polish delegation likewise thought it important to support any attempt to organize international meetings of scientists and artists, and to give publicity to those meetings, not only among intellectual leaders and specialists, but also among the workers and educated people in every country. Unesco should, in addition, encourage the publication, in a number of languages, of the recommendations of such meetings and congresses, including editions intended for the general public.

(43) Further, the Polish delegation would support any action and expenditure designed to facilitate and broaden artistic exchanges throughout the world, international theatre tours, exhibitions likely to spread knowledge of national cultures, while drawing attention both to their diversity and their common human qualities. Thus, as defender of the peace and intermediary between the various national cultures, Unesco would be able to achieve more than by means of publications and exhibitions about the Organization itself.

(44) Mr. Mencel recalled that, in the United Nations, his country had supported the programme of technical assistance to economically underdeveloped countries. Poland would also support those sections of Unesco's programme which concerned technical co-operation with such countries on a basis of equality and mutual respect.

(45) As the Polish delegation saw it, the most important task facing the Commission was to ensure that the budget, without any undue increase, was concentrated on a few particularly important projects, enabling Unesco to discharge the most urgent duty which the nations expected of it, namely, to construct the defences of a lasting peace.

(46) Mr. CALO (Italy) recalled that the Head of the Italian delegation had already put forward its general views. For his own part, he would merely draw the Commission's attention to a few important points. In the first place, some doubt might exist as to the utility of the many filters through which material submitted to the Commission had to pass.

(47) Secondly, in collaboration with National Commissions, a new procedure for the preparation of the programme should be worked out, but without encroaching upon responsibilities belonging

essentially to the Director-General and the Secretariat. Once those decisions had been taken, the objectives assigned to the Advisory Committee on Programme and Budget might be seen in a different light, and an almost inevitable drawback at present, namely, the tendency of Member States to submit their draft resolutions too late, might be overcome. The Advisory Committee proposed to remedy the situation by altering the prescribed intervals between the submission of draft resolutions and the opening of the Conference, but, in view of the difficulties of publishing the draft programme and budget any earlier and the considerable delays involved in forwarding documents to certain States, it might not be easy to carry out that suggestion. At all events, it should be clearly understood that the Commission and the Conference should remain fully entitled to examine the programme in detail, while at the same time exercising the self-discipline which was necessary if their work was to be effective.

(48) The Italian delegation considered that Unesco should cease to spend money on unprofitable undertakings, such as staff travel, tours of inspection and seminars. Instead of an international seminar, it was often better to organize local courses, if necessary with technical aid. Greater emphasis should be laid on fellowships, study abroad and exchange of persons.

(49) In that connexion, it was worth while remembering that, after a series of seminars held at La Brévière, the Consultative Committee on Adult Education had come to the conclusion that they should be terminated and that La Brévière should be used as a centre for research and experiments.

(50) Such were the ideas behind the draft resolutions and amendments submitted by the Italian delegation, particularly in respect of education. Their aim was generally either to simplify procedure, or to promote economy, to view certain problems more rationally in the light of national needs and assuming more effective co-operation between National Commissions; or to suggest tasks deserving Unesco's attention, or, lastly, to suppress tentative action where intervention by Unesco was bound to be useless and ineffective.

(51) There would always be problems which could be dealt with only at the national level, others calling for scientific research which Unesco could not undertake itself, and others which required no more than an exchange of information on the results of certain enquiries. It was particularly important to decide to which category each of the proposed tasks belonged.

(52) The Director-General had expressed the firm and praiseworthy intention of achieving a good balance. In the opinion of the Italian delegate, what Unesco should do was to make a general appeal for co-operation, whenever it seemed evident that the aims in view could not be achieved by isolated efforts.

(53) The Italian delegation shared the views expressed by the delegate of the United Kingdom. The cause of culture in general could not be served if fundamental education and the implementation of the right to culture were neglected. Furthermore the success of popular education would be jeopardized if creative forces and activities of the mind were not stimulated. Civilization had veered from the high cultural level of a small minority to the shallow culture of the masses. A link should be established between those two spheres, and it would be a grave mistake to believe it possible to develop fundamental education without tapping the sources of a higher culture.

(54) The Italian delegation wished to submit certain remarks on the remodelling of the programme. First, it urged that closer links be established between all educational activities. Problems concerned with the teaching of particular subjects, such as the natural and social sciences, should be dealt with by the Department of Education. In such cases, educational considerations should be uppermost. It might be necessary in the end to set up mixed working parties in the Department of Education on the lines suggested by the United States delegation.

(55) Still more radical changes appeared necessary in the field of Mass Communication. A clear distinction should be made, for example, between the cinema as a specific art form and the cinema as an instrument for the spreading of news and propaganda. As an art form, the cinema should count as a cultural activity.

(56) As far as information was concerned, the activities under that heading were extremely complex and should be classified according to their purpose:

1. Information for schools and educational purposes (cinema, radio, press and television);
2. Information for the adult population as a whole;
3. Information about Unesco and other international organizations working for international co-operation and understanding;
4. Technical improvement of information media.

(57) Half Unesco's work in that field might, however, prove useless if the right of all men to know the truth and to have free access to every source of information were not effectively safeguarded. To do violence to men's minds by deliberately fostering ignorance was a crime against human dignity and one of the worst forms of encroachment upon freedom.

(58) Mr. Calo next referred to his delegation's draft resolution concerning the study of the harmful effects of mass media on children. There was merely a question of continuing enquiries already undertaken by the Secretariat in accordance with instructions given by the General Conference at its seventh session. Many Member States had replied that they were in favour of the enquiry. In Italy those concerned attached great importance to the problem. There was no question of introducing any form of censorship, nor of overlapping in any way with activities already underway. The proposed centre would merely co-ordinate the work of existing bodies. For the time being, the Italian delegation simply proposed that Unesco continue its consultations with Member States, and it recommended that a committee of experts be convened at the end of 1955. In conclusion, Mr. Calo hoped that the Italian proposal would be accepted.

(59) Mr. ZAMORANO HERNANDEZ (Chile) observed that his delegation was taking part for the first time in the discussions of the General Conference and found it a very interesting experience. He had perceived that, despite the differences of culture, outlook and aims, there was an underlying sense of human unity, conducive to agreement and solidarity. He was on the whole in favour of a higher budget level. Unesco's resources would never suffice to satisfy all demands, but a budgetary increase would facilitate the implementation of Unesco's programme, and would help it to launch new projects. States recently admitted to Unesco were not only prepared to pay their contributions, but also hoped to submit new projects.
(60) Mr. Zamorano explained that he was against any rigid stabilization of the budget and advocated considerable flexibility in carrying out the programme, so that Unesco's work might become more universal. While considering it inappropriate to increase Member States' contributions, he thought that the contributions of new Member States should be usefully employed. Further, there should be closer relations between Unesco and its Member States.
(61) He did not consider it fitting for Unesco to concern itself with research on cancer. Such work was the responsibility of other international organizations working in other fields and, if necessary, Unesco could make suitable suggestions to them. He supported the view of the Indian delegation that Unesco's work should be imbued with a spirit of international understanding and human fellowship. It was not necessary to create special bodies to take charge of such activities. France had suggested that international understanding and education for living in a world community should be the subject of special chapters. There could be no doubt that the ideas underlying the proposals of India and France were identical. All classes of society should be associated with the activities and aims of Unesco, but that would depend upon the work done by National Commissions. Unesco should serve as a catalytic agent, co-ordinating and encouraging efforts, information and new endeavours.
(62) While approving the decentralization of Unesco's activities, the delegate of Chile was against administrative decentralization. Attempts at decentralization should take the form of training teachers, not only primary teachers, but also secondary school teachers and university staff. The following month, an Inter-American Seminar on Secondary Education would be held at Santiago, Chile, and all countries, particularly those of Latin America, were invited to take part. In Chile, an Institute of Oceanographic Research already existed. If, in accordance with the draft resolution submitted by Japan, an advisory Committee on Oceanographic Research were set up, Chile would wish to take part in it.
(63) In conclusion, Mr. Zamorano hoped that priority would be given to all projects likely to advance international understanding and peace.

(64) Mr. DIAZ SAMAYOA (Guatemala) praised the layout and content of the draft programme and budget for 1955-56, its approach to the various problems, and its eagerness to meet the needs of Member States. While approving many of the new projects in the programme, the speaker considered that they should not impair the activities which Unesco already had in hand. Work should be intensive rather than extensive. During the next two-year period, Unesco's budget ought to be increased.
(65) Mr. Diaz Samayoa emphasized the importance of fundamental and adult education, literacy campaigns, public libraries, and the use of radio and films as means of raising the general cultural level. He advocated that projects be carried out over longer periods, as they would thus be more effective and might lead to the formation of a cultural tradition.
(66) He thanked Unesco for the help it had given Guatemala in sending a Technical Assistance Mission to advance the country's industrial development. The experts sent had achieved practical results. He also thanked Unesco for the fellowships awarded to Guatemalans for industrial studies; that would encourage students, including members of native groups, to go in for vocational training. For the training of industrial teachers, the Government of Guatemala had set aside over 190,000 quetzales, the scheme would last for at least ten years. There was an Industrial Training Committee and an Agricultural Institute at Retalhuleu, as well as four engineering schools and an engineering institute. Guatemala had asked for Unesco's assistance in a programme for the production of textbooks and other teaching materials; the Government had set aside 25,000 quetzales for that programme.
(67) Mr. Diaz Samayoa was in favour of encouraging research, especially in the social sciences. The University of Guatemala had set up an institute for social science research, and had asked Unesco for technical aid in that new venture, which would contribute to the well-being of Guatemala and to international understanding.

(68) Mr. ESTELRICH (Spain) pointed out that, since Spain had joined Unesco two years previously, efforts had been made to keep in close contact with the Organization. He wished to make a general statement in connexion with the presentation of the draft programme and budget for 1955-56
(69) With regard to the stabilization of the budget, Spain would not, for the time being, express any final opinion. It seemed to him, however, that any budget increase should go to help underdeveloped countries and to new projects to be undertaken by Unesco at the request of Member States.
(70) The delegate of Spain recommended that decentralization be effected by means of regional institutions, established by Unesco in close co-operation with the States concerned. He also thought that the programme should be adjusted to the particular conditions of each country and each cultural or linguistic group.
(71) Furthermore, Mr. Estelrich considered that education should include the humanities. The part of the programme relating to humanistic studies should be considered in relation to general

education. Only thus could men be imbued with the eternal spiritual, intellectual and cultural values. The inclusion of the humanities did not in any way conflict with the acquisition of scientific knowledge, which was necessary. In many countries, the people's cultural level and the technical instruments at their disposal were out of all proportion.
(72) Unesco was turning illiterates into literates, but new literates might find themselves without reading matter. It might not be wise to furnish them with extracts from Don Quixote or Shakespeare, but the humanities should not be excluded from their education. There was a relevant project in the programme which should be attached to the education chapter.
(73) Further, Unesco applied political and geographical criteria to activities which should be judged only on the basis of cultural criteria. For example, Unesco did not seem to take account, in any of its projects, of the cultural values of the Spanish, Arabic or Germanic groups. Unesco, owing to its very nature, should apply cultural criteria alone. The speaker drew attention to the fact that very interesting cultural activities were going on in America. He was in sympathy with the motion presented by the Union of South Africa for the development of the African continent, and was in favour of better interpenetration of eastern and western cultures. A knowledge of other cultures widened people's horizons. He would therefore advocate the translation into Spanish, under Unesco's auspices, of classical Arabic, Indian, Chinese and Japanese works. Spain would be glad to co-operate in that work.

(74) Mr. STOLETOV (Union of Soviet Socialist Republics) said that his delegation had followed the Commission's debates with great interest. Some of the points put forward were of basic interest and deserved attention. His delegation considered that Unesco propaganda and information should be used only for encouraging a spirit of peace and international understanding and not for stimulating a spirit of aggression. Information was perhaps being abused at the present time with the idea of creating anxiety and eagerness to go to war among the public. Culture should not be placed at the service of any cause other than that of peace. He therefore hoped that support would be given to the resolution put forward to that end by his delegation.

(75) Mr. LOEFFLER (German Federal Republic) joined in the congratulations offered to the Director-General on the clarity and conciseness of the draft programme, which succeeded in emphasizing the essential points and set out the joint work plans so well.
(76) Mr. Löeffler approved the idea of dividing each chapter into two main sections and considered that the Executive Board's report on the remodelling of the future programme deserved close study. He believed that the work of the National Commissions should be made more effective by bringing them more closely into touch with Unesco's activities and with the preparation of the programme, although that should not mean lessening the responsibilities of the Secretariat.

(77) The delegate of the German Federal Republic was keenly interested in the project to provide for co-operation between the Secretariat and intellectual leaders in all Member States to promote the spread of information and foster international understanding.
(78) He further approved the division of the budget estimates into two levels provided that those two levels continued to be regarded as an integrated whole. While a higher priority might be assigned to certain projects, and others suppressed, they should nevertheless be judged as part of a single programme.
(79) The German delegation noted with pleasure that the Secretariat planned to subsidize the three Institutes which Unesco had set up in Germany. The activities of those bodies had assumed considerable importance and they could complement Unesco's programme by making their influence felt beyond the frontiers of the country in which they were established.
(80) Mr. Löeffler congratulated the Director-General on having introduced into the programme certain proposals relating in particular to school education, education for international understanding, and the improvement of school textbooks and teaching materials to further such understanding.
(81) He drew attention to the fact that the appropriate bodies in the German Federal Republic had done a great deal to put Unesco's ideas on education into practice.
(82) Mr. Löeffler concluded by saying that, although his delegation had some criticisms to make on points of detail, it would always try to be constructive in its criticism.

(83) Mr. PHOTIADES (Greece) emphasized the need to strengthen the Organization's work of co-ordination. He thought that Unesco should try to give greater support to important organizations such as IBE, ICSU and CIPSH. The means at present made available to them were out of keeping with the balance which should exist in the distribution of Unesco's funds.
(84) Unless Unesco gave fuller support to the freest forms of intellectual co-operation, in the light of current requirements, scientists, humanists and sociologists would continue to take less interest than they should in Unesco.
(85) The secretariats of such bodies were in fact working for the very ideas that Unesco stood for. They lacked the funds, however, to carry out effectively work which was indispensable to the Organization's development.
(86) Mr. Photiades was convinced that Unesco should develop on the lines of intellectual rather than of political co operation, since there were other bodies to deal with that angle. Unesco should rely more on those working to raise intellectual standards.
(87) He did not think, however, that that warranted a cut in the funds for the Department of Education. It should be possible to economize on activities deserving a lower priority than that assigned to co-operation between scientists and cultural leaders, who were the backbone of Unesco. Unless Unesco remained true to that principle, the thread of continuity linking all its activities

would be broken, and objectives of a different kind would assert themselves.
(88) In Mr. Photiades' view, the aim should be to make Unesco more universal in its own fields, but without encroaching on the universality of other Specialized Agencies, or on universality as conceived in the sphere of politics.
(89) The Greek delegation thought it desirable for delegates to take more interest in organizations for intellectual co-operation, with the aim of broadening Unesco's whole cultural scope.

(90) Mr. RIEGNER (Conference of International Non-Governmental Organizations having Consultative Arrangements with Unesco) drew the Commission's attention to document 8C/PRG/21, containing the observations made by the non-governmental organizations after a meeting to which they had been invited for consultation by the Director-General.
(91) Mr. Riegner thanked the Director-General for enabling those organizations to meet twice to examine the future programme of Unesco with members of the Secretariat, and expressed the hope that the practice would continue to be adopted in future.
(92) He also wished to convey the satisfaction felt by the non-governmental organizations at seeing that the Director-General and the Executive Board had, in their reports to the General Conference, drawn special attention to the importance they attached to the co-operation of such organizations with Unesco.
(93) Anxious though he was not to encroach on the right of individual organizations to put forward their comments on Unesco's programme, Mr. Reigner pointed out that there was full agreement among those organizations in regard to certain problems raised before the Commission.
(94) The non-governmental organizations had been unanimous in hoping that the General Conference, at its eighth session, would adopt the higher spending level as expressed in the draft appropriation resolution.
(95) The Conference of Non-Governmental Organizations likewise welcomed the emphasis laid in the new programme on projects corresponding to particular needs of certain Member States. It considered, however, that it would be dangerous to stabilize the budget for permanent activities promoting international co-operation on an international scale.
(96) After drawing attention to certain aspects of the above-mentioned document, and particularly to the observations regarding ways of strengthening co-operation between Unesco, its National Commissions and its Secretariat, on the one hand, and the international non-governmental organizations, on the other, Mr. Riegner concluded by assuring the Commission of the devotion of those organizations to the ideals and work of Unesco.

The meeting rose at 1.10 p.m.

# FIFTH MEETING

*19 November 1954 at 3.30 p.m.*

*Chairman*: Mr. BOURGEOIS (Switzerland)

**ITEM 8.2 OF THE REVISED AGENDA: CONSIDERATION OF THE REPORT OF THE ADVISORY COMMITTEE AND GENERAL DISCUSSION OF THE DRAFT PROGRAMME AND BUDGET FOR 1955-56** (continued)

(1) Mr. KOVAL (Ukrainian Soviet Socialist Republic) felt that in 1955-56 Unesco should begin to implement the recommendations put forward at international conferences in Geneva in 1953 and 1954 on the promotion of fundamental education, the use of the mother tongue in the various countries and free secondary schooling. In that connexion, he referred to the Uruguayan proposal regarding completely free schooling.
(2) Speaking of the natural and social sciences, he was in favour of the measures to provide technical aid, the clearing house for information in the social sciences, and aid to international organizations contributing to the development of scientific co-operation.
(3) The cultural bodies of the Ukraine were ready to take part in preparing a history of the scientific and cultural development of mankind, and in promoting scientific and cultural exchanges.
(4) Mr. Koval was also in favour of the technical and economic assistance requested by the underdeveloped countries from the United Nations. It should not be confined to sending out specialists and giving expert advice. He thought that Unesco's administrative costs should be cut, and that the savings should be devoted to the technical assistance programme.
(5) The Ukrainian delegate hoped that the General Conference would not miss any opportunity of fostering mutual understanding among the peoples and helping to solve the problems of safeguarding international peace and security. His delegation particularly approved the proposals put forward by India with regard to the peaceful utilization of atomic energy and the insertion in the Conference

agenda of the item concerning the possibility of peaceful coexistence for differing systems of government. The delegate added that such peaceful coexistence was a basic principle of the foreign policy of the USSR.
(6) Lastly, Mr. Koval supported the Soviet Union's proposal to prohibit the use of the means of mass communication for spreading war propaganda and imperilling international co-operation and economic and cultural relations between the peoples.

(7) Mgr MAROUN (Lebanon) drew attention to the clarity and originality of the form in which the proposed programme and budget was presented, and its division into two parts: (1) established service activities of the Secretariat, and (2) programme activities. He added that the division had a practical counterpart in the execution of the programme but thought that it was possibly artificial in one respect, since it was impossible to make a clear-cut distinction between the two phases of Unesco's work - the collection and classification by the Secretariat of material obtained from the Member States, and the use of that material in programme activities. The Lebanese delegate considered that the natural link between the two phases had not been made clear enough.
(8) In that connexion, Mgr Maroun stressed the direct relationship between the development of the permanent service activities and the programme activities; he was uneasy about the possible outcome of certain proposals for the final stabilization of the budget for the permanent services; such a decision, he thought, would result in a sort of petrifaction of services, which should be kept flexible to match the programme.
(9) Referring to Part II of the document, the Lebanese delegate noted the efforts made to balance the various activities in the Unesco programme, but he perceived two rather serious shortcomings. He felt that the purely technical side of the conduct of educational activities received too much attention compared with the content of educational programmes, which he thought regrettably meagre. He remarked that there had been no systematic effort, until the current year, to knit culture into education, of which it was, however, part.
(10) A second shortcoming in Mgr Maroun's view was the unimportant place apparently given in the programme to contacts between intellectuals. Whenever the budget was discussed, many voices were raised against aid to non-governmental organizations. He thought, however, that it was Unesco's duty to foster international co-operation between intellectuals. He considered that delegations should have sufficient courage and understanding not to begrudge cultural activities and international co-operation the appropriations they needed.

(11) Mr. UMREIKO (Byelorussian Soviet Socialist Republic) said that the activities in the programme which he favoured most were those which aimed at developing international understanding, science, national culture and education in all Member States.
(12) With regard to fundamental education and the literacy campaign, the delegate stressed the importance of practical steps to provide schooling for all children in all countries without distinction of race, sex, language, material circumstances or social background, and urged the need for such measures. He favoured the Uruguayan proposal for free schooling at every stage, and regarded it as essential that all children should have the opportunity of primary and, if possible, secondary education.
(13) He had no objection to the budgetary proposals for educational aid to underdeveloped countries in 1955-56. With regard to technical assistance, his Government was not opposed to the expanded programme of technical assistance for economic development. His Government could provide such assistance by sending experts and samples of machinery to the underdeveloped countries and by undertaking to train specialists from those areas.
(14) With regard to the natural sciences, the 1955-56 programme should be directed towards assisting in the scientific study of questions concerned with raising the standard of living and improving social conditions. In that connexion, he was in favour of the scientific study of methods of fighting cancer and also of the draft resolution of the Indian delegation for the peaceful use of atomic energy.
(15) Unesco's work in the social sciences and cultural activities should tend during 1955-56 toward the lessening of international tension, and his delegation would not oppose the allocation of funds to non-governmental organizations genuinely concerned with the spread of science, culture and education.
(16) Mr. Umreiko supported the principle, put forward by the United Kingdom, of basing the 1955-56 budget on the present level, but he might approve certain additional expenditures occasioned by the admission of new members.
(17) He drew particular attention to the part of the programme dealing with mass communication. In his view, the media of communication should be used to promote the ideas of peace, friendship and mutual understanding between nations, together with education, science and culture. Accordingly, his delegation supported the draft resolution of the USSR to prevent the use of such media for war propaganda.

(18) Mr. PAZUR (Czechoslovakia), alluding to the remarks of previous speakers, urged that the programme be organized so as to concentrate to a great extent on a limited number of important items. He considered that education should come first among all Unesco's activities, because the problems arising in connexion with it throughout the world were so vast. He approved the Organization's programme of technical assistance to underdeveloped countries.
(19) He endorsed the ideas expressed by the delegations which had urged that greater emphasis be placed in the programme on the idea of human fellowship and international understanding based on peaceful coexistence, and he referred in particular to India, France and Switzerland.
(20) He would like Unesco to take steps to have that idea suitably incorporated in teaching syllabuses, school textbooks and the work of teachers themselves.

(21) The Czechoslovak delegate also considered that Unesco tended to overlook the international phenomenon of films and books that glamourized crime in every form and exercised a bad influence on the upbringing of children. The harm done was causing grave concern to parents, teachers and even the judicial authorities and the legislatures in many countries. The same considerations applied to the glorification of crimes against international law and the lauding of war criminals. Unesco should see that, in future, education was free of such influences and it could do so only by overruling the Advisory Committee's recommendation for the rejection of India's proposal on peaceful coexistence.
(22) In the hope of seeing the proposal adopted and implemented, the Czechoslovak delegation wished to submit an amendment to the draft resolution of the Indian delegation.

(23) Mr. BERNAL JIMENEZ (Colombia) was in agreement with the approved principle that, before deciding on the content of the programme, the budget ceiling should be set. Projects logically depended on the financial provision made for them.
(24) In the Director-General's introduction to the proposed programme and budget, it was proposed that the amount of contributions from new Member States for the years 1953-54 should be used for financing the budget for 1957-58. The proposed course of action showed prudence but would retard the impulse to expansion and revitalization which everyone wished to see in Unesco's future work. It would perhaps be possible and, as things were, more appropriate, to use the new revenue in the budget for 1955-56.
(25) Another question requiring consideration was the concentration of the programme. Colombia was perhaps the first country to set forth the need for such action, as early as the Florence session of the General Conference. In view of the wide field covered by Unesco, there were many temptations to disperse its efforts in a multitude of sectors; but a cautious policy should be adopted to ensure that those efforts were concentrated on a limited number of large-scale projects. And those projects should have a close bearing on the objects for which the Organization had been established.
(26) In the detailed debate on the various chapters of the programme, the delegation of Colombia would again speak on other problems of interest to it, such as National Commissions, technical assistance, fundamental education centres, etc.

(27) Mrs. SCHROEDER (Catholic International Union for Social Service) drew attention to a statement in the Director-General's report, in connexion with a resolution of the Economic and Social Council of the United Nations, that economic development was inseparable from social development. Social service was designed principally to improve family life and could make no progress without the help of economists, doctors, teachers and social welfare workers, all of whom were concerned with educational work.
(28) With regard to the discussion concerning methods of measuring the cultural standards of peoples, what mattered was the number of healthy families and men equipped to cope with life, far more than the number of schools, libraries, etc. For that purpose, an enquiry would have to be carried out in all countries on the standard of family life. Its results would reveal the real standard of living. The Catholic International Union for Social Service was ready to give Unesco the benefit of its experience and all the help in its power in such an investigation, which would suggest what should be done to raise living standards.
(29) Again, Unesco's aims in education should not lead it simply to teaching people to read and write. It was quite as important to help in the training of good fathers, good mothers, good workmen and good citizens.
(30) Non-governmental organizations were nearer to the life of the people, were in a position to accomplish their objectives, and carry out useful work for international co-operation, since they were concerned not with governments but with their citizens. Those organizations had started their work before Unesco had attempted to bring governments together to achieve the objects set it. The financial resources they used in that work were greater than those available to Unesco.
(31) Consequently, the Catholic International Union for Social Service asked that a distinction be drawn between three classes of activities: those directly initiated by Unesco; those undertaken at the request of Member States, and those carried out at the instance of the non-governmental organizations.

(32) Dr. STEINBERG (World Jewish Congress) was grateful for the opportunity given him to express his views to the Commission. It was a great privilege to be in Montevideo as an observer at the General Conference of Unesco, where the believers in its mission were together examining the future work of the Organization. The World Jewish Congress, which he was representing, had the benefit of the views of both believers and critics.
(33) It was the opinion of his organization that Unesco was proceeding steadily, if slowly, towards its goal. It saw in the present draft programme the significance of its main theme, which was education for living in a world community; the whole programme seemed to subordinate itself to that main theme.
(34) He thought, however, that the programme took much for granted and did not appreciate the real world situation. In evaluating that situation, it could be seen that many were strong opponents of the principle of education for living in a world community and, if the General Conference did not take that into account, the programme would not be the best means to the desired end: it would have to cure what it had not succeeded in preventing.
(35) He welcomed the emphasis which the programme put on vital necessities, particularly in the spheres of school curricula and the social sciences; it was essential that people should be educated to meet the situation which faced them. He also welcomed the inclusion of special projects which indicated that Unesco was taking steps to solve fundamental problems.

(36) The World Jewish Congress was co-operating with Unesco in the fields of education, social science and cultural activities and asked permission to comment on the relevant chapters of the programme at a later stage.

(37) The CHAIRMAN summed up the general discussion just held, which, he noted, had been of a very high order.
(38) Paying tribute to the sense of fellowship shown throughout the debate, he urged delegates to make every effort to arouse similar sentiments among all taking part in the Conference.
(39) He also noted the apparently general determination to consider the programme as a whole and hoped that in the subsequent discussions emphasis would also be placed on keeping the programme flexible.
(40) Finally, the Commission had, he thought, shown its desire to base action on the needs of Member States and, wherever necessary, to call on the services of non-governmental organizations. The latter, for their part, were very ready to furnish their assistance in Unesco's work.

**CONSIDERATION OF THE REPORT BY THE EXECUTIVE BOARD (document 8C/PRG 13) ON THE REMODELLING OF THE FUTURE PROGRAMME OF UNESCO**

(41) Sir Ronald ADAM (Chairman of the Executive Board), giving a brief outline of the history of document 8C/PRG/13, said that discussion in November 1953 by the Executive Board on the possible remodelling of the programme had brought to light four points. Disappointment had been expressed that Unesco had not made its expected impact on Member States, on leaders and on the masses, the National Commissions were not doing the work which had been expected of them; more use of regionalism should be made in planning Unesco's programme, and, in the programme, there was too wide a dispersion of effort. In March 1954, the Executive Board had given those points to the Director-General for guidance in drafting the programme for 1955-56 and, at its meeting in Venice in the summer, had set up a small drafting committee which had drafted document 8C/PRG/13. That document had been agreed to in its present form by all the members of the Executive Board with the exception of one.
(42) It was divided into two main parts, the first containing criticisms about what had not been achieved by Unesco and praise of achievements, and the second containing the main matter, the structure of the programme itself. The second part of the document divided the programme into two parts, relating, on the one hand, to general or continuing activities and, on the other, to special activities. Part I of the programme would include activities of interest to all Member States, while Part II would include special activities dealing with specific problems affecting the requirements of individual Member States.
(43) He had heard some delegations expressing anxiety about the position of general activities under the proposed remodelling and pointed out that the Executive Board had stated in paragraph 19 of its report that it considered that the general activities provided the basis of the programme, without which Unesco would be unable to carry out its special activities.
(44) Further, he had heard some delegates say that they did not agree that the major part of the budget should be devoted to Part II of the programme - special activities. In answer to that, he pointed out that, in the past two programmes, the proportion of the budget devoted to general activities and special activities was substantially the same as that proposed for the 1955-56 programme.
(45) With regard to Part II of the programme, the Executive Board had stressed the necessity for concentrating on major projects. That theme had been repeated at every General Conference and, in his opinion, the time had come when a General Conference must give the Director-General guidance on what it meant by concentration.
(46) He drew the attention of the Commission to the concentration of efforts between Agencies when dealing with common problems and hoped that greater co-operation between such Agencies would materialize in the future.
(47) The Board did not like the term "technical aid" because it would be confused with technical assistance. He hoped that a better term would be found. Technical aid would be given to any Member State requesting it. The Board felt that technical aid should be asked for because then it would fulfil the wishes of a particular Member State. The Member State would play its full part and, in doing so, would become interested in the work of Unesco and stimulate the National Commissions in their work.
(48) The Executive Board hoped that the Commission and the General Conference would give the Director-General clear instructions for the preparation of the 1957-58 programme without going into detail, leaving the question of balance between the two parts of the programme to the Director-General to decide in the best interests of the work of Unesco.

(49) Mr. GARDNER DAVIES (Chairman of the Advisory Committee on Programme and Budget) said that he had little to add to what had been said in the report of his Committee (document 8C/BUD/2). The Committee wished to express its satisfaction with the spirit in which document 8C/PRG/13 had been drafted and its approval of the proposed modifications.
(50) Two problems on which adequate guidance had to be given to the Director-General appeared to confront the General Conference. In the first place, there was the problem of the structure of the programme and the balance which should be maintained between general activities and special activities. The Committee had felt that it would be harmful to attempt to fix the proportion of the budget to be allocated to each of those categories of activities and had agreed with the Executive Board that the essential interdependence of the permanent services and of the activities concerning direct aid to Member States should not be overlooked.

(51) The second problem was that of concentration, which had been the subject of so much previous discussion. The Committee considered that it was essential to give the Director-General guidance in that matter in order that he could prepare the programme for 1957-58. In particular, it would be necessary to have a decision whether the recommendation of the Executive Board to concentrate on a limited number of major projects aimed at solving specific problems should be followed. The choice of such projects and the definition of methods of implementation were two fundamental questions on which the General Conference would be asked to advise.
(52) The Advisory Committee had recommended that the General Conference should formulate and adopt the necessary measures for implementing the principles contained in document 8C/PRG/13, either through working parties or through the Advisory Committee itself. The procedure, criteria and stages of implementation would have to be established for obtaining a solution of major projects.
(53) He repeated, in concluding, that the General Conference would have to try and provide the Director-General with clear instructions to enable him to draw up specific plans in 1955-56 for remodelling the programme for 1957-58.

(54) The CHAIRMAN suggested the following procedure for the discussion: (1) delegates would be asked for their opinion on the advisability of dividing activities into the two proposed groups; (2) the Commission would determine the criteria on which the division should be based; (3) it would consider the ratio in which each group should stand within the programme as a whole.

(55) Mr. BARBEY (Switzerland) began by making a general comment: the Swiss delegation was inclined to say that document 8C/PRG/13 did great credit to the Executive Board as it had been constituted to date, but it did not wish to stress that point lest it seem to be desirous of influencing the Conference's decision on a proposal which a majority was apparently already prepared to support.
(56) The delegate of Switzerland considered that the report of the Executive Board owed its value entirely to the fact that it was based on self-examination and self-criticism. The difficulties and disappointments recorded in paragraphs 1 to 6 made paragraph 9, dealing with achievements, stand out all the more, and account should be taken of that in devising satisfactory and well-grounded propaganda. If the document were approved, it would at once furnish the Commission with criteria for its subsequent work; Mr. Barbey thought, however, that it would be better to study it as a whole rather than paragraph by paragraph.

(57) Dr. MUDALIAR (India) expressed satisfaction with document 8C/PRG/13 and gratitude to the Executive Board for having undertaken such a task. His Government was satisfied with the proposed division of programme. He was of opinion that, while general activities of a world-wide nature should receive due consideration, emphasis should be placed on general activities and special activities having a field of limited application. Unesco should act as a catalytic agent, the Director-General making direct contact with the Member States to interest them in Unesco's work.
(58) As to the details of the programme, he thought that, although non-governmental organizations contributed to the success of Unesco, greater emphasis should be put on their truly international character. Certain of the non-governmental organizations which were assisting Unesco had not been heard of by some Member States and should be encouraged to extend their membership and activities on a global basis. Subventions should be kept at a level necessary for carrying out Unesco's work. To further that idea, he was in agreement with the Executive Board that substantial subventions should be given to a limited number of recipients.
(59) He thought that more support should be given to National Commissions and, in that connexion, it would be helpful to have the occasional presence of the heads of departments of the Secretariat at meetings of National Commissions. Further, joint meetings of the National Commissions in a particular area could be held, which would have a greater effect than a meeting of a single National Commission, and would encourage collaboration in Unesco's activities in that area. He did not think that consideration of the geographical distribution of activities was necessary except in the case of problems which were common to all or many Member States. Unesco should be an agency to stimulate and guide the efforts of its Member States.
(60) The internal activities of Unesco should be co-ordinated more closely to give better results. Departments should consult with each other to see that a maximum effort was at the disposal of any project.
(61) It was also essential that States benefiting from technical aid should make their contributions to any project being undertaken. The resources of a beneficiary Member State should be fully explored, not only for reasons of economy, but for psychological reasons. The people of a country receiving aid would show more interest in a project if they felt that they were playing an active part in it.
(62) The Indian delegation considered the report excellent and would like to have it sent to the National Commissions of Member States for comments. In the past, the policy of allowing Member States to submit suggestions on the proposed programme had not been too successful. It would be better if Member States were asked to make suggestions a year before the programme was formulated in order that the Director-General could appreciate the requirements of the various Member States and take them into account when planning the programme. He suggested, therefore, that the report should be forwarded to Member States for comments within a period of six or nine months, with a request that suggestions for the programme for 1957-58 should be made within that period.

(63) Mr. FRANCOIS (France) thought that earlier

Unesco programmes did not deserve all the criticisms heaped upon them. In his view, the disappointments and failures recorded had always been mainly due to the exiguity of Unesco's budget. Unesco's budget, which amounted to less than the cost of ten bombers or one light cruiser, was approximately the same as that of a French department; and, in France, the functions a department was required to fulfil were strictly limited. The French delegate thought that another cause of inefficiency was that policies were too often changed, and activities which failed to show spectacular results were abandoned too soon. In the third place, he thought that responsibility for the Organization's failures also lay partly with the National Commissions.

(64) The French delegation approved the distinction made between general and special activities, provided that the two groups of activities were not completely separated, and that any increase in funds for the latter category automatically brought with it an increase in those for the former.

(65) Quoting the example of the bilateral revision of school textbooks undertaken by France with Germany and the United Kingdom, he pointed out that the success of the work had been due not only to the assistance given by teachers but also, and above all, to the co-operation of historians, which had made it possible to present certain events in their true light. That, he thought, was proof that theorists should be asked to play their part in carrying out practical activities.

(66) With regard to the section of document 8C/PRG/13 dealing with general activities, the French delegate felt obliged to mention that he was uneasy about item E.

(67) He had the impression that public information activities were to be limited to propaganda, whereas what was chiefly needed was education, and the collaboration not only of specialized agencies and scholars but also of educators.

(68) With regard to the special activities, Mr. François thought it difficult to lay down a list in advance; the activities should be chosen as the different chapters of the programme came up for discussion.

(69) Turning to the question of progressive concentration on major projects, the French delegate pointed out that, if too much attention were given to such concentration, Unesco's activities might become set in too unchanging a mould; it was wise to have an eye to the future and to pave the way for subsequent action on the part of the Organization, and, from that point of view, it would be wise to maintain a reasonable variety of activities.

(70) Mr. BERREDO CARNEIRO (Brazil) proposed the following amendments to document 8C/PRG/13:

(71) Paragraph 19. Add: "Through the investigations and studies they include, they provide material for the preparation of future programmes of action".

(72) Paragraph 20. Add: "and these studies".

(73) Paragraph 23. After E, add: "F. The investigation and study of fresh subjects with a view to the preparation of future programmes of action".

(74) After paragraph 36, add a new section, in the following terms:

"F. Investigations and studies.

If the Organization is to be able to submit to the General Conference well considered proposals for action and to suggest methods for their implementation, worked out in adequate detail, it must carry out investigations and studies of subjects which might later give rise to practical undertakings. The subjects might be suggested by the General Conference, the Executive Board and National Commissions. The methods of study might include:

consultations with international, governmental and non-governmental organizations;

contacts between members of the Secretariat and appropriate persons and institutions;

work carried out by experts under contracts;

finally, at a later stage, meetings of experts to formulate conclusions on the results achieved".

(75) The Brazilian delegate also proposed the following amendment to the report of the Advisory Committee on Programme and Budget (document 8C/BUD/2):

Paragraph 12. After the phrase, "for the solution.... future programme", add: "for the purpose of guiding this selection, and enabling the appropriate procedures to be defined, the Secretariat must undertake investigations and studies bearing on fields and problems which are not included in the list of projects in the concentrated programme, but which are necessary for the preparation of future programmes. It is suggested that in the first section of the programme of each department (general activities) explicit mention should continue to be made of investigations and studies. This part of the programme will include for each biennial period a list of subjects from among which the Director-General will select, in consultation with the Executive Board, those on which he will arrange for the departments to concentrate. This part may account for only a small proportion of the budget of each of the programme departments. It is in the light of the results secured from these investigations and studies that the Director-General will subsequently be able to make definite proposals with regard to the programme of the next biennial period".

(76) Mr. Berredo Carneiro explained that his aim in making his proposals was solely to help the Secretariat in planning its future work so that improvisation would be unnecessary.

(77) Mr. VERONESE (Italy) recalled that, as a member of the Executive Board, he had taken part in the drafting of document 8C/PRG/13.

(78) He stressed the importance of the document, which had been approved by his delegation. Speaking as a member of that delegation, he had a few comments to make on the way in which the document should be used.

(79) The first point he wished to make was that the Conference should not forget the need for bold decisions after such dispassionate self-criticism. The Executive Board, for its part, would have greater responsibilities to shoulder in drawing up future programmes, since the most important part of the work, to be carried out with the

co-operation of the Secretariat, would devolve upon it.
(80) In the Italian delegation's view, document 8C/PRG/13 was a starting point; it would therefore be unwise to draw from it any hasty conclusions.
(81) The division of activities into two categories appeared to have its uses, provided that a careful balance were maintained between the two parts of the programme, that their interdependence was clearly shown, and that they were not treated as alternatives. It would also be necessary to define exactly the activities falling into each category.
(82) The Italian delegation also approved the report of the Advisory Committee on Programme and Budget. Mr. Veronese, however, stressed that the various stages in the implementation of the proposed projects should not be rushed. He agreed with the Indian delegate that the Conference would have made a considerable advance if it prepared a basis for future work and secured the collaboration of Member States and National Commissions both at national and at regional level.
(83) In addition, the Italian delegation approved the plan for the reorganization of the Secretariat, to which reference had been made, but felt that here again it was advisable not to precipitate matters and that the problem need not be taken up immediately.

(84) Mr. FAUBLAS (Haiti) wished to draw the attention of the Director-General and the Secretariat to a project on which work had been interrupted in January 1954: the Haiti pilot project. He reminded the Commission that ethnologists and sociologists had been sent out to Haiti and that instructors had been trained to give the inhabitants of the Marbial Valley the basic knowledge of which they stood in need, and that some results had been achieved.
(85) The delegate of Haiti regretted that the project was no longer included in Unesco's budget; the Government of Haiti had assumed responsibility for it and was continuing to run the two training centres and the 386 fundamental education centres, but the funds it could devote to the work were very small. The needs, on the other hand, were considerable, as there were large numbers of illiterates in the country, and, in order to save time, the length of the training courses for instructors had been reduced to three months.
(86) The Government of Haiti accordingly hoped that consideration would be given to the possibility of according it some aid, not in the form of money but in that of cinema equipment, films, duplicating machines, and paper for printing books in the vernacular.

(87) The CHAIRMAN remarked that the request of the delegate of Haiti had no bearing on the current discussion, which was concerned with the structure of the future programme, not the examination of the programme for 1955-56. He assured Mr. Faublas, however, that his request would receive the closest attention when the part of the programme to which it referred came up for discussion.

(88) Mgr MAROUN (Lebanon) expressed his satisfaction with document 8C/PRG/13, a critical review which should be most useful as a guide to policy in the future programme.
(89) He noted that Unesco had concentrated on the preparation of the programme and budget, drawn up in co-operation by the Executive Board and the Secretariat, which had worked as it were centrifugally, moving out from the centre towards Member States.
(90) In his opinion, however, the efforts of the Executive Board and the Secretariat had been able to make little impression on the Member States. Of 72 States, a bare 50 had sent in reports for the Conference. The first need, therefore, was to do something to combat the lack of interest and the laxity on the part of Member States. Unesco was not an entity existing apart from those States; they had themselves engaged in work in the fields of education, science and culture before Unesco had been set up. The Organization's task was to promote collaboration at the international level; in order to do so it needed the help of all its Members; otherwise the programme would be a dead letter. Some States had not yet set up National Commissions and that was a consideration to be borne in mind when future programmes were being drawn up.
(91) Mgr Maroun was convinced that, once Unesco had succeeded in enlisting the efforts of all its Members, funds would not be lacking. As a churchman, he believed that the first thing to do was to establish faith and then material resources would be forthcoming.

(92) Mr. SALIM (Hashemite Kingdom of Jordan) thought that the General Conference should be guided by two principles in considering the future activities of Unesco, namely, the principle of promoting human dignity and the principle of procuring better international understanding. To achieve those two aims, a list of activities of greatest use to all Member States and to the common good should be compiled.
(93) In the field of education, all Member States had apparently the desire to see an equal opportunity for education given to the citizens of all countries. It was equally important to provide the opportunity of improving the quality of education. That could be one of the general services of Unesco. All countries needed assistance in the fields of adult and fundamental education - not necessarily material assistance, but advice about techniques, materials and general trends.
(94) Another general service should be the popularization of science. Science would dictate the fate of the world and every State must work to channel knowledge in the desired direction.
(95) With regard to cultural activities, he would like to see the spreading of information about unknown or little known cultures, for only through its culture could a country be properly understood. Unesco could play a part in eradicating all kinds of discrimination which existed in every country in the world, by entering into or encouraging international agreements on culture or in the field of social science.

(96) Some countries did not require technical assistance, but, in his opinion, it should be encouraged and promoted in order to link the givers and receivers and facilitate better understanding.
(97) He concluded by saying that he had briefly quoted a few examples of what he considered should be general services of Unesco. If the list were added to, it would be of the greatest assistance to anybody connected with remodelling the programme.

(98) Mr. SIDDIQI (Pakistan) expressed appreciation of the work done by the Executive Board and by the Director-General in preparing the programme for 1955-56.
(99) He drew attention to the matter of technical assistance. He understood that countries concerned in technical assistance were helping to discharge a basic function of Unesco, which was to advance the principle of equality of educational opportunity. That principle was of the utmost importance to Unesco, because, if underdeveloped countries were not helped in that respect, it would be impossible for them to collaborate on an equal footing with other countries. Without equality in the level of education, it would be impossible to establish real world understanding and solidarity.
(100) Efforts devoted to technical assistance were often frustrated by the technical means used to translate ideals into action. It was unfortunate that countries with ancient cultures lagged behind in scientific knowledge. If that were not fully understood by the administrators of technical assistance, frustration manifested itself in unrest and impatience. Solidarity should be promoted in the interests of peace and steps taken to further the principle of educational equality.

(101) Mr. TREJOS DITTEL (Costa Rica) referred to two points brought up by previous speakers concerning the structure of the programme. The first related to the rôle of National Commissions; the second to the general activities described in the Executive Board's Report in document 8C/PRG/13, paragraph 23.
(102) Success or failure in co-operation between the National Commissions and Unesco depended upon the co-ordination of the work of those commissions. Many of them were still by no means fulfilling their real purpose. That situation was due to failure to secure the necessary co-ordination and, for that reason, it was preferable for Unesco to consult them after having worked out its programme instead of asking them to send in their reports beforehand, as some delegates had suggested.
(103) Paragraph 23 E, speaking of general activities, referred to "public information activities on behalf of the objectives of Unesco, particularly in its service of human rights, in the maintenance of peace and the spirit of international co-operation". Teaching should be included amongst those objectives, since the permanent, fundamental work of Unesco was concerned with children of school age. And it should be particularly stressed that such work was called for on a wider basis in Spanish-speaking countries and in Costa Rica itself.
(104) Useful experiments had been made in connexion with education for living in a world community; but they had not been closely enough associated; indeed, in some States, nothing was known of what had been achieved in others. The most praiseworthy of the current projects was the one prepared by the Department of Education, which merited all possible support.
(105) The lack of co-ordination in that respect, like the lack of co-ordination with regard to the functions of National Commissions, resulted in a waste of effort which should be avoided in the interests of Unesco's noble aims.

(106) Mr. FORSYTH (New Zealand) said that his Government had watched the growth of Unesco with great interest and had always tried to persude the General Conference to integrate and co-ordinate projects that would show practical results. It had always considered better international understanding the paramount criterion for any of Unesco's activities. It welcomed, therefore, the sincere approach of the Executive Board in its attempt to remodel the programme.
(107) The proposed programme for general activities should be concise and any subventions granted should go to organizations having a truly international character.
(108) The public information activities should be given new emphasis in the remodelled programme for 1957-58. Up to the present, the efforts of the National Commissions to enlighten public opinion had not been successful. Unesco had failed to reach the intelligentsia or the masses and it was hardly to be hoped that they could be reached on a publicity budget. However, he thought that a valuable group could be reached, namely the middlemen. The middlemen between Unesco and the masses were the college and university professors, directors of museums and theatres etc. and they were the people who were in touch with both the intelligentsia and the masses. A campaign could be undertaken to make known the work and ideals of Unesco, using as campaigners the non-governmental organizations.

(109) Before closing the meeting, the CHAIRMAN requested the Commission's approval of the programme of work he had outlined at the beginning of the discussion on the remodelling of the future programme.

(110) Approved.

The meeting rose at 6.30 p.m.

# SIXTH MEETING

*29 November 1954 at 10 a.m.*

*Chairman:* Mr. BOURGEOIS (Switzerland)

**ITEM 8.2 OF THE AGENDA CONSIDERATION OF THE REPORT OF THE ADVISORY COMMITTEE AND GENERAL DISCUSSION OF THE DRAFT PROGRAMME AND BUDGET FOR 1955-56** (continued)
(documents 8C/PRG/13, 8C/BUD/2 and 8C/DR/86)

(1) The DIRECTOR-GENERAL opened the meeting with a few general remarks. He was satisfied with the basis on which the division of the programme had been made in the draft budget, as explained in the introduction. He pointed out that general activities were not stable and were liable to change according to resolutions of the General Conference. He would welcome any suggestions in that field. Special activities were defined largely in terms of Conference decisions in a given session. The degree to which the General Conference ought to define special activities for the 1955-56 programme and to ask the Director-General to be specific in his proposals for succeeding programmes was a difficult matter. It was undesirable to leave it completely open, but it was not possible to be very specific.
(2) The years 1957-58 would be transitional ones, as the 1955-56 years were, and it would be unwise to embark on more than one or two major projects, although special projects, the Director-General thought, would to some extent be absorbed by the bigger ones.
(3) He referred to the confusing terms programme, project and campaign, and suggested that a project should be regarded as something precise which could be organized and budgeted for (such as certain activities in Fundamental Education), while a general activity in support of an idea such as human rights could not be fully defined as a project. A great project was clearly not limited to any one of the chapters as they now stood. Member States, he suggested, when submitting a project, should first state the specific field to which it more properly belonged, though there would later be contacts with other departments.

(4) Mr. LEE (United States of America) was in favour of most of the ideas contained in the report on remodelling (document 8C/PRG/13). They pointed the way towards concentration, a balance between continuing and special activities and the acceleration of aid to underdeveloped areas, which his country had always regarded as very desirable.
(5) The report of the Executive Board was a statement of principles. In the light of that report and of the debate held the previous day, the Commission should proceed to formulate practical measures for their implementation. It should provide the Director-General with general guidance for future planning, without imposing any rigidly crippling instructions.
(6) The delegate of the United States of America supported the suggestions made by the Chairman the previous evening that the Advisory Committee should serve as a working group for the Commission, and prepare for it draft statements on (1) criteria for choosing major projects, (2) the balance between permanent and special activities and (3) a directive to serve the Director-General and the Executive Board in their further implementation of the report under consideration, especially in respect of procedure and schedule of timing.
(7) Mr. Lee hoped that the Committee would take note of the various ideas voiced in the Commission about consultation with Member States.

(8) Sir Charles WEBSTER (United Kingdom) strongly supported the position taken by the delegate of the United States of America against any too rigid planning. He considered that not only the next budgetary period but all periods were transitional, and planning needed continual reshaping in the light of experience. He hoped the whole machinery of Unesco would be employed in the process. Non-governmental institutions should be contacted early in order that they might bring their scientific knowledge to bear on any new plans.
(9) He appreciated the words of the Director-General on the meaning of special activities and projects. A division between permanent and special projects would place undesirable fetters on activities that were liable to change. Many special activities would, he hoped, become permanent ones, not spasmodic dashes in this direction or that.

(10) Mr. STANKOVIC (Yugoslavia) preferred to keep the greater part of his remarks for the discussion on the particular items of the programme and budget. He considered, however, that a remodelling of the future programmes was necessary and that the methods for putting the various projects into effect should also be reviewed.
(11) He agreed in principle with the Executive Board's proposal to divide the programme into two sections - general activities and special activities. But the two categories should not be allowed to conflict, they represented a single whole. A fixed allocation of budget expenditure between the two would be artificial and valueless.

(12) Mr. Stankovic thought that the concentration of the programme was a question not purely of finance, but one of substance. Unesco should concentrate its efforts on a few carefully chosen projects.
(13) One of Unesco's main criteria should be the safeguarding of peace through co-operation between the peoples of the world.
(14) With regard to the methods of implementation, the development of the National Commissions would make wider national action possible. The regional work of the National Commissions was especially important, and Mr. Stankovic mentioned, as an example, the good understanding that existed between the Turkish, Greek and Yugoslav National Commissions, which were planning to co-ordinate their activities and collaborate more closely.
(15) On the subject of regionalism, Mr. Stankovic said that the requirements of a concentrated programme did not seem to him to be incompatible with the promotion of regional activities.
(16) He urged that Unesco help the different countries to improve their information services.
(17) As for the non-governmental organizations and the Specialized Agencies, they could render immeasurable service in the execution of complex large-scale projects and could even, in the future, play an active part in the drawing up of Unesco's programme.
(18) Mr. Stankovic submitted these suggestions with a view to helping the Director-General - to whom he paid tribute for what had already been accomplished.

(19) The CHAIRMAN asked the delegations to put forward concrete proposals on: (1) the definition that could be given of the permanent activities and special activities between which Unesco's programme and budget were divided in the Executive Board's report (document 8C/PRG/13); (2) the balance to be established between the two categories, without loss of elasticity to the programme, (3) the criteria by which the Advisory Committee on Programme and Budget might select the larger programme projects; (4) the Brazilian proposal on the remodelling of future programmes (document 8C/DR/86); and (5) methods of implementation.
(20) He then suggested closing the general discussion.

(21) Mr. WIDDOWSON (Union of South Africa) said that the South African delegation was very glad to note in the Executive Board's report, and in the present debate, a clear recognition of the need for progressive concentration on major projects, a point on which previous General Conferences had laid stress. It was also pleased to see the equally clear recognition by the Advisory Committee of the need for establishing criteria which would enable concentration to be realized. There he suggested that the Commission could with advantage study the criteria for priorities laid down by the Economic and Social Council.
(22) Referring to the Executive Board's plea for an increased budget to enable Unesco to function more effectively, Mr. Widdowson said that, in the opinion of his delegation, the institution of a sound system of priorities and concentration on a limited number of major and productive projects would enable Unesco to carry out its work without an increased budget.

(23) Mr. MENDIS (Ceylon) wished to emphasize the remarks made the previous day by the delegate of India on the remodelling of the programme. Member States should have every opportunity of proposing projects adapted to the individual needs of each country. As it would not be possible for National Commissions to contribute to any great extent to the framing of Unesco programmes until they were a good deal stronger, Mr. Mendis proposed that the Secretariat, after a careful study of the reports of Member States and after visiting the countries in question, should draw up a document containing specific suggestions about the organization of National Commissions. If regional offices could be set up wherever Member States were prepared to collaborate in that work, they might contribute to the framing of Unesco programmes, and to the better utilization of the limited resources of the Organization.

(24) Mrs. LEGARDA (Philippines) appreciated the remarks made by the Director-General, and by the delegates of the United Kingdom and the United States of America, on the remodelling of the programme. The proposed programme and budget, while it left room for improvement, represented the first practical steps towards a reorientation of Unesco's activities. It had been studied very thoroughly by the Advisory Committee and the Executive Board, and she felt that it could now be adopted in toto or with the few minor changes that might still be required.
(25) A realistic appraisal of the disappointments suffered by the Organization was given in document 8C/PRG/13. As a whole, however, the Philippine delegation endorsed the programme and would support it, as well as any further changes that tended towards its streamlining, concentration or improvement in some other form.

(26) Mr. MAHEU (Assistant Director-General), on a point of order, said that the Commission should avoid any confusion between the work of the working party on decentralization and the work of the Advisory Committee. That procedural problem would be solved if the working party met before the meeting of the Advisory Committee, and if the latter abstained from intervening until it had seen the working party's report.
(27) With regard to the Egyptian delegation's remark on the necessity for consulting Member States on special activities, Mr. Maheu said that that was the Secretariat's idea; what was proposed was not merely to collaborate with Member States, but, in each case, to obtain their agreement before doing anything at all to launch those activities.

(28) The CHAIRMAN then reopened the question of the division of activities into two categories, in accordance with the Executive Board's report.

(29) Mr. ZAMORANO HERNANDEZ (Chile) said that his delegation agreed to the division into general

and special activities, provided that what the Yugoslav delegate had said was accepted.

(30) Supported by the delegates of Egypt, Yugoslavia and Chile, the division of activities into two categories, in accordance with the Executive Board's report, was approved.

(31) Mr. SEDES (France) referred to his previous remarks and submitted the amended text of certain paragraphs of document 8C/PRG/13. He considered that those corrections were in keeping with the spirit at least of paragraphs 13, 18 and 21 of the document.

(32) Paragraphs 62 and 68, thus revised, would read:

"62. Unesco receives many more requests for assistance than it can satisfy, either under its regular programme or under the Expanded Programme of Technical Assistance. However, the Executive Board recommends that, on account of the connexion existing between general activities and special activities, increases in Unesco's budget be proportionally divided between the two types of activity."

"68. In conclusion, the Executive Board's purpose in recommending changes in the structure of the programme is to make it a practical instrument better adapted to the means and ends of the Organization and more responsive to the needs of Member States. It is the Executive Board's hope that the Organization's resources and energies will be equitably distributed between the two types of activity. The special activities provide perhaps the most direct help towards fulfilling the vital needs of Member States, but the general activities are essential to the clear-sighted elaboration of particular undertakings and to their effective implementation."

(33) The PRESIDENT wished to know whether or not the Commission wanted to fix proportions.

(34) Sir Ronald ADAM (Chairman of the Executive Board) said that it was not within the competence of the Commission to amend the Executive Board's report.

(35) Mr. SEDES (France) and Mr. VERONESE (Italy) were in favour of fixing proportions.

(36) Mgr MAROUN (Lebanon) thought the term proportions was unsuitable, for it was a question not merely of fixing mathematical relations, but of defining two kinds of activity and their connexion, the importance of which had been adequately demonstrated to the Commission. He thought it would be better to define the two categories before fixing proportions, which might be different for each field of activity

(37) Mr. COSTA RIBEIRO (Brazil) thought the French delegation's remarks were well inspired. But the Lebanese delegate's remarks complemented them. It would be absurd to fix a ration once for all; proportions should vary according to the field of activity.

(38) Mr. ABDEL-RAHMAN (Egypt) remarked that the Advisory Committee had already given its views on the apportionment of funds between the two activities, in document 8C/PUD/2, paragraph 7. It was not possible to speak of a division between special and general activities, before agreement had been reached on the meaning of the two words.

(39) Mr. SIDDIQI (Pakistan) supported the conclusions of the Executive Board mentioned in paragraphs 62 and 68 of document 8C/PRG/13 as well as the comments of the Advisory Committee mentioned by the delegate of Egypt. His country was in favour of stressing special activities.

(40) Mr. KRUYT (Netherlands) said it was not possible to fix a numerical proportion between general and special activities, but the Commission could express its opinion on the tendency that relation should follow.

(41) He quoted from his speech at the plenary meeting the warning of the Netherlands delegation against exaggerating the importance of special objectives and neglecting general activities.

(42) Technical assistance was a spectacular activity, but it was only possible when general activities were sponsored as they ought to be and, if science were not promoted in the developed countries, underdeveloped countries would not be able to receive the aid they needed.

(43) Sir Charles WEBSTER (United Kingdom) fully supported the remarks of the delegate of Egypt. The terms general and special had not been sufficiently defined for any proportion between the two activities to be fixed. The Netherlands were in favour of general activities, while a number of other countries had spoken for special activities. Perhaps, when the definitions had been made clearer, those opposing trends of thought would be harmonized, and the question of proportions might lose its importance.

(44) Mr. KABIR (India) thought that, although it was not possible to decide on precise proportions, the general feeling of the meeting could be indicated to the Advisory Committee. His country supported the views expressed by the delegate of Pakistan: the accent should be on special activities.

(45) Mr. SOMMERFELT (Norway) proposed that the Advisory Committee be asked to prepare a text for discussion by the Commission.

(46) Mr. CHENG CHI PAO (China) enquired whether the proportion of general activities given in the programme and budget document as 35% and of the special activities as 65% were based on past experience, or represented an assumption for the future. He suggested that the term general should apply to advisory and information services, while the term special covered promotional services.

(47) Sir Ronald ADAM (Chairman of the Executive Board) replied that in paragraph 44 of the Introduction to the proposed programme and budget the proportions were given for the 1955-56

programme (32.54% of the funds attributed to general activities and the remainder to special activities). There was also a note on the proportions in past budgetary periods.

(48) Mr. LAUGIER (France) accepted without enthusiasm the division of activities proposed by the Executive Board. In his opinion, it was only admissible if it could be achieved without its having paralysing effects and subsequently a reduction of general activities in favour of special activities.
(49) With reference to the second part of the report of the Advisory Committee on Programme and Budget (document 8C/BUD/2, paragraph 7) - "It would therefore be harmful to seek to determine in advance the apportionment of funds between the general aspect and the special aspect of these activities..." - Mr. Laugier entirely endorsed the Advisory Committee's opinion and suggested that the Commission deal with the contents of the programme without binding itself in advance by establishing percentages in the dark.

(50) Mr. AFTALION (Argentina) agreed with the views of the French delegate. The problem was presented in such a way as to remove it from a qualitative to a quantitative basis. A general direction could be set and criteria and priorities laid down, without going further and fixing proportions and budgetary figures.

(51) Mr. ZAMORANO HERNANDEZ (Chile) noted the diversity of opinion expressed during the discussion, which made it difficult to take up a position and lay down criteria to be followed in determining the allocation of budget funds. He thought that the proposed programme and budget was drafted clearly. He favoured giving preference to special activities, and agreed with the Executive Board's criterion. It would be preferable to adopt a realistic criterion, without prolonging the discussion on different concepts.

(52) Mr. MAHEU (Assistant Director-General) reminded the Commission that the Executive Board had proposed the division of the programme into general activities and special activities, recommending that the latter receive priority in any apportionment of fresh resources. The Advisory Committee, for its part, in paragraph 7 of its report (Part II), had said that there was no need to fix mathematical proportions in advance.
(53) It seemed that the Commission was roughly divided into two groups: one wanted to decide forthwith for or against the recommendation of the Executive Board; the other wanted to wait until some clearer definition of the two categories of activities had emerged from the discussions. In the first group, the delegations of Pakistan, India, and it seemed, Chile, echoed the view of the Executive Board, whereas France (in its delegate's speech) and the Netherlands were against it. In the second group were Egypt, the United Kingdom, France (in the French delegate's second speech), Lebanon and Brazil. Those last-named delegations preferred to ask the Advisory Committee to define the elements of the problem better and, meanwhile, to proceed to the study of the proposed programme and budget before expressing an opinion on the proportions to be observed between the two categories of activities.
(54) Without wishing to speak on the substance of the debate but intervening on a point of order and at the request of the Chairman, Mr. Maheu thought it would be better to embark at once on the discussion of the proposed programme and budget and to return afterwards to the question of proportions without referring it to the Advisory Committee, which had already, in its report, expressed its view on the matter.

(55) Mr. GARDNER DAVIES (Chairman of the Advisory Committee on Programme and Budget) endorsed the Assistant Director-General's remarks. It was impossible that the Commission should refer the matter to the Advisory Committee at that stage, as no new result could be produced. It should not be referred to the Committee until a clear directive could be expressed by the Commission.

(56) Mr. ABDEL-RAHMAN (Egypt) proposed a postponement of the decision until the Advisory Committee had made its report on the matter of definitions and timing.

(57) Mr. LEE (United States of America) agreed with the view of the Assistant Director-General. He thought the discussion should be kept open until the Advisory Committee had made its report and until the programme and budget document had been discussed chapter by chapter. The Commission should not bind itself to a decision, or to precluding discussion in the Advisory Committee.

(58) In answer to a suggestion from the CHAIRMAN, who thought that the Commission could refer to the Advisory Committee the study of criteria on which the selection of the larger programme projects would in future be based, Mgr MAROUN (Lebanon) said that even that course would be premature. He reminded the Commission that the exchange of views on the reports of the Executive Board and the Advisory Committee had clarified members' minds on many points. He endorsed the Secretariat's suggestion.

(59) Mr. VERONESE (Italy) reminded delegates that the Commission still had to give an opinion on criteria and the methods of implementation, and that the time factor was beginning to come into play. He considered that the Commission could suspend its discussion on that point without taking an immediate decision, and could proceed to study the special reports which had no financial implications.
(60) He also asked the Secretariat to summarize briefly what the terms of reference of the working party on decentralization might be; in that way, lengthy discussions on those terms of reference could be avoided.

(61) Mr. FAWZI (Egypt) said that the Commission was tending to become involved in a dogmatic discussion of terms. The delegates had repeated

that it was impossible to take a decision. Italy and Lebanon, in particular, had maintained that point of view, and Mr. Fawzi endorsed it.

(62) Mr. NIELSEN (Denmark) thought that the Commission should express its wishes to the Director-General, to help him in the establishment of future programmes, but without going into details. Any suggestion of percentages would mean a recasting of the programme, if it referred to the 1955-56 period, and would in any case involve a lot of difficult work. It was not possible to go much further than the Executive Board's proposal did in stating that the greater part of funds should be devoted to special activities. A numerical definition would be harmful to the method of the Conference.

(63) Sir Charles WEBSTER (United Kingdom) supported the delegate of Denmark. The Advisory Committee would report on the subject with reference to the discussion of the 1957-58 programme, not the 1955-56 one.

(64) Mr. KABIR (India) supported the delegate of Denmark. He reminded the meeting that no General Conference could bind a succeeding General Conference by any of its decisions.

(65) Mr. BARBEY (Switzerland), referring to Mr. Maheu's suggestion that discussion on the percentages to be fixed for general and special activities should be postponed, submitted a procedural motion in that sense.

(66) The procedural motion was adopted.

(67) Mr. GARDNER DAVIES (Chairman of the Advisory Committee on Programme and Budget), having asked what the Commission had decided with regard to referring the matter to his Committee, Mr. MAHEU (Assistant Director-General), intervening purely on a procedural question, replied that the Advisory Committee had been charged by the Programme and Budget Commission to report on the entire substance of the matter. That would take account of the report of the working party on decentralization, but did not deal with the question of proportions.

(68) The Commission approved that conclusion.

(69) Sir Ronald ADAM (Chairman of the Executive Board) said that the competent committee of the Executive Board had spent a lot of time on National Commissions. He hoped to present a resolution shortly.

(70) It was agreed that the working party would cover the other subjects, and to defer the matter of National Commissions until the Executive Board was able to produce its considered views.

(71) Mr. ABDEL-RAHMAN (Egypt) wished to refer at that stage, on the question of decentralization, to the effects of General Conference meetings outside Paris. He asked whether that subject could be included in the agenda of the working party.

(72) The CHAIRMAN replied that it had already been included.

The meeting rose at 12.40 p.m.

# SEVENTH MEETING

*22 November 1954 at 10 a.m.*

*Chairman:* Mr. BOURGEOIS (Switzerland)

(1) The CHAIRMAN announced the death of Mr. de Thibault, a member of the Belgian delegation, on 19 November. He expressed the condolences of the Commission to the Belgian delegation, and requested the latter to convey the Commission's sympathy to Mr. de Thibault's family. He asked delegates to observe one minute's silence.

**ITEM 8.4.8 OF THE REVISED AGENDA: TECHNICAL ASSISTANCE**

(2) The CHAIRMAN asked members of the Commission to proceed to the examination of documents 8C/5 Annex VIII, 8C/3 and 8C/3 Add., and called upon the Director-General.

(3) The DIRECTOR-GENERAL said that there had been many important developments in the administration of technical assistance during the last year. It was the opinion of the Secretariat that the changes would represent a definite improvement. The most important was the trend towards country planning, which meant that technical assistance would be given to countries according to their desires and needs. Every effort would be made to keep the costs of administration low and to strengthen the scheme through collaboration with other agencies.

(4) The Commission would have to review the technical quality of the programme and recommend to the General Conference the resolutions which should be passed.

(5) Mr. ADISESHIAH (Director, Department of Technical Assistance) reminded the Commission that the technical assistance scheme was in its fifth year and had still the full and continuing support of the governments concerned. Seventy-two countries were receiving assistance and the amount spent from the Technical Assistance Fund had risen from $20,000,000 in 1950 to $25,000,000 in 1954. The United States contribution to the fund still remained at about 60% of the total, in spite of the fact that some countries had substantially increased their contributions and new countries were contributing. From the Technical Assistance Fund, Unesco had at its disposal the sum of $2,500,000 for its technical assistance programme in 1954. Up to date, 300 requests for assistance had been received from 48 countries, 44 basic agreements on technical assistance had been signed and 57 projects were under way in 37 countries. Three hundred and fifty experts had been appointed, of whom 140 were in the field, and of 329 fellowships granted, the holders of 82 were still studying, whereas 230 had finished their studies and returned home, where the majority were now employed. $1,500,000 worth of equipment had been supplied and a further $2,700,000 worth would be supplied under the 1955 programme.

(6) Unesco was providing assistance to 44 countries and had five regional programmes, which in 1955 would require, for a minimum programme, the sum of $2,700,000 or, for a maximum programme, $3,200,000. Three hundred and ninety thousand dollars would be required for headquarters administration. In the programme of technical assistance, the proportion spent on education and science would remain the same, approximately two-thirds being spent on education and one-third on the natural sciences.

(7) The programme was divided into six major fields. The technical assistance programme attached the utmost importance to primary and secondary school education. Priority was given to those branches over fundamental education because the regular programme of Unesco took responsibility for fundamental education, and Unesco's campaign for compulsory fundamental education had started bearing fruit.

(18) Unesco was associating in the field of fundamental education in three different ways. It was running centres in 9 countries; it was carrying out campaigns for fundamental education in 9 countries; and it was co-operating in the same work under the overall programme of other United Nations agencies.

(9) With regard to technical education, Unesco was carrying out projects in eight countries under its technical assistance and regular programmes, by helping to reorganize existing educational systems or to establish pilot technical education training centres.

(10) The work of the Technical Assistance Department in the field of science was, of necessity, a continuing work. It consisted of work in the field of scientific and technical documentation and in the field of scientific research. It was proposed to set up four documentation centres in the four main regions of the world in 1955 and to continue work on seven major projects of scientific research.

(11) There were six main characteristics of the programme for scientific teaching. In the first place, the programme would be mainly a continuing one. The reasons for that were not only financial, but followed from the size and nature of the programme envisaged. Secondly, it was a co-ordinated programme, because assistance would be given to carry out the basic activities of the Organization, because it was necessary to mobilize the resources of Unesco as a whole and not only those of a particular department and, finally, because it involved other United Nations agencies. Thirdly, it was a programme with limited and concrete objectives. All the proposed projects had a time-limit for the giving of assistance and, in every project as yet undertaken, the government concerned had made plans for follow-up work on the termination of the period of technical assistance. Fourthly, it was a programme which contained possibilities for evaluation. The problem of evaluation was difficult, as it was not easy to isolate the United Nations investment in a project from the development of the project as a whole, and also the results of a project were often not measurable. However, a rough and ready evaluation of every project had been completed with the assistance of the Department of Social Sciences. The most difficult problem in evaluation was how to introduce an element of objectivity, for which facts and not opinions were required. In order to obtain that objectivity, it had been decided to establish a base line when starting a new project and a control situation for continuing projects. In addition, care was being taken to formulate the type of questions for questionnaires which would furnish facts. All the work on evaluation would be done at no cost. A fifth characteristic of the programme was that each project was to be continued as a training project. The last characteristic was flexibility. The three forms of technical assistance, through experts, equipment and fellowships, were to be flexible in form, allowing for some money to be spent by the recipient country on exchange schemes.

(12) In the past, the procedure for technical assistance had been for countries to request assistance and for Unesco to decide what was to be done with the funds allotted by the Economic and Social Council. New legislation had been passed by the Council to meet the requirements of the new country programme. From 1956 onwards the procedure would be to tell each country a year ahead how much money it would be allocated for the following year. Governments would then decide how the money was to be used. Unesco was firmly and unanimously in support of that new procedure. In addition, beginning in 1956, requests would be approved by a Technical Assistance Committee and by the Economic and Social Council which meant that they would be subject to intergovernmental control. Financial regulations had also been altered. A new technical assistance capital reserve fund was to be founded during 1954, 1955 and 1956, which would ultimately provide greater stability for technical assistance projects. During those three years there would be less money available for technical assistance.

(13) There would also be a change in the local cost of schemes. In the future, 50% of the per diem allowance for experts would be paid by the recipient country direct to the Secretary-General, and the Organization would then be responsible for paying all the allowances and expenses of the expert.
(14) Mr. Adiseshiah paid tribute to all the experts in the field who had devoted themselves to their work. Their quality was proved by the fact that the governments requested the extension of the terms of their service. The machinery of recruitment was also improving, owing mainly to the efforts of the countries making the largest contributions. He felt, however, that experts should not be taken only from donor countries, and that Unesco should try to discover talent and put it to use.
(15) There were some major shortcomings in the programme. In the first place there was the problem of timing. Technical assistance was absolutely useless if not given in proper time. Secondly, there was the problem of adequate planning. It was necessary to see that sufficient time was given to plan a programme. Thirdly, there was the problem of co-ordinating between agencies, between the Departments of Unesco, and co-ordinating the resources of the governments concerned.
(16) With regard to headquarters costs, the sum of $390,000 for 1955 was approximately the same sum as had been required in 1954. The problem of overwork would be serious. The country planning programme would call for a reorganization of the Department at headquarters, and emphasis would be put on the responsibilities which would be given to the four area offices. Headquarters would then be responsible for assisting governments in making plans, in assisting experts, supervising projects, and evaluating them.
(17) Mentioning that three heads of teacher training missions were present at the meeting, Mr. Adiseshiah suggested that the Commission might like to hear their comments on what was being done in their field.

(18) Mr. GARRIDO (Head of the Unesco Mission to Uruguay) said that in February 1952 the Uruguayan Government had asked Unesco to send out a mission to organize a Scientific, Technical and Economic Documentation Centre in Montevideo.
(19) In October 1953 Dr. Garrido had arrived in Montevideo to carry out the project, and the present state of the work was as follows:
(20) With regard to the union catalogue of Uruguayan libraries, 19 volumes listing the books in 46 libraries had been published, and work in connexion with the remaining 20 libraries was in progress.
(21) A catalogue had been issued of scientific, technical and economic reviews published in Uruguay since 1850.
(22) An analytico-bibliographical bulletin, to give other countries information on scientific and technological developments in Uruguay, was being prepared.
(23) The bibliographical service included some hundred bibliographical reviews and a large number of general reference works.
(24) The photographic service was working fully.
(25) The translation service was now fully equipped for functioning.
(26) The Centre was installed in the National Library building, and the equipment sent by Unesco, although it had not all arrived, was on its way. At present four persons were at work, instructing the Uruguayan staff.

(27) Mr. SABAS OLAIZOLA (Head of the Unesco Mission to Ecuador), referring to Unesco project 1504 - Primary and Secondary Education (Teacher Training) - said that it was started in Ecuador in April 1952, with the object of providing advice and assistance in the reorganization and development of teacher training.
(28) The mission, with one expert, began its work in the two Teacher Training Colleges of Quito.
(29) From the start, the authorities and local staff showed a desire for concrete achievements. It was then that the mission evolved a plan to reform the demonstration schools attached to the teacher training colleges, believing that they determined the objectives of the teaching profession, cultural callings, and the scientific means of improving the nation's manhood and its educational policy. That important problem was the central factor in Unesco's work of assistance.
(30) Intensive cultural training was advocated for teachers, but it should be in direct relation to the development of the schools, since the teacher training college was responsible for that work.
(31) In October 1952 modern teaching methods were introduced into the curriculum of the teacher training college.
(32) During the 1952-53 school year, the four reformed attached schools aroused great hopes, and in June 1953 their achievements were considered at a seminar, where the masters who took part in the experiment submitted more than 40 papers. In the following year, modernized schools were organized in remote parts of Ecuador, being started by pupil-teachers.
(33) Later, at the request of the Government, Unesco supplied two science experts for the teacher training colleges.
(34) Two modern science laboratories had been installed in the Quito teacher training colleges; and ten schools attached to the four urban teacher training colleges in Ecuador applied the project of the mission. The latter had been requested by the authorities to extend its activity to rural areas, and would do so when more experts were available.
(35) The mission's permanent aim was the foundation of new teacher training colleges.

(36) Mr. TURNER (Head of the Unesco Mission to Guatemala) said that in 1951 the Guatemalan Government asked for Unesco's co-operation in a programme of training for industrial occupations. In the following year, five technical assistance experts joined the mission.
(37) In 1952 the Committee of Industrial Education of Guatemala was established by presidential decree, with the Technical Assistance Mission acting as adviser to it. The following important developments then took place: (1) A better selection of pupils for the industrial schools; (2) an improvement in education, inspection and direction in industrial schools; (3) the mission and its local

collaborators produced more than 2,000 job and instruction sheets; (4) more than a hundred teachers and inspectors were trained, in groups or individually, (5) nineteen persons studied abroad and attended a camp connected with the mission's work; (6) Unesco supplied educational equipment and material to the value of $27,000; (7) a national plan was approved for clerical and technical training; (8) the number of machine shops in the industrial institute increased considerably.

(38) In August, the Government approved a special credit of 100,000 quetzales to expand the programme in 1955. It requested the mission to remain during 1956 and until the country had completed its programme for training Guatemalan staff. The Government also asked for Unesco's co-operation in the production of industrial training material and in the training of instructors.

(39) The CHAIRMAN felt that, after the statements by Mr. Adiseshiah and the speakers who followed him, he could express the satisfaction felt by everyone in realizing that technical assistance possessed such an effective instrument for the carrying out of its mission.

(40) Mr. GARDNER DAVIES (Chairman of the Advisory Committee on Programme and Budget) said that he would be very brief, and hoped that his brevity would reflect the satisfaction of the Advisory Committee with regard to document 8C/5 Annex VIII. At its twenty-sixth meeting, the Advisory Committee had unanimously adopted the following resolution:

"The Advisory Committee on Programme and Budget, having considered Annex VIII of the proposed programme and budget, and having taken into account the oral commentary and explanations provided on behalf of the Director-General, commends the document to the General Conference as a useful and lucid summary of Unesco's technical assistance activities, whose main trends appear to the Committee to be satisfactory.

The Committee approves the draft resolutions contained in the report and recommends their adoption by the General Conference, with the slight reservation that the word reduced should be replaced by limited in the preamble to draft resolution 8.52."

(41) The CHAIRMAN said that nineteen members of the Commission had intimated their wish to speak in the general discussion. Recalling that the Commission had already held a discussion on the programme as a whole, he wondered whether it would not be advisable to pass immediately to an examination of the resolutions formulated on pages 5 and 6 of document 8C/5 Annex VIII, allowing delegates every latitude to comment during the discussion. He asked for the Commission's opinion on that point.

(42) Mr. LAUGIER (France) thought that, as technical assistance was one of the main problems with which the United Nations had to deal, it would be a mistake to curtail the general discussion on that point.

(43) Mr. FAUBLAS (Haiti) agreed with the French delegate.

(44) The CHAIRMAN asked the Commission to vote on the matter.

(45) By 29 votes in favour, 6 against, and 3 abstentions, it was decided to pursue the general discussion.

(46) Mr. LAUGIER (France) recalled that the position adopted by the French Government was entirely favourable to technical assistance, and that it had decided to give it unreserved support.

(47) The French delegate, paying tribute to the country which had taken the initiative in the work, described it as the United Nations' workshop of hope.

(48) Nevertheless, Mr. Laugier wished to make two comments. In the first place, he deprecated the optimism displayed in all the documents relating to technical assistance; it seemed to him exaggerated and out of place. The French delegation had studied the progress of a technical assistance project from the moment it was drawn up to the time when it was put into operation, there had been no fewer than twenty-four international stages in its journey, from the various technical assistance services to the commissions and committees of Unesco's General Conference, then to TAB, TAC, the different United Nations organs, the Co-ordination Committee and finally, it seemed, to new committees set up for the purpose of evaluation. To all those should be added consultations with the various Specialized Agencies.

(49) The French delegate thought that the tentacles of official bureaucracy might thus well paralyse work undertaken, and he was prepared to ask that a new committee be set up for the purpose of simplifying the machinery.

(50) Mr. Laugier also deplored the fact that reports made by technical assistance missions were kept strictly confidential. Distinguished men were enlisted to carry out those missions, which were financed by technical assistance funds, but their work produced no reverberations. In that connexion the French delegate mentioned Sir Charles Darwin's mission to Thailand, the results of which would be well worth publicizing in all quarters concerned with fundamental education. He therefore hoped that the missions' reports would in future be published for Member States, and given wider currency.

(51) In reply to the CHAIRMAN, Mr. LAUGIER (France) said that he did not propose to submit a resolution forthwith on the two points to which he had referred, but that he reserved the right to do so, if necessary, after the general discussion.

(52) Mr. TREJOS DITTEL (Costa Rica) said that his Government had asked Unesco for technical assistance in 1950 to undertake investigations into the educational system and evaluate the work carried out and the results achieved in his country during more than a hundred years of primary teaching, sixty years of it free and compulsory at

the State's expense. In October 1951 the first members of the mission arrived to work on pilot projects for rural and fundamental education, and on a teacher training project.
(53) The rural education pilot project was carried out in two different areas - one in the highlands and the other in the plains. Two technicians with local assistants were in charge of the scheme, which operated in eleven communities in the highlands and in thirteen in the plains. Work on it had started in 1952 and was pursued in co-operation with the ministries concerned and the Committee for Co-operation with Unesco. The result was a series of constructional achievements, such as new wards for the hospital, repairing of water mains, local roads, sanitary installations, etc. The Inter-American Technical Service for Agricultural Co-operation and other organizations in Costa Rica also collaborated.
(54) An intensive campaign was carried through to improve primary education, the number of teachers had risen from 65 in 1952 to 83 in 1953 and, in the last period of 1954 to 102. They were given a series of special preparatory courses at seminars, held under the joint auspices of the Ministry of Education and the technical assistance experts. Thanks to that co-operation, the percentage of pupils promoted had increased from 81% in 1952 to 90.44% in 1953.
(55) The experts had carried out detailed surveys of secondary education and their recommendations were being studied.
(56) The mission had also co-operated, usefully and effectively, in the field of teacher training.

(57) The CHAIRMAN reminded delegates that special projects should be mentioned only in so far as they contributed to the development of the general discussion.

(58) Mr. TREJOS DITTEL (Costa Rica) wished to be extremely brief, but felt nevertheless that he must make some observations with regard to the technical assistance services.
(59) He considered technical assistance to be the most important form of aid that Unesco or any other United Nations organization could give to Member States. At the same time he understood that the service should be carefully planned; its results depended not only on the outcome of specific projects, but on the prestige of the organization providing the service.
(60) It was essential that in that matter Unesco should assemble all the factors essential to success. Missions should be well integrated and experts selected who had a knowledge of the social and cultural surroundings in which they were going to work, etc.
(61) Another aspect of the question to which he wished to draw attention was that of the actual concept of technical assistance. As he saw it, such assistance was not given by Unesco; it constituted action by the governments themselves. The experts in a mission were simply persons collaborating, in each country, with the ministries concerned.
(62) Yet another problem was that of supervising technical assistance missions. Unesco should evolve an effective method of superintending the experts' work, and there the Organization could benefit from the experience of other international bodies such as the Organization of American States, which in certain technical aid projects maintained, apart from the experts, supervisory units in given areas. Unesco would do even better work if it established such units.
(63) Lastly, the Costa Rican delegate considered that the technical assistance services deserved the attention of the Conference; any efforts that could be made to increase the funds ear-marked for them would redound not only to the benefit of Member States, but to the credit of the Organization.

(64) Mr. SHARIF (Pakistan) said that, during the four to five years for which technical assistance had existed, he had watched the struggle between Unesco and the Economic and Social Council over its scope. He had been glad to see that the Executive Board and the Director-General, when attending the Economic and Social Council meetings, had so strongly supported the idea of extending its scope to include educational and social progress in the field of technical assistance. He hoped that the Director-General would continue his efforts to broaden the interpretation of educational development.
(65) He approved the two trends which were apparent in the programme for 1955-56, namely, the emphasis which was being put on the needs of Member States and on the idea that technical assistance was a two-way process.
(66) He thought that more care should be taken in the selection of experts. Before an expert was appointed, Unesco should ascertain that he was willing to accept the conditions in the country to which he was to be sent, that he had the necessary mental flexibility to accept local conditions of work and that he was willing to stay at least three years. In addition, Unesco should make certain, before granting technical assistance, that the government of the country concerned had made plans for a follow-up programme.
(67) With regard to projects, the technical assistance project in geophysics in Pakistan was now completed and the Pakistan Government was ready to accept foreign students at the observatory in Quetta. Secondly, he had visited some Pakistani students at the Fundamental Education Centre at Patzcuaro, and had concluded that such a centre was extremely useful for making international contacts. More emphasis should be laid on the acceptance of foreign students in national centres.
(68) He concluded by congratulating the Department of Technical Assistance on its splendid achievement, and wished it every success.

(69) Mr. MENDIS (Ceylon) paid tribute to the experts of the Fundamental Education Project at Minneriya. He drew attention to pages 19 to 21 of document 8C/5 Annex VIII, which dealt with that project. No doubt existed in Ceylon concerning the permanent value of the project. Next year, the Department of Rural Development in Ceylon would take over the Fundamental Education Centre. There was already a

Co-ordinating Committee of Secretaries to ensure continuity.
(70) He had been interested in the remarks made by the delegate of Pakistan that a project should not only be useful to the country concerned but should be used for training purposes for people of other nationalities. The Ceylonese delegation would welcome educators from other countries at Minneriya.

(71) The CHAIRMAN proposed that members of the Commission should collectively express their admiration and gratitude for the work accomplished by the Technical Assistance Department, as described by Mr. Adiseshiah.

(72) Approved.

(73) Mr. FAUBLAS (Haiti) said that, in the opinion of his delegation, Unesco seemed to tackle too many problems at the same time; before embarking on new enterprises, it would perhaps have been wise to concentrate resources and efforts on fundamental education and on primary schooling in town and country. Without losing sight of its aim of creating an intellectual élite in every country, the Organization should before all else enable the masses to approach nearer to that élite.
(74) With regard to technical assistance, the Haitian delegate thought that Unesco's first task was, not to try to satisfy all the demands made upon it by Member States, but to decide which States most needed such assistance.
(75) The Haitian delegation would like to see carried out, in other countries, the same kind of work as had been accomplished in Ecuador and Guatemala.

(76) Mr. RAADI (Iran) agreed with the French delegate on the advisability of simplifying the functioning of technical assistance.
(77) *On the other hand, the Iranian delegate noted* with satisfaction that, in the technical assistance programme for 1955-56, priority had been assigned to primary and secondary education.
(78) He hoped that, in the scientific field, the countries not directly associated with technical assistance projects would be enabled to benefit from the results obtained in other countries.
(79) Mr. Raadi welcomed the news that the technical assistance programme was being rendered more flexible, as his delegation had advocated on more than one occasion.
(80) However, he thought mention should be made of the fact that fellowships were still too few and that, in order to enable their holders to derive the maximum benefit from them, their duration should be extended.
(81) With regard to the preparation of experts, the Iranian delegate agreed with his colleague from Pakistan. He thought, too, that missions should be of longer duration, so as to enable experts to adapt themselves, physically and mentally, to the country in which they had to work.
(82) He also believed that any general adoption of the system whereby the governments shared the expenses of the experts' visit would be unwise, as it might oblige certain countries which were short of funds to refuse the services of experts.

The meeting rose at 1 p. m.

# EIGHTH MEETING

*23 November 1954 at 10 a. m.*

*Chairman:* Mr. BOURGEOIS (Switzerland)

(1) The CHAIRMAN drew the attention of delegates to the final report of the Expert Committee on Education for International Understanding and Co-operation which met in Paris from 25 October to 5 November 1954 (document 8C/DIV/30). He proposed that that document be submitted to the Advisory Committee on Programme and Budget, so that the latter might evolve concrete directives and resolutions from it.

(2) Approved.

**ITEM 8.4.8 OF REVISED AGENDA: TECHNICAL ASSISTANCE** (continued)

(3) Mr. AL-HILLI (Iraq), referring to technical assistance projects in Iraq, said that there was need for co-ordination between the agencies involved, to prevent overlapping. A conference had been held of representatives of those agencies together with members of the ministries under whose jurisdiction the work on projects came, and plans had been made to solve the problem of duplication. The conference had also stressed the importance of the national contribution to projects. He felt that Unesco could encourage similar conferences in other countries.
(4) It was the desire of his Government to have further Unesco aid to expand the fundamental education project in Iraq. Up to the present, there was only one fundamental education centre, which was purely regional and did not meet the urgent needs of Iraq as a whole. If Unesco would

help in the training of teachers, another centre could be set up near Baghdad.
(5) Further, in the past, Unesco had confined its technical education work in Iraq to schools. He felt that much could be done, by holding evening classes and by other means, to educate skilled labourers, who were, in most cases, illiterate. There was urgent need in Iraq for such a scheme.
(6) Finally, he drew the attention of the Commission to a new experiment which was being tried out in Iraq, namely, the cultural or vocational unit. Those units were composed of a technical school, a cultural school and a teacher training school. The students lived together in one block and each department had its own building. So far, there was only one such unit in Iraq but, if the experiment were successful, others would be set up. Unesco could give assistance to each of the three schools forming every unit. There was a special need for teachers and technical assistance.

(7) Mrs. RODRIGUEZ (Philippines), speaking of community education, pointed out that the Philippines was an underdeveloped agricultural community with a rural educational system inadequate for modern needs. She emphasized that its Government was willing to co-operate with Unesco to improve its new community school programme.
(8) The Rural-Urban Education Centre, which was formally opened in 1953 at Bayambang with Unesco assistance, had overcome many obstacles and was now doing well. It had certain objectives for which special groups were working, each knowing what it was trying to do. Naturally the project was still in the experimental stage, but, if it was a success, which it showed every sign of being, it was to be hoped that similar projects would be started elsewhere.
(9) In 1952 and 1953 groups of foreign educators had visited the centre, and the Philippine Government hoped that, after the General Conference, some of the delegates might be able to pay the centre a visit.
(10) She concluded by expressing, on behalf of the peoples and Government of the Philippines, gratitude to the Director-General, the Chairman of the Executive Board and to Mr. Secco Ellauri and Mrs. Pecson for their visit to the centre and admiration to Mr. Adiseshiah and his Department for their work.

(11) Mr. CHARYAVIBHAJ (Thailand) expressed his Government's appreciation of the technical assistance which had been given to Thailand. The Government was particularly grateful for the excellent services of the experts engaged on various projects in the country.
(12) With regard to document 8C/5 Annex VIII, he had been impressed by the diversity of the programme undertaken and by the results so far achieved.
(13) He drew the attention of the Secretariat to a misleading statement in the last sentence of paragraph 4 on page 69 of document 8C/5 Annex VIII, which said that the Thailand Government had indicated that assistance to the Chachoengsao project might cease at the end of 1955. The facts were that the project had been planned in two stages (a) for a period from 1951 to 1955 and (b) for a period from 1955 to 1960. The first stage had been intended to be experimental and Unesco was to provide expert advice. The full quota of experts did not arrive in Thailand until 1953. The Government considered that the remaining period for the experimental stage was too short and would like to have it extended. The plan for the second stage had been to sift out the successful educational features from stage one, and incorporate them in schools elsewhere. During that stage, technical assistance would be reduced gradually until the Government had taken over completely. Further assistance would be appreciated.
(14) He was in complete agreement with the delegate of Iran that the length of fellowships should be extended, possibly for two years. He also suggested that regional travel fellowships might be inaugurated for short periods, as he believed that such fellowships would be highly beneficial in the fields of education, science and culture as well as for promoting international understanding.

(15) The CHAIRMAN said that there remained nine speakers on the list for the general discussion. He proposed that, once they had been heard, the Commission should immediately proceed to examine the resolutions appearing in document 8C/5 Annex VIII.

(16) Approved.

(17) Mr. JOHANNES (Indonesia) felt that social and economic development should be preceded or accompanied by educational development and that emphasis should be put on educational development in the programme.
(18) The requests for technical assistance from Indonesia had been mainly concerned with primary and secondary school education up to the present. Now, however, the Government was faced with the problem of too many students wanting a university education and not enough professors to teach them. The Indonesian Government was asking for technical assistance in the field of university education, and hoped that experts could be sent to help with science teaching at that level. It would be necessary to have experts willing to build up departments from scratch, as there were no well equipped laboratories. In order to undertake a programme to better university education in Indonesia, all three types of technical assistance would be required.

(19) The CHAIRMAN reminded delegates that the current discussion was confined to general remarks on document 8C/5 Annex VIII. He asked speakers to deal only with points likely to contribute to that discussion; the particular needs of each country should be put before the Director-General.

(20) Mr. SALIM (Hashemite Kingdom of Jordan) said that his Government felt that the programme of technical assistance opened wide the door of hope, and was grateful for its share of help
(21) The Government had been disappointed, however, with the size of the allocation it had

received because it had been promised more. He hoped that a similar disappointment would not result from the eighth session of the General Conference. It was impossible for the technical assistance programme to meet all the needs of all countries but it was possible for countries who were in a position to give financial help, to do so.
(22) He welcomed the principle of flexibility envisaged in the new programme, because requests from countries represented their most urgent needs. He also appreciated the move to country planning, which would, he felt, give better results, but could not agree to the policy of supporting continuing projects if it meant that countries entering the field for technical assistance late would be deprived of it. He suggested that a serious evaluation should be made of the results of projects in the various countries and a system of priority set up on the relative needs of countries receiving little technical assistance.
(23) In the interests of stability, the proposed Working Capital Fund was a good idea, but, if the programme for technical assistance were to be curtailed for the three years during which the Fund was accumulating, more than three years of progress would be lost. A delay in starting a programme of education for three years would mean that three age groups would receive inadequate or even bad education. He suggested that a scheme to finance technical assistance might be elaborated which would meet the requirements of stability and at the same time avoid delaying programmes.
(24) Jordan was satisfied with the two Unesco experts, who exerted themselves untiringly in the interests not only of Jordan but also of Unesco.

(25) Mr. AVIDOR (Israel) was of the opinion that too many projects started with experts and ended in reports. Reports might be excellent but they were doomed to oblivion, either because the experts applied statistical methods which were not applicable to the country in which they were working, or because the reports were impossible to implement. For that reason he had been pleased to read in document 8C/5 Annex VIII that the primary effort of Unesco was to be the development of human resources. After reading that statement, however, he had been puzzled to see, from the table on page 11 of the document, that the costs for experts were to go up in 1955 and the costs for fellowships and equipment were to be reduced, and asked for an explanation of that apparent contradiction.
(26) He did not propose moving for changes in the programme, but suggested that, in applying the 1955 programme, the principle of flexibility outlined on page 8 of the document should be adhered to, that Unesco should emphasize to all experts that their primary task was one of training for leadership and, for future programmes under country planning, that Unesco should advise countries to move the balance away from experts.
(27) He concluded by saying that his remarks about experts under technical assistance were equally true when applied to experts under the normal programme of Unesco.

(28) Mr. DUERING (Sweden) said that, even if the work done under technical assistance did not measure up to the needs of countries, it was nevertheless impressive. He pointed out that, in 1953, there were requests for technical assistance amounting to $43,000,000, whereas only half of that amount had been collected from Member States. The great problem at present was to raise enough money for the technical assistance programme. He thought that the problem of financing was not insoluble. The Swedish Government was of the opinion that technical assistance was important morally in the field of international solidarity and that the moral importance exceeded the importance of the money. He suggested that National Commissions should do all in their power to arouse public opinion in their own countries and appeal for funds from private sources.
(29) From the point of view of the underdeveloped countries, it was essential that as much as possible of the money available was spent on projects and that the share that went to administration should be as small as possible. If the administration was inefficient, the money would be badly or uneconomically used. It was therefore important to spend sufficient on administration to ensure an efficient service. He agreed, however, with the delegate of France that the exorbitant administration of the total technical assistance programme was a serious obstacle to progress.
(30) He shared the general feeling in favour of the new system of basing the distribution of funds on the requirements of countries requesting assistance, and thought that decisions whether to grant aid should be based primarily on the urgency of the project to the country concerned. In his opinion, however, assistance should not be spread out thinly.
(31) He approved the policy of greater co-ordination at all levels and thought that better results would be obtained if Unesco supported only well co-ordinated projects. He reminded the Commission that the scheme for technical assistance was still flexible and that it was important not to let it become rigid.
(32) The Swedish Government was aware that multilateral assistance through the United Nations and the Specialized Agencies had definite advantages for the receiving countries. Bilateral agreements were however of great value to the donor country and supplemented assistance given on a multilateral basis. He felt that bilateral agreements helped to promote a two-way traffic in assistance. He stressed that the Swedish Government did not prefer bilateral agreements to multilateral ones.
(33) Summarizing the points which the Swedish Government thought important, he said that Unesco should attempt to secure a stable financial basis for technical assistance programmes, that under the country programme the criteria of urgency and practicability should be applied, that the administration should be efficient and the number of committees and boards dealing with technical assistance be reduced and, finally, that the programme should be considered not as expanded but as expanding.

(34) Mr. MUJEEB (India) welcomed the emphasis on the phrase mobilize the resources in connexion

with the work of Unesco, United Nations Agencies and the Member States.
(35) The trend towards international co-operation would be of great value. By putting the responsibility of choice on governments, projects would be strengthened. In view of those factors, the Indian Government would be gratified if the higher budget level were adopted by the General Conference.
(36) The change in emphasis to primary and secondary school education was a natural development which showed the success of the technical assistance programme. There had been a gradual adjustment of the programme to meet new requirements.
(37) He hoped that attention would be paid to the amounts of money given for purchasing equipment, to the delays in supplying equipment, and to the selection of experts, so that a better distribution would be achieved.
(38) Further, Unesco had freedom of action with regard to technical assistance in cases of emergency, and he suggested that advantage be taken of previous experience in dealing with such emergencies.
(39) He emphasized two aspects of the policy of flexibility. In the first place, there should be no rigidity in the selecting of experts, and experts should be given a chance of working in their own countries. Secondly, fellowships should be granted to students for study in their own countries.

(40) Mr. WARD (United Kingdom) associated himself with the general opinion on the importance of the technical assistance programme and welcomed the trends outlined in document 8C/5 Annex VIII, particularly the trend towards country programmes.
(41) He agreed, however, with the delegate of France that the document showed unreal optimism. The general tone of the document suggested that nothing was wrong, but that was obviously not so. All Unesco documents were publicity documents, whether intentionally or not. He suggested to the Secretariat that it would be helpful to have a more reasoned appraisal of the type of problems facing technical assistance workers, and of possible methods of solving them.
(42) He did not entirely agree with the delegate of France about the publication of reports. He could not agree to the publication of confidential reports. He suggested that the Technical Assistance Department should assemble material and write descriptions of projects without giving details or names, and publish a handbook on the problems in the field. Such a handbook would be interesting and valuable in attracting the interest of potential experts. This suggestion might be taken up by the Secretariat in the future.

(43) Mrs. PINTO DE VIDAL (Uruguay) recalled that Unesco's basic efforts were directed towards the development of human resources through education and science. In that respect, technical assistance had up to the present time had three means at its disposal for making progress in developed and underdeveloped countries: experts, fellowships, and the supply of teams.
(44) According to the reports presented, governments had chiefly requested assistance for the training of teachers, the application of modern teaching methods, fundamental education, the training of rural teachers, agricultural training, and research centres; furthermore, somewhat exceptionally, the Government of Guatemala had requested aid for technical and industrial training; aid had also been applied for in connexion with the development of arid zones and deserts.
(45) A properly prepared teaching staff and special teaching methods were fundamental to the task for which Unesco was responsible, because without teachers the masses could not be educated.
(46) Mrs. Pinto de Vidal also considered that the appeal for aid for the training of rural teachers was opportune; in her country, a teacher training institute had been set up, and 120 rural clubs for children had been organized - similarly to what was being done in the United States of America.
(47) It was fundamental that requests should be made for agricultural training experts. The speaker stressed, in that connexion, that Unesco had worked in collaboration with FAO.
(48) She pointed out, indeed, the need for Unesco to work in collaboration with other Specialized Agencies of the United Nations, and referred to the two specialized centres - ASFEC and CREFAL. These two international centres were created in pursuance of a resolution adopted by the General Conference at its sixth session. The former, the Arab States Fundamental Education Centre, was set up in January 1953. CREFAL devoted its attention to remote rural zones or poverty-stricken areas - like those parts of Uruguay known as rancherîos (ranching areas) - where it was necessary to rehabilitate the population.
(49) She recalled that in her country education was free, secular and compulsory; that explained why Uruguay had, in that respect, received little help from Unesco. Education should however be extended, as illiterates still existed in Uruguay. The Minister of Education had formed a Literacy Commission which had carried out censuses in a ranching area, in an agricultural area and in the seventh section of the Department of Montevideo.
(50) Lastly, the speaker wished to refer to women and their very special place in society as mothers and wives. In her view, women should receive training in how to face so great a responsibility, and Unesco should encourage governments to pay due attention to the education of women, so that they might be taught the essentials of domestic science, the bringing up of children, hygiene and maternity. If women were trained in that way, humanity could count it a blessing.

(51) Mr. MASSAQUOI (Liberia) apologized for his late arrival in Montevideo and said that he felt it his duty to speak at the present meeting of the Commission, although he had not heard preceding speakers.
(52) He felt that it would be impossible for Unesco to implement the Charter of Human Rights when two-thirds of the peoples of the world had not the basic facilities for education. It was urgent that the people for whom the Charter was to be implemented should be rescued from their plight.

(53) In his opinion, the programme should be very flexible, the question of priorities should be flexible and technical assistance in terms of experts, fellowships and equipment should be adapted to the needs of each country.
(54) He did not criticize document 8C/5 Annex VIII, but thought it should be used as a yardstick to measure the different programmes in the different areas.
(55) Technical assistance was very important in Liberia, where 90% of the population was illiterate and there, as in most underdeveloped countries, Unesco was judged by the success or failure of the projects undertaken in the country. For that reason he approved the policy of country programmes.
(56) In conclusion, he regretted that the teacher training programme had been placed in category 2. In his opinion it should be in category 1.

(57) Mr. BERNAL JIMENEZ (Colombia) stressed his conviction that technical assistance was one of the spheres in which Unesco could carry out its work with regard to underdeveloped countries most effectively.
(58) When the programme of technical assistance was initiated, Member States had to be shown what it was. At that moment relatively few requests were submitted by Member States; but later the applications for technical assistance had increased to such an extent that they had exceeded Unesco's capacities, either in funds or in available experts. That was a problem to which he wished to draw attention, so that the Commission might give its assent to any proposal calculated to help in solving it.
(59) He wished to emphasize a particularly remarkable achievement in the field of fundamental education, closely linked with Unesco's action - the Educational Radio of Sutatenza. Clearly, in underdeveloped countries like Colombia, the fundamental education of the adult rural population raised grave problems. Neither the State nor individual co-operative efforts could meet the needs of adult rural education in countries of wide geographical extent, especially in areas very remote from urban centres; that was one of Latin America's great problems. The activities of the Radio School at Sutatenza were being developed as a short-term solution to those difficulties.

They had made peasants wish to improve themselves by becoming literate and acquiring general culture, as well as engaging in healthy distractions. Approximately 300,000 peasants in 283 parishes were taking part in the scheme, which was organized through 8,000 radio schools in 12 Departments, in 3 municipalities and in the State of Trujillo in Venezuela.
(60) Every possible kind of teaching material had been distributed to the radio schools. Special publications had been issued, such as the reading and writing primer, the only one of its kind in the world. Single-wave radio sets to the number of 5,000 had been acquired, at a cost of 135,000 Colombian pesos. In addition, Acción Cultural Popular (Popular Cultural Action) in Sutatenza was erecting a building to accommodate workshops, storerooms and depositories. Electronic material was being imported from the United States of America to the value of $500,000. A contract had been signed with the firm of Philips in Holland for the acquisition of 10,000 radio receivers to a value of $178,000; and 4,000 extra radio batteries had been imported at a cost of $54,000. A Unesco House was also being built in Sutatenza so that technicians might be lodged there.
(61) The delegate of Colombia said that both his Government and Popular Cultural Action at Sutatenza wished to receive fellowship holders from other countries, whether through Unesco technical assistance or despatched by their respective countries, or again by arrangement with cultural organizations or the ministries of education concerned.

(62) The CHAIRMAN declared the general discussion on document 8C/5 Annex VIII closed. He asked the Commission to take a decision on the resolutions appearing on pages 5 and 6 of the document, examining them by groups and beginning with resolution A, items 8 to 8.11.

Resolution A. Items 8 to 8.11

(63) Mr. ANGELL (United States of America) did not doubt that there was justice in the criticism voiced by the delegates of France and the United Kingdom but he felt that it was a minor criticism. The United States Government considered technical assistance of the utmost importance. He moved the adoption of the resolution.

(64) Mgr MAROUN (Lebanon) was in favour of items 8 to 8.11 being adopted. He was however dissatisfied with the text of the second paragraph in 8. "Noting with satisfaction ... in certain regions", for he felt that it implied, as already pointed out by the delegates of France and the United Kingdom, undue optimism. He was certain that technical assistance would contribute to improving the living conditions in many countries, but doubted whether it had so far achieved the results implied in the text. He hoped that the criticisms put forward by the delegates of France and the United Kingdom would lead to a remodelling of the paragraph in question.

(65) Mr. HACQUAERT (Belgium) considered that, in order to increase the number of experts dealing with technical assistance, their status and remuneration should be standardized. On the last point he underlined the danger of asking contributing countries to cover a share of the experts' visiting expenses, and wondered whether the text of the resolution should not mention that problem.

(66) Mr. WARD (United Kingdom) hoped that his remarks had not been taken as criticism of the Expanded Programme of Technical Assistance. It was a good programme, which would be carried out with a share of the imperfection to be found in all programmes. He agreed that his remarks were of small importance. They had been suggested to improve the reports.
(67) He supported the United States proposal.

(68) Mr. FAWZI (Egypt) also supported the motion put forward by the delegate of the United States of America.
(69) He considered that the optimism in the text of resolution A, item 8, should not be over-criticized, for Unesco was a young organization and a certain amount of optimism must therefore be permitted it; otherwise its work might be compromised.

(70) The CHAIRMAN having asked him whether he maintained his point of view, Mgr MAROUN said that he did not wish to reject the proposed text formally; it gave, however, too great an impression that appreciable results had already been obtained, which could hardly be the case since technical assistance had only been in existence for three or four years.

(71) Mr. ADISESHIAH (Director, Department of Technical Assistance) pointed out that the paragraph in question concerned not Unesco but the expanded technical assistance programme of the United Nations.

(72) Mgr MAROUN (Lebanon) withdrew his proposal.

(73) The CHAIRMAN proposed the adoption of resolution A, items 8 to 8.11.

(74) Adopted.

Resolution A. Item 8.12

(75) Adopted without discussion.

Resolution A. Item 8.13

(76) Mr. LAUGIER (France) said that the French delegation would continue to urge that social progress and economic development be placed on an equal footing, and that the former should not be considered simply as a consequence of the latter.
(77) In agreement with the delegate of Pakistan, he opposed the principle whereby social progress was to be taken into account only in so far as it could contribute to economic development; he deplored the fact that certain social projects had been rejected by technical assistance as not calculated to promote economic progress.
(78) He therefore proposed that in the text of item 8.13 the part of the sentence reading "for the economic development of underdeveloped countries, paying due attention to questions of a social nature which directly condition economic development" should be replaced by: "for the economic development and social progress of underdeveloped countries.

(79) Mgr MAROUN (Lebanon) said that the French delegate's remarks accorded with certain observations made by the Executive Board concerning the social aspect of economic development projects, particularly in relation to technical assistance.
(80) He seconded Mr. Laugier's proposal.
(81) The amendment was supported by the delegate of Liberia.

(82) Mr. BERNAL JIMENEZ (Colombia) also supported the French proposal. He thought that man, considered either as an individual or collectively, was the central element and that the economic factor ought therefore to be subordinated to higher social interests, and not man to the economic factor.

(83) Mr. AFTALION (Argentina) said that, in order to evaluate the technical assistance programme, it was necessary, as the French delegate had said, to bear in mind its origins - the technical assistance programme of the United Nations Economic and Social Council. Unesco was associated in the development of that programme, it being understood that Unesco would be connected with the activities which were specifically recommended to it. When working out the technical assistance campaign, the Economic and Social Council had classified countries on an economico-social basis, and according to quantitative criteria. In fact, on the economico-social as on the quantitative plane, statistics of national income, production, trade, taxes etc. clearly reflected the various countries' stages of development. But thence a conclusion was usually drawn which was far less clear, viz. that the economically and socially more developed countries, which in theory provided economic and social assistance, must also be the most highly developed culturally. That conclusion was far from clear, because in the cultural field, while certain countries might be quantitatively less developed in the sense that they had a lower literacy percentage or a smaller number of universities, it could not be concluded, a priori, that such countries were qualitatively less developed.
(84) From a number of observations made by delegates, it would seem that the success of certain concrete assistance activities had been prejudiced because the experts had failed to adapt themselves to the conditions of the recipient country. That might be due to the fact that it had been sought to inject cultural standards, rather as a living organism was injected.
(85) The Argentine Republic had the greatest respect for the philosophical, political, legal and economic concepts of all nations. Naturally it had its own political, legal, economic and social concepts, which were found in the national doctrine expounded by President Perón. But, just as Argentina did not admit of intrusions into its own sphere of influence, it recognized the sovereign right of other peoples to have their own ideals, and thus respected all philosophies.
(86) For those reasons, the Argentine delegation would welcome the inclusion, in the draft resolution under consideration, of a passage to the effect that technical assistance should take due account of national characteristics, avoiding any cultural grafting foreign to the country involved.
(87) In addition, through general or special activities undertaken on Unesco's initiative, a better knowledge of the culture of underdeveloped countries should be promoted, so that it should be known that, from many points of view, so-called assisted countries could and must become

countries which, in their turn, gave assistance.

(88) Mr. ANGELL (United States of America) asked whether, if the resolution were adopted, technical assistance under the United Nations system would be qualified.

(89) Mr. ADISESHIAH (Director, Department of Technical Assistance) explained that the language in item 8.13 was exactly the same as that of the Economic and Social Council, which had asked Unesco for co-operation. The Executive Board had discussed the request of the Economic and Social Council, and had asked the Director-General and the Department of Technical Assistance to bring the matter to the notice of the General Conference.
(90) The amendment proposed by the delegate of France was acceptable to the Director-General without disqualifying the technical assistance under the United Nations system.
(91) He referred the delegate of Argentina to the fourth paragraph of item 8, which referred to resolution 222 of the Economic and Social Council. That reference covered the point made by the Argentine delegate.

(92) The CHAIRMAN called for a vote on item 8.13, with the amendment proposed by the delegate of France.

(93) Adopted, by 41 votes in favour and 2 against.

Resolution A. Items 8.2 to 8.23

(94) The CHAIRMAN proposed that, at the beginning of item 8.2, the French word prie should be replaced by invite.

(95) Mr. ESTELRICH (Spain) thought it more suitable to leave, in the Spanish version of the draft resolution, the word pide (requests) instead of invita (invites), since pide (requests) had a mandatory sense, which, in that instance, should be conveyed.
(96) In item 8.21, where it said "To submit to the Executive Board", the following addition should be made: "and to the Governments of Member States". Otherwise, Member States would only learn about the application of the programme and its results every two years, on the occasion of the General Conference.

(97) Mr. BERNAL JIMENEZ (Colombia) observed that, if the term pide (requests) were changed to invita (invites), it would be necessary to say, in the Spanish text, a presentar, a transmitis, instead of que presente, que transmita.

(98) Mr. ZAMORANO HERNANDEZ (Chile) agreed with the amendment proposed by the Spanish delegate.
(99) In addition, he considered that in item 8.21 the text should read: "To submit to the Executive Board and to Member States the reports" etc.
(100) The reports which most interested Member States were those dealing with areas where given programmes were being carred out. He would be interested to know, for example, what work was being done in Latin America.

(101) The CHAIRMAN said that the suggestion by the delegates of Spain, Colombia and Chile would be communicated to the Drafting Committee.

(102) Mr. FAUBLAS (Haiti) did not think it necessary to add to the text of the resolution that reports should be communicated directly to Member States. As the Executive Board was in the future to consist of representatives of those States, its members would be expected to communicate reports submitted to them to their governments.

(103) Mr. ADISESHIAH (Director, Department of Technical Assistance) pointed out that the Executive Board was charged by the General Conference to look after the programme. He asked whether the Commission was authorizing the Executive Board to continue its responsibility. If that were the case, he suggested that the words "and to circulate to Member States" should be added after the words "to submit to the Executive Board" in item 8.21. He pointed out that, if that were adopted, the cost of publications would be substantially increased.

(104) Mgr MAROUN (Lebanon) considered that the sending of special reports to Member States on technical assistance activity raised a serious problem. He thought it would be difficult, between sessions of the General Conference, to prepare certain documents for the Executive Board and others for Member States. Documents submitted to the Executive Board were usually communicated to Member States for information; furthermore, the Director-General prepared a report every year on Unesco's activities, in which technical assistance was covered. Mgr Maroun therefore thought that the request put forward by the delegate of Chile was not justified.

(105) Mr. SILLER (Mexico) said that, as the Executive Board would consist in future of representatives of governments, it was not enough that only the States represented on it should receive that information officially. For that reason he supported the proposal that information should also be sent to all the other Member States.

(106) Mr. ESTELRICH (Spain) seconded the proposal put forward by the delegate of Mexico.

(107) The CHAIRMAN asked the Commission to vote on the text of resolution A, items 8.2 to 8.23, with the addition of "and to distribute to Member States" after "to submit to the Executive Board".

(108) Adopted by 29 votes to 9, with 2 abstentions.

Resolution B. Items 8.3 to 8.43

(109) Mr. FAWZI (Egypt) having requested information as to the distribution of experts by nationality, Mr. ADISESHIAH (Director, Department of Technical Assistance) stated that he would find that

information in document 8C/5 Annex VIII, Addendum I.

(110) The CHAIRMAN submitted items 8.3 to 8.43 to the Commission for approval.

(111) Adopted.

Resolution C. Items 8.5 to 8.512

(112) Mr. LAUGIER (France), repeating what he had said with regard to item 8.13, asked that, in item 8.5, social phenomena should be mentioned alongside economic objectives. The Drafting Committee could have discretion to alter the text.

(113) The CHAIRMAN thought that the Commission, as it had already agreed to the alteration in principle, would have no objection to raise.

(114) In reply to a question raised by Mgr MAROUN (Lebanon), regarding the safeguarding of the rights and privileges of experts mentioned in item 8.511, the CHAIRMAN thought he could assure the Lebanese delegate that experts seconded to technical assistance services would lose none of their rights.

(115) Items 8.5 to 8.512 were adopted.

Resolution D. Items 8.52 to 8.524

(116) Mr. MASSAQUOI (Liberia) drew the attention of the Commission to the word reduced in the introduction to Resolution D and suggested that it should be replaced by the word limited.

(117) That proposal was seconded by the delegates of Iran and France and was adopted by the Commission.

(118) Mrs. PINTO DE VIDAL (Uruguay) noted that item 8.523 read as follows: "To employ on the project counterpart staff who have completed their fellowship and scholarship courses..." She complained that in the Spanish text the same word, becas, was used for both fellowships and scholarships.

(119) Mr. SILLER (Mexico) supported the Uruguayan delegate's observation. He thought that, although Mr. Adiseshiah's report seemed satisfactory, the Spanish draft left much to be desired and hoped that that would be remedied in the future.

(120) The CHAIRMAN said that the errors in the Spanish text would be studied by the Drafting Committee. The latter would be asked to revise the Spanish text of the resolutions with particular care.

(121) He called for a vote on resolution D.

(122) Adopted.

(123) The CHAIRMAN called for a vote on resolutions A-D as a whole.

(124) Adopted by 37 votes i. favour.

**CONSIDERATION OF TWO DRAFT RESOLUTIONS PRESENTED BY THE FRENCH DELEGATION**

(125) The CHAIRMAN invited the Commission to consider a draft resolution presented by the French delegation in the following terms:

"The General Conference,

Convinced that the reports of technical assistance missions, frequently evolved and drafted by distinguished persons, contain information and suggestions which might be of value to a large number of Member States,

Invites the Director-General, after securing the agreement of the Member State in which the mission was carried out, to arrange for the publication and dissemination of all items in reports which are of a general interest extending beyond the State concerned".

(126) Mr. ADISESHIAH (Director, Department of Technical Assistance) remarked that the resolution had received the attention of the Director-General. Referring to the remarks which had been made about one report, he said that the Director-General had written to the Minister of Education in Thailand, who refused with regret to allow its publication. The Secretariat planned in the future to take sections of those reports and, after permission from the government concerned, to publish them in pamphlet form. The Director-General welcomed the resolution.

(127) The resolution of the French delegate was supported by the delegates of Lebanon and the United Kingdom.

(128) Mr. SILLER (Mexico) considered that the French draft resolution should be considered point by point. He agreed with Mr. Adiseshiah that publication of the reports of missions working in certain Member States might be extremely inconvenient for the States concerned. Indiscretions might arise from the publication of such texts.

(129) Mr. CHEVALIER (Secretary of the Commission) read out the text of the resolution once more.

(130) Mr. ADISESHIAH (Director, Department of Technical Assistance) replied that, under the resolution, no action would be taken by the Secretariat until the reclassification process had been completed.

(131) Mr. SILLER (Mexico) was uncertain of the exact scope of the French expression en accord, but said he would like the Spanish text to be more explicit and contain the expression "previo acuerdo o autorizacion del Estado interesado."

(132) Mr. WARD (United Kingdom) proposed, in view of the preceding remarks, that no formal resolution be passed and that the matter should be left to the Department of Technical Assistance for action in light of the discussions which had taken place.

(133) Mr. CHARYAVIBHAJ (Thailand) supported the United Kingdom proposal.

(134) The CHAIRMAN thought he should not withdraw the draft resolution from the Commission. Its text seemed to him reasonable; it met the wishes of a certain number of delegates, and of the Secretariat itself.
(135) He called for a vote on it.

(136) The resolution was adopted by 31 votes in favour with 3 abstentions.

(137) The CHAIRMAN then submitted a second draft resolution presented by the French delegation, as follows:

"The General Conference,

Desiring to ensure a maximum return from the funds devoted to technical assistance,

Perturbed by the number of channels through which, successively or simultaneously, the study and administration of technical assistance projects of the United Nations and Specialized Agencies are passing,

Invites the Director-General:

(1) To propose to the higher authorities of the United Nations, on every feasible occasion at joint meetings, that all measures calculated to expedite procedures for study and action, and to reduce the percentage of administrative expenditure in technical assistance services, be examined and implemented in the shortest possible space of time;

(2) To endeavour, so far as Unesco is concerned, to stabilize and if possible reduce the administrative expenditure involved in technical assistance;

(3) To report to the next General Conference on the progress made in this connexion".

(138) Mr. ADISESHIAH, speaking on behalf of the Director-General, remarked, in connexion with the procedure for technical assistance, that at present a Member State drew up a year's programme and forwarded it to the Technical Assistance Board for approval. Under the French proposal the Administrative Committee on Co-ordination, a committee independent of the technical assistance programme, was to be asked to give advice. That seemed unpractical.
(139) In connexion with stability and the reduction of administrative costs, only $390,000 from the total budget would be used for administration. That amounted to about 12% of the total budget. He warned the Commission that the expanded programme activities were already being subsidized from the regular programme. Unfortunately the Advisory Committee on Programme and Budget had not had time to examine Headquarters' costs, but the Department of Technical Assistance was running at minimum cost.

(140) He requested the delegate of France not to press his resolution and gave his assurance that, if the resolution were withdrawn, the Department of Technical Assistance would take into account what had been said during the debate.

(141) Mr. LAUGIER (France), having heard Mr. Adiseshiah's arguments, and in order to meet the point with regard to efficiency, withdrew his draft resolution. He felt, however, that the discussions to which the matter had given rise had not been fruitless, and that a current of opinion in favour of curbing bureaucratic procedures had been created.

(142) Mr. ADISESHIAH (Director, Department of Technical Assistance) drew the attention of the Commission to three reports, brought to the General Conference by three delegations, which described projects being undertaken in their countries. He thought that it was a good policy to encourage governments to publish the results of projects.
(143) He further drew attention to the invitations which had been extended by the delegates of Pakistan, Philippines and Ceylon to foreign experts to visit projects in their countries.
(144) He had noted that the Commission would like future reports to contain information concerning the failures of Unesco in technical assistance. He pointed out that the document on the programme and budget could not emphasize failures and that document 8C/5 Annex VIII had been designed for the Technical Assistance Board and the Technical Assistance Committee. However, he would bear in mind the wishes of the Commission and include a section which would tone down the optimism of those documents.
(145) Secondly, he noted the wish of the Commission that experts should concentrate on training activities.
(146) He assured the delegate of Thailand that his Government's request for further technical assistance had been accepted by the Director-General.
(147) He would take note of the remarks made by delegates concerning flexibility in the field of technical assistance.
(148) He concluded by saying that in 1955 there would be 200 experts and 800 counterpart staff in the field. It had been said two weeks ago of the pilot projects in Bolivia: "our children are being trained to know what Bolivia wants and what the world wants". That was a good omen for Unesco. A further quotation might reflect the aims of technical assistance: "We look to the programme for telescoping into a decade what other countries have had centuries to do".

The meeting rose at 1.30 p.m.

# NINTH MEETING

*24 November 1954 at 3 p. m.*

*Chairman:* Mr. BOURGEOIS (Switzerland)

**ITEM 8.3 OF THE REVISED AGENDA: REPORT TO THE GENERAL CONFERENCE ON THE MAXIMUM ASSESSMENT LEVEL AND ON THE PROVISIONAL BUDGET FIGURE FOR 1955 AND 1956 (Documents 8C/5 Corr., 8C/BUD/1, 8C/DR/71, 8C/DR/91 and 8C/DR/92, 8C/DIV/105 Corr., 8C/ADM/31 and 32 Add., and 8C/ADM/33)**

(1) The CHAIRMAN called on the representative of the Executive Board to give the Board's recommendation on the budget proposed by the Director-General in 8C/5 Corrigendum.

(2) Sir Ronald ADAM (Chairman of the Executive Board) informed the Commission that the Executive Board strongly supported the higher budgetary level.

(3) The DIRECTOR-GENERAL drew attention to the Draft Appropriation Resolution in document 8C/5 Corr. page 3. Certain changes, he pointed out, would be made if the recommendations of the Administrative Commission, which were to be dealt with next in the order of business, were accepted.

(4) Mr. ERIKSSON (Rapporteur of the Administrative Commission) presented document 8C/ADM/32, the first interim report of the Administrative Commission on matters relating to the ceiling of the budget for 1955-56. Points 1 and 3 had been adopted by the Plenary Conference that morning. It remained for the Commission to fill in the figures of point 2, Methods of financing the budget.

(5) The CHAIRMAN reminded the Commission that the General Conference, in plenary meeting, had approved paragraphs 1 and 2 of document 8C/ADM/33, dealing respectively with the scale of contributions and the methods of financing the budget. The Programme and Budget Commission, therefore, had only to fill in the blanks in paragraph 2 of the document, and first of all to fix a provisional figure for the maximum assessment level for the two-year period 1955-56. A draft resolution on that subject had been prepared by the delegations of Brazil, Egypt, France and Japan. The Chairman therefore requested the delegate of Brazil to comment on the proposals contained therein.

(6) Mr. BERREDO CARNEIRO (Brazil) explained that the draft resolution in question was to be found in document 8C/DR/91 with an amendment in document 8C/DR/92. Its aim was to fix a provisional figure of $20,000,000 as the maximum total assessment on Member States for the financial years 1955 and 1956. With the adjustments that would have to be made to allow for other possible sources of income (miscellaneous revenue and assessments on new Member States), the gross budget level would reach $21,617,830; then, after subtraction of the sum of $1,012,000, corresponding to contributions unlikely to be received, the final figure would be $20,605,830.

(7) Mr. Berredo Carneiro emphasized the fact that, if the proposal were adopted, the contributions of Member States would, in most cases, be lower than those which they had paid in 1953-54. For instance, the United Kingdom's contribution would be reduced by $395,000. On the other hand, it was true that the United States' contribution would rise from $5,999,400 to $6,000,000, and that there would be an increase of some $600 each in the contributions of the following States, as compared with the 1953-54 figures: Cambodia, Costa Rica, Ecuador, Haiti, Honduras, Hashemite Kingdom of Jordan, Laos, Liberia, Monaco and Nicaragua.

(8) Although Mr. Berredo Carneiro disliked the idea of asking any more of the ten small countries he had just mentioned, he pointed out that the proposal in document 8C/DR/92 was already the result of a compromise, and strongly urged the Commission not to fix at less than $20,000,000 the figure which the Conference would be invited to consider as the total assessment level for the financial period 1955-56.

(9) In reply to a question from Sir Ben BOWEN THOMAS (United Kingdom), the CHAIRMAN explained that the draft resolution submitted jointly by Brazil, Egypt, France and Japan (document 8C/DR/92) should be regarded as an amendment to the proposals submitted by the Director-General, with the approval of the Executive Board.

(10) Sir Ben BOWEN THOMAS (United Kingdom) introduced an amendment to document 8C/DR/71, submitted by the United Kingdom, as follows:

"The General Conference,

Recognizing the need for the most effective and economic use of Unesco's resources;

Recognizing that accession of new Member States does not of itself justify an expansion of Unesco's activities;

Taking note of the statement of the seventh session of the General Conference working party on future programme and development that 'Unesco's growth does not depend entirely on increasing the budget';

Instructs the Programme and Budget Commission

(a) To examine the whole programme presented

to the Conference by the Director-General on the assumption of a budget for 1955-56 equivalent to the 'present budgetary spending level' as proposed by the Director-General in document 8C/5 Corrigendum; to which may be added

(b) The additional cost of holding the ninth session of the General Conference at New Delhi; and

(c) The cost of the use of Russian as a working language at the ninth session of the General Conference; and

(d) To report accordingly.

| Explanatory Note | |
|---|---|
| Present Budgetary Spending Level | $17,575,854 |
| Cost of New Delhi & Russian Language | 500,000 |
| Total Spending Level | 18,075,854 |
| Assessment Level | 17,324,236 |
| Total Appropriation | 18,942,066" |

(11) The United Kingdom, Sir Ben Bowen Thomas explained, had been confirmed, by all the discussions that had taken place on the budget, in its view that Unesco had a prescribed but essential function, the counterpart of which lay in the activities of Member States, acting officially and through voluntary organizations, both nationally and internationally. To base policy upon an increasing number of international bodies growing in size and power showed a wrong diagnosis of the needs of Member States, from which direct action was required. The accession of new Member States, and the effective return of old ones, did not justify an immoderate expansion in the work of the Organization. A level of expenditure could not be based upon a windfall.

(12) Sir Ben Bowen Thomas pointed out that the amendment he was proposing authorized the Director-General to spend, in 1955-56, $18,075,854, which was about a million dollars more than he had been allowed in 1953-54. As a result of the acceptance by the Plenary Conference of the recommendations of the Administrative Commission on how to finance the budget, the provision of that sum meant a total appropriation of $18,942,066, but, thanks to the availability of the surpluses contained in the recommendations of the Administrative Commission, the call on Member States for the next two years would only be $17,324,236.

(13) The well being of the world, Sir Ben Bowen Thomas concluded, ought not to be identified with the continuing expansion of an international organization. More money should be spent directly by Member States on an education system and cultural activities tending to attune their peoples to international understanding, and Unesco should be helped to grow in strength within its limited expert field, by concentration on tasks proper to it. The United Kingdom resolution provided the funds necessary for its efficiency during the next two years.

(14) The delegates of Canada and Austria seconded the proposal of the delegate of the United Kingdom.

(15) Mr. WIDDOWSON (Union of South Africa) firmly supported the United Kingdom proposal. The arguments presented in its favour were sound, and in conformity with the Organization's best interests. His Government went further, believing that it should even be possible to reduce the present budgetary spending level, and still have adequate resources. He suggested economies that would not impair the efficiency of the programme: (1) with regard to the travel allocation, in many cases observers could be replaced by the despatch of conference records. (2) It should be possible to reduce expenditure on contracts, and avoid duplication with other organizations.

(16) The DIRECTOR-GENERAL replied that the question of staff travel was to be discussed in detail at a later stage. But, he pointed out, if more response were to be given to the needs of Member States, more travel for consultation would obviously be necessary. Staff travel was less costly than the setting up of regional offices. With regard to contracts, the main increase in those was at the higher budgetary level, for the purpose of increasing technical aid to Member States by sending out experts to help them in technical aid projects.

(17) Mr. ARSENAULT (Canada) considered that, in the present state of affairs, any increase in Unesco's budget might be prejudicial. Unesco was going through a phase of reorganization. Not only was it giving its activities a new slant, but it had decided to change the structure of its Executive Board and to provide its Secretariat with a new building. It would therefore have to go through a transitional stage, during which any further extension of its activities - and the resultant untimely swelling of the budget - might be perilous. Although the speaker was well aware of the urgency of the problems Unesco was asked to help solve, he believed that it should concentrate on following up the decisions it had already taken with a view to remodelling the programme, before thinking of extending the scope of its activities by means of a larger budget.

(18) Mr. Arsenault also pointed out that many Member States were carrying on activities at home which, being as generous in their aims as Unesco's own activities, cost them a considerable amount of money.

(19) Mr. SHARIF (Pakistan) had found two trends in all the meetings on budget ceilings he had attended: one based on the belief that Unesco must expand and therefore obtain larger contributions from Member States; the other on the conviction that contributions should be adjusted to the internal economy, resources and obligations of Member States. Mr. Sharif believed there was a third way, which could reconcile the demands of the programme with the limitations of Member States. He was greatly impressed by the arguments of the Head of the United Kingdom delegation, particularly his emphasis on the need for national economy and national obligations, although he did not agree with the specific resolution moved by him. He pointed out that in view of the accession of new Member States it would be possible to develop the programme without straining the resources of Member States. His Government was opposed to any ceiling which might increase the existing contributions of Member States, and would strongly favour relief in the existing scale of contributions. The delegate of

Pakistan therefore suggested a compromise over the ceiling suggested by the delegate of the United Kingdom and by the delegates of Brazil, France and Japan and expressed the hope that the Conference would adopt a suitable compromise.

(20) Mr. HUZAYIN (Egypt) was happy to take part in submitting the resolution presented by the delegate of Brazil on behalf of that country, France, Japan and Egypt (documents 8C/DR/91 and 92). It was the result of the deliberation of a number of States and it presented a very reasonable compromise with the proposal of the Director-General and the Executive Board. The honour of putting it forward had been distributed geographically to extend over the whole world.

(21) He mentioned the following points in support of the motion. Firstly, since the number of Member States of Unesco had increased over the past few years, it was only reasonable that the budget should increase. Secondly, no Member State would suffer any considerable increase in its contribution; some, like the United Kingdom, were offered a reduction. A small increase in a budget devoted to peace would be a very encouraging sign in the present state of world affairs. He appealed to the meeting to take a broad view of the issue and reaffirmed that the amendment proposed by the four States was a very reasonable one.

(22) Baron van der STRATEN WAILLET (Belgium) was in favour of the United Kingdom proposal. He believed that both the budgets and activities of the Specialized Agencies should be closely co-ordinated with those of the United Nations. It would therefore appear inopportune to make plans for a substantial increase in Unesco's budget, just at a time when the General Assembly of the United Nations had cut that Organization's budget by more than a million dollars.

(23) Mr. SANDOVAL VALLARTA (Mexico) had listened attentively to the remarks of the delegate of the Union of South Africa concerning the need to cut down certain administrative costs which were too high. However, he disagreed with the South African representative in thinking that such cuts should provide an opportunity to reduce Unesco's income. Income should not be reduced; on the contrary, additional funds should be made available for the implementation of the basic projects in Unesco's programme.

(24) The Mexican delegation was against the United Kingdom amendment and would vote for the amendment proposed by Brazil and other delegations. It would also oppose any suggestion to reduce estimated income; thus it would also vote against any proposal to cut down Unesco's activities.

(25) Mr. SOMMERFELT (Norway) had advocated concentration and economy at all past Conferences, but the situation had changed. New members had entered Unesco. It was possible to enlarge the former budget, but not to the extent proposed in the four-State amendment. The delegate of Norway accordingly moved the following amendment (document 8C/DR/101) to the United Kingdom proposal:

(26) "Proposal submitted by the delegation of Norway to amend draft resolution 71.

Replace paragraphs (a) and (b) of the draft resolution by the following text:

(a) To examine the whole programme presented to the Conference by the Director-General on the assumption of a budget for 1955-56 equivalent to the 'present budgetary spending level' as proposed by the Director-General in document 8C/5 Corrigendum; to which may be added subject to a maximum appropriation of $20,000,000:

(1) The additional cost of holding the ninth session of the General Conference at New Delhi;

(2) The cost of the use of Russian as a working language at the ninth session of the General Conference;

(3) The cost of such additional items as may be agreed by the General Conference to merit priority; and

(b) To report accordingly.

Explanatory Note:

On the basis approved by the Administrative Commission:

| | |
|---|---|
| Total Appropriation | $ 20,000,000 |
| Assessment Level | 18,382,170 |
| Spending Level | 19,080,891 |

(1953-54 Spending Level: $17,056,964)

(27) The proposal was supported by the delegates of Thailand, the United States of America and Greece.

(28) Mr. LAUGIER (France) felt bound to defend energetically the joint proposal submitted by his delegation and those of Brazil, Egypt and Japan. It seemed impossible to him that fortunate, strong and wealthy States should want to take advantage of the admission of new Member States to have their own contributions reduced. As stated in document 8C/DR/91, the admission of those new States would mean additional expenditure for Unesco. Every country could certainly develop those national services whose aim it was to promote education, science and culture; but the most important thing, in the fields of education, science and culture, was to awaken a true spirit of international brotherhood, and that task no country could accomplish alone. It therefore fell to Unesco to undertake it. The Organization's principal aim should be to enable the large countries to give the less privileged nations the help they so badly needed. The defence budgets of the different Member States of Unesco together totalled $100,000,000,000. The proposal under consideration aimed at obtaining from Member States the $20,000,000 that several delegations deemed necessary in order to carry out a programme worthy of Unesco and of the generous minds in which it had been conceived some years ago. It would be discouraging indeed if that proposal were rejected.

(29) Mr. SALIM (Hashemite Kingdom of Jordan) assured the delegate of Brazil, who had referred to the increased contributions of some small countries, that they would be welcomed by his own, not as a sacrifice, but as a token of its appreciation of the Organization's aims and objectives. He added that on pages 246-8 of the draft programme and budget it was seen that 40% of the total budget was

spent on establishment posts and administration, whereas only 15% of the increase in the higher level budget would be spent in that way. Therefore the services Unesco would render Member States amounted to 85% of the $2,000,000 increase envisaged.

(30) Mr. BENDER (Netherlands) explained his country's position, which had been the same as that taken by the Norwegian delegation. The Netherlands had approached Unesco with some reserve at first, but after study of Unesco's work it considered that the Organization was developing normally and that new contributions should be used to finance that natural growth. He therefore supported the four-State amendment.

(31) Dr. MUDALIAR (India) welcomed the opposite points of view that had been expressed, and felt that countries like his own appreciated the point of view of the Director-General better than those like the United Kingdom, who were not in such great need of help from the Organization.
(32) The United Kingdom delegate had suggested that the well being of the world should not be identified with the expansion of an international organization. But Unesco was a catalytic agent. The Ministers of Finance in Member States had been influenced by the ideals presented by Unesco. Not much more was being asked of Member States now. The delegate of India was very happy to hear the assurance of the delegate of Jordan in that respect.
(33) Reference had also been made to the changed rôle of the Executive Board, but the speaker was convinced that the new Board would continue to take the same view of its responsibility to the General Conference as in the past, even if it varied in its responsibility to Member States.
(34) The delegate of India thought that the Conference should not be too precise in fixing the items to be reduced and increased, but, referring to the remarks made by the delegate of the Union of South Africa on staff travel, he said the recent trip of the Director-General with the Chairman of the Executive Board had been of great assistance to Member States in getting to know the Organization. Replying to a remark of the French delegate, he thought reference to military budgets should be avoided.
(35) He concluded by saying that, in relation to the total population of the world, the proposed budget at the higher level would cost 1.05 cents per head.
(36) The Indian delegation supported the four-State amendment to the Director-General's original proposal without hesitation.

(37) Mr. BARBEY (Switzerland) announced that, although he had at first been inclined to support the proposal of the Director-General and the Executive Board, he was thenceforth prepared to accept the proposal in document 8C/DR/92, fixing the maximum assessment level at $20,000,000.

(38) Mr. SPILHAUS (United States of America) repeated the general position of his delegation. It had first proposed that the budget should be kept at the 1953-54 level, around $18,000,000. It did not consider the accession of new members a reason for a higher budget, but, since the remodelling of the programme for the 1955-56 period was now envisaged, it had changed its view, and would support an increase, but only a moderate one, since any increase would be an imposition on the smaller countries and would have repercussions on the other United Nations Agencies.
(39) The United States of America took a middle of the road position. It would vote against any budget below $18,000,000 and therefore against the United Kingdom proposal. It would abstain on $18,000,000, it would support any increase up to and including $20,000,000 and therefore supported the proposal of the delegation of Norway and, failing that, the four-State proposal. And it would oppose any proposal of over $20,000,000.

(40) Mr. MASSAQUOI (Liberia) said that, in 1952, governments in favour of the lower budget ceiling had informed the Conference that their instructions were due to financial stringency in their countries. Sir Ben Bowen Thomas had announced the willingness of his government, when the world situation improved, to increase its contribution. The situation had improved, the contribution of those countries had decreased, some smaller countries were required - and were ready - to pay more, a remodelled programme had been worked out, and still the Conference was faced by those unwilling countries. The delegate of Liberia was flabbergasted. His Government, he concluded, fully supported the four-State proposal.

(41) Mr. BERNAL JIMENEZ (Colombia) could not understand the proposal, which had been made at the time when the present session of the General Conference was being prepared, that the contributions of new Member States should be used to reduce the contributions of other Member States. He thought it logical that advantage should be taken of the new contributions to improve certain of Unesco's activities, such as technical aid, scientific co-operation, etc.
(42) At a previous meeting, the Colombian delegation had disagreed with a proposal of the Director-General that he be given authority to invest those new contributions until the beginning of the two-year period 1957-58. The speaker would not maintain his opposition, because the proposal at present under discussion, presented by Brazil and other delegations, was a proposal likely to give fresh impulse to Unesco's activities.
(43) Mr. Bernal Jimenez pointed out to the United States delegation that the fixing of the amount of contributions was closely connected with the change in the structure of the Executive Board; therefore, those who seconded the United States proposal would wish the United States delegation to follow their lead in dealing with the problem of the use to be made of the contributions of new Member States.
(44) The Colombian delegate would vote against any proposal to stabilize the budget at its present level, for he believed it essential for Unesco to grow if it were not to become paralysed; in other words, it should be a dynamic, and not a static, organization.

(45) Mr. PHOTIADES (Greece), like the United States delegate, was ready to accept any figure not less than $18,000,000 and not more than $20,000,000. In that connexion, he remarked that it should be possible for Unesco to cut down its expenditure to some extent by further improving its administrative methods and delegating certain tasks to the international non-governmental organizations best able to carry them out successfully.

(46) Although Mgr MAROUN (Lebanon) was ready to vote for the proposal in document 8C/DR/92, it was not because his country would be one of the first to benefit from an increase in Unesco's budget. In his opinion, however, the generosity displayed by certain Member States towards the people in their charge should continue to be shown by Unesco itself. Only an international organization like Unesco could ensure that all the poorer countries benefited from the aid of the more privileged. The sum mentioned in document 8C/DR/92 was certainly not too large, if Unesco were to accomplish that task successfully.

(47) Mrs. PINTO DE VIDAL (Uruguay) announced that she would vote for the Brazilian proposal. A small country like Uruguay had faith in Unesco and placed hope in its activities. The worst thing that could happen would be for Unesco to be left without sufficient money to carry out its task. Member States should not apply the brakes to Unesco's work for economic reasons. If such countries were obliged to go to war because they had stopped Unesco's cultural and pacific activities, it would cost them far more, especially in human lives, which were a country's most valuable possession.

(48) Mr. AL-HILLI (Iraq) said that, as long as there were underdeveloped countries, the views expressed by the meeting would continue, as at previous Conferences, to diverge. He supported the amendment submitted by the four States in favour of the higher budget ceiling.

(49) Mr. HAGUIWARA (Japan) wished to reply to some of the remarks made during the debate. If, as the Canadian delegate had said, the programme for 1955-56 was a transitional one, only partly reflecting the recommendations made by the Executive Board with a view to a complete remodelling of Unesco's programme, the corresponding budget ought to be relatively large. Before venturing in new directions, Unesco would have to start by completing projects which it intended eventually to abandon, and that would entail heavy expenditure.
(50) In reply to the delegate of Belgium, Mr. Haguiwara pointed out that Unesco's budgetary situation was somewhat different from that of the United Nations, which did not have to supply direct technical aid out of its own budget, since the Expanded Programme of Technical Assistance did not come under the United Nations budget.
(51) In conclusion, Mr. Haguiwara drew the Commission's attention to the last paragraph of document 8C/PRG/13 (Remodelling of the future programme of Unesco), which read:

"Now that, after early trials and experiments, the direction of Unesco's future activities can be more clearly discerned, the attention of governments should be drawn to the desirability of increasing the budget of the Organization so that it can carry out more effectively, more rapidly and on a wider scale the task which the peoples of the world have the right to expect of it."

(52) After a brief discussion on the procedure to be followed in voting on the various proposals that had just been discussed, the Commission authorized the Chairman to put the proposals to the vote in the following order:

United Kingdom proposal (document 8C/DR/71 amended);

Norwegian proposal (document 8C/DR/101);

Joint proposal of Brazil, Egypt, France and Japan (documents 8C/DR/91 and 8C/DR/92);

Proposal of the Director-General, approved by the Executive Board.

(53) Put to the vote, the United Kingdom proposal was rejected by 36 votes to 14, with 5 abstentions.

(54) Mr. BERREDO CARNEIRO (Brazil) then asked if he might warn the Commission of the dangers of the Norwegian proposal. He urged the Commission once again not to approve any figure lower than the $20,000,000 advocated in document 8C/DR/92, and he paid tribute to the small countries, which had refrained from opposing the Brazilian proposal, despite the additional burden its adoption would impose upon them.

(55) The Norwegian proposal was next put to the vote and rejected by 36 votes to 24, with 1 abstention.

(56) The CHAIRMAN then put to the vote the joint proposal submitted by Brazil, Egypt, France and Japan.

(57) That proposal was adopted by 41 votes to 12, with 3 abstentions.

(58) The CHAIRMAN stated that the figures resulting from the adoption of the joint proposal would be inserted in document 8C/ADM/33, where blank spaces had been left. He then invited the Commission to approve document 8C/ADM/33.

(59) Document 8C/ADM/33 was approved.

The meeting rose at 6 p.m.

# TENTH MEETING

*25 November 1954 at 10 a.m.*

*Chairman:* Mr. BOURGEOIS (Switzerland)

**ITEM 8.4 OF THE REVISED AGENDA: CONSIDERATION OF THE DRAFT PROGRAMME AND BUDGET, CHAPTER BY CHAPTER, AND EXAMINATION OF SPECIAL REPORTS**

(1) The CHAIRMAN indicated the method he intended to follow in examining the programme: the document would be studied section by section, project by project, and resolution by resolution; whenever a new item came up for discussion, he would invite the representatives of the Executive Board and the Advisory Committee on Programme and Budget to speak, and would then call upon the delegates who had put down their names to speak on the subject. Finally, he would give the Director-General's representative an opportunity of replying to the observations made.

**ITEM 8.4:1: EDUCATION**

(2) Mrs. PECSON (Executive Board) said that the Executive Board had strongly recommended approval of the programme and budget as drafted. It had given considerable thought to the section under discussion and had agreed to recommend its adoption to the General Conference. She would give the comments of the Executive Board on the individual application of the principles of co-operation, collaboration or consultation at the relevant stages of the discussion.

(3) Mgr MAROUN (Lebanon) paid tribute to the effort of concentration referred to in paragraph 55 of the Introduction which seemed to have influenced the text, the organization of services in the Secretariat and the programme of work, alike.
(4) He considered, however, that something still remained to be done and that some of the proposed activities were still unco-ordinated and inadequate. In his view, the International Bureau of Education might give the Secretariat useful help, especially if it were granted financial aid.
(5) With regard to the extension of education, Mgr Maroun advocated work in two directions: (1) development of the system of regional conferences; (2) increased aid to countries requesting Unesco's help in planning their educational systems.

(6) Mrs. HALINA (Poland) explained the views of her delegation with regard to certain educational problems which it considered to be particularly important: fundamental education, adult education, women's education, free and compulsory education.
(7) As Poland had instituted compulsory education and had established many schools for adults, it had scarcely any experience of fundamental education. She believed, however, that the funds allocated to that type of activity should be increased, particularly for the training of qualified staff. She hoped that the new Members admitted would bring the Organization not only increased resources, but the benefit of their experience in that field.
(8) The resolutions dealing with adult education would receive the support of the Polish delegation, which hoped that particular attention would be given to raising the standard of education among women, and that the press, films and other mass communication media would be used in education.
(9) The Polish delegation shared the views of the Uruguayan delegation on the need for making primary education compulsory, and education at all levels free (document 8C/DR/40). She considered that, if her country had been able to bear the cost of such a reform, despite the burdens imposed on it by reconstruction, countries under a less severe handicap should be able to solve the problem considerably more easily.
(10) Another resolution presented by the Uruguayan delegation (document 8C/DR/53), dealing with the payment of adolescents during apprenticeship, also seemed to her to be reasonable.
(11) In the view of the Polish delegation, the training of teachers was a major problem. The new feature to be introduced into the annual education conferences at Geneva, i.e. the exchange of views between educationists of all countries, seemed likely to help in improving the teaching profession. But she considered that the efforts of teachers would be successful only if the whole of society helped to build up a spirit of peace and international understanding.
(12) The Polish delegate hoped that Unesco would not be content to include substantial appropriations for education in its own budget but would endeavour to induce Member States to devote a steadily increasing proportion of their own funds to education, science and culture. Lastly, it seemed to her that the Organization's mission in the educational field was to promote contacts between educationists in all countries and to make education serve the cause of peace and understanding among the peoples.

(13) Mr. ZAMORANO HERNANDEZ (Chile) said that he had been unable to study the document under consideration in sufficient detail.
(14) He thought it would have been well for the Commission to set up a working party to present a

brief study of the various chapters, so that in considering the document, which was the most important item on the Conference agenda, reference could have been made to a systematic and detailed evaluation of the subjects, ideas and measures proposed. He understood, however, that there were certain technical difficulties which had prevented the adoption of that procedure. Although he considered that the Commission should not become involved in academic discussion, he thought it important to mention certain ideas which had a bearing on education.

(15) He agreed that priority should be given to the extension of primary education and to the development of fundamental education. But he thought that pre-school education had not received sufficient attention. There seemed to be some reluctance to give pre-school education a place in the initial stage of the ordinary educational system. He considered that pre-school education should also be included in the free education system which all Unesco's Member States were advised to adopt.

(16) Many of the difficulties encountered in the discussion of educational problems arose, he thought, from the use of terms which made the normal exchange of ideas difficult. Although that did not happen in the case of primary, pre-school and technical and vocational education, it did occur in connexion with secondary education. It was of very great importance that in future Unesco programmes, and at the regional Conferences mentioned by the Lebanese delegate, some standardized terminology should be worked out, and at least a rought definition evolved of certain ambiguous concepts which had given rise to concern and usually fruitless argument in educational matters. With regard to secondary education, for example, the terms "middle" or "intermediate" education were used, without any real emphasis on the specific differences between secondary and primary education. He thought that attention should later be turned to a special study of secondary education, regarded as a nodal point in the educational system as a whole, connecting up with all its different branches: marking the end of primary education, leading on to university education, dovetailing in with technical and vocational education.

(17) The delegate of Chile considered that education for all should be the first principle of primary education so that it should remain democratic. He felt that, while European countries had already instituted general compulsory education, for the great bulk of the population in the Latin American countries, for example, and in other continents, the problem of primary education should be considered in conjunction with that of providing education for all, designed to train good citizens and skilled workers.

(18) His purpose in making such general observations was to help in clarifying those problems for future Unesco programmes and any regional conferences that might be held.

(19) In reply to the remarks of the delegate of Chile, Mr. CHEVALIER (Secretary of the Commission) stated that, in accordance with Rule 9 of the Rules of Procedure, document 8C/5 had been sent to Member States by air on 28 June. As the Conference had started work on 12 November, the time limits had been observed.

(20) Mr. FRANCOIS (France) mentioned that the French National Commission had always taken a very lively interest in the work of the Education Department, and paid tribute to the efforts of Mr. Beeby and Mr. Elvin, who had, in turn, been the Head of the Department.

(21) He regretted that he was unable, on behalf of his delegation, to approve the proposed programme for the Department of Education.

(22) The disappearance of the Division of Education for International Understanding had surprised the French delegation most. The activities of that division were supposed to be taken over by other services in the same department, which, in carrying out their work, were to bear in mind the need for international understanding. Mr. François thought that, if it were split up in that way, the section of the programme would lose its point and cease to have any force. He drew the Commission's attention to various questions.

(23) Paragraph 163 ended with the sentence: "Finally, a special responsibility falls on Unesco and on Member States with regard to the orientation of school curricula towards the objective of international co-operation". In the French text, the term "en outre" seemed unfortunate, as one of Unesco's prime obligations was involved. He thought the English text better drafted.

(24) Consideration of heading 1.2 showed that the proposed appropriations for education for international understanding under the heading: "Pre-School and School Education" had been substantially reduced in comparison with earlier years. For 1955, they represented 30% of the total; for 1956 they had been reduced to 24%.

(25) Under the higher budgetary level, education for international understanding accounted for 7% for 1955 and 7% for 1956.

(26) The total appropriations proposed for international understanding under the heading of pre-school and school education amounted to 17% for 1955 and 12% for 1956.

(27) The delegate of France, however, considered that the new budget ceiling should make it possible to consider further projects.

(28) Mention was also made of international understanding in the paragraphs dealing with co-operation with youth organizations (page 45). But the appropriations for that division had been reduced by 20%.

(29) Certain practical activities had been stopped short. Studies had been undertaken with the object of discovering means of promoting international understanding in the different branches of teaching: history, geography, literature, science; French teachers had taken a great interest in the question and had attempted to act on the suggestions emerging from the study. If it were interrupted, Unesco might lose invaluable help.

(30) The delegate of France considered that the programme of the Department of Education was in conflict, on several points, with decisions taken

by the General Conference in 1952. It had then been decided to delete from the Education Department's programme certain projects which had not seemed vital, involving a total expenditure of $37,000. Several of those projects, however, were back in the programme for 1955-56. Without denying that they might be useful, Mr. François considered it unnecessary to take them up again. If Unesco wished to solve all the problems arising in the educational field, the whole of its budget would be insufficient.

(31) When considering the staffing pattern of the Department of Education (page 49), the French delegation had felt that the department was tending increasingly to become a supra-national Ministry of Education. His delegation considered that such a task was beyond Unesco's powers, and would urge the Organization to concentrate: (1) exchange of information and documentation; (2) extension of fundamental education, and of compulsory primary education; and (3) education for international understanding.

(32) For the reasons he had given, the French delegation would oppose certain projects and would ask for cuts and transfers of appropriations.

(33) Mr. CALO (Italy) paid tribute to the work done by Mr. Elvin and his colleagues.

(34) However, he was in almost complete agreement with the observations of the French delegate, and stressed the need for the Organization to concentrate its efforts. He too considered that the problems affecting yount people were extremely important and that some of the projects in the Department of Education's programme did not appear vital.

(35) The Italian delegation had prepared draft resolutions on various points. Those draft resolutions had nearly been rejected because of their budgetary implications. Mr. Calo pointed out that they were calculated to simplify the programme and to result in savings.

(36) The delegate of Italy had a proposal on the question of concentration. The Secretariat should invite Member States to make suggestions to the next General Conference on how the programme should be concentrated. The Secretariat would draw up a scheme, based on those suggestions, and would submit it to Member States for their views. The scheme would provide a basis for the Conference's work, so that wise decisions could be taken.

(37) Mr. ZIMIN (Union of Soviet Socialist Republics) pointed out that one of Unesco's principal tasks was to develop education.

(38) Al children, of all races and religions, and whether rich or poor, should be able to enjoy the benefits of primary education at least. In the years to come, Unesco should seek to introduce free and compulsory education in all countries where it did not already exist.

(39) The needs of the underdeveloped countries should be considered with all possible care and efforts should be made to meet them. But their problems could not be solved simply by giving them international aid. They should be helped to develop their domestic resources by making use of the experience of countries having different social systems. That question should be thoroughly studied at the 1955 International Conference on Education.

(40) The delegate of the USSR considered that special attention should be devoted to teaching methods; there was still much to be done in that field.

(41) The needs of economic development raised the problem of broadening technical training not only in the countries mentioned in the programme but also in other large areas where there were underdeveloped countries.

(42) Those same needs also brought the problems of higher education to the fore, since the object of higher education was to train qualified national leaders in various fields. In the Soviet delegation's view, the omission of that problem from the programme was a serious defect.

(43) The delegation of the USSR hoped that the Director-General and the Executive Board would take the observations just made into account in carrying out the programme for 1955-56 and in preparing the programme for the following two years.

(44) Mrs. PINTO DE VIDAL (Uruguay) considered that the chapter on education was the most important that the General Conference had to consider at its current session.

(45) She was surprised that a Uruguayan draft resolution, dealing with free education, had not been submitted to the General Conference. In that connexion, she mentioned that she had already stated several times that, in her country, education was secular, free at all levels, and compulsory at the primary level, and that Uruguay hoped also to be able to make secondary education compulsory. She wondered whether Unesco, with its great programme for international understanding, was not under an obligation to launch the idea of free education as a major theme. It was intolerable that there should be children in the world who were able to learn simply because their economic circumstances were easy while others were obliged to forgo the benefits of education.

(46) She thought it would be interesting to draw up statistics on armaments production in all countries to see what financial contribution each individual in a particular country had to make to give his country arms enough to put it on a war footing. It would then be seen whether a reduction in that contribution would make it possible for all the citizens of a country to help to provide free education for the nation's children. All countries should do everything in their power to institute compulsory education.

(47) Another subject on which she had already touched, and to which she wished to return, was the problem of literacy. She thought that literacy work would be useless without fundamental education. Besides knowing how to read and write, people needed to know about everything connected with their health, housing and clothing. That was one of the problems that Unesco had to solve and any money spent on it was well spent.

(48) She also wished to speak on the question of rural teachers. Rural teachers should not only instruct the children but should guide and counsel the whole neighbourhood, so that the peasants would acquire ideas that would otherwise never reach them.
(49) With regard to the programme for international understanding, she regretted that Mr. Düring's report made no mention of the greatest word in man's language - "mother". The first requisite for international understanding was that mothers should be capable of imbuing their children with love of the family and of their neighbour, so that they should never go to war to kill the children of other mothers.
(50) She thought that the pre-school education to which the Chilean delegate had referred should also be made free.
(51) Mrs. Pinto de Vidal repeated what she had already said on other occasions with regard to the education of women. Women, as wives and mothers, were bound to be interested in subjects other than those which were taught to men: domestic economy, motherhood, hygiene and child-care.
(52) With regard to the social and legal status of women - a question which had already been raised at the United Nations - the delegate of Uruguay said that neither in South nor in North America did all women yet enjoy civil and political rights. In Uruguay, however, women had full rights and her delegation hoped that women throughout the world would eventually possess the same privileges.
(53) Lastly she felt that little had so far been done to spread information about the United Nations. Everyone had seen pamphlets explaining what Unesco, WHO, FAO and UNICEF were, but children in primary and secondary schools had only hazy ideas about those organizations. She thought that Unesco should bring out primers explaining why the United Nations came into existence and what Specialized Agencies were associated with the organization.

(54) Mrs. ARUNDALE (India) was of the opinion that the programme of the Department of Education was in line with Unesco's educational ideals, although more emphasis should be put on fundamental education, the basis of all education.
(55) Too much discussion had taken place on the topic of international understanding and co-operation and too little had been achieved in their attainment. The problem was how to achieve international understanding. War had taught humanity the desirability of peace and the problem was now how to eradicate ideas of war and promote ideas of peace in the hearts of children throughout the world. The programme dealt with problems connected with education but in her opinion did not go to the heart of the matter.
(56) She pointed out that education and understanding were based on love. That love included not only humanity, but a love of nature in all forms. Advantage should be taken of the natural love in every child and every opportunity taken of promoting it. Children should be taught from the earliest age to understand the feelings of all living things. For that purpose pre-school education was of tremendous importance as was also the education of mothers. Education was a matter not only of techniques but of the heart.
(57) With regard to youth, it was necessary to help, through culture, in the teaching of an understanding of natural love. Youth should be taught the noble ideals of citizenship, of spiritual life and of the philosophy of life, and given a desire for knowledge. The fundamental principle to be followed was simplification of ideals. After the ideals had been accepted techniques would follow.
(58) She concluded by stressing the importance of seeing that the right means were used to achieve Unesco's objectives and of ensuring that spiritual as well as other values were absorbed in the process.

(59) The CHAIRMAN reminded the Commission that it was considering the programme for 1955-56 alone, and that observations about future programmes could be put forward at a later stage.

(60) Mr. GARBARINI ISLAS (International Labour Organization) was very pleased with the arrangements for collaboration between the Organization he represented and Unesco, a signal instance of which was the signing of the memorandum, dated 14 October 1954, on vocational and technical training and allied subjects.
(61) The comments of the Director-General of the International Labour Office on Unesco's programme for 1955-56 appeared in document 8C/PRG/20, Annex II, page 8. Paragraphs 77 and 79 in the Exchange of Persons chapter dealt with the exchange of workers, an activity in which the two organizations could usefully co-operate. Paragraph 85 of the same chapter dealt with longer-term exchanges, which was another matter in which the two organizations might collaborate. In the paragraph dealing with workers abroad and employment exchange, however, no mention was made of collaboration with ILO, though that was, no doubt, an oversight.
(62) The need for collaboration between the two organizations was recognized in connexion with the survey of psychological factors affecting productivity, i.e. the social impact of industrialization. In that connexion, ILO had made a study of the human factors affecting productivity, labour management relations, etc.... He was therefore pleased at the suggestion that the survey of the psychological, cultural and sociological factors affecting productivity, mentioned on page 98 of the programme, should be carried out in close collaboration with ILO.

(63) Mr. ELVIN (Director, Department of Education) remarked that it would be difficult to be brief if he was to answer all the points which had been raised during the discussion.
(64) In the first place, the Commission was considering a draft programme, to which, without doubt, improvements could be made. In the second place, most of the points raised by delegations had been thought of by the Secretariat, had been given its consideration and had either been

rejected or dealt with in a spirit of compromise in the interests of a balanced programme.
(65) Delegations had thought that the programme should be more concentrated but, on the other hand, had suggested that more emphasis should be given to fundamental education, to the extension of schooling, to women's education, to adult education and to work on child development. If the programme was to be more concentrated, it would not be possible to emphasize all these various branches of education. It was difficult to obtain a balance between the various wishes of Member States on the budget at the Department's disposal. In preparing the programme, the Department had observed the request of the Economic and Social Council, namely, that priority should be given to fundamental education and that work on other branches should be kept at a stable level.
(66) Referring to the remarks of the delegate of France, he explained that the Secretariat, backed by the Expert Committee, had felt that it was confusing to have a section in the programme devoted to education for international understanding, as much of the work undertaken in that field came under other sections. Further, the Department thought that, in the field of education, it was wrong to suppose that it was necessary to have special instruction in that matter; the idea should be part of every good education.
(67) He questioned the points made by the delegate of France in connexion with the budget, pointing out that formerly the section had contained four parts, two of which had been transferred to other parts of the programme. If those two parts were removed from the sections in which they now were and put in a separate section, there would be an increase in budget requirements of $9,000. He reassured the Commission that the Department would not diminish its efforts with regard to education for international understanding but would concentrate on the idea that such education was part of any good education.
(68) In answer to the remarks made by the delegate of Chile concerning confusion of terms used in documents, he said that the Department was trying through its clearing house to establish a glossary of terms used in the field of education.
(69) Concentration was not always synonymous with elimination of small expenditures. In some cases a small subvention was all that was needed to set in motion a project which would be of great value. He quoted as an example the benefits which would accrue from spending a small sum of money on a study of the causes of failure in school. Such a study would not only result in financial gain but would be of great use in dealing with the retarded child.
(70) He concluded by repeating that the Department had tried to attain a reasonable balance in the programme in the light of the budget at its disposal.

(71) The CHAIRMAN stated that the Commission did not have to vote on the preamble to the education chapter.

Project 1.11: Co-operation with International Organizations and Institutions

(72) Mr. CHEVALIER (Secretary of the Commission) mentioned that the Advisory Committee had made no observations on project 1.11.

(73) Mr. ESTELRICH (Spain) considered that the problem of co-operation with international non-governmental organizations and agencies was closely bound up with what the delegates of Lebanon, France and Italy had said during the general discussion and with what the Director of the Department of Education had just stated.
(74) He laid great stress on the concentration of projects - a principle that he supported - but there was a preliminary question to be considered. The delegate of Spain, like Mr. Elvin, felt that concentration was not an end in itself, but rather denoted a system of concentrated projects, linked up with the whole problem of education. Agreement should be reached on what Unesco was to do in that important field. It would also be well to apportion responsibilities, with regard to the general problem of education, between Member States, Unesco itself, national organizations and institutions, and international governmental and non-governmental organizations.
(75) In document 8C/PRG/21, which contained the observations of international non-governmental organizations, the following statement regarding education appeared (page 3): "It is noted with concern that both the proportions and the actual sums of money spent by the Department of Education through non-governmental organizations, in the form of subventions or contracts, are noticeably smaller than is the case for other departments... This is all the more regrettable in view of the undoubted competence of a number of non-governmental organizations which have long and valuable experience in the field of education". If the nature of subventions granted to non-governmental organizations were considered, however, it might be said that Unesco, far from lagging behind, was doing too much. Definite criteria should therefore be laid down concerning economic aid to international educational organizations.
(76) To sum up, the Spanish delegation hoped, firstly, that fuller information than that appearing in the programme would be provided about the practical activities in connexion with the provision of technical advice or other matters, that Unesco contemplated handing over to the organizations; secondly, that, once such a study had been carried out, the subventions to bodies that were doing educational work for their own purposes would be placed in category 3, as recommended in the Advisory Committee's Report; thirdly, that the Secretariat would consider the possibility of granting such aid in future by means of contracts for the execution of specific activities.
(77) The delegate of Spain stated that his proposal was not to abolish any of the proposed subventions, nor to belittle the work that many organizations could do. The reason for the criterion he suggested was the inevitable paucity of Unesco's resources,

which made it essential to establish strict priorities for expenditure.

(78) Mr. PRASAD (India) supported the proposal to adopt project 1.11. With regard to paragraph 20 concerning the International Bureau of Education, he suggested that the Director-General should be asked to come to an agreement with IBE to make all its working documents available to Member States on request.
(79) Secondly, with regard to paragraph 45 concerning the International Association of Universities, he asked whether membership of the Association was confined to individual universities or was open to national bureaux of universities. In his opinion, membership should be open to national bureaux, because, if confined to single universities, membership, in many cases, would be only nominal.

(80) Mr. NIELSEN (Denmark), answering the question of the delegate of India, said that membership of the Association was open either to individual universities as members or to existing associations of universities as associate members.

(81) Mr. AL-KOUSSY (Egypt) said that he would comment on paragraphs 20, 23, 41 and 49.
(82) He agreed with the remarks made by the delegate of Uruguay, in his opening speech at the plenary meeting, that subventions should be granted to organizations only if they fulfilled the criteria of universality and efficiency based on cheapness. He also supported the view expressed by the delegate of India that, to make the work of the organizations effective, it was necessary that all Member States knew about them and their work.
(83) With regard to the Unesco Institutes in Germany, his delegation would like to have further information in order that it could judge their value.
(84) Some organizations were important from a local and international point of view because their work enhanced that of Unesco. He expressed surprise that in many cases only nominal subventions were being granted to such organizations
(85) In his opinion, Unesco should give its strongest support to the International Bureau of Education, the World Federation for Mental Health, the New Education Fellowship and the World Confederation of Organizations of the Teaching Profession, because such organizations were very important to Unesco's work. He was not against support for other organizations but felt that those four should be given priority as they were widely international and were capable of arousing awareness of Unesco's work.
(86) He proposed that the subventions to those four organizations should be increased and that the Commission should not agree to make a subvention which would merely justify their continued existence. If the subventions were not increased, he would abstain from voting.

(87) Mrs. PINTO DE VIDAL (Uruguay) endorsed the comments of the delegate of Egypt. She thought that Unesco should not curtail its aid to any bodies co-operating with it in the educational field. That did not mean that aid should be given to all institutions; a study would have to be made of the activities which those associations carried on in the various countries.

(88) The CHAIRMAN pointed out that subventions were not necessarily proportional to the importance of the organizations which received them; the needs of organizations were also taken into account.
(89) He would, however, ask the representative of the Director-General to give all the necessary details on that point.

(90) Mr. SOMMERFELT (Norway) indicated that he had the same comment to make on paragraphs 25, 30, 34, 37, 40, 44, 51 and 54, which was to the effect that, although he was in favour of subventions being granted for specific purposes, he thought that the method used for their distribution was unfair. In his opinion, it was a waste of time for the General Conference to grant subventions and he suggested that the Secretariat should be asked to consider making a large subvention to a really international organization for global distribution to smaller organizations doing work of interest to Unesco.

(91) Mr. BROWNELL (United States of America) felt convinced that the best way of disseminating the work of Unesco for international understanding was through co-operation with other organizations and institutions. In his opinion, subventions were only warranted if organizations had an expanding influence and if their work did not overlap or duplicate that of other organizations or if their contribution to the work of Unesco was unique.
He thought that organizations should be encouraged to be self-supporting but that adequate warning should be given if Unesco intended to decrease its subvention.
(92) With regard to paragraphs 38-40 concerning the subvention to the Joint Committee of International Teachers' Federations, he said that, if he had been correctly informed, contributions of members to the organization amounted to $438. He opposed the granting of a subvention four times the amount of members' contributions to an organization which apparently competed with existing organizations, without evidence that it would have an expanding influence.
(93) He found it difficult to understand why the subvention to the World Confederation of Organizations of the Teaching Profession had been reduced. That organization showed ample evidence of increased growth. It should continue to receive a bigger subvention.
(94) He concluded by suggesting that the subvention proposed for the Joint Committee of International Teachers' Federations should be deleted and that the subvention to the World Confederation of Organizations of the Teaching Profession should be restored to its previous figure.

(95) Mr. FORSYTH (New Zealand) strongly supported

the remarks and proposals of the United States delegate. While not wishing to repeat the remarks of the delegates of Egypt and the United States of America, he stressed the importance of the teaching profession. In his opinion, money was being spent on how international understanding was to be taught when it should be spent on discussing who was to teach it. The World Confederation of Organizations of the Teaching Profession was a virile organization, which could provide Unesco with a medium for teaching international understanding. He thought that it would be sensible and appropriate to grant a larger subvention to that organization and to ask it to teach about the ideals and aims of Unesco.

(96) Mr. HACQUAERT (Belgium) thought the programme of the Department of Education excellent, and congratulated the Secretariat on it.
(97) With reference to paragraphs 55 to 62, and 385, he stressed the need for co-ordinating the activities of the three Unesco Institutes in Germany. The Institute at Gauting did not seem to him to have produced the results expected of it. Unesco should endeavour to turn it into an international centre for German youth and, if possible, for young people of other countries too.

(98) Mrs. BURCHULADZE (Union of Soviet Socialist Republics) considered that the three Institutes set up by Unesco in the German Federal Republic in 1951 were not very international in character.
(99) She suggested that they should be financed, not out of Unesco funds, but by special contributions from governments. The sums allocated to maintaining the Institutes would be better employed if spent on financial aid to underdeveloped countries or on other tasks connected with international co-operation and mutual understanding.
(100) She emphasized that the Advisory Committee had also expressed doubts about the usefulness of the financial aid given to the Institutes at a time when the Organization's resources were needed for more important tasks.

(101) Mr. ROBERTSON (United Kingdom), referring to the Unesco institutes in Germany, said that his delegation would support the proposed subvention but not without hesitation, and only because it was suggested in the programme and budget document that Unesco's financial help should taper off and cease. It would perhaps be unfair to say that there were grave doubts about the work of the Institutes, but it was a temperate claim that they had failed to establish widespread confidence.
(102) He suggested that, owing to the size of the proposed subvention and the perplexity which surrounded the work of the institutes, it would be preferable that the critical study should be entrusted to a small number of independent experts, as being the best method of obtaining an unbiased opinion.

(103) Mr. CALO (Italy) drew the attention of delegates to the situation of some of the international organizations to which it was proposed to grant subventions. Generally speaking, he would have liked the reports submitted by the organizations to be communicated to Member States.
(104) The New Education Fellowship did not seem to have maintained its previous level of activity.
(105) The World Organization for Early Childhood Education, which could undoubtedly give Unesco useful help, was going through a serious crisis. Its national committees were divided. As things stood, it was difficult to foresee what contribution it would be able to make. The proposed subvention should therefore be approved subject to the proviso that the World Organization should surmount its crisis and provide certain guarantees.
(106) The delegate of Italy had no criticism to make of the International Federation of Children's Communities. He wondered, however, whether children's communities, which had been set up to deal with the special conditions of the post-war period, were still serving a useful purpose.
(107) Mr. Calo wanted further details about the International Association of Universities, and asked what was its relation to the Association of University Professors and Lecturers. He thought that one or other of the associations, or both, might be commissioned to solve the problems of the equivalence of university degrees, and might be asked to consider how universities could help in adult education.

(108) Mr. LAUGIER (France) proposed that the question of the amounts of subventions be referred to the Executive Board. He did not consider that the Commission should study it in detail.

(109) Mr. LOEFLER (German Federal Republic) said that he had already tried to clarify German feeling on the three Unesco institutes in Germany and referred to the Director-General's remarks about encouraging their work. There were several educators at the General Conference who had attended the Conference of the Institute for Education in Hamburg and who knew what the position was. He was grateful to the delegates of Belgium and the United Kingdom for their remarks. He supported the suggestion made by the delegate of the United Kingdom that any study should be entrusted to independent experts.
(110) He asked the Commission to support the institutes for a further two years in order that it might be seen whether their work for Unesco should continue.

(111) Mr. FRANCOIS (France) shared the Belgian delegate's opinion with regard to the Unesco Institutes in Germany, particularly the Institute at Gauting, which seemed to him to be the only body of its kind capable of studying technical problems.
(112) He considered the suggestion by the delegate of the USSR concerning the financing of the institutes to be dangerous. Their international character could be maintained only if they received funds from an international organization. If they were financed by governments, they might become platforms for the various doctrines in conflict in the world.

(113) In reply to the remark by the delegate of Italy, Mr. François thought that the World Organization for Early Childhood Education would emerge safely from the crisis through which it was passing.
(114) He did not think that Unesco could cast off the International Federation of Children's Communities. Unesco itself had set it up, and most of the needs which children's communities met still existed. A very large number of children were still suffering from the condition of society and were obliged to leave their families temporarily for health or other reasons. In children's communities they found a new family life. The French delegation therefore strongly supported the grant of a subvention to the Federation.

(115) Mr. ZAMORANO HERNANDEZ (Chile) considered that the Commission had too few data about the problem of subventions to be able to take decisions on any amendments suggested. He believed that the best course was to leave the solution of the problem to the Executive Board to be appointed at the current session of the General Conference. The new Executive Board and Unesco's technical services would be able to reach the right decisions on international organizations, about which information was rather vague.

(116) The CHAIRMAN pointed out to the delegate of Chile that the subventions had already been approved by the Executive Board and the Advisory Committee on Programme and Budget.

(117) Mr. ZAMORANO HERNANDEZ (Chile) explained that he was referring to the subventions to be granted to the international organizations in the future.

(118) Mr. NIELSEN (Denmark) said, in connexion with the remarks made by the delegate of Italy about the World Organization for Early Childhood Education (paragraphs 28 and 29), that he was glad that that work was to continue. The differences of opinion were domestic matters within the purview of the Organization and, according to his information, were near settlement. He was in favour of granting that Organization a subvention.
(119) With regard to Unesco institutes in Germany, when those institutes were founded it was intended that they should be self-supporting through voluntary contributions from Member States but those contributions had not proved sufficient. The Danish Government was still willing to make a contribution to the institutes. He did not object to the United Kingdom proposal if it would help a decision to be arrived at on the usefulness of the work being done. It would be harmful to the reputation of Unesco if they were dropped at the present stage. He judged from previous discussions that most countries were interested in the experiment of uniting the educational and social aspects of the youth problem. If the experiment were successful, similar institutes could be set up in other parts of the world.

(120) Mr. AL-HILLI (Iraq) thought that subventions in the bracket from $2,000-6,500 should be allocated in accordance with services rendered. In order to do that, reports of the activities of organizations should be studied.
(121) He proposed that Unesco should grant subventions to organizations and authorize the Director-General to request them to carry out specific work. The amount of the subvention should be decided by the Director-General and the organization concerned.

(122) Mr. ELVIN (Director, Department of Education) reminded the Commission that it was discussing subventions. Contracts brought no financial benefit to organizations.
(123) Replying for the Secretariat to the remark that delegations had not received enough information about organizations, he pointed out that document 8C/ADM/20 contained very adequate information. If delegations were not satisfied with the information in that document, the Secretariat would be more than willing to supply further details.
(124) In connexion with the criteria by which subventions should be granted, the Secretariat considered not only services rendered but also the usefulness to Unesco of the continuance of any organization. It was sometimes more valuable to keep an organization in existence than for Unesco to undertake the work itself.
(125) In answer to the references of the delegate of Italy to the World Organization for Early Childhood Education, he said that the view of the Secretariat was that the internal differences were being resolved. The Secretariat was watching the situation carefully.
(126) The United States proposal concerning the subvention to the Joint Committee of International Teachers' Federations would, if adopted, suppress an organization which was "a child of Unesco". It was true that its work overlapped that of another organization, but he strongly advised the Commission to recognize both. The Joint Committee was preparing a Teachers' Charter, which would be of the utmost value to teachers throughout the world.
(127) The Secretariat could give more information to delegations about the Unesco institutes in Germany if required.
(128) Concerning the question of procedure, the question of each subvention was carefully examined by the Executive Board and by the Advisory Committee on Programme and Budget and approved by them before being sent to the Commission and the General Conference. In principle a decision on subventions had to be taken by the Commission and the General Conference.

(129) The CHAIRMAN asked delegates to take a decision on the proposed amendments to resolution 1.11.
(130) He called for a vote on the French delegation's proposal, which was to refer the subventions to international educational organizations to the Executive Board for consideration.

(131) Mr. LAUGIER (France) wished to make it clear that his delegation was in favour of granting subventions to many organizations, provided that they were thoroughly studied beforehand. It had suggested referring the details of subventions to

the Board, in order to avoid protracted discussions in the Commission. He therefore proposed that a vote be taken on resolution 1.11, on the understanding that the Executive Board would reconsider the proposed figures, which would then be studied in the light of further information obtained about all the organizations.

(132) The proposal was seconded by the delegates of Lebanon and Liberia.

(133) The CHAIRMAN called for a vote on the French proposal, which was rejected by 18 votes to 10, with 12 abstentions.
(134) He asked the Commission to take a decision on the amendment, proposed by the delegation of Egypt, to raise the subvention to the New Education Fellowship.

(135) Mgr MAROUN (Lebanon) observed that the Executive Board and the Advisory Committee on Programme and Budget had already carefully examined the proposed figures for the subventions. He wished to know the Executive Board's opinion.

(136) Mrs. PECSON (Executive Board) informed the Commission that those items were studied singly by the Executive Board in the light of information received from the Secretariat. A special committee had been created by the Executive Board to study the whole question of subventions.
(137) The Executive Board, after very lengthy consideration, had agreed to recommend to the General Conference approval of the subventions to the Unesco institutes in Germany in order that they could carry on.

(138) Mr. MASSAQUOI (Liberia), raising a question of procedure, asked whether, as the Commission had not received comments from the Advisory Committee on Programme and Budget on the question of subventions, the Commission should proceed to a decision. As he did not believe that the Commission was in a position to take action in that respect, he supported the proposal by the delegate of France that the subventions should be forwarded to the Executive Board for decision.

(139) The CHAIRMAN mentioned that the report of the Advisory Committee on Programme and Budget (document 8C/BUD/1) had been communicated to all delegates, and that the document contained no observations on draft resolution 1.11.
(140) He stated that the proposed amendments would involve an increase of $14,000 in the appropriations.

(141) Mr. ELVIN (Director, Department of Education) said that the responsibility would rest with the Commission. If the Commission decided to increase a subvention, it would also have to decide where a corresponding reduction was to be made.

(142) Mgr MAROUN (Lebanon) urged that the balance between the different parts of the programme be maintained.
(143) As the amendment proposed by the Egyptian delegation was not seconded, no vote was taken on it.
(144) Another amendment, also proposed by the Egyptian delegation, to raise the subvention to the World Federation for Mental Health was not seconded, and no vote was taken on it.

(145) The CHAIRMAN called for a vote on a third amendment, proposed by the delegation of Egypt, to raise the subvention to the World Confederation of Organizations of the Teaching Profession to $6,000 for each of the two years.

(146) The proposal was seconded by the delegate of the United States of America.

(147) Approved by 17 votes to 11, with 15 abstentions.

(148) The CHAIRMAN called for a vote on an amendment, proposed by the delegate of the United States of America, to delete the proposed subvention to the Joint Committee of International Teachers' Federations.

(149) The proposal was seconded by the delegates of Egypt and Costa Rica.

(150) Rejected by 17 votes to 14, with 11 abstentions.

(151) The CHAIRMAN called for a vote on the proposal by the delegate of the USSR with regard to the financing of the Unesco institutes in Germany.

(152) Mrs. BURCHULADZE (Union of Soviet Socialist Republics) stated that she had not intended to make a formal proposal for deleting the subvention to the Unesco institutes in Germany, but had simply wished to indicate why she would abstain from voting on resolution 1.11.

(153) A vote was taken on resolution 1.11, with the approved amendment.

(154) Adopted by 40 votes, with 3 abstentions.

The meeting rose at 1.30 p.m.

# ELEVENTH MEETING

*25 November 1954 at 3.30 p. m.*

*Chairman:* Mr. BOURGEOIS (Switzerland)

ITEM 8.4.1 OF THE REVISED AGENDA: EDUCATION (continued)

Project 1.12: Clearing House and Advisory Services

(1) The CHAIRMAN called on the Commission to comment on resolutions 1.121 and 1.122 and the relevant work plans (paragraphs 64 to 111).
(2) A number of draft amendments submitted by Member States would have to be studied in conjunction with the resolutions.

(3) Mr. PRATT (Australia) asked permission of the meeting to deal with resolution 1.121 (paragraph 64) in combination with resolution 1.122 (paragraph 68) as the two were closely connected.
(4) The Australian delegation regarded the Clearing House activities as of the greatest importance. They certainly fulfilled the catalytic function of Unesco as described by the delegate of India. The great value of that work implied a danger lest the volume of requests (150 had been received in one week) immobilize the Department. A high level of discernment was needed in dealing with those requests in the appropriate manner. On that ground, the delegate of Australia questioned the proposal outlined in paragraph 77 to call in six documentalists for consultation. He urged that not too much should be expected in that direction, and made the same remark in connexion with the proposals in paragraph 99. He stressed the importance of National Commissions in connexion with Clearing House activities.
(5) Mr. Pratt supported resolution 1.121, but felt that, with regard to resolution 1.122, more emphasis should be laid on the second part, namely, "the educational programme of Unesco", than on "the needs of Member States", which, however important, made the field too wide.

(6) Mr. AL-KOUSSI (Egypt) suggested that there was a relation between the stage of a country's development and its interest in a clearing house, which was wanted for purposes of research and exchange. It would be a good plan to make countries more clearing house conscious. Expert advice would be needed to co-ordinate the work done here and there by Ministry departments. The Egyptian Ministry of Education was interested in setting up a local clearing house, and intended to consult Unesco on the matter.

(7) Mr. ZAMORANO HERNANDEZ (Chile), speaking of resolution 1.122, said that the Education Clearing House should be divided into sections, each of which would deal with a different part of the world, covering countries with similar features. Every Member State was interested in all kinds of educational experiments throughout the world, but interest was greater when the information supplied related to countries with which a State had closer affinities.
(8) Paragraph 77 spoke of calling in six documentalists "to discuss the results of the survey of documentation centres" and "to advise on common problems of educational bibliography". It would be very helpful if those specialists were chosen to represent different parts of the world, and one of them might well represent the Latin American countries.

(9) Referring to paragraph 99, which dealt with the ways in which Unesco proposed to collaborate with national bodies concerned with educational matters, Mr. CALO (Italy) pointed out that there were a number of such institutions in Western Europe, and particularly in France and Italy, which might be of great help. He therefore felt that sufficient sums should be provided in the budget to enable Unesco to make contracts not only with the American Education Research Association but also with similar organizations in Western Europe. Referring to the figures given in paragraph 100a, he accordingly suggested that the estimates for 1955-56 ($18,080 and $9,080) be increased respectively to $20,000 (or even $21,000) and $10,000 (or even $11,000). Should his proposal be considered unacceptable, the amounts provided for "staff travel" might perhaps be somewhat reduced in order to increase the amounts requested in the budget for "contracts".

(10) Mr. WARD (United Kingdom) associated himself with the views expressed by the delegate of Egypt, and added that his country had many years since set up a national clearing house in imitation of Unesco's. But the work done in that respect by Unesco was not well known enough in the United Kingdom. He wondered if the Secretariat could provide an authoritative article (or material for one) for publication in the educational journals of his country and perhaps in others.

(11) Mr. CASSANI (Argentina) said that his delegation considered the contents of the chapter under examination to be very important, and was in agreement with the Italian delegation. The sums shown in paragraph 81 for financing the documentation unit should be increased by $5,000

a year. If such an increase were not possible, his delegation would not withdraw its motion, as it was anxious that its desires in that respect should remain on record. It was very important that studies carried out in one country should be publicized in others and Unesco should be responsible for the supply and exchange of information.
(12) Mr. Cassani was in agreement with the Australian representative. The establishment of a large educational information centre would be one of the most useful contributions to progress in the world.

(13) Mgr MAROUN (Lebanon) had little to add to previous speakers' remarks about the work plans for resolution 1.122. With reference to paragraph 92, he wished to point out, however, that the Secretariat seemed to underrate the studies there mentioned. Such studies on Human Rights and, in particular, on the right to education laid down in Article 26 of the Universal Declaration, had, he reminded the Commission, been repeatedly requested. It was very much to be hoped, therefore, that the Secretariat would take more active measures to carry them out.

(14) Mr. ESTELRICH (Spain), commenting on paragraph 101 of the proposed programme and budget, praised the work being carried out by the Department of Education. That work might be supplemented by the publication of an international educational review, which would supply information and, while avoiding controversial subjects, would give practical and theoretical advice. The review might suggest curricula and serve as a guide to teachers.
(15) The representative of Spain was sure that the Secretariat would have interesting suggestions to make concerning that project.

(16) Mr. STEINIG (United Nations) stressed the great importance of Unesco's contributions to the United Nations in many of its major activities. He made the following remarks on paragraphs 83-100. For the first time specific financial provision had been made for the reports and studies Unesco provided in the field of education. Referring to paragraphs 186-196 he appreciated the fact that teaching about the United Nations and the Universal Declaration of Human Rights had now been recognized as a specific responsibility. Suitable information was to be made available to teachers, and an effort to provide basic teaching materials and documents for the classroom. The operative provisions however remained unchanged. The Secretariat might consider extending the scope of its assistance to the United Nations in that field.
(17) The report referred to in paragraph 89, he informed the meeting, would be concluded during the year. That might affect the studies mentioned.
(18) On paragraph 93, the status of women, a further resolution affecting Unesco had been adopted by the Commission on the Status of Women at its eighth session, and, on its recommendation, approved by the Economic and Social Council. It called for studies in connexion with school attendance, the vocational education of girls, and the use of women as teachers. On paragraph 94, racial discrimination, the study was not to be limited to questions of race, and Mr. Steinig thought the word 'racial' might be eliminated from the paragraph.

(19) Mr. ELVIN (Director, Department of Education) replied to the points that had been raised by members of the Commission.
(20) The correction called for by the delegate of the United Nations had already been made.
(21) He would be very happy to comply with the request of the delegate of the United Kingdom for an article on the clearing house activities of Unesco.
(22) Replying to the delegate of Australia on the volume of requests handled by the Unesco clearing house, he said the normal average was about 150 requests a month. They were of all conceivable kinds, and every effort was made to control the degree of attention granted to them. Mr. Elvin felt however that all requests should receive some answer. Decentralization was necessary, and he appreciated the remarks of the Egyptian delegate in that connexion. To be successful, Unesco's work depended on the creation of educational clearing houses in all the Member States. The visit of documentalists questioned by the Australian delegate had been planned with that aim in mind. To the delegate of Chile he replied that Unesco aimed at a broad coverage but the specialists of clearing houses could only be invited where such clearing houses were already in existence. The idea behind the project in paragraph 99 (referred to by the delegate of Australia) was to get research workers thinking along lines favourable to the work of Unesco, and to inform the Organization of their results.
(23) Answering the delegate of Italy, Mr. Elvin said that his department was aware of the existence in other parts of the world of organizations such as the delegate of Italy had mentioned. They could however only be assisted one at a time. The next Conference would be free to decide where the next effort was to be made. If the Commission did not vote an increase in the budget for that activity, Mr. Elvin thought it would be unwise to make a cut in the sums required for the first effort.
(24) To the Spanish delegate, Mr. Elvin replied that the Secretariat had considered an international educational review for the draft programme, but the Hamburg Institute had decided to start one itself, and it would probably be better that it should be run under strictly professional auspices.
(25) In conclusion, Mr. Elvin thanked the delegate of the United Nations for his remarks. The list of work on hand and the fact that the activities connected with the United Nations had been listed in a special section were evidence of the close co-operation between the two organizations. He begged the representative of the United Nations for as long a notice as possible of any new studies wanted, as they required considerable staff time.

(26) The CHAIRMAN then asked the Commission to vote on the amendment proposed by the Italian delegation with regard to the estimates given in paragraph 100a.

(27) Mr. CALO (Italy) said that the Italian delegation was prepared to lower the figures which it had originally mentioned in its draft amendment (document 8C/DR/28), since its main desire was to emphasize the question of principle. Its proposal accordingly was that the appropriations set out in paragraph 100a be increased from $18,080 to $20,000 and from $9,080 to $10,000.

(28) The Italian proposal was seconded by the delegates of France, Turkey and Spain.

(29) It was then put to the vote and rejected by 21 votes to 7, with 16 abstentions.

(30) The CHAIRMAN then called on the Commission to take a decision on the amendment proposed by the Argentine delegation, to increase the amounts provided in paragraph 81 by $5,000 for each year. The amounts as they stood were $12,330 for 1955 and $12,330 for 1956.

(31) As the proposal was not seconded, it was considered to be rejected.

(32) A vote was taken on resolution 1.121, which was unanimously adopted.

(33) A vote was then taken on resolution 1.122, which was also adopted, with no dissentient vote but one abstention.

Project 1.21: Development and improvement of school systems and school teaching (paragraphs 112 et seq.)

(34) The CHAIRMAN called upon the Commission to comment on the resolutions and work plans relative to this project.

(35) Mr. NIELSEN (Denmark) said that the time had come to discuss draft resolution 40 submitted by the Uruguayan delegation, inviting Member States to take the necessary measures to ensure that education was provided, free of charge, at all levels. He appreciated the idealism behind the proposal. The delegate of Uruguay had protested that morning against the Executive Board's failure to recommend it, and it had been supported by the delegate of Poland.
(36) Most countries, Mr. Nielsen thought, were aware of the difficulties inherent in a proposal of that kind, and tried to approach their common goal step by step. If any countries did not agree with the spirit of the resolution, it would hardly carry the weight required to change their attitude.
(37) If a proposal had no budgetary implication, that did not mean it was "harmless" and could therefore be adopted. If it had no effect, it would be detrimental to the impact of Unesco on the world. That remark had a bearing on a good many resolutions which had been put before the Conference by Member States.

(38) Mgr MAROUN (Lebanon) considered that the general remarks set forth in paragraphs 115-127 called for some comment. Referring to paragraph 117, he remarked that racial or religious discrimination, which in the past had prevented certain children from attending schools which were open to others, tended to disappear today. The inequalities found in educational opportunities were thus due, in the main, to economic or social factors. Mgr Maroun was most anxious that that fact should be stressed in paragraph 117.
(39) He also considered that, in a programme of action such as that before the Commission, there was no need constantly to reiterate principles already formulated repeatedly. What was needed was exact details about the means by which those principles were to be applied.
(40) Among the steps taken by Unesco for the development of education, Mgr Maroun was wholeheartedly in favour of all those on an international and regional scale. He considered that at the national level, however, Unesco had not so far been moving in the right direction, nor had it succeeded in giving its Member States the help they needed to improve their own education systems. He would therefore have a number of criticisms to make regarding the section on "Action on particular problems (paragraphs 153-175)". Many of the activities mentioned in that section lay outside Unesco's competence, since the Organization should act neither as a kind of international Ministry of Education, nor as an international institute of education, but should concentrate primarily on giving its Member States the help they needed to further the development of educational facilities on their own territory.

(41) Mrs. BOLLO (Uruguay) said that, in every Commission, the universal character of Unesco had been mentioned as being its most noteworthy and characteristic feature. Free and compulsory education in all countries and at all levels was one of the things that Unesco's universal activities were intended to achieve. Such education was available in some countries and not in others; but steps should be taken to establish it everywhere.
(42) The representative of Denmark had said that he would not oppose the Uruguayan proposal (document 8C/DR/40), but that the right to education was already set forth in the Universal Declaration of Human Rights. The representative of Lebanon had said that nobody would dare to challenge that right, but that, once such a declaration was down on paper, it was best to wait until events brought it into effect. As the Advisory Committee on Programme and Budget had not thought fit to recommend the Uruguayan proposal for approval, it was necessary to lay particular stress on it.
(43) Uruguay wanted all education to be free. Such a system had been introduced in Uruguay itself with beneficial results and the Uruguayans wished all to enjoy the same facilities. The best way of bringing that about was a strong recommendation for immediate action. The right to culture as proclaimed in the Declaration of Human Rights could be effective only if secondary and higher, as well as primary education, were free and compulsory.
(44) Uruguay proposed that Unesco set aside a sum sufficient for carrying out an experiment in

the provision of such education in a country where it did not exist, so that action should not be confined to an abstract statement of aims. Free and compulsory education should be established in all the 72 Member States of Unesco. If education were not free, the cultural level of the peoples could never be raised, and Unesco's aims in that respect could never be achieved.

(45) Mr. SOMMERFELT (Norway) reminded the Chairman of the need for the meeting to be informed of the decisions taken by the Advisory Committee on all the questions discussed by the Programme Commission.

(46) The CHAIRMAN announced that draft resolution No. 40 had not been recommended by the Advisory Committee.

(47) Mrs. PECSON (Executive Board) said this had been a challenging resolution, but the Executive Board had been obliged to face the issue realistically. Many States could not afford to provide free education at all levels. It had been found impossible to recommend the project for a high priority.

(48) Mr. CASSANI (Argentina) said that his delegation had noticed that in dealing with the development and improvement of school systems and school teaching (project 1.21), particular importance was attributed to primary education, some attention was devoted to secondary education, while higher education was completely overlooked. His delegation wished that shortcoming to be remedied and consideration to be given to the problems of teaching at all levels of education.
(49) The Argentine delegation considered that free education was an ideal which should be confidently and energetically pursued. Argentina had had considerable experience, for it had introduced free education at all levels, for all Argentine or foreign students and pupils, who attended Argentine educational establishments in their thousands. There were many ways of achieving that ideal; one of them was through proper guidance, and Unesco was always in a position to give such guidance.

(50) Mr. FORSYTH (New Zealand) suggested that at future conferences there should not be such a flood of last-minute resolutions. Small delegations had no opportunity for studying them properly, and were sometimes obliged to vote against resolutions for that reason alone.

(51) Referring to resolution 1.211, Mr. FAUBLAS (Haiti) pointed out that education could not be made compulsory until it could be provided free. He therefore thought it would be well to include in the programme a more firmly worded resolution, calling on Member States to earmark part of their budget each year for the expenditure entailed in providing free education for their nationals.

(52) Mr. WIDDOWSON (Union of South Africa) said that the two resolutions with which the meeting was now concerned were a case of the overlapping of activities he had referred to in general terms at an earlier meeting. The Council for Technical Co-operation in Africa South of the Sahara had already convened a conference on primary education. With regard to the Unesco Conference proposed in paragraph 150, had the necessary preliminary studies laid down by the Economic and Social Council been made, and more important, had full account been taken of the work already carried out in that field by other organizations?

(53) Mr. MASSAQUOI (Liberia) protested against the objection raised by the delegate of the Union of South Africa. He had not objected to the many conferences continually held by Unesco in other parts of the world, but when one was proposed for his own region, which was the most backward economically, socially and educationally, he opposed it. The delegate of Liberia suggested that more money should be allocated to the proposal and more conferences held in Africa south of the Sahara.

(54) Mr. WIDDOWSON (Union of South Africa) agreed with the delegate of Liberia on the need of educational activities in Africa, but insisted that, when they were already being tackled on a wide basis, there was no case for duplication on the part of Unesco.

(55) Mr. KABIR (India) agreed that duplication should be avoided in general, but thought that the case of Africa was exceptional. The more conferences held there, the better. There was an urgent need to train political leaders and arouse a social conscience.

(56) Mr. WIDDOWSON (Union of South Africa) was in entire sympathy with the delegate of Liberia in his concern for educational progress in South Africa.

(57) Replying to the comments of the delegate of the Union of South Africa, the CHAIRMAN stated that, in his opinion, the best course would be to leave the Executive Board and the Secretariat to decide to what extent Unesco should take account of what had already been done by regional and local organizations for educational development in Africa.

(58) Mr. CHEVALIER (Secretary of the Commission) then read out the recommendations of the Advisory Committee on Programme and Budget regarding paragraphs 137, 143, 147 and 163 (document 8C/BUD/1, pages 4 and 5).

(59) Mr. AL-KOUSSI (Egypt) wished to make an important point, but without budgetary implications, concerning resolution 1.211 on extending free and compulsory schooling. Some countries were exposed to education in a way that did not fit in with their own culture, which had the effect of denationalizing them and leaving them in a state of unrest. The delegate of Egypt would like

the addition, at the end of the resolution, of the following sentence: "The development of primary education in the non-self-governing territories should take full consideration of its indigenous pattern of culture". Egypt was a member of the United Nations Committee on Information from non-self-governing territories, and was aware of the problems that arose when that aspect of the question was ignored.

(60) Mr. ZAMORANO HERNANDEZ (Chile) was surprised that, since the beginning of the General Conference, statements such as that just made by the representative of New Zealand had been heard. The condemnatory tone adopted should have been modified. Chile had put forward one or two amendments and had a right to the consideration always accorded to States which had recently been admitted to the Organization.
(61) He was, in principle, in favour of the Uruguayan proposal and wished to see free and compulsory education extended.

(62) Mr. KOVAL (Ukrainian Soviet Socialist Republic) stressed the importance of resolutions 1.211 and 1.212. He reminded the meeting that there were 200 million children of school age in the world who had no means of education. One of Unesco's first duties should be to remedy the existing situation and to do away with illiteracy among children and adults alike. It should, in the opinion of the Ukrainian delegation, direct its efforts, in the main, to improving education in the underdeveloped countries. It should seek to remove all forms of discrimination, based on race, religion, language or social standing, which affected educational opportunities. Mr. Koval stressed the need for Unesco to give attention, particularly in the underdeveloped countries, to the training of well-qualified teachers, who should be recruited locally to staff primary and secondary schools. Unesco should also bear in mind the importance of building new schools and providing better equipment for existing schools.
(63) Mr. Koval hoped that his comments would be taken into consideration in working out Unesco's programme for 1955-56.

(64) Mr. WARD (United Kingdom) was happy to agree with the delegate of Egypt on his proposed amendment to resolution 1.211. It was the policy of the United Kingdom Government to base education in its non-self-governing territories as far as possible on their indigenous culture. But the suggestion of the Egyptian delegate should be extended to all countries, for all of them had cultures which were only to a very small extent indigenous, and all of them faced the same double need: to develop citizens of their own countries who should at the same time be citizens of the world.

(65) Mr. KABIR (India) seconded the delegate of Egypt. All he had wanted to say had been said for him by the delegate of the United Kingdom.

(A) International Conference on Public Education (paragraphs 137-142)

(66) Mr. ESTELRICH (Spain) referred to the recommendation of the Advisory Committee on Programme and Budget concerning the International Conference on Public Education, which had been read out by the Secretariat. In it the Committee hoped "that meetings of this Conference.... will be increasingly devoted to the discussion of specific problems of concern to educators rather than to the presentation of the reports submitted by Member States".
(67) He said that, whenever he had taken part in the proceedings of the International Conference on Public Education, he had seen how efficiently, soundly and competently its work had been done. The recommendation was unnecessary because the Conference was already dealing with specific problems of great interest. At its 1952 meeting, it had studied the natural sciences and educational opportunities for women. At its 1953 meeting, it had dealt with the training of primary teachers, while in 1954 it had given its attention to the training of secondary school teachers; for 1955-56, it was preparing to discuss questions of outstanding interest, such as the financing of public education and school inspection.
(68) The International Bureau of Education carried out studies on educational developments, and in the establishment and building of educational institutions; in doing so, it had a clear picture of education in all countries, which thus made it possible to pool useful experience. Furthermore, it issued very full publications to make known the results of the work it was carrying out.
(69) The Commission should therefore not endorse the Advisory Committee's recommendation but, on the contrary, should make explicit mention of the zeal and ability with which the International Conference on Public Education was accomplishing its work.

(B) International Educational Development Fund (paragraphs 143-146)

(70) Mr. BROWNELL (United States of America) gave the opinion of his delegation on that section. He supported the idea of pre-school education, but not the Fund, about which his ideas were in line with those of the Advisory Committee.
(71) All countries were agreed that it was important to advance education as rapidly as possible, but it was hard to find the right balance between providing what was wanted and creating a state of dependence or of despair because too much was being done too soon. No Member State had an adequate answer to that problem in his own country, and Unesco's efforts were no more than a drop in the bucket. A thorough study of each other's mistakes ought to be made before any such fund was started. In the United States of America a conference of citizens and educators was to be called before November 1955 to discuss those problems. Similarly, he felt, all the knowledge of Member States could be pooled before the proposal was taken any further.

(72) The CHAIRMAN, after requesting speakers to keep closely to the document before them, and not to present their obser ations too haphazardly, called on the Swedish delegate.

(73) Mr. DUERING (Sweden) suggested that it would be wiser for Unesco to postpone its efforts to establish a separate fund for another two years, in view of the fact that the United Nations had recently taken some steps towards a similar one - SUNFED - and that the United States of America had contributed $35,000,000 for the purpose. The proposed Unesco fund was not supplied with sufficient resources to enable it to begin functioning. If it were put off until the results of the work of SUNFED could be evaluated, there would be time also to investigate the possibility of giving the financial assistance required in some other way, such as by an expansion of technical assistance. Mr. Duering asked for the deletion of Section B.

(74) Mr. STEINIG (United Nations) agreed that it would be advisable to await the results of the United Nations consultations and negotiations before creating a special fund which might not prove necessary. On 16 November the Second Committee of the General Assembly, now in session in New York, adopted unanimously a resolution on the special United Nations fund for economic development, which brought the realization of SUNFED one step nearer. It had resolved to urge all governments to review their positions in extending material support to that fund, "taking into consideration changes in the international situation and other relevant factors, both national and international". It further decided to request Mr. Raymond Scheyven, a distinguished Belgian stateman and former President of the Economic and Social Council of the United Nations to continue his exploratory consultations with governments with a view to obtaining their views on the support they would be prepared to extend to such a fund; and to prepare, in co-operation with the Secretary-General and an ad hoc group of experts and after having consulted the Technical Assistance Board and the Specialized Agencies, a further report containing a full and precise picture of the forms, functions and responsibilities which such a fund might have, and the methods by which its operations might be integrated with the development plans of the countries receiving assistance from it. Dates had been fixed for the final presentation of the report to the Economic and Social Council and the General Assembly in 1955 and hope was expressed that the fund would be established as soon as practicable.

(75) The CHAIRMAN declared the discussion on paragraphs 113 to 146 closed, and called on the French delegate to put forward comments he wished to make on Section C, dealing with regional conferences on free and compulsory education.

(C) Regional Conference on Free and Compulsory Education (paragraphs 147-152)

(76) Mr. FRANCOIS (France) feared that, by engaging in work in Africa in which local organizations had apparently already achieved a fair measure of success, Unesco could only harm its own prestige. He would therefore favour dropping the regional conference to be held in Africa in 1958, for which provision was made in paragraph 150.

(77) Mr. ESTELRICH (Spain) had wished to speak on paragraph 145, but, when the CHAIRMAN pointed out that to do so would mean reopening discussion on a section that the Commission had completed, he spoke on paragraph 148, which dealt with the calling of a regional conference on free and compulsory education.

(78) Mr. Estelrich asked whether sufficient data were available about education in Latin America, whether such data were accurate, and whether a study had been made of the complex factors affecting the problem. Moreover it seemed unlikely that anything would be gained by bringing together a large number of people to study the obstacles standing in the way of extending free education. It would be better to hold a small meeting of experts to achieve the desired results.

(79) Mr. MASSAQUOI (Liberia), on the question of abandoning the proposed regional conference in Africa (paragraph 150), said that that would be a repudiation by Unesco of its own principles. For the first time, Member States had protested against the holding of a conference in a region which statistics showed was at the foot of the ladder in education matters. How was it possible to claim that the Commission for Technical Co-operation in Africa south of the Sahara was doing all the educational work needed in that region?

(80) Mr. WARD (United Kingdom) was also a member of the Council for Technical Co-operation in Africa south of the Sahara, but did not think it desirable or practicable to exclude the operation of international organizations from that part of the world. He hoped it could be taken for granted that whatever Unesco did would be done after consultation with the governments concerned. He did not want any duplication but no one could pretend that Africa south of the Sahara possessed all the education and wisdom on matters of education it needed. Mr. Ward was confident that Unesco would be able to co-operate with the Council for Technical Co-operation, and could not support the deletion of paragraph 150.

(81) Mr. ERZUAH (Gold Coast) supported the delegates of Liberia and the United Kingdom. The danger in Africa was always of doing too little.

(82) Mr. ELVIN (Director, Department of Education) commented first on Section C. He referred to a similar problem in Latin America.

On hearing that the Organization of American States proposed to convene a Conference of Ministers of Education, which might serve the same purposes as the Conference on Free and Compulsory Education planned by Unesco for 1956, the Director-General had suggested that the project should be maintained on the understanding that, if the two conferences had the same purpose, they would co-operate rather than separate. Mr. Elvin suggested that, with the approval of the Executive Board, the same procedure could be followed over the African conference.
(83) Reverting to Section B, he said that the Commission and the Conference would have to decide, in view of the comments of the United Nations representative, which the Advisory Committee had waited for, whether it would now withdraw the proposal, on the understanding that, if SUNFED failed to come into existence, the Director-General could study a separate Education Fund, and report, before action was taken, to the next Conference.

(84) Mr. FRANCOIS (France) then withdrew his proposal concerning the deletion of paragraph 150.

(85) Mr. KABIR (India), on the proposal in Section B, wondered if, in view of the modest sum involved ($2,000 in the first year and $1,000 in the second), the project might not be retained, with the purpose of creating a public opinion in its favour, which might contribute towards the establishment of SUNFED.

(86) The CHAIRMAN then asked the Commission to vote on Section B (International Educational Development Fund).
(87) The Commission would vote on the proposal to recommend that the General Conference postpone consideration of the project until its ninth session.

(88) The proposal was adopted by 34 votes to 6, with 6 abstentions.

(89) Section C (Regional Conference on Free and Compulsory Education) was approved.

(D) Education and Child Development (paragraphs 153-159)

(90) The CHAIRMAN then called on the delegate of Italy.

(91) Mr. CALO (Italy), referring to paragraph 158, commented on the draft amendment set forth in document 8C/DR/79. He pointed out how useful it would be to arrange for studies, by the meetings of experts mentioned in the paragraph in question, of methods of securing closer co-operation between teachers and social workers. He thought, too, that still more emphasis should be placed on the study of the examination systems in force in the various types of schools.
(92) Lastly, Mr. Calo suggested that some of the subjects for study put forward in the original paragraph 158 were too vague, and unlikely to lead to good results in practice.

(93) Mr. AL-KOUSSI (Egypt) disagreed with the Italian delegate's suggestion of deleting certain points in paragraph 158. Far from being over-emphasized, he thought the parts objected to had been under-emphasized. Indeed, he considered that not only the training of educational psychologists, parent education, etc., but the hygiene of marital life and its influence on children and the rising generation should be taken into serious consideration.

(94) Mr. FRANCOIS (France), without underestimating the usefulness of the activities proposed in paragraph 158, felt that they could produce worthwhile results only if considerably larger funds were available for carrying them out. He also considered that, since Unesco had to operate on a very limited budget, it would do better to concentrate on work which possibly had a closer bearing on its true mission. He accordingly proposed the deletion of the appropriations for the purposes referred to in paragraph 158.

(95) Mr. ELVIN (Director, Department of Education) was astonished at the suggestion that certain subjects in paragraph 158 which had been essential elements in educational progress for the last fifty years, were not considered to be the concern of Unesco. Unesco had for the first time called in experts who had studied the ways of other countries. A lot could be done there at little cost.

(96) Mgr MAROUN (Lebanon) pointed out once again that, in tackling the question of educational development, Unesco should seek mainly to solve the administrative problems facing the various Member States, rather than to deal with technical questions or those of educational theory. He did not therefore greatly favour the activities mentioned in paragraph 158, and was prepared to second the French delegate's proposal that they be deleted.

(97) The CHAIRMAN then asked the Commission to vote on the French delegate's proposal that the suggested appropriations for the activities mentioned in paragraph 158 be deleted.

(98) The proposal was rejected by 30 votes to 3, with 10 abstentions.

(99) Replying to a question from the CHAIRMAN, Mr. CALO (Italy) stated that he did not wish for a vote on the proposal contained in document 8C/DR/79. All he hoped was that, when the time came, the suggestions made in that document would be taken into account.

(100) The Commission took note of Mr. Calo's desire.

Draft resolution 8C/DR/37: Promotion of Health Education

(101) The CHAIRMAN asked if the delegation of

Uruguay stood by its proposal; if so, a vote would be taken.

(102) Mr. CARBAJAL VICTORICA (Uruguay) said that the proposal was on very broad lines and that it would be inappropriate to withdraw it, as it fitted in with proposals made by other delegations.

(103) Replying to Mgr MAROUN (Lebanon), Mr. ELVIN (Director, Department of Education) stated that the Advisory Committee on Programme and Budget had recommended adoption of the proposal.

(104) Mr. AVIDOR (Israel) drew attention to the recommendation by the Advisory Committee that the project which had no budgetary implications should be adopted.

(105) The proposal contained in document 8C/DR/37 was put to the vote and adopted by 34 in favour, none against and 8 abstentions.

The meeting rose at 6.45 p.m.

# TWELFTH MEETING

*26 November 1951 at 10 a.m.*

*Chairman:* Mr. BOURGEOIS (Switzerland)

**ITEM 8.4 OF REVISED AGENDA: CONSIDERATION OF THE DRAFT PROGRAMME AND BUDGET, CHAPTER BY CHAPTER, AND SPECIAL REPORTS** (continued)

(1) The DIRECTOR-GENERAL said that, in the General Committee that morning, the Secretariat had been asked to explain to the Administrative Commission, from time to time, what the financial situation was. Accordingly, as soon as the Programme and Budget Commission had finished its examination of each chapter, the Secretariat would report, at the next meeting, on the financial implications of the decisions taken, reserving the right to ask the Administrative Commission to approve such further cuts in expenditure as might be required to enable Unesco to work within the budget ceiling decided on in plenary session. In addition, the Secretariat might ask to be allowed to revert to any particular chapter after all the chapters had been considered by the Programme Commission.
(2) As regarded budget figures, $314,000 more would be required to hold the ninth session in New Delhi, $141,000 for the use of Russian at the Conference, $40,000 for the use of Spanish in the Executive Board, and $12,000 for the travel expenses of members of the Board. There would be a decrease in expenditure of $23,000 (established posts, Director-General's office, common service costs), so that, all in all, the Programme Commission would have to reduce expenditure, taking into account the Advisory Committee's recommendations and the draft resolutions submitted, by $222,937 - roughly, $223,000.
(3) So far, in the field of education, the additional expenditure decided on amounted to $8,000 and cuts to $2,900 - a net increase of $5,100.
(4) The Advisory Committee was recommending cuts to the extent of $218,946 and an increase in expenditure, on the basis of the resolutions submitted, of $86,367. Of those $218,946, roughly $18,000 were accounted for by the cuts made in the Director-General's office, the Bureau of the Comptroller, and in common service costs, so that the net decrease recommended was about $200,000. The net increase on the draft resolutions was $86,000.

(5) The CHAIRMAN considered that the procedure recommended was by far the best. The decisions to be made would be provisional only and the Commission would have a chance of going back to those questions after the budget had been examined as a whole.

**ITEM 8.4.1 OF REVISED AGENDA: EDUCATION** (continued)

(E) Rural training (paragraphs 160-162)

(6) Mgr MAROUN (Lebanon) asked the Secretariat to give some explanation of paragraph 161, for he did not see the point of the method proposed.
(7) Judging by experience at the Sirs-el-Layyan and Patzcuaro Centres, which had been established in rural districts to demonstrate modern methods in action and stimulate the local economy by a suitable programme of agricultural training, the new measures proposed did not seem really necessary.

(8) Mrs. PINTO DE VIDAL (Uruguay) agreed with the views of the Lebanese delegate.
(9) With regard to rural teacher training, particularly in Latin America, she considered that preliminary studies of the areas in which they would work should be carried out, for conditions varied greatly. In certain areas of Latin America the Indian problem had to be considered; in others, farming was the main source of livelihood; in others cattle raising; and, in yet others, mining. The basis for the training of rural teachers should therefore be provided by studies of the various regions, carried out by the Latin American governments. Consideration should be given not only to those to be educated, but also to the influence the rural teachers might have in the communities where they worked.

(10) Mr. MARTI (El Salvador) considered that rural teacher training was Latin America's most urgent need in the field of education. He said that El Salvador could not at the moment make use of the fellowships granted to his country for study at Patzcuaro, because it had no posts to offer to those who had qualified in fundamental education.
(11) The delegate of El Salvador thought it undesirable to spend too much on experts and recommended making use of the services of the Pan American Union through its school, "Rubio", in Venezuela.

(12) Mr. BARDALES (Honduras) considered that the problem of the supply of rural teachers, 80% of whom held no diploma, had an effect on rural primary education in Latin America.
(13) In order to give rural primary schools in Latin America qualified teachers, it was urgently necessary for Unesco to take measures to encourage Member States to set up rural teacher training colleges, and, in the countries where there were already such colleges, to increase the number of teachers trained in them.

(14) He also considered that rural teachers, who had to work in a very difficult environment, should be better paid, and that they should receive more, or at least not less, in salary than teachers in towns. He believed that something had already been done in that respect in Panama and Uruguay.
(15) He thought it necessary for the improvement of rural teaching that measures be taken to provide professional training for unqualified primary teachers by means of correspondence courses run by the rural teacher training colleges; they could send out their teaching material in printed form every month and might also employ staff to visit rural areas from time to time and give the teachers direct practical tests which would make good any shortcomings in the correspondence courses. He said that Mexico already had an institution of that kind; that Honduras had had such a service for the past two years, and that Costa Rica was proposing to organize a similar one with Unesco's technical assistance.

(16) Mrs. REINOSO DE RODRIGUEZ (Philippines) said that paragraph 160 was extremely relevant to the needs of the underdeveloped countries. It was perhaps difficult for highly industrialized countries to understand the peculiar needs of the underdeveloped ones. The rural teacher in the latter was an exceedingly important person in the village community, he must be a community leader, general adviser, banker, agricultural expert and, on occasion, even entertainer.

(17) Mr. FAUBLAS (Haiti) thought that the discussions would be shorter and would proceed more smoothly if the Secretariat were given an opportunity of answering questions as soon as they were raised.

(18) Mr. ELVIN (Director, Department of Education) said that, while the rural teacher in underdeveloped countries might not be quite the jack-of-all-trades suggested by the previous speaker, he nevertheless had to have a sympathetic understanding of the problems facing those who were trying to improve village life in general. Experience had shown that social workers in the village needed the confidence of the village teacher, who therefore needed some training in how to approach the more general problems of the community.
(19) The Secretariat had discussed the matter with the observer from the Organization of American States, who had agreed that the proposal implied no rivalry with the model rural college established by that Organization. In any case, there were other parts of the world which were less fortunate and needed Unesco's assistance.

(20) Mr. SANDOVAL VALLARTA (Mexico) said that his country had had a rural teacher training centre for the past seven years, and would be pleased to put its services at the disposal of Unesco for the purpose of co-operating in the work.
(21) He reminded the meeting that Mexico had approved the agreement concluded between OAS and Unesco with regard to the Regional Fundamental Education Centre at Patzcuaro.

(22) A proposal of the delegation of El Salvador to delete the appropriations for paragraph 162 was not supported. The whole of section E, "Rural Teacher Training", was unanimously approved.

(F) The school curriculum (paragraphs 163-167) and documents 8C/DR/82, 8C/DR/84 and 8C/DR/93

(23) Mr. CHEVALIER (Secretary of the Commission) said that the Advisory Committee on Programme and Budget (document 8C/BUD/1) thought that, before an International Advisory Committee on the School Curriculum was set up, as proposed in paragraph 166, a careful study of the problems involved should be made in collaboration with the appropriate international bodies.
(24) The Advisory Committee on Programme and Budget therefore recommended that the international committee should not be set up until 1956 - thus freeing the funds set aside for that purpose for the year 1955.

(25) Mr. CALO (Italy) thought the idea of setting up an International Advisory Committee on the School Curriculum praiseworthy, although its aims seemed rather ambitious and complicated.
(26) While in some Member States nothing had yet been done on school curricula, in many others an established tradition had to be taken into account, and, there, the solving of the delicate problems raised would depend mainly on the countries concerned. Moreover, the problems themselves were not the same in different parts of the globe. It would therefore be preferable, instead of setting up one committee of ten, to set up several small committees of three or four, each responsible for a group of States with similar and comparable cultures. Naturally, those committees should provide help for Member States only at the latter's request, and should deal only with major questions that had a bearing on Unesco's basic concerns.
(27) Mr. Calo said that in recent years the tendency everywhere had been to cut down the number of subjects taught, and it was a matter of urgency for Unesco to consider how the great, underlying principles of its work could be introduced into the schools while the curricula were being lightened.
(28) If the Organization did not first make a careful study of the question, it might find the Member States unwilling to co-operate. The Italian delegation, therefore, wished to lay particular stress on the second paragraph of its resolution (document 8C/DR/82).

(29) The DIRECTOR-GENERAL said that the idea of creating an advisory committee on the school curriculum had been his own.
(30) During his first few months with Unesco, he had been greatly struck by the multitude of unco-ordinated proposals submitted by the various departments for the inclusion of extra subjects in the school curriculum. It had seemed to him that the only way to harmonize such recommendations and to ensure that the curriculum was not grossly overloaded would be to set up an international committee of experts.
(31) Unesco sometimes sent experts to Member States, at their request, to advise on school curricula. In the past, those experts had tended to make recommendations on the basis of their own experience, with

the result that there had been a remarkable lack of uniformity. The need was clear for somebody to lay down general rules which might be adapted to local conditions and to the economic resources of governments. Such a body would in no way impose any rigidly uniform views.
(32) Such a committee could be consulted by Member States on their particular problems. It would consider the problem of school curricula not from a regional, but from a world-wide point of view. Its experience would benefit highly developed countries as much as underdeveloped ones.

(33) Mr. ELVIN (Director, Department of Education), commenting on the Italian proposal, said that a committee of a regional character would not cost less than a committee of the type proposed, since, under the proposal, it would have more members than the ten proposed by the Secretariat.
(34) Nor was he sure that there was any point in approaching the problem from a regional point of view. There were neighbouring countries with very different educational requirements. He therefore preferred the original suggestion of a committee, universal in outlook, whose advice would be available to Member States if asked for.

(35) Mr. ZAMORANO HERNANDEZ (Chile) said that his country ventured to think its experience in connexion with school curricula was fairly reliable. He considered it useless to alter curricula without a careful revision of the objects which they were intended to serve and of the structure of the system within which they functioned. He therefore thought the move to be a trifle over-ambitious, and felt that Unesco was not yet in a position to undertake the work in the form proposed.
(36) He warmly supported the Executive Board's proposal, and considered it most important to have a programme in which Unesco's Department of Education and the National Commissions should take part. Once that work, which might take years, was achieved, the International Advisory Committee on the School Curriculum could take action; that body would naturally be intended solely to make general recommendations, and he therefore asked that the International Committee should deal mainly with the techniques for working out school curricula.
(37) He thought the Executive Board's proposal that the budget item be deleted for 1955 was well advised. However, it was proposed that the $26,530, set aside for 1955, be used, if not entirely, at least partly, as contributions to help Member States to carry out the preliminary work properly.
(38) He considered that paragraph 163 was not quite accurate, when it said: "Hardly less significant to the extension of school education than the problem of teacher training is the group of problems related to the curriculum". The truth was, not that problems related to the curriculum were as important as teacher training, but that reform of the curriculum necessitated reform of teacher training. The problems were allied and could not be separated.

(39) Mr. FRANCOIS (France) wondered whether the Secretariat had appreciated all the implications of the huge and most interesting project in question.
(40) School curricula and educational systems were closely linked and, while the problems of the different countries had much in common, their solutions depended entirely on the special social and economic conditions.
(41) It should therefore rest primarily with the country concerned to initiate such reforms, rendered necessary by the ever-increasing speed of social development.
(42) To do so, a country could obtain all the requisite information from the Education Clearing House or, at its own expense, send missions of experts to the country or countries whose school system and curricula interested it most.
(43) Again, if it asked for direct assistance from Unesco, the experts sent by the Organization would have to brief themselves very thoroughly before going out, and, in any case, should remain in the country longer than a few months if they wanted to achieve anything really worth while.
(44) For those reasons, the French delegation regarded an International Advisory Committee on the School Curriculum as unnecessary. Moreover, its functions were defined only in the vaguest way, and the Advisory Committee on Programme and Budget itself had been very cautious in its recommendation.
(45) Failing some reassurance from the Secretariat, the French delegation would suggest that the proposed appropriations for paragraph 167 be deleted.

(46) Mr. FORSYTH (New Zealand) spoke with the authority of a practising primary teacher in moving adoption of the Advisory Committee's recommendation. He was extremely sceptical of the ability of such an expert body to offer advice to national educational authorities. A long stay in a country was needed to grasp its educational problems.
(47) He would suggest that, if the Advisory Committee's recommendation were adopted, the Secretariat should go into the matter in greater detail, so that some more definite statement, accompanied by fuller plans, could be made to the next Conference.

(48) The CHAIRMAN pointed out that the Commission had three proposals before it:
(1) A proposal of the Advisory Committee on Programme and Budget, seconded by the delegations of New Zealand and El Salvador, for deleting a part of the proposed appropriations;
(2) A proposal of the French delegate for deleting the whole appropriation,
(3) A proposal of the Italian delegate, seconded by the Chilean delegation, for changing the procedure for carrying out the suggested measures.
(49) The Chairman then asked the delegates who had applied to speak whether they had new proposals to put before the Commission, or whether they merely wished to speak on the proposals already submitted.

(50) Mr. MENDIS (Ceylon), moving the amendment submitted by his delegation (document 8C/DR/93) to paragraph 166, said that his Government welcomed the idea of a study being made both of the primary and of the secondary school curriculum.
(51) In Ceylon, there had been a tendency, during the previous twenty or thirty years, to pile one subject on the other in the school curriculum. In addition,

practical subjects (weaving, woodwork, basket-making, etc.) had been included, to meet the charge that the education provided was of too academic a character. Difficulties had been encountered in co-ordinating those various subjects.
(52) There was, too, a language problem; there was a lack of textbooks in the national languages(Sinhalese and Tamil) in which instruction was given up to the ninth year of schooling.
(53) The whole question of the curriculum was being studied at the national level; a special committee had been appointed, and a thorough investigation would be made. To that end, the co-operation of other countries would be very valuable.
(54) He agreed with the view of the Advisory Committee that, before such an advisory committee on the school curriculum was set up, the matter should be taken up with the National Commissions. Nevertheless, he was against postponing the problem for another year, and a fortiori strongly opposed the French proposal to drop paragraphs 163-167.
(55) His delegation was proposing that five regional seminars be held, made up of representatives of National Commissions, and that they be called upon to submit their reports by March 1956, after which it would be possible to go ahead with setting up the advisory committee suggested.

(56) Mr. HACQUAERT (Belgium) observed that, if the Commission endorsed the Advisory Committee's recommendation to postpone the setting up of the International Advisory Committee until 1956, the Committee would need to meet only once, since the questions it was to deal with could not be expected to develop very rapidly.

(57) Mrs. PINTO DE VIDAL (Uruguay) was in favour of the establishment of an International Advisory Committee on the School Curriculum as set forth in paragraph 166.

(58) Mr. FAWZI (Egypt) said that, according to some speakers, the problem was so big as to need postponement. He, on the other hand, felt it was very urgent and required careful study. There was a need for further investigation by Unesco on new lines.
(59) The word "curriculum" was being taken in too narrow a sense. The problem was not just to fill a child's head with facts, but to allow him to grow up in the right sort of atmosphere.
(60) He was therefore in favour of taking up the problem, although he was prepared to admit that the project might be postponed for one year in order that it might be given further thought.

(61) Mr. CLEGG (United Kingdom) thought that the French proposal to jettison the work already done in favour of youth work was equivalent to sawing off the branch on which one was sitting.
(62) The success achieved by youth work was largely attributable to good teacher training and to good curricula. Youth work, too, if it was to be really successful, had to be voluntary. He would earnestly ask the delegate of France not to press his point.

(63) Mr. STANKOVIC (Yugoslavia) thought that, with the social and economic changes that had taken place, school curricula no longer met contemporary needs and should therefore be revised. Moreover, curricula needed to be given a new slant if they were to serve the noble aims of international understanding and co-operation. A difficult and complicated study was necessary, which Unesco could carry out only with the collaboration of experts from other agencies and the National Commissions.
(64) The Yugoslav delegation could support neither the French nor the Italian proposal, but would vote for the setting up of the committee in 1956, or preferably in 1957.

(65) Mr. ELVIN (Director, Department of Education), explaining the budgetary implications of the various proposals made, said that the French proposal to drop the project would mean a saving of $53,000 over the following two years. Adoption of the Advisory Committee's recommendation, to the effect that the 1955 meeting should be abandoned, would save $26,000 (cost of meeting and cost of studies). Adoption of the Italian proposal would mean increasing the number of members in the committee, or an extra expense of $37,000 over two years.
(66) The proposal by Ceylon for regional seminars during the first year would be very expensive if Unesco had to finance them. Some $80,000 would be required. It might be better if National Commissions convened meetings and appealed to Unesco for aid; the money saved by abandoning the 1955 meeting might in that case be used to assist them.
(67) The Belgian suggestion that the committee meet but once a year would save $18,530 over two years, which sum could either be considered a net saving or be used to help pay the cost of national seminars.

(68) In reply to a question raised by Mgr MAROUN (Lebanon), he pointed out that the International Conference on Public Education, mentioned in paragraph 166, was a joint IBE - Unesco Conference, the subject for which had been chosen by a joint committee. It had merely been suggested in the programme that one of the subjects for that conference in 1957-58 might be primary and secondary school curricula. It did not follow that the conference would not meet if the paragraph were dropped.

(69) The CHAIRMAN observed that the French proposal for deletion of paragraphs 163-167 had not been seconded.

(70) The Advisory Committee's recommendation, in favour of deferring the establishment of the committee for one year, was adopted by 41 votes to 5, with 5 abstentions.

(71) Mr. MENDIS (Ceylon) asked for a vote on his amendment.

(72) Mr. MASSAQUOI (Liberia) seconded the proposal by Ceylon, on the grounds that it encouraged activity by National Commissions, of which there had recently been criticism.

(73) The proposal by Ceylon (document 8C/DR/93) was put to the vote and adopted by 26 votes to 19, with 7 abstentions.

(74) The CHAIRMAN said that the Italian delegation would like a vote to be taken on the draft resolution it had submitted (document 8C/DR/82).

(75) Mr. CALO (Italy) reminded the Commission that his delegation attached great importance to reconciling the introduction of new subjects with the general lightening of the school curriculum. He therefore asked the Commission to take a decision on the second paragraph of the draft resolution.
(76) As the Italian delegate's proposal was not seconded, it was not put to the vote.

(77) The DIRECTOR-GENERAL said that, in accordance with the amendment by Ceylon just adopted, it seemed probable that the report from the five regions would reach Unesco in March 1956 and, since the report by the Advisory Committee on Curricula had to be ready for the Conference in November 1956, it was pointless (and might well be impossible) to have two meetings of the Advisory Committee in 1956. The ideal time for the Committee to meet would be in May or June, so that its report could be prepared and distributed well in advance of the Conference. The cost would be $9,200.

(78) Mr. FRANCOIS (France) was doubtful about the powers of such a committee and the vague way in which the use to be made of the funds released under paragraph 167 had been defined.
(79) The French delegation proposed to revert to the item at a plenary meeting.

(80) Mr. ANGELL (United States of America) said that, in accordance with what had just been said by the Director-General, he would move that the Committee hold only one meeting in 1956.

(81) Mr. MASSAQUOI (Liberia) seconded.

(82) The United States proposal to the effect that the Advisory Committee on Curricula meet only once in 1956 was adopted by 54 votes to 0, with 2 abstentions.

(G) Improvement of school education in certain fields (paragraphs 168-173)

(83) Mr. ELVIN (Director, Department of Education) was glad to be able to report that, just before the Conference, the Director-General had signed an agreement with ILO delimiting the respective spheres of the two organizations as regards vocational education and training. There had been discussions within the Secretariat (although no proposals had yet been submitted to the Governing Body of ILO or to the Executive Board) on the possibility of making the conference referred to in paragraph 169 a joint one. The ILO Secretariat had informed Unesco that the cost of so doing had been underestimated. For that reason it would be well to keep the original budget estimate.

(84) Mr. GARBARINO ISLAS (International Labour Organization) recalled that Unesco's Proposed Programme and Budget for 1955-56 made provision for the holding of a conference, in collaboration with ILO, on vocational and technical education in schools, for the Arab States of the Middle East. He thought such a meeting would be well-timed because those countries were going through the transition from an agricultural to an industrial social structure. He pointed out that, in an exchange of letters between the Directors-General of Unesco and ILO, both had agreed upon the importance of holding such a conference jointly.
(85) He added that a meeting of representatives of the Secretariats of Unesco, ILO and FAO had been held, at which a preliminary draft agenda for the conference had been drawn up.
(86) He believed that the proposed conference would be an excellent instance of the collaboration which should exist between the Specialized Agencies of the United Nations.
(87) Lastly, he was pleased to report that the Governing Body of ILO, at its meeting in Rome, had approved the proposal presented by the Director-General concerning the Conference of Arab States in the Middle East.

(88) Section G was put to the vote and unanimously approved.

(H) Evaluation of national pilot projects in pre-school education (paragraphs 174 and 175)

(89) Mr. ZAMORANO HERNANDEZ (Chile) reminded the meeting that Unesco had made clear its intention of promoting the development of pre-school, primary, secondary and vocational education, by technical co-operation to enable Member States to solve their most urgent problems in those fields of education. In addition to setting up educational establishments of a new kind, it was urgently necessary to provide means of reforming the traditional educational establishments in Member States. Experience had shown that, to achieve such aims, schools or experimental centres should be set up to deal with both regular and out-of-school education
(90) He suggested that Unesco include experiments in teaching in its education programme in order to achieve the following aims: (a) the improvement of experimental teaching bodies in Member States; (b) the establishment of new experimental teaching centres in countries which desired them; and (c) the concentration of efforts for setting up regional experimental teaching centres in important areas of the world.
(91) A permanent service dealing with that kind of problem should be maintained in order to fulfil those requirements. It would have to give information on the following: the position of experimental teaching; aspects of teaching which, in every country, were suitable for pilot projects; plans for the creation of regional centres. He furthermore proposed that the Director-General be authorized to study the possibility of giving such a service a permanent place in the budget for coming years.

(92) Mr. CLEGG (United Kingdom) said that the success of an evaluation scheme (referred to in

paragraph 174) depended on who carried it out. Would the Secretariat be the sole judge of the success or failure of the pilot project?

(93) Mr. ELVIN (Director, Department of Education) said that two outside persons, possibly an educational expert and a social scientist from different countries, would be asked to undertake the task.

(94) Section (H) was unanimously adopted.

(I) Developing the teaching of languages of wide communication (paragraphs 176-178) and document 8C/DR/39

(95) Mr. CHEVALIER (Secretary of the Commission) mentioned that the Advisory Committee had suggested (document 8C/BUD/1, page 6) that the proposal submitted by the Uruguayan delegation be given further consideration by the States concerned.

(96) Mrs. BOLLO (Uruguay) said that her country had proposed a study of the use of Spanish and English in the Americas because it thought a knowledge of those two languages to be necessary for better international understanding among the countries of the American continent.
(97) She recalled that in North America, and particularly in the United States, Spanish departments had been set up in almost every university, under the control of eminent men from Spain and South America.
(98) A knowledge of both languages would confer considerable benefits in both North and South America. For example, if the peoples of Latin America had a better knowledge of English, they could improve their mastery of the sciences. On the other hand, a knowledge of Spanish would help to give the English-speaking countries of North America a fuller understanding of the countries of Latin America.

(99) Mrs. PECSON (Executive Board) said that, while the Board recognized the value of the proposal, it had decided, as it would involve large-scale outside consultations, not to recommend adoption of the proposal for the next two years at least.

(100) Mr. SANDOVAL VALLARTA (Mexico) and Mr. MASSAQUOI (Liberia) supported the Uruguayan proposal.

(101) The Uruguayan proposal (document 8C/DR/39) was put to the vote and rejected by 11 votes to 9, with 23 abstentions.

(102) Section (I) was thereupon unanimously adopted.

(J) Textbooks and teaching materials (paragraphs 179-185) and document 8C/DR/75

(103) The CHAIRMAN, noting that the Advisory Committee had not yet communicated its findings on draft resolution DR/68 submitted by the delegation of Honduras, suggested that the Commission postpone consideration of that question and asked the delegate of Honduras to get into touch with the Chairman of the Advisory Committee.

(104) Approved.

(105) Mr. CHEVALIER (Secretary of the Commission), after reading out the draft resolution submitted by the Italian delegation, said that the Advisory Committee had not had time to study that question, nor, generally speaking, the drafts contained in document 8C/DR/64 and later documents.

(106) Mr. ELVIN (Director, Department of Education) confessed that the Secretariat had been a little puzzled by the Italian resolution. It was suggested that the Secretariat should print two pamphlets. That would cost some $2,700. The proposal also suggested a small meeting of experts. Would the Secretariat have to send representatives? The point was not clear.
(107) It was suggested that the same work could be done at less cost. For the reasons given above, he was inclined to doubt that.

(108) Mr. WARD (United Kingdom) moved adoption of the text appearing in the Director-General's programme.

(109) The CHAIRMAN asked the Commission to postpone consideration of the question until it had received the recommendations of the Advisory Committee.

(110) Approved.

(K) Teaching about the United Nations and human rights (paragraphs 186-192) and documents 8C/DR/28, 8C/DR/55 and 8C/DR/80

(111) Mr. CHEVALIER (Secretary of the Commission) said that the Advisory Committee had recommended that the proposal submitted by the Uruguayan delegation be rejected.

(112) Mrs. PINTO DE VIDAL (Uruguay) recalled that Uruguay had presented a proposal in the form of a draft resolution relating to teaching about the United Nations and human rights.
(113) She considered that, since 1945, the Charter of the United Nations had represented the best hope of the human race and that thenceforward its provisions were the best guide for the preservation of peace. She therefore considered it essential that all peoples should be acquainted with it if better international understanding was to be achieved.
(114) She also thought it necessary to spread knowledge about human rights. She reminded the meeting that all human rights entailed duties, and said that, if those rights were maintained and suitably publicized, there would be no room for the appearance of men who, knowing nothing about them, might impose a tyrannical rule upon many peoples.

(115) Mrs. PECSON (Executive Board) said that, since the proposal had no budgetary implications, the Executive Board recommended its adoption.

(116) Mr. SANDOVAL VALLARTA (Mexico) and Mr. FRANCOIS (France) supported the proposal.

(117) The Uruguayan resolution (document 8C/DR/38) was adopted by 24 votes to 2, with 19 abstentions.

(118) Mr. CHEVALIER (Secretary of the Commission) read out draft resolution DR/55 submitted by the Uruguayan delegation and said that the Advisory Committee recommended that the first paragraph be adopted. In its remarks on the Social Sciences chapter, the Committee had added that it also recommended adoption of sub-paragraph (a), but classed the study only in category 3. There were no budgetary implications.

(119) The CHAIRMAN proposed taking a vote on the first paragraph and postponing consideration of the rest until the Social Sciences chapter was discussed.

(120) Approved.

(121) With reference to DR/80, the CHAIRMAN, in the absence of comments from the Advisory Committee, suggested that the Italian draft resolution be referred back to the Committee.

(122) Mr. CALO (Italy) said that, as the project had no budgetary implications, it could be discussed straight away.

(123) The CHAIRMAN observed that the resolution began with the words: "Contracts will be concluded .....".

(124) Mr. VITO (Italy) then explained that the Italian delegation suggested deleting the international seminars, which seemed unlikely to make any constructive contribution.

(125) The main thing was to interest the teaching profession in the problem. Unesco had already approved substantial subventions to a great many international organizations in the field of education, which could be commissioned to carry out the work.

(126) The Italian delegation thought one of the best methods would be to organize competitions in the different countries, with prizes which would enable the winners to write and publish works that would be of great use to their colleagues. The necessary funds for the prizes could be taken out of the subventions already granted.

(127) Mr. ELVIN (Director, Department of Education) failed to see what the Italian delegation expected to achieve with its proposal. It seemed to him that the original plan prepared by the Secretariat would achieve the very aims that Italy desired to attain, for a modest outlay. He had not grasped the reference to competitions, for it was impossible for the Secretariat to organize competitions or to award prizes without budgetary implications.

(128) Mr. FRANCOIS (France) considered that the Italian delegation's proposal was most interesting and worthy of closer study, and accordingly asked for it to be referred back to the Advisory Committee.

(129) Agreed.

The meeting rose at 1 p. m.

# THIRTEENTH MEETING

*26 November 1954 at 3.30 p.m.*

*Chairman:* Mr. BOURGEOIS (Switzerland)

**ITEM 8.4.1 OF REVISED AGENDA: EDUCATION (continued)**

Teaching of the Charter of the United Nations and the Constitutions of the Specialized Agencies (document 8C/DR/38)

(1) Mr. ANGELL (United States of America) wished to submit an amendment to the resolution adopted at the previous meeting, which he had discussed with the delegate of Uruguay and which would enable his delegation to support the resolution. He proposed that the word "encourage" should be substituted for the word "cause"; the Federal Government of the United States of America had no control over the school curriculum.

(2) Mrs. PINTO DE VIDAL (Uruguay) was very pleased at the support that the United States of America was giving her country in its great scheme.

(3) Mr. ARSENAULT (Canada) supported the amendment proposed by the United States delegate. In his country too the Federal Government had no control of education, and he had been obliged to abstain from voting on the resolution, in spite of the importance which his Government attached to teaching about the United Nations.

(4) The CHAIRMAN noted the Canadian and United States delegations' approval of the resolution contained in document 8C/DR/38, adopted at the previous meeting, subject to that slight change in wording.

(5) He recalled that the Chairman of the Advisory Committee had been asked to consider certain draft

resolutions which that Committee had been unable to study, its report having been drawn up before they were received.

(6) Mr. GARDNER DAVIES (Chairman of the Advisory Committee on Programme and Budget) said that the Chairman's request concerning additional draft resolutions would place the Advisory Committee in an awkward situation. The only item remaining on the Committee's agenda was the remodelled programme, and it would be extremely difficult to reopen discussion of the 1955-56 programme. He proposed that any draft resolutions presented too late to be discussed by the Advisory Committee should be handled by the Commission.

(7) The CHAIRMAN saw no alternative to adopting the suggestion just put forward by the Chairman of the Advisory Committee, leaving it to delegations to submit draft resolutions not included in the Committee's report during the meeting; he added, however, that, where there were budgetary implications, such proposals could not be admitted; where there were none they could be introduced orally in the course of the discussion.

(8) Mr. HUZAYIN (Egypt) reminded the meeting that the Conference had originally had two separate Commissions, a Programme Commission and a Budget Commission; they had been amalgamated into a single Commission, the Programme and Budget Commission, which, in his view, was competent to deal with all such questions; it would be a pity to deprive the central Commission of the Conference of the right to take up any questions on which it had not been possible to obtain the opinion of the Advisory Committee.

(9) Mr. CALO (Italy) had genuinely believed that it was in order for him to propose amendments which, taken as a whole, far from entailing additional expenditure, would result in savings on certain items. The Italian delegation was ready to withdraw any draft amendment or even to remain silent throughout the discussion. Mr. Calo mentioned, in particular, one amendment submitted by the Italian delegation at the previous meeting which had recommended the cancellation of two meetings planned by the Secretariat. He ended by asking the Commission to note that the Italian delegation was abandoning its draft amendments, and that it was unnecessary to take a vote.

(10) Mr. WARD (United Kingdom) was extremely grateful to the delegate of Italy: it was not easy to renounce projects on which much thought and effort had been expended.

(11) The Commission was making rather slow progress in its work and much time had been given to the discussion of matters not directly related to the programme. Unesco existed solely to execute its programme, and that was the subject the Commission should discuss. He pledged his full co-operation, no matter how many extra or late meetings might prove necessary.

(12) Mr. NIELSEN (Denmark) hoped that a more satisfactory method of dealing with draft resolution could be found before the next General Conference. With regard to the problem of proposals submitted after the prescribed date, a distinction had to be made between those suggesting changes in the proposed programme and budget and those introducing new items. It would be correct for the Commission to discuss the former, since all delegations had the right to submit modifications: and it would be helpful if they could be given to the Secretariat in writing. The latter proposals must be ruled out of order.

(13) The CHAIRMAN felt that the best method the Commission could adopt would be to consider only those draft resolutions already examined by the Advisory Committee, leaving delegations to submit further proposals in the way suggested by the delegate of Denmark. To allay the anxieties voiced by the Egyptian delegate, he made it clear that the Commission was still entirely free to discuss, accept or reject proposals of any kind.

(14) The Egyptian delegate agreed to the proposed procedure.

**REPORT OF THE ADVISORY COMMITTEE ON PROGRAMME AND BUDGET (PART IV): EXAMINATION OF THE FINAL REPORT OF THE EXPERT COMMITTEE ON EDUCATION FOR INTERNATIONAL UNDERSTANDING AND CO-OPERATION**
(documents 8C/BUD/3 and 8C/DIV/80)

(15) Mr. GARDNER DAVIES (Chairman of the Advisory Committee on Programme and Budget) said that the Advisory Committee had examined the proposals of the Expert Committee in the light of their possible effect on Unesco's programme and budget. As a result, the Advisory Committee had, in document 8C/DIV/80, suggested modifications to certain of its original recommendations to the Programme and Budget Commission. He proposed that discussion should, for the time being, be limited to that part of the report.

(J) Textbooks and teaching materials (paragraphs 179-185)

(16) Section (J) was approved.

(K) Teaching about the United Nations and human rights (paragraphs 186-192)

(17) Mr. CASSANI (Argentina), referring to paragraph 190, said that it would seem advisable that the documents which were to be published in French and English to provide teachers with systematic information about the United Nations and its Specialized Agencies, should also be published in Spanish, which was an official language of the General Conference. In that way the work of translation would be shortened and teachers would receive the documents with less delay.

(18) Mr. ELVIN (Director, Department of Education), in reply to a question from the CHAIRMAN, said that it would be a comparatively simple matter to

add Spanish to the two languages concerned. The proposal, however, was not to print the documents, but to supply them in stencilled form, leaving Member States to publish and print in quantity.

(19) Section K was adopted.

(L) Scheme of Co-ordinated experimental activities in education for international understanding and co-operation (paragraphs 193-196)

(20) Mr. CHEVALIER (Secretary of the Commission) reminded the Commission that, according to the report of the Advisory Committee (document 8C/BUD/3), the report of the experts (document 8C/DIV/80) appeared to place the work in the priority category, whereas the Advisory Committee maintained its previous decision, placing it in category 2.

(21) Mr. GARDNER DAVIES (Chairman of the Advisory Committee on Programme and Budget) said that the Expert Committee had requested high priority for the activity. The Advisory Committee, on the other hand, had approved the activity but made no recommendation on priority.

(22) The CHAIRMAN remarked that it was permissible for the Commission to reconsider the proposal, which was not one of those to be considered only if funds were available in the budget.

(23) Mr. BROWNELL (United States of America) supported the views that had been expressed by the Director-General and the Director of the Department of Education at the previous meeting concerning the school curriculum. Unesco must respect national sovereignty on that question, and the Secretariat should guard against appearing to impose a Unesco doctrine. Unesco's ideas should be advocated because they were sound, constructive and acceptable but not imposed as a Unesco or government directive.

(24) Mr. ROBERTSON (United Kingdom) found the paragraphs in question acceptable and referred to experiments being conducted in English and Welsh schools. Unfortunately, work was hampered by lack of films and illustrative material on other countries. He urged delegates, instead of making speeches on the importance of international understanding, to direct their attention to the production of material in their countries which would promote knowledge and understanding in other nations.

(25) Mr. MORITO (Japan), who had been a Japanese member of the Expert Committee, strongly supported the project. Peaceful aims of mankind could not be fostered by emancipation from illiteracy and diffusion of technical knowledge and skills alone; nor did fundamental education as such lay the foundations of peace. It was essential to develop international understanding and international co-operation in the younger generation.
(26) In the case of Japan, for example, education had been compulsory for half a century; but although long before the war the rate of school attendance had reached nearly one hundred per cent and illiteracy had almost disappeared, the love of peace had not increased proportionately. Education in international understanding was therefore necessary as much in countries with free compulsory education as in underdeveloped countries.
(27) Educators were still seeking effective methods, and the pilot project outlined in the paragraphs under discussion was precisely the kind of action required. Moreover it was an excellent example of the co-operation between Unesco and Member States which was to be promoted in Unesco's future programmes. Japan was participating in the scheme; four schools had already been selected and the Government had allocated $5,000 for the current year. The people concerned with the scheme, of whom he himself was one, were looking for help and guidance from Unesco.
(28) He re-emphasized the importance of the project and asked that it should be given the highest possible priority in Unesco's programme.

(29) Section (L) was approved.

(30) The CHAIRMAN asked for a vote on resolution 1.211, subject to the amendments already made, and in particular, to the addition of the following phrase:
"... due regard being had to the cultural individuality of each country or territory".

(31) Mr. FAUBLAS (Haiti) mentioned that he had the previous day submitted a proposal for an addition to resolution 1.211, asking the Director-General to urge Member States to devote at least one-twentieth of their annual budget to the promotion of free and compulsory education.

(32) The delegate of Uruguay seconded that proposal.

(33) Mr. ELVIN (Director, Department of Education) said that the original proposal mentioned no specific proportion. Whether or not the Haitian delegate's amendment were included, the resolution would have no budgetary implications for Unesco.

(34) Mgr MAROUN (Lebanon) had a comment to make on the wording of the resolution. He did not think it fitting that Unesco should make recommendations of that sort to Member States; the recommendation in question seemed to imply that they did not set aside such a proportion of their budget for education, whereas in fact most of them devoted a very much higher percentage of their resources to it.

(35) Mr. FAUBLAS (Haiti) did not agree with the Lebanese delegate. Unesco had thought it right to put forward suggestions about free education to its Member States because it knew that such facilities were not provided by them all; such general suggestions might remain a dead letter, but, if States were asked to devote not less than one-twentieth of their resources to free education, Unesco would more easily make an impression on them and help to solve the important problem of free schooling.

(36) The CHAIRMAN asked for a vote on the amendment proposed by the delegate of Haiti, seconded by the delegate of Uruguay.

(37) The proposal was rejected by 30 votes to 3, with 15 abstentions.

(38) The amended text of resolution 1.211 was then put to the vote, and it was adopted unanimously.

(39) Resolution 1.212 was also adopted unanimously.

(M) Technical aid to Member States for the development of school education (paragraphs 197-213)

(40) Mgr MAROUN (Lebanon) pointed out that Unesco's work in that field was conducted at three levels: the international level (annual IBE-Unesco Conference); the regional level (regional conferences) and the national level, when Member States asked Unesco for help. The emphasis in the programme for 1955-56 was on the needs of Member States, and Mgr Maroun was sorry that a practical form of action which was certain to produce good results had been placed under the "higher budgetary level", that meant that the Organization would be unable to help Member States unless, by an unexpected stroke of luck, its budget was increased; Mgr Maroun did not think such a policy was altogether worthy of Unesco. Seeing that for once - with the agreement of the United Kingdom delegation - a higher budget had been approved, Mgr Maroun urged that the activity in question, which was so important to Unesco, be transferred to the "present budgetary level".

(41) Mr. ANGELL (United States of America) said that the project was one of the more important parts of Unesco's programme, and one on which any additional funds might usefully be spent.

(42) Mr. AVIDOR (Israel) proposed deletion of the word "technical" in all paragraphs where it appeared, not only in the interests of brevity and economy, but because aid from Unesco should be many-sided and not merely technical.

(43) The Director-General accepted the proposal.

(44) Mr. AL-KOUSSI (Egypt) proposed deletion of the words "higher level", in accordance with the views expressed by many delegates and the Director-General's statement that there was no difference between projects at the higher and lower levels.

(45) The Director-General agreed to delete the words wherever they appeared.

(46) Mr. HOUGHTON (Observer for the British Caribbean Group) said that the wording of paragraph 209 implied that conferences had only been held in the areas listed, which was not the case.

(47) Mr. ELVIN (Director, Department of Education) proposed deletion of the words "that is" in the second line of the paragraph and substitution of the words "for example".

(48) Agreed.

(49) Section (M) was approved.

(N) Assistance to national regional seminars on school education for international understanding and co-operation (paragraphs 214-216)

(50) Approved.

(51) Resolution 1.213 was adopted subject to deletion of the word "technical".

Project 1.22: Emergency educational assistance

(A) Assistance to Palestine refugees (paragraphs 223-237)

(52) Replying to a question from Mgr MAROUN (Lebanon), who had asked at what stage in its work the Commission could expect to do away with the distinction between the higher budgetary level and the normal budget, the CHAIRMAN recalled that it had been agreed that there was no real differentiation between the two budgetary levels.

(53) Mr. GARDNER DAVIES (Chairman of the Advisory Committee on Programme and Budget) recalled that the Director-General had informed the Committee of a request he had received from the Director-General of UNRWA for three additional staff members. The Committee had expressed interest in the request and left the initiative to the Director-General.

(54) Mr. SALIM (Hashemite Kingdom of Jordan) said that his country was extremely grateful to the General Conference for the assistance it had voted in the past for the Palestine refugees, who were still suffering from poverty and disease. He also thanked UNRWA and the members of the Unesco Secretariat who had helped in the work. He regretted, however, that Unesco's contribution to that project for the next two years was to be reduced; the increase in Unesco's budget and in the Organization's responsibilities in the project, and the rising number of children of school age, merited an increase rather than a reduction.

(55) Had the report of the working party set up in Jerusalem been distributed to Member States, they would, he felt sure, have realized the urgent needs and shortcomings of the programme. It was stated in paragraph 226 that free education was now available for all; in fact, Unesco and UNRWA schools housed only eight per cent of the refugee population. Moreover, the UNRWA report showed that education was often given in poor accommodation, with inadequate equipment and by untrained teachers. In addition, the five per cent of primary school enrolment which it was proposed under paragraph 230 to admit to secondary schools was too low. He also disagreed with the statement in paragraph 231 that it was easier for skilled or semi-skilled workers to become economically independent than for holders of secondary school diplomas. In Jordan no holder of a secondary school diploma was unemployed.

(56) Any programme with which Unesco was associated must be exemplary in practice and must be carried out in accordance with Unesco's recommendations and resolutions. He moved that the budgetary allocation for 1953-54 be maintained and

that the increase of $45,000 over the allocation proposed for 1955-56 be used partly to cover the $25,000 for the three additional posts already referred to and partly to provide programme specialists with the necessary materials and equipment.

(57) Mr. GARDNER DAVIES (Chairman of the Advisory Committee on Programme and Budget) pointed out that the Advisory Committee's approval of the proposed three additional posts had been conditional on the submission of a formal proposal by the Director-General and on funds made available by reductions in other parts of the programme.

(58) Mgr MAROUN (Lebanon) considered that the part of the programme in question was, for many reasons, a true Unesco activity rather than one carried out by Member States with Unesco's assistance. Unesco had in fact taken the lead in 1948 in helping the Palestine refugees and had renewed its assistance in each succeeding year. After adding his thanks to those of the delegate of Jordan, Mgr Maroun pointed out to the Director-General that he was the first to cut out of the programme an activity designed to help refugees - a form of work to which his predecessors had attributed great importance. He urged the Director-General to reconsider once more the request made by UNRWA and supported by the delegate of Jordan.

(59) The DIRECTOR-GENERAL said that facilities for schools had increased remarkably during the past two years and aid was now being provided at the rate of some millions of dollars annually. Because financial grants were being made by UNRWA and because Unesco needed funds for other important work, it had seemed wiser for Unesco to limit its assistance to the most important posts. It had been understood that UNRWA was agreeable to the arrangement proposed in 8C/5, but now it appears that UNRWA believes the implementation of the principle will require Unesco to pay the salaries of additional personnel. He had accordingly agreed to ask the Conference whether it wished to vote additional funds for that purpose.
(60) He was willing to support the delegate of Jordan's proposal if the General Conference would decide where the funds could be found; but he wished to point out that one of the most likely places would be under paragraph 230.

(61) Mr. KHADRA (Saudi-Arabia) wished to pay tribute to Unesco, UNRWA and the people in the field for the work being done to combat ignorance and illiteracy among the refugees. He deeply regretted that, in spite of the progress that was being made, it had been decided to reduce the budgetary allocation. For the following reasons, he proposed that it should be increased.
(62) First, a great number of people formerly possessing liquid assets had now come to the end of their resources and were eligible for assistance.
(63) Secondly, the birth rate was high, and school facilities should be expanded to meet it.
(64) Thirdly, Unesco's budget for 1955-56 was larger than for 1953-54.
(65) He had been told that the Director-General's original proposal had been to reduce the budgetary allocation by one-half and that he had only modified it as a result of strong representations from the Director of UNRWA. He could not understand the reasons for any reduction, and warmly supported the delegate of Jordan's proposal for an increase.
(66) He asked whether the statement in paragraph 226 implied that every child of school age was now receiving education. With regard to paragraph 230, the opportunities provided by the admission of 5 per cent of primary school enrolment to secondary schools, and the offer of university grants to 5 per cent of refugees enrolled in secondary schools were quite inadequate. He also questioned the trend indicated in paragraph 231 and hoped that the importance of a balanced education would be borne in mind.
(67) In conclusion, he drew attention to the recent changes in the technical assistance policy of the Foreign Operation Administration, which was now giving financial assistance to universities and educational centres in underdeveloped areas, five million dollars being allocated to the American University in Beirut. He proposed that the Director-General should endeavour to negotiate agreements with the Foreign Operation Administration or the American University in Beirut for the provision of fellowships for the refugees.

(68) Following a question by the CHAIRMAN and an explanation by the delegate of the Hashemite Kingdom of Jordan, it was agreed that the Director, Department of Education should work out the financial details and submit them to the Commission.

(69) Mr. PRATT (Australia) supported the project and sympathized with the proposal of the delegate of Jordan, but asked whether a refusal by Unesco to provide the funds would mean the suppression of the activities, or whether the funds might be provided by UNRWA.

(70) The DIRECTOR-GENERAL said that the request from UNRWA would mean the addition of three posts to the four referred to in paragraph 233 and the cessation of any cash contributions. The cost of the three additional posts would amount to about $27,000 in 1955 and about $27,500 in 1956. With regard to the delegate of Australia's question, the problem was one of principle rather than finance, since, if UNRWA had to provide the money, it could only do so by the curtailment of other educational activities.

(71) Mr. ELVIN (Director, Department of Education) said that the delegate of Jordan's proposal to restore the allocation to the 1953-54 level would involve additional sums of $44,060 in 1955 and $43,095 in 1956, or a total amount of approximately $87,000 (including the three additional posts) over and above the budgetary amount proposed for the 1955-56 period.

(72) Mr. SIDDIQI (Pakistan) supported the proposal.

(73) The CHAIRMAN asked for vote on the proposal of the delegate of Jordan, seconded by the delegate of Saudi-Arabia.

(74) Mgr MAROUN (Lebanon) recalled that the Director-General had stated that Unesco and UNRWA had agreed on the principle that UNRWA should furnish all the necessary teaching materials, and Unesco all the necessary staff.

(75) The proposal of the delegate of Jordan was adopted by 29 votes to 7, with 17 abstentions.

(76) The CHAIRMAN explained that the figures being fixed by the Commission were provisional, and that they would need to be reconsidered, firstly at the end of the examination of the chapter on Education, and, secondly, when all the chapters of the programme had been reviewed; a balance would have to be established between them before the Commission drew up its report.

(B) Emergency educational assistance to Korea (paragraphs 238-244)

(77) Mr. PAIK (Korea) was grateful for the work being done by UNKRA, welcomed the resolution authorizing Unesco's collaboration, and noted that Unesco was proposing to provide two field experts in 1955 and 1956. He wished, however, to see Unesco taking a more active part in the emergency assistance programme, and saw no reason why specific projects should not be included in Unesco's regular programme, provided there were no duplication of work being done by other bodies in the same field. The work was too extensive to be handled by a single organization.
(78) He accordingly proposed that the Commission should adopt a resolution authorizing the Director-General to work out a Unesco programme for educational assistance to Korea which would not duplicate the work of other organizations active in Korea.

(79) Mr. U TSUIN-CHEN (China) supported the proposal.

(80) The DIRECTOR-GENERAL said that, since Unesco was already co-operating with the agency set up by the United Nations, the Korean delegate's resolution appeared superfluous.

(81) Mr. PAIK (Korea) agreed to withdraw his proposal.

(82) The Secretary of the Commission read resolutions 1.221 and 1.222, which were adopted.

(83) Mr. SOLODOVNIKOV (Union of Soviet Socialist Republics) said that his delegation wished a vote to be taken on resolution 1.222 because they intended to abstain as a means of making their views known.

(84) The CHAIRMAN remarked that a fresh vote would therefore have to be taken on resolution 1.222.

(85) The result of the voting was 46 in favour, none against with 6 abstentions.

Project 1.31: Fundamental education

(Paragraphs 247-267)

(86) Mr. GARDNER DAVIES (Chairman of the Advisory Committee on Programme and Budget) said that the Advisory Committee had, at the suggestion of the Director-General, reviewed Unesco's activities in fundamental education as a whole. The method had proved highly successful and had given the Committee a clear idea of the main projects and their connexion with the work of the various departments. The Committee had noted with satisfaction that fundamental education accounted for about $2,000,000 or 13% of the programme activities, half under the Department of Education and the remainder under the Departments of Social Science, Cultural Activities, Mass Communication and Exchange of Persons.

(87) Mr. WARD (United Kingdom) said that the system of Associated Projects was one of the most important parts of Unesco's work. He had, however, two comments to make on the paragraphs under discussion. First, paragraph 256 contained no reference to the great variety of languages. Secondly, with regard to the recruitment of experts under paragraph 259, it was difficult to find experts capable of dealing with many different kinds of project, and Unesco must resist the temptation to employ an expert for several projects merely because they were located in the same region.

(88) Mr. HACQUAERT (Belgium) recalled that, at the seventh session of the General Conference, the Belgian delegation had drawn attention to the heavy expenditure on the two regional centres at Patzcuaro and Sirs-el-Layyan, and had expressed doubts about the possibility of setting up other centres of the same kind; he thought that the Belgian view had been justified and considered that it would be reasonable for Unesco in due course to cease financing the centres, the cost of which should gradually be assumed by the countries benefiting from their work. The Executive Board had suggested setting up a world centre, but the Director-General had said he preferred national centres. The Belgian delegation upheld the latter viewpoint, as it felt that there would be insuperable psychological, linguistic and financial obstacles to setting up a world centre. The policy of encouraging countries which wished to create centres to do so seemed, on the other hand, calculated to spare offence to national feelings.

(89) Mgr MAROUN (Lebanon) said that, though he might later return to the question of the centres, he would confine himself for the time being to the wording of resolution 1.311 (paragraph 246); his comments would also have a bearing on the following paragraphs, down to paragraph 289. Fundamental education covered an enormous field and he paid tribute to the project which Unesco had so bravely undertaken. While it was clearly Unesco's duty to take action in that field, it should not be forgotten that fundamental education had not been invented by Unesco, but had been conducted and was still being conducted by an army of men and women who were

quietly devoting themselves to the service of their fellows. Missionaries of every faith, from every country in Europe, had for long years been bringing knowledge and education to the less civilized peoples; Mgr Maroun noted with regret that the part they had played was not even mentioned. Unesco could not leave their work out of account, either in the Secretariat or in the field and in the very wording of its programme. Resolution 1.311, which, as it stood, said nothing of such private work, would be improved by the addition, (after "international organizations" - second line) of the words "... and appropriate private bodies in this field....".

(90) Mr. WIDDOWSON (Union of South Africa), referring to paragraphs 258 to 260 (Servicing Associated Projects), stressed the importance of preliminary consultation with the responsible authorities in areas where Associated Projects were to be established, before any budgetary provisions were made.

(91) Mr. ELVIN (Director, Department of Education) said that it was axiomatic that the Director-General did not invite an expert to make a study in any Member State without prior consultation with the competent authorities. In connexion with the teaching of reading, for example, a conference had been held in Nigeria, the participants coming from many African territories and including Dr. Cook of the Union of South Africa.
(92) In reply to a further question from the delegate of the Union of South Africa, Mr. Elvin said that consultation had not yet taken place in the unspecified areas mentioned in paragraphs 258-260, but when the draft programme had been approved, it would be initiated only after consultation with the Member States concerned.

(93) Mr. KADYROV (Union of Soviet Socialst Republics) said that his country's delegation had put forward a resolution, on which he wished to make a few comments.
(94) A study of cultural conditions in the twentieth century showed that half the population of the world was still shrouded in ignorance - a state of affairs which was neither just nor humane
(95) The closest attention should be paid to work connected with education; illiteracy should be wiped out without creating social differences or introducing discrimination with regard to religion or sex, and that should be one of Unesco's fundamental tasks.
(96) The delegation of the Soviet Union held teaching and education to be impossible unless based on a knowledge of the national languages of the country concerned and the provision of proper training for the teaching staff.
(97) In Russia, there had been a great deal of illiteracy until, with the triumph of the Revolution, many peoples had had the opportunity of studying in their own languages. In the USSR, teaching was carried on in at least 60 different languages, through a network of schools, institutes and academies for the spread of knowledge.
(98) Unesco should develop its work along those lines in all countries and publish textbooks on fundamental education in order to wipe out illiteracy.

(99) Mr. AL-KOUSSI (Egypt) supported the remarks of the United Kingdom delegate on Associated Projects. Egypt was planning a number of projects, including the training of rural teachers and establishment of social centres, and looked forward to receiving assistance from fundamental education leaders. He therefore welcomed the inclusion of paragraphs 258-260 in Unesco's programme, but care should be taken that the projects to which Unesco proposed giving assistance were true fundamental education centres.

(100) Mr. ERZUAH (Gold Coast) said that fundamental education was the only Unesco activity which reached the masses. As stated in paragraph 253, it was still in an experimental stage, and the experience in his own country might be of value to the Commission.
(101) The three main features of the system adopted in his country were these: the campaign was conducted on a nation-wide basis; it was directed towards a general improvement in the life of the community, and it included voluntary effort.
(102) A preliminary step had been the setting up of temporary rural training centres in the main regions to provide the necessary staff. Mass literacy was an important element since it was realized that through literacy people became aware of the need for social and economic improvement. Literacy was thus not an end in itself but a means to achieving the full benefits of living. It had also been realized that the logical sequence was literacy in the vernacular, followed by literacy in English as a gateway to the knowledge and culture of the outside world.
(103) To achieve nationwide impact, the campaign had been organized on a regional basis under community development officers, a method which had been of great assistance in dealing with the diversity of vernaculars and the particular local problems. Bearing in mind the objective of improving standards of living, attention was directed to providing not only reading primers but also reading material on such subjects as village sanitation, farming, child care and nutrition. Vernacular newspapers were published to keep people informed on matters outside their own community, and it was hoped later to provide leisure-time reading material. Activities included training courses for local authority officials, and plans were being made for a local government publicity campaign by mass education teams to encourage acceptance of the responsibilities attached to rights in local self-government.
(104) An important feature was the voluntary worker, coming from many walks in life and trained at the rural training centre.
(105) Recalling the Director-General's reference to the empirical nature of work in fundamental education, the speaker would welcome information on the experience of others.

(106) Mr. ESTELRICH (Spain) sympathized with the views put forward by the delegate of Lebanon and warmly supported his proposal. He also wished to emphasize that in Latin America 12,000 missionaries were engaged on fundamental education work.

(107) The CHAIRMAN proposed the closure of the discussion. The proposal of the delegate

of Lebanon, seconded by the delegate of Spain, was before the Commission.

(108) Mr. ELVIN (Director, Department of Education), replying to the delegate of the United Kingdom, said that Unesco considered that an expert might be useful in a number of associated projects, but did not expect one person to be capable of handling all the projects in a given region.
(109) In answer to the question by the delegate of Belgium, while it was an accepted doctrine that Member States should ultimately take over responsibility for fundamental education centres, it was not yet appropriate to do so in the two cases mentioned.
(110) With regard to the question raised by the delegate of the Soviet Union, it was Unesco's policy to see that the results of experiments in any country were supplied to other Member States. Information on the work of the cultural missions in Mexico had been published by Unesco. He agreed with the Soviet delegate's emphasis on the educational value of teaching reading and writing initially in the spoken languages. The idea conformed with Unesco's educational doctrine, although there might be administrative limitations in small areas with large varieties of languages.
(111) In reply to the delegate of Lebanon, Unesco was already in consultation with a number of private organizations, whose experience in fundamental education was valuable to the Organization. He asked if the following amendment to the resolution would meet the case: the insertion of the words "and in consultation with competent private organizations" after "appropriate international organizations". It was essential to distinguish between association with the United Nations and the Agencies and consultation with private organizations, since association implied joint responsibility.

(112) Mgr MAROUN (Lebanon) emphasized, however, that not only consultation but co-operation was needed between Unesco and organizations which had been dealing for many years with fundamental education. He therefore wished the words "in association with" to apply to the appropriate private organizations as well.

(113) Mr. ZAMORANO HERNANDEZ (Chile) supported the proposal of the Director of the Department of Education; he considered consultation with private organizations interested in fundamental education to be important, but it was better to do the actual work of education through the competent government departments.

(114) Mr. MASSAQUOI (Liberia) supported the Lebanese delegate's proposal. In his own country private missionary organizations had been working on fundamental education long before any governmental action was initiated, and their collaboration was necessary to the work.

(115) The CHAIRMAN wondered whether a compromise was possible between the proposals of the Lebanese delegate and of the Secretariat. He suggested the following wording: "... and in conjunction with private organizations....".

(116) Mgr MAROUN (Lebanon) confessed that the shade of meaning introduced by the new form of words eluded him.

(117) The DIRECTOR-GENERAL said that the correct term in respect of private organizations was "consultation". Use of the word "collaboration", which implied participation in the management of a project, could lead to serious legal difficulties with other collaborating agencies.

(118) Mr. SANDOVAL VALLARTA (Mexico) referring to what the Director-General had said, observed that this country would oppose any form of collaboration in the Patzcuaro Centre, not already covered by the existing contracts.

(119) Mr. WARD (United Kingdom) supported the statements of the Director-General and the delegate of Lebanon. In United Kingdom territories a great debt was owed to educators whose main driving force was religion, whether Christian, Muslim, Hindu or other denominations. With regard to the drafting difficulty, since the voluntary organizations were all working in collaboration with their respective governments, Unesco could collaborate with them through the Member Governments concerned. The wording "in relation with voluntary organizations" should therefore be satisfactory.

(120) The DIRECTOR-GENERAL said that relationship with private organizations was automatic and use of the word in the resolution would only cause confusion.

(121) The CHAIRMAN said that the wording might be: ".... in consultation with the appropriate private organizations....".

(122) Mgr MAROUN (Lebanon) recalled the work done by non-governmental organizations in addition to that of governmental organizations, adding that Unesco was in a good position to appreciate it. To collaborate with governments did not automatically mean collaborating with all the existing organizations in a country

(123) The DIRECTOR-GENERAL proposed the wording "and in consultation with competent international non-governmental organizations and appropriate private organizations".

(124) The delegate of Lebanon signified his approval.

(125) Before the vote was taken, Mr. FAUBLAS (Haiti) stated that he was not in favour of formally adopting a proposal which was to be referred back to the Secretariat for final drafting.

(126) The CHAIRMAN thought that a vote might be taken, since the Lebanese delegate had indicated his agreement with the Director-General.

(127) The DIRECTOR-GENERAL proposed a further slight modification, and the delegate of Lebanon said that he would be satisfied to leave the final drafting to the Secretariat.

(128) The amended resolution was put to the vote

and adopted by 41 votes to nil with 9 abstentions.

(A) Methods of teaching how to read and write (paragraphs 268-270)

(129) Mr. WARD (United Kingdom) approved the project, but considered it illogical to define a region in terms of its political status. The wording of paragraph 269 would exclude Liberia and possibly other sovereign territories in Africa. He proposed that the words "non-self-governing territories" should be replaced by "Africa South of the Sahara".

(130) Mr. MASSAQUOI (Liberia) seconded the proposal, adding that he would not have taken exception to the existing wording, because Liberia was already receiving great benefits from Unesco's technical assistance programme.

(131) Section (A) as amended, was approved.

(B) Evaluation of literacy campaigns (paragraphs 271-273)

(132) Approved.

(C) The use of a language of wide communication in relation to the use of vernacular languages in fundamental education (paragraphs 274-279)

(133) Mr. WARD (United Kingdom) said that he had heard with great interest the statement of the Soviet delegate and was struck by the similarity of the Soviet and United Kingdom policies on vernacular languages. The number of languages in which the Soviet Government was providing education was impressive and exceeded the number in United Kingdom territories. He had much to learn from the Soviet methods and looked forward to hearing of developments in the future.

(134) Section (C) was approved.

(D) Joint field experiments (paragraphs 280 and 281)

(135) Approved.

(E) Field consultation (paragraphs 282-289)

(136) Mr. WARD (United Kingdom) said that, while he found nothing objectionable in the aims of the project, he saw a danger in the use of the word "urged" in paragraph 285. He had every sympathy with the policy of paying more attention to the interests of women but Unesco's rôle in Associated Projects was to advise and not to control.

(137) Mr. ELVIN (Director, Department of Education) said that he had already explained his own doubts over the wording to the Advisory Committee on Programme and Budget. He would see that a suitable alteration was made in the drafting of the paragraph.

(138) Mr. SOLODOVNIKOV (Union of Soviet Socialist Republics) wished to point out, with regard to the teaching of vernacular languages in the USSR, that he had said that 60 languages were taught, and not so many as the delegate of the United Kingdom seemed to have understood.

(139) Mr. PRATT (Australia) proposed deletion of the word "compulsory" at the end of paragraph 283.

(140) Agreed.

(141) Section (E) was approved.

(F) International fundamental education centres (paragraphs 290-304)

(142) Mr. ORTIZ (Director, Regional Fundamental Education Centre for Latin America) said that at Patzcuaro teachers from all the Latin American countries except Argentina and the Dominican Republic had been undergoing training. He invited those two countries, through their delegations at the Conference, to take part in the work of the Centre.

(143) Since the Centre had been set up, some 180 students had been trained. Careful attention had been given to the methods and procedures of training and constant progress had been made until the existing form of organization was established.

(144) Training at the Centre lasted 18 months, with one month's vacation. The training was divided into three semesters, at the end of which students submitted their theses and sat examinations.

(145) Certain fellowship holders who had taken courses at Patzcuaro had already returned to their countries (Peru, Bolivia, Ecuador, Honduras), and were working in their respective communities, while fellowship holders from other countries were still undergoing training.

(146) Mr. SEDES (France) stated that the French delegation had studied the section on Fundamental Education Centres with special care and was of the opinion that the logical course was to continue what had been begun, even though the financial burden imposed by the two Centres unfortunately prevented Unesco from pursuing action elsewhere. With the need for continuity of effort in mind the French delegation supported the section, together with its budgetary implications.

(147) Mr. CASSANI (Argentina) said that his delegation supported all types of fundamental education, but added that the problem did not arise in his country. Nevertheless, if it were thought desirable, Argentina would send students to the Patzcuaro Centre.

(148) Mr. SANDOVAL VALLARTA (Mexico) wished to put on record that the Patzcuaro Centre was jointly maintained, being supported by Unesco, the Organization of American States and the Government of Mexico, the latter contributed more than $50,000 a year.

(149) His delegation believed that technical assistance should be combined with fundamental education, in order to improve living standards.

(150) Mr. ZAMORANO HERNANDEZ (Chile) speaking on behalf of his Government, expressed his gratitude for the invitation for students from his country to attend the Patzcuaro Centre; he believed that such activities as had resulted in the establishment of the Centre should be undertaken more often, for they were conducive to international understanding.

(151) Mr. MARTINEZ COBO (Ecuador) said that the Patzcuaro Centre was one of Unesco's most useful projects in Latin America. A generation of teachers from Ecuador had been trained there and were already teaching in their country.
(152) The delegation of Ecuador suggested that a project for the establishment of a fundamental education centre in the Andes region should be submitted to the General Conference at its ninth session.

(153) Mr. WARD (United Kingdom) said that it was desirable to have as much information as possible on the Sirs-el-Layyan and Patzcuaro Centres, to which such importance had been attached and to which so much effort had been devoted. He asked if the Secretariat could prepare information on the activities of graduate students who had returned to their own countries.

(154) Mr. ELVIN (Director, Department of Education) replied that in the case of the Sirs-el-Layyan Centre it was too early to furnish such information. With regard to Patzcuaro, details were already available and a statement would shortly be published showing the influence of graduates in their respective countries.

(155) Mrs. PECSON (Executive Board) said that the Executive Board had approved paragraph 285 on the understanding that it was concerned not with furthering women's interests generally, but with giving women a greater part in the promotion of fundamental education. The Board had recognized that women had more free time than men - who had to earn their living; that there were now more women than men in the world; and that women suitably trained could start educating children in their homes.
(156) The Executive Board looked upon fundamental education centres as one of the foundations of Unesco's work. It had devoted a considerable amount of time to studying the Sirs-el-Layyan and Patzcuaro Centres and, in view of the fact that students would ultimately work for the benefit of their own countries, had decided to recommend that in future efforts should be made by the Member States concerned to support their own students out of technical assistance grants.
(157) With regard to the establishment of other regional centres, experiment had shown that it was impracticable in other areas of the world, owing to cultural, linguistic and geographical barriers. The Board had therefore agreed to recommend that only national centres should be encouraged.

(158) Section (F) was approved.

(G) Aid to national fundamental education centres (paragraphs 305-307)

(159) Dr. MUDALIAR (India) appreciated the difficulties referred to by the representative of the Executive Board and, in the circumstances, approved the idea of national centres, which would be less costly to Unesco. He urged, however, that national centres should have the main features of, and be given the same assistance as, the existing international centres.

(160) The DIRECTOR-GENERAL assured the delegate of India that his remarks would be borne in mind.

(161) Section (G) was approved.

(H) Further contributions to the international fundamental education centres (paragraphs 308 and 309)

(162) Mr. PRATT (Australia) asked whether the contracts in paragraph 309 involved a large increase in student maintenance costs. He felt that the time had come for some of that expense to be met by the countries from which students were drawn. The contracts for the two years 1955 and 1956 amounted to over $150,000 and he would suggest that part of that expenditure might be diverted from that item and used elsewhere in the education programme.

(163) The DIRECTOR-GENERAL said that he had submitted the item at the higher budgetary level because he wished the present session of the Conference to decide whether it was the appropriate time to ask Member States to bear the cost of maintaining their own students. The proposal under the lower budgetary level was that, starting in 1955, the maintenance of all new students should be paid by Member States. The decision now before the Commission was whether Member States should assume the burden or whether it should continue to be Unesco's responsibility.
(164) The reason for the larger amount in 1956 was that that year would include the students already there since 1955 and the newcomers in 1956.

The meeting rose at 7.10 p.m.

# FOURTEENTH MEETING

*27 November 1954 at 9 a.m.*

*Chairman:* Mr. BOURGEOIS (Switzerland)

**ITEM 8.4.1 OF REVISED AGENDA, EDUCATION (continued)**

(H) Further contribution to the international fundamental education centres (paragraphs 308 and 309) (continued)

(1) Mr. ELVIN (Director, Department of Education), developing remarks previously made by the Director-General, said that, when the budget was originally drafted, provision had been made for financial support of the Patzcuaro Centre for two years, while support for the other centres had been put on the higher budgetary level. The aim had been to draw attention to the point made at the previous meeting by the delegate of Australia, namely, that the time must inevitably come when Member States might reasonably be expected to bear the costs themselves. The Director-General hoped the Commission would not think he was advocating cuts in order to force through what at the present time must necessarily be a difficult decision, i. e., whether Unesco should continue its financial support or not.

(2) Mr. FORSYTH (New Zealand) said he had been instructed to raise the same point as the delegate of Australia. His attitude towards such centres was by no means unsympathetic. But he felt that the time must come when such projects must stand on their own feet, otherwise there would be no possibility of creating new ones. He understood that the Patzcuaro project was already costing the Mexican Government a good deal of money. Surely those other countries taking advantage of the facilities there offered ought at least to pay for the maintenance of their students?

(3) Mr. AL-KOUSSI (Egypt) said that direct contact with the centres and with the States sending students there would convince Unesco of the value of continuing its assistance, which in any case would taper off in future years. Its premature cancellation would be most damaging to the centres. He trusted that the amounts provided for in the programme and budget would be approved.

(4) Mr. ANGELL (United States of America) was in favour of assisting the centres, which were doing most important work. But he recognized the force of the arguments adduced by the Australian and New Zealand delegations.
(5) An essential condition, if the centres were to see their influence strengthened, was that the support of governments be enlisted to a much greater extent, and that governments should be anxious to see the training acquired by students they had sent there used to the best advantage. One of the best ways of achieving that aim was to call on governments to contribute to the cost.
(6) However, it was perhaps premature to expect the governments to take over full financial responsibility right away. He would propose that Unesco make its full contribution for 1955, but that in 1956 governments be expected to pay half the cost of the centres, Unesco paying the other half.
(7) In submitting his proposal, he had been more anxious to strengthen the influence of the centres than to save money for Unesco.

(8) Mr. ATADEMIR (Turkey) seconded the proposal.

(9) Mr. FAUBLAS (Haiti) stated that his Government had given him instructions to support any recommendation the Director-General might make concerning the Fundamental Education Centre at Patzcuaro.

(10) Mr. SANDOVAL VALLARTA (Mexico) said that his Government would keep strictly to the terms of the contract it had signed with Unesco with regard to the Regional Centre at Patzcuaro. In addition, his Government would welcome adoption of the recommendations which had been made under paragraph 308 of the programme by the representative of the Executive Board and by the Advisory Committee on Programme and Budget.

(11) Mr. WARD (United Kingdom) sympathized with the views expressed by the delegates of Australia and New Zealand. Sooner or later the question would have to be faced whether Member States should pay a proportion of the cost of maintaining their students at the centres, pending the time when they would take over full financial responsibility.
(12) Nevertheless, the point should not be pressed at the moment. Let the Secretariat decide, in consultation with the directors of the two centres and the governments concerned, how arrangements might be made for Unesco's financial aid to taper off.

(13) Mr. ZAMORANO HERNANDEZ (Chile) considered that the question under examination had three aspects, which led to confusion. Firstly, it was not a question of touching on the problem of what Unesco should consider permanent and what it should consider temporary. If Patzcuaro or any similar project were to be permanent, they should not be dealt with at that meeting. Secondly, what steps Member States should take in developing those projects had not been submitted for examination either. Thirdly, there was the concrete problem of subventions to those regional centres. In

that respect the speaker believed that what the Secretariat had proposed should be approved.

(14) Mgr MAROUN (Lebanon) pointed out that, if those Arab States that were interested in the functioning of the Centre at Sirs-el-Layyan could not at present give it sufficient financial aid, it was because they had to face a concrete problem: the training given was of an extremely high standard and the countries from which trainees came were not yet equipped for putting the necessary resources at their disposal for the rational and fruitful use of the knowledge they had acquired at the Centre.
(15) The Secretariat had fixed the credits indicated in paragraph 309 with a full knowledge of the facts.

(16) Mr. SEDES (France) supported the United Kingdom delegate's statement. It was without doubt desirable to find a way in which the States concerned could participate financially, but any premature decision might compromise the existence of the two centres, which, as had been said and emphasized, was a necessity.

(17) Mrs. PINTO DE VIDAL (Uruguay) said that, in view of the good results so far obtained by the Regional Centre at Patzcuaro, she considered that its present organization should not be changed for another two years. She also believed that the governments of countries whose students enjoyed the benefits of the Centre, should contribute to its maintenance and should for example bear travel expenses. Mexico for its part could help by providing cheaper accommodation.
(18) She supported the project in the form in which it had been presented.

(19) Mr. AL-HILLI (Iraq) said the Centre at Sirs-el-Layyan was in its early stages, and after two years of existence had turned out only five Iraqi students, who were being used by the Iraqi Government to start two new centres, the cost of which it was bearing itself.
(20) The Egyptian Government, he had been told, was making a substantial financial contribution. In fact, he believed it was paying more than Unesco.
(21) He agreed that governments should be expected to contribute, but not in the early stages. A cut in the Unesco contribution would gravely endanger the centres.

(22) Mr. PRATT (Australia) wished to make it clear that his delegation was strongly in favour of the centres. There had been substantial agreement among previous speakers as to their value. The only question was how their influence and value could best be ensured.
(23) He would be the first to acknowledge that the Egyptian and Mexican Governments had given the centres magnificent support. But in general he would be inclined to associate himself with the United States proposal, for the reasons given by the delegate of the United States of America.

(24) Mr. C.W. CARTER (Canada) thought that the United States proposal would go far to meet the fears entertained by the delegates of Australia and New Zealand. A rather similar situation had arisen in Canada in the past, and had been settled along the lines indicated in the United States proposal.
(25) Even if the Commission supported the United States proposal, it should, he considered, support the estimates given in the document for 1955. The activities were central to the programme of Unesco.

(26) Mr. ANGELL (United States of America) repeated that his proposal had been submitted merely in order to reinforce the position and influence of the centres and, since it seemed to be meeting with a cold reception, he would be perfectly willing to withdraw it.

(27) Mr. ELVIN (Director, Department of Education) said that one important point had not been made. Every Member State sending students to the centres paid in some way or other. For example, since most of the students were married men with commitments, the States concerned undertook to continue paying their salaries. In addition, they paid students' travel expenses.
(28) A distinction should be made between the two centres. That at Sirs-el-Layyan was much the younger, and it was felt that at least five years would be required to estimate the extent to which it had succeeded in making its influence felt in the Arab world.
(29) Then there was the question of timing. The Latin American States had been asked for their views whether Unesco assistance should not be tapered off. Most of the replies received had been sympathetic, but the view had been expressed that, if such steps were taken too early, the future of the centres would be jeopardized. The Director-General might be asked to investigate the attitude of States towards the question whether they should take over maintenance costs and to report thereon to the General Conference at a later session.

(30) Paragraphs 308 and 309 were unanimously adopted.

(I) National experiments on the production of reading material for new literates (paragraphs 310-312)

(31) Mr. ELVIN (Director, Department of Education), commenting on a suggestion by the delegate of the United Kingdom that discussion of the two paragraphs should be postponed until the Commission came to discuss cultural activities, said that such a course was possible, but that the two activities were complementary rather than identical.

(32) Paragraphs 310-312 were unanimously adopted.

(33) Resolution 1.311 (pages 33 and 34) was unanimously adopted.

Project 1.32: Adult Education (paragraphs 313-333)

(34) Mr. WEILENMANN (Switzerland) said that his country approved resolution 1.322, and was appreciative of what the Director-General had done in that field during the preceding year.
(35) He stressed the great importance of adult education,

to which, indeed, almost every chapter in the programme made reference in some way or other.
(36) The world was rapidly shrinking and adult education was of vital importance in training people to live peaceably side by side. The experience of Switzerland showed that a modus vivendi between various linguistic and cultural groups could be found, provided education emphasized the principles of freedom, equality and voluntary association.
(37) Education in those three principles was equivalent to education for democracy, and democratic principles had to be instilled not only into children, but also into adults.
(38) Adult education was being largely carried on by independent voluntary associations, some of which had grown up in the nineteenth century, such as workers' educational movements. In addition, he would mention the Universidad de Trabajo in Uruguay, and the extension lecture system operated in British universities. Such bodies and such schemes were working in the same direction as Unesco.
(39) Thence Unesco should make better use of them. To that end he proposed that the Director-General be authorized to have recourse to adult education institutes for advice and to foster regional and world-wide associations of such institutes. He understood that such an association was being formed in Europe and another in the United States of America.

(40) Mr. HACQUAERT (Belgium) seconded the proposal.

(41) Mr. SEDES (France) said that the French delegation attached great importance to that chapter and approved the long-term programme which would make it possible for all departments to take a greater part in the various tasks connected with adult education.
(42) Referring to paragraph 327, the French delegate proposed that the sentence "in consultation with the staff specially concerned with adult education" should be completed by the addition of the words "and with the practice of the social sciences", and suggested to the Drafting Committee that they find an expression more satisfactory than "the common people"

(43) This proposal was seconded by the delegations of Haiti, Lebanon, and Switzerland.

(44) Mrs. DOUGLAS (Canada), referring to paragraphs 314 and 315, in which the words "adult education, including workers' and women's education" were used, said that a simple change in wording would remove the impression that women's education was somehow not the same as education for adults. Perhaps the words "also special projects for women's education" might be inserted.

(45) Mr. FORSYTH (New Zealand) wished to make it clear that his delegation fully supported the project as a whole.
(46) As regarded the expression "workers' education", used in paragraph 319, it would be better to say "adult education". In New Zealand the word "former term" had certain ideological implications and it should not be suggested that distinctions should be made in educational needs along class lines.

(47) In connexion with paragraph 322, he would suggest that the Consultative Committee on Adult Education, therein mentioned, should be made more representative of the world as a whole.
(48) In paragraph 332, mention was made of a permanent International Centre. Was the Secretariat satisfied that with its existing resources and staff it could organize and direct the activities of such a centre.

(49) Mrs. JOBORU (Hungary) said that her country, since the war, had acquired much valuable experience in adult education. It would be very willing to offer other Member States the benefit of that experience.

(50) Mr. CASSANI (Argentina) was in agreement with the part of the programme under examination and with the suggestions presented by New Zealand and Canada for altering the wording of paragraph 314. He considered that the words "workers" and "women" should be deleted, as it was absurd to talk of adult education that excluded workers and women. He thought the most suitable wording would be: "Member States are invited to encourage the development of adult education, of both men and women without exception". In that form he unreservedly supported the paragraph in question.

(51) Mr. ANGELL (United States of America) welcomed the two resolutions 1.321 and 1.322 as also the statement by the delegate of Switzerland on the principles involved.
(52) As regarded the wording of paragraphs 314, 315 and 319, the distinction made between workers' and women's education, as branches of adult education, was, he felt, a valid one. In the United States of America there were no less than thirty million men and women belonging to labour unions of one kind or another which actively promoted adult education for better international understanding - the United States National Commission would be very ready to supply information about programmes, if requested. He was therefore in favour of keeping the existing wording.

(53) Mr. WARD (United Kingdom) enquired how the Consultative Committee was constituted. Was the advice of the National Commissions taken in regard to the choice of members?
(54) He was a little surprised that the delegate of the United States of America was in favour of keeping the expression "workers' education".

(55) Mrs. PINTO DE VIDAL (Uruguay) stated that, when the time came, her delegation would vote in favour of the resolution in the form in which it had been presented. However, the fact that the Swiss delegate had alluded to the Universidad del Trabajo (Workers' University) in Uruguay led her to declare that from the age of twelve upwards everyone could be admitted to that university; it taught all the working techniques in use not only in Montevideo, but throughout the country.
(56) She pointed out that in Uruguay there were primary courses for adults, which both men and women could attend. As a rule, they were evening courses arranged for those who worked during the day.

(57) For secondary education, a secondary school with evening classes had been organized on the same lines.
(58) Higher education was open to all those who had completed primary and secondary education.
(59) With regard to the expression "workers and women", appearing in resolution 1.321 (paragraph 314), she considered that the word "adults" would be sufficient.

(60) Mgr MAROUN (Lebanon) was surprised that the chapter nowhere mentioned the trade union movement. Did Unesco not collaborate with the different bodies representing that movement?

(61) Mr. ELVIN (Director, Department of Education), commenting on the expression "workers' education" used by the Secretariat, said that the word "worker" obviously had different connotations in different countries; there were historical reasons for that.
(62) The Secretariat was in frequent consultation with workers' organizations of various kinds, and often helped international non-governmental organizations and international trade unions to organize summer schools in adult education. There was therefore some reason for making a special reference to workers' education.
(63) As regarded women's education, there was, in the United Nations, a special commission on the status of women, which was continually asking Unesco what it was doing for women. For that reason the Secretariat had made specific reference to women's education more to protect itself against criticism from that quarter than for any logical reason.
(64) It had been suggested that the text might be expanded to show that the Department of Education worked in co-operation with the Department of Social Sciences and other departments. The Secretariat was quite prepared to make such an addition, but he could assure the Commission that such collaboration already existed.
(65) With regard to the question raised by the delegate of New Zealand about the permanent International Centre mentioned in paragraph 332, the field was one in which expansion had been impossible because of pressure to give priority to school education and fundamental education. But it was planned to go ahead as soon as the budget permitted.

(66) Mr. HORNE (International Confederation of Free Trade Unions) stated that workers did not think that educational, cultural and scientific activities could achieve their real objectives if workers, who were an important and large body of the population, were excluded from them.
(67) Two recommendations in the education programme deserved the firmest support from ICFTU: the transformation of the International Workers' Educational Centre through the decentralization of its activities, and the transference of international summer schools run by international non-governmental organizations to underdeveloped areas.
(68) ICFTU had been pleased with the proposals contained in the draft resolution concerning the organization of national or regional adult education seminars. He stressed the need for full co-operation between the competent national or regional organizations, including trade union organizations, in the running of such seminars.
(69) He praised Unesco activities in underdeveloped areas.
(70) He also expressed his satisfaction at the increased possibilities offered by Unesco to non-governmental organizations in the last two years, and hoped that that interest would grow.
(71) Although, at the international level, relations between ICFTU and Unesco had certainly been generally satisfactory, collaboration between free trade union organizations and a large number of Unesco National Commissions left much to be desired. It was only exceptionally that representatives of workers' organizations were members of National Commissions, or were consulted by National Commissions on problems of particular concern to workers. The work that Unesco was doing in Member States through its National Commissions would be seriously compromised if trade union organizations were not represented on them as they should be. Consequently, ICFTU asked Unesco once more to request Member States to appoint representatives of workers' organizations to sit on National Commissions as well as to select them as members of delegations to Unesco General Conferences.

(72) Mr. VIEBRA FERNANDEZ (International Federation of Christian Trade Unions) supported what the previous delegate had said.
(73) Although the work that Unesco was doing was effective, he believed that it had not been understood by the general public; most of the inhabitants of Montevideo were still wondering what Unesco was and what purpose it served. For that reason he considered that, when the general public started to understand and take interest in Unesco, it would be very near to achieving the result that it was seeking: to achieve peace through culture.
(74) He was in agreement with all that had been done and was to be done for the education of children, who formed the essence of tomorrow's community, but he considered that the workers were the reality of today and that, for that reason, their education should not be neglected.
(75) He thought that, if the workers took a more active part in Unesco activities, it would dispel the idea that Unesco was no more than a gathering of intellectuals who talked a great deal but did little or nothing.

(76) Mrs. PINTO DE VIDAL (Uruguay) recalled that the distinguished Italian delegate had stated at the last meeting that he no longer wished to take part in the debates of the Commission. Although she did not know the reason for that drastic decision, she would ask the Italian delegate to reverse it and continue to assist with his wide knowledge and experience in solving the problems facing Unesco.

(77) The CHAIRMAN said that, under the procedure, it was not possible to reverse a decision taken on the previous day.
(78) He recalled that all delegations none the less had the right to present in the form of oral proposals

draft resolutions on which the Advisory Committee had not been able to give its opinion.

(79) Mr. CALO (Italy), after thanking the delegate of Uruguay for the friendly words addressed to his country, stated that he had made reservations about the usefulness of taking part in the discussion and above all had declared that he would avoid making suggestions which constantly came up against budgetary obstacles.
(80) Mr. Calo considered that the problem in adult education which required urgent solution before all others was that of training teaching staff.
(81) The establishment of permanent courses, in which workers could take a personal part to explain their desires and impart their experiences and concerns, would be a first step in that direction.
(82) The teaching profession and university circles could also give a great impulse to adult education. Universities should therefore be encouraged to intensify their university extension courses as practised so successfully in English-speaking countries.
(83) Mr. Calo then referred to the highly desirable creation of a permanent international adult education centre and assumed that the present Consultative Committee on Adult Education would be merged in the new body, since it would be doing the same work.

(84) Mr. BERREDO CARNEIRO (Brazil) stated that Brazilian experts on their return from a seminar at the International Workers' Centre (La Brévière) had launched an active movement for fundamental education; they hoped to get wider support in the national field.
(85) On the basis of that example, the delegate of Brazil drew the Commission's attention to the text of a draft recommendation which had no budgetary implications but which would be of great help to Member States who had to face those problems.

(86) The CHAIRMAN then reminded the meeting that the Commission had to take a decision on several proposals, notably on the amendment to resolution 1.322 presented by the delegation of Switzerland (seconded by Belgium).

(87) Mr. ELVIN (Director, Department of Education) said that an expert committee convened by Unesco had considered the possibility of forming an association of adult education movements. That committee had given most sympathetic consideration to the problem, but had reluctantly concluded that, in view of the diversity of such movements, the time did not seem ripe to carry the matter further. Did the Commission think that the problem should be given further consideration?

(88) Mr. WEILENMANN (Switzerland) felt, nevertheless, that it would be good if Unesco were to help in the formation of regional associations.

(89) The Swiss proposal that Unesco should foster collaboration between the various adult education movements was put to the vote and adopted by 24 votes to 0, with 19 abstentions.

(90) The French proposal (seconded by the Netherlands), to amend the last line of paragraph 327 to read: "adult education and, in co-operation with social science experts, to adapt their programmes to the needs of the common people" was unanimously adopted.

(91) The Brazilian resolution (seconded by Argentina) was amended so that the words "fundamental education" read "fundamental and adult education".

(92) It was subsequently put to the vote and adopted by 34 votes to 0 with 5 abstentions.

(A) Consultation at the international level (paragraphs 334-336)

(93) Mr. ELVIN (Director, Department of Education), answering a question raised earlier by the delegate of the United Kingdom, said that thitherto the Committee mentioned in paragraph 334 had been small (10 or 12 members). Its members were not nominated by National Commissions, since that would have involved asking no less than seventy-two such commissions to put forward candidates. Also there were the interests of the non-governmental organizations to be considered.
(94) The Committee was made up of individuals drawn from countries with much experience of adult education, or from suitable non-governmental bodies. When a member of the Committee did not come from some clearly international organization, informal contact was kept with the National Commission of his home country.
(95) A suggestion had recently been made, and had been approved by the Director-General, that a list of thirty associate members should be drawn up. Persons unable to attend meetings of the Committee at frequent intervals would be included in that list. It was proposed to ask some of those associate members to take part, in turn, in the meetings held by the Committee.
(96) The membership of the Committee changed from time to time, and was not exclusively European.

(97) Mr. MASSAQUOI (Liberia) said that paragraphs 328, 329 and 330 laid stress on the need for regional meetings and called for special efforts to be made in the underdeveloped countries.
(98) Accordingly, he felt that the Committee in question should be such as to permit the active participation of the various parts of the world. A fundamentally European body inviting persons from elsewhere from time to time was not enough, since most of the peoples of the world lived in the underdeveloped areas.

(99) Mr. ELVIN (Director, Department of Education) said that a distinction had to be made between fundamental education (normally understood to mean basic education for those who had not enjoyed a normal schooling) and adult education (i.e., further education for those who had had a normal education).
(100) Adult education movements were most strongly developed in the countries where literacy was most widespread, and thence, in setting up the Consultative Committee, it was inevitable that recourse should be had, first and foremost, to such countries. The Committee itself was anxious to be broader, but it was

difficult to give exactly equal representation to the various parts of the world without interfering with the basic purposes of the Committee.

(101) Mr. MASSAQUOI (Liberia) said that, if what the previous speaker had said was true, paragraphs 328, 329 and 330 were largely meaningless. The point was that the countries with large illiterate populations were trying to industrialize and wished to benefit from the experience acquired, and the mistakes made, in the more highly developed countries.

(102) Mr. ELVIN (Director, Department of Education) said that, in setting up a committee to conduct a literacy campaign, it would surely be only logical to have recourse to countries which were culturally more highly developed. It was natural that the countries with highly developed adult education movements should be called on to provide most of the members of the Committee.
(103) Paragraphs 328-330 were not meaningless. In fact, that very year, there had been two seminars in adult education, one in India, the other in Latin America.

(104) Mr. MASSAQUOI (Liberia) said that the Social Science Department was holding a meeting in the Ivory Coast on problems of industrialization and urbanization, which surely proved that such problems were not peculiar to European countries. Africa was rapidly evolving, particularly in areas like the Congo and South Africa, and should not be used by the rest of the world for experimental purposes only. The machinery already existed for making use of African experience and should be used.

(105) Mr. AL-HILLI (Iraq) enquired whether the Committee included any member from the Arab countries.

(106) Mr. ELVIN (Director, Department of Education) said it did not. No adult education movement of any strength existed in the Arab countries, but representatives of the Arab States would attend seminars on adult education.

(107) Mr. AL-HILLI (Iraq) said that, in his country, there were evening classes on a wide scale. No fewer than 3,000 lawyers had graduated from such classes alone, and similar figures could be given for other Arab countries. It was important, therefore, that there should be an Arab member of the Committee

(108) Mr. ELVIN (Director, Department of Education) had much sympathy with the views expressed as regarded the terms "fundamental education" and "adult education", having asked the same question himself on first entering Unesco. He had often suggested that work should be divided under headings, according to the type of person to whom those activities were directed. But in the circumstances the best course was probably to keep the two terms "fundamental education" and "adult education" as ordinarily used, i.e., understanding, under "adult education", the further education of those who had already enjoyed an ordinary schooling.

(109) Mr. WARD (United Kingdom) supported what had been said by the delegate of Liberia. He had lived in Africa and he was in a position to affirm that there did exist, in Africa South of the Sahara, a growing movement for adult education as that term was normally understood in Europe.
(110) In the Gold Coast, for example, an organization known as the People's Education Association was doing work very similar to that performed by the Workers' Educational Association in Great Britain, and the University College of the Gold Coast was also active. Other examples could doubtless be given for Sierra Leone and elsewhere. It was certain therefore that there did exist, in Africa, people well qualified to advise the Committee, or at least to serve on the consultative panel.

(111) Mr. BARRIOS (Nicaragua) thought that fundamental education embraced rural and adult education; beyond being a method of teaching, it was a philosophy of education, the purpose of which was to co-operate with those two branches of teaching (rural and adult).

(112) Mr. SANDOVAL VALLARTA (Mexico) proposed, in accordance with Rule 76 of the Rules of Procedure of the General Conference, that the debate be closed and that a vote be taken on paragraphs 334 to 336.

(113) Mr. BARDALES (Honduras) stated that the general lines of the fundamental education school were laid down at the seminar in Rio de Janeiro in 1949. It was said on that occasion that there was a serious shortage of primary schools in Latin America and in other countries and that the population of school age had no chance to attend school, while even those who could do so, remained only one or two years. It was for that reason that the name of "fundamental education" had been given to a minimum teaching period of three years with the object of extending it to the whole population, including adults and children.
(114) He thought that adult education should be for those who already had some fundamental education and wished to widen their knowledge; that included those who had studied in schools of all types. Adult education also aimed at improving the condition of the workers (manual and professional).

(115) Section (A) was unanimously approved.

(B) Summer schools and training courses for members of approved international organizations (paragraphs 337-339)

(116) Unanimously approved.

(C) Technical aid to Member States (paragraphs 340-350)

(117) The CHAIRMAN recalled that the Commission at the previous day's meeting had decided to delete the word "technical".

(118) Mr. FRANCOIS (France) pointed out (with reference only to the French text) that the wording "en vue de l'organisation de cours" in resolution 1.323 was too restrictive, as the organization of seminars was also proposed.

(119) Mr. MARTI (El Salvador) asked that the part of the paragraph which read: "including workers' and women's education" should be deleted. He thought it was clear that workers' and women's education was included in adult education.

(120) The CHAIRMAN said that that point had already been discussed and that it had been decided to keep the present wording.

(121) Mr. FORSYTH (New Zealand) said that, at a meeting held by his National Commission, there had been a person who had attended two seminars on adult education. That person had made two suggestions, first, that there should be a broader geographical representation at such seminars and, second, that, before the seminar met, its aims should be clearly defined by the Secretariat. Much time had been lost in deciding whether the seminar was merely a group of individuals or a group called upon to submit a report.

(122) Resolution 1.323 was unanimously adopted.

Project 1.33. Work with youth

Paragraphs 351-371

(123) Mr. HACQUAERT (Belgium) regretted, in view of the importance and of the occasional difficulty of relations with youth movements, that the post of a qualified staff member had been suppressed. He urged that that post be maintained.

(124) Mr. FRANCOIS (France) considered that the reduction of credits for that chapter by 12% was not compensated in its effects, as the Director of the Department of Education had given to understand, by the subventions granted to the Youth Institute, which was not a recent creation; furthermore, it served an informative purpose and stood aside from the active rôle which that branch of the Department of Education had to play.
(125) Mr. François stigmatized the complete failure of the present programme to fulfil the promises contained in the Florence programme. Most young people escaped early from the school atmosphere, and youth movements could alone take them in hand. The Council of Europe, with its fourteen Member States, supported those movements with sums ten times those provided by Unesco.
(126) For that reason the French delegation proposed that the credits for contracts and the purchase of publications should be increased by $5,000 and $1,500 per annum respectively.

(127) The proposal was seconded by Belgium, Brazil, Italy and the Lebanon.

(128) Mgr MAROUN (Lebanon) recalled that Unesco's first efforts in the field had met with a cool reception and that young people themselves had been sceptical about the results to be obtained from them; he was disappointed to see the credits cut in that particular chapter.
(129) He considered that a larger place should be given to contracts drawn up with youth organizations if real encouragement was to be given to ideas of co-operation and citizenship in the international field.

(130) Mr. ELVIN (Director, Department of Education) pointed out that the figures in paragraph 351 showed the scale of expenditure for 1953 and 1954, as well as the proposed expenditure for 1955 and 1956.
(131) The total expenditure for the first period had been estimated at $143,000. Proposed expenditure had been cut to $136,000 - a reduction of only $7,000.
(132) It had to be remembered that the normal budget of Unesco was expected to find $64,000 for the Youth Institute at Gauting.
(133) As regarded staffing, it was not often that the Secretariat could give light-hearted approval to staff reductions, but it was a fact that the work in question could be performed with the staff proposed, i.e., with one established post less.

(134) Paragraphs 351-371 (Work with youth) were unanimously adopted.

(A) Associated youth enterprises (paragraphs 372-384)

(135) The proposal of the French delegation (DR/100), seconded by the delegations of Belgium, Brazil, Italy and the Lebanon was approved by 14 votes to 10 with 17 abstentions.

(136) Mr. HACQUAERT (Belgium) proposed that "access of women to education" should be added as a theme to the subjects of study enumerated in paragraph 376.
(137) Referring to paragraph 380, he furthermore suggested that Unesco should encourage the International Federation of Organizations for School Correspondence and Travel to extend its aid to youth movements.
(138) With regard to paragraph 381, which proposed the creation of a Consultative Committee on Youth Work, Mr. Hacquaert thought that experts should be chosen in collaboration with the large international youth associations, so that scout movements and workers and correspondence associations etc., should be represented on the Committee.
(139) In addition, he asked Unesco to consider paying not only travel expenses but also a per diem allowance.

(140) Mr. STEINIG (United Nations) said that the United Nations naturally took the keenest interest in Unesco's work with youth, in so far as youth work represented a contribution to international understanding, and also in so far as Unesco's work impinged on special United Nations projects, such as the prevention of juvenile delinquency, and youth welfare services.
(141) He would reiterate the assurances given by the Secretary-General of the United Nations to the Director-General of Unesco that the United Nations would co-operate to the full with Unesco in planning further projects and in preparing the agenda for seminars and conferences in that field.

(142) Mgr MAROUN (Lebanon) shared the Belgian delegate's point of view.
(143) He added, however, that the Consultative Committee proposed under paragraph 381 should be

formed on the basis of a wide geographical distribution. In Near and Middle Eastern countries, in particular, youth movements were very popular.

(144) Mr. CLEGG (United Kingdom) said that, in paragraph 374, the Director-General would "inform" Member States, National Commissions, etc., of the proposed scheme and of the conditions for association. Surely it would be better if he consulted National Commissions and youth organizations first? As a compromise, he would suggest that National Commissions and youth organizations be given time to make their comments.
(145) As regarded paragraph 381, how would the members of the Consultative Committee on Youth Work be chosen? Would the National Commissions be consulted?

(146) The CHAIRMAN recalled that the problem of contacts between Unesco and the National Commissions had already arisen several times. It seemed that they could not be as direct as would sometimes be desirable, because governments had to be informed of such steps being taken.

(147) Mr. ELVIN (Director, Department of Education) explained that the members of the Committee would largely be drawn from international youth organizations, and would be selected primarily for their international standing. Their nationality, therefore, would be more or less incidental, although he saw no objection to informing National Commissions of the choices made.
(148) As regarded paragraph 381, it had been suggested that Unesco pay travel costs plus per diem allowances. That was a suggestion the Secretariat could accept. If the Committee met once a year, for five days, the cost would be $1,000 a year.
(149) As to the point raised by the United Kingdom (paragraph 374), the Secretariat would most certainly send out proposals well in advance and leave time for comments to be received before any final decision was taken.

(150) Mrs. PINTO DE VIDAL (Uruguay) said that, in dealing with the chapter regarding youth organizations likely to improve international understanding, mention should be made of one such organization which deserved Unesco's attention: the Junior Red Cross. It was a branch of the International Red Cross and was based on three principles: the health of young people, national solidarity and international solidarity. Unesco had taken an interest in the organization and had granted scholarships to some of its members. It would be a good thing to organize camps with government aid; the friendships between young people and adolescents which might be formed there would be a very valuable factor in understanding. She therefore hoped that Unesco would consider what she had said, with a view to aiding the Junior Red Cross throughout the world.

(151) Mrs. LEGARDA (Philippines) said that in her country there were plenty of youth movements - boy scouts, girl guides, Catholic youth, etc. The problem was rather how to cater for young people not yet organized in youth movements and for young people out of school hours. She would therefore urge the adoption of paragraph 381, with special reference to that problem, which was closely bound up with the problem of juvenile delinquency and the provision of suitable films and literature for young people.

(152) Paragraphs 372-384, as amended by France, were unanimously adopted, subject to the comments made.

(B) Collaboration with the Unesco Youth Institute, Gauting (paragraphs 385-395)

(153) Mr. GARDNER DAVIES (Australia), speaking as Chairman of the Advisory Committee on Programme and Budget, said that there had been doubts in the Committee as to financial support for the Institute. The Committee, after lengthy discussion, had been of opinion that the Institute had been in existence for too short a time for any final judgment on its usefulness to be passed, and so had recommended that the estimate of expenditure should be maintained, and that the Director-General should submit a critical study on the matter to the ninth session of the Conference.
(154) The Committee had drawn attention to the report by the Expert Committee on Education for International Understanding and Co-operation. Both staff and studies should be made more international in character, and the results of the studies carried out should be disseminated.

(155) Paragraphs 385-395 were unanimously adopted.

(C) The rôle of sport in education (paragraphs 396-398)

(156) Mr. CHEVALIER (Secretary of the Commission) said that the question was explained in detail in document 8C/PRG/12.

(157) Mr. CALO (Italy) was surprised that large international organizations like the World Health Organization and the International Council of Philosophy and Humanistic Studies had not been invited by Unesco to take part in the preliminary studies in a field in which their opinion might carry particular weight.
(158) Public health specialists, physiologists, pediatrists and moralists had constantly expressed doubts of the value of sport in character formation (when practised intensively and from an early age) unless it led gradually from simple games to competitions properly so called, passing through the stages of methodical exercise and moderate sporting activity.
(159) For that reason, the Italian delegation, which had always strongly favoured all exchanges of information between Member States, now thought it necessary to call an international conference or a meeting of experts to study, on the basis of questionnaires and other documentation, more particularly:

1. The influence of sports organizations and international sports meetings on the development of international co-operation and understanding;
2. The desirability of sport at different ages and scholastic levels.

(160) Those problems should also be studied by the

Youth Institute at Gauting; senior boys and girls obviously had something to say on the question of sport as a factor in education.
(161) It was only a suggestion, but the Italian delegation would be glad if it were taken into consideration.

(162) Mrs. JOBORU (Hungary) said that her Government gave every encouragement to sport both at school and outside, and much valuable experience had been acquired. Sport, if properly organized, helped to build character and contributed to international understanding among young people.
(163) Hungary, which had achieved great successes in the field of sport, would be very ready to take part in any scheme for the pooling of information and experience in connexion with the rôle of sport in education.

(164) Mr. BROWNELL (United States of America) said that, while the United States of America had been criticized for the almost excessive importance it attached to sport as a means of education, he questioned how far Unesco could go in the matter under discussion, in view of pressing educational needs in other fields.
(165) Two organizations in the United States of America had just made a careful study of the problem (the North Central Association of Colleges and Secondary Schools, and later the Educational Policy Commission of the United States). Their findings might usefully be consulted by the Conference.

(166) Mr. STEWART (Canada) said that, while the paragraphs in question had no budgetary implications, there might well be some in two years' time.
(167) In document 8C/PRG/12, Canada was quoted, but, while Unesco must have consulted various organs, it had not consulted the educational authorities. If the resolution 1.332 were adopted, confusion might well result, unless the points on which Member States were consulted were very clearly defined. Information might be submitted, for example, on semi-commercial or commercial sport. Hence he would support the United States proposal (document 8C/PRG/12) that none of the activities mentioned in resolution 1.353 of the seventh session be undertaken.

(168) Mr. CLEGG (United Kingdom) said that, if the value traditionally ascribed to organized games was taken for granted, and it was assumed that Unesco was not concerned with a favoured minority, the practical problem which arose was the following: did there exist, in the great cities and agglomerations, sufficient open ground available for games?
(169) The Advisory Council on Education in Scotland had decided that not enough ground was available in Scottish towns. It had, however, suggested that a careful enquiry ought to be carried out. As far as he knew, no such enquiry had been made.
(170) He would suggest two lines of enquiry. Firstly, was enough ground available? Secondly, if not, could games be encouraged involving less ground but inculcating the real or supposed virtues of organized games?

(171) Mr. FRANCOIS (France) thought that the object of the consultations and studies proposed by the authors of paragraphs 396 and 397 was to throw light nationally and internationally on the great problem of the coexistence of amateur and professional sport; it was certainly within the scope of Unesco to ask Member States in which the problem existed to make a study of the repercussions of professional sport on education, and France would particularly need to know how those things were arranged in other countries.
(172) The French Government would even be prepared to devote large sums to a study of the kind and would probably be glad to know the results of the large-scale enquiry of which the delegate of the United States of America had spoken.

(173) Mr. BERREDO CARNEIRO (Brazil) thought that there were two distinct aspects of the rôle of sport in education: on the one hand, there was sport as seen in the framework of physical culture, on the other, the part it could play and the effects it could have in the field of international understanding.
(174) The delegate of Brazil considered that Unesco, through resolutions appearing in other parts of the programme, was already in a position to face the tasks that that implied, and he thought that too great an importance would be attached to sporting organizations, which anyway had more money than did cultural organizations, if the question were given special attention.

(175) The proposal submitted by the delegation of the United States of America was rejected by 16 votes to 8 with 15 abstentions.

(176) Resolutions 1.331 and 1.332 were unanimously adopted.

Creation by Unesco of an International School in Paris (document 8C/PRG/1)

(177) Mr. GARDNER DAVIES (Australia), speaking as Chairman of the Advisory Committee on Programme and Budget, said that his Committee, after considering the recommendation by the Expert Committee on Education for International Understanding and Co-operation had decided to support the experts' view that, while there might be a call for such a school, Unesco should not take the initiative of founding it.

(178) Mr. ELVIN (Director, Department of Education) said that clear advice had been given by the Expert Committee and by the Advisory Committee, so perhaps no comment was appropriate.

(179) Mr. FRANCOIS (France) said that his country was very pleased to welcome children of different nationalities in its schools, but was also anxious to educate them in such a way as to satisfy the very varying aspirations of parents.
(180) He therefore wondered whether that direct experiment in international understanding was not, first and foremost, part of the mission which Unesco had undertaken and whether that eminently varied sphere was not the best suited to the study of the possibilities for developing the idea of living in a world community.

(181) For that reason the French delegation would favour the Secretariat's continuing the study of that project while envisaging the formation of an expert committee, which would naturally be composed of educationalists, but also of legal experts, since one day the problem of the equivalence of degrees would arise.
(182) As regarded the financial aspect of the question, the French delegate recalled that the French Ministry of Education had promised to collaborate directly with Unesco by offering to put the necessary teaching and administrative staff at its disposal.

(183) Mr. FORSYTH (New Zealand) was against the scheme. Such a school would be founded merely to render a service to international officials, and could never be considered a Unesco project in the field of work for international understanding. In addition, many parents would no doubt want their children to obtain higher education in their home countries. It would be a great blow to Unesco's prestige if the scheme were a failure. Hence he was strongly opposed to it.

(184) Mr. BERREDO CARNEIRO (Brazil) spoke of the existence of private international schools in Switzerland, which could achieve the same result without new schools' intervening. Furthermore, he considered that a problem might arise in that children, having studied in this school, could not be certain that their degrees and diplomas would be recognized by their own countries or by countries in which they had to take up their residence.

(185) Mrs. PINTO DE VIDAL (Uruguay) accepted the creation of the proposed international school in principle. She particularly supported the experimental character of the school, having regard to the fact that what was most important would be to give the pupils basic training both in how to belong to a world community and in how to be potential citizens in a local community.
(186) She thought that the school could be set up by private contributions and would not need financial aid from Unesco.
(187) She remembered a visit she had paid to the school for the children of United Nations staff members in New York, and she considered that teaching in a school of that kind would be fraught with difficulties, particularly with regard to languages.

(188) Mrs. PECSON (Executive Board) said that the Board had discussed the scheme to determine whether it could constitute a pilot project or whether it was merely for the benefit of international officials. Reports on the international schools in New York and Geneva had been considered.
(189) The Board had come to no very clear decision for or against, and had merely referred the document to the Conference without comment.

(190) Mr. FRANCOIS (France) said that he would be surprised if Unesco were to ignore a problem to which many other international organizations, less directly interested, had already found a solution.
(191) The French delegation had, moreover, done no more than ask that a study of the kind should be pursued, so that it could be put before the General Conference at its next session.
(192) As for the argument of possible failure, put forward by the New Zealand delegate, its use, for that project or for others, could only foreshadow Unesco's own failure.

(193) Mr. SIDDIQI (Pakistan) said that, as a proposal to offer reasonable facilities to international officials in educating their children, the scheme had much to be said for it.
(194) Such a school, however, could never be considered a pilot project, as it would be operating under very special conditions.

(195) Mr. CALO (Italy) was in agreement with the continued study of a project of the kind and paid tribute to the generosity of the French offer.
(196) However, if he had to vote on a proposal for carrying out the project immediately, he would feel obliged to abstain, as he doubted the desirability of early bilingualism or multilingualism, as much from the educational point of view as in the formation of character.

(197) Mr. CLEGG (United Kingdom) thought that, with so untypical a group of pupils, such a scheme could never be a pilot project. In addition, how could Unesco with a good conscience set up a costly school when dedicated to the cause of free compulsory education for all? At a time when so much urgent work remained to be done elsewhere, the scheme was wholly unsatisfactory.

(198) Mr. SUNDARAM (India) could not support the scheme. How much support was there for such a school amongst the staff of Unesco? It would be by no means easy to find suitable staff. It would be better to leave the creation of such a school to voluntary enterprise.
(199) Then there was the grave problem of religious education, a question on which parents might have strong views. The difficulties were so great that there was no point in further study.

(200) Mr. FAWZI (Egypt) thought that fear of the school being a failure was no argument against its establishment.
(201) The French offer was extraordinarily generous and offered a unique opportunity of assembling children of all nationalities and creeds for an experiment in peaceful coexistence.
(202) He himself had been against the scheme in the Advisory Committee, but had since changed his view and had become a firm supporter.

(203) Mr. ELVIN (Director, Department of Education) said that the school would certainly offer a most interesting opportunity for experiment. At the same time, conditions would be very far from typical. In addition, the school would be competing with other schools in Paris. There were, for example, an American school, an Anglo-French school, a Swedish school, and possibly other national schools, besides the French ones.
(204) Then, again, there might be financial difficulties. The financial calculations had been based on the

assumption that Member States would supply teachers without cost. Hitherto, only France had made such an offer.
(205) There would be the capital costs of some $550,000, which would have to be borrowed. If the scheme were adopted, the Conference would have to authorize a loan from the Working Capital Fund to borrow half of the money required; the rest would no doubt have to be raised from some French agency.
(206) The delegate of France had suggested that the principle involved should be further studied. But that had already been done at length in the document itself.
(207) Hence it would be well to take a decision forthwith on the principle involved. If the principle were rejected, there would be no call for further study. If it were adopted, there would be need of course for planning.

(208) By 25 votes to 2, with 16 abstentions, it was decided that Unesco should not create such a school.

(209) Mr. ELVIN (Director, Department of Education) said that the Commission had recommended increases in the expenditure of the Education Department amounting to $96,990 net. Should the Director-General continue to submit proposals for reductions?

(210) The CHAIRMAN recalled that, in accordance with an earlier decision, the Commission was entirely free after it had finished its examination of the programme as a whole to return to each main chapter separately and to hear what the Director-General had to say about such detailed adjustments as he thought possible.

The meeting rose at 1.15 p.m.

# FIFTEENTH MEETING

*29 November 1954 at 10 a.m.*

*Chairman:* Mr. BOURGEOIS (Switzerland)

(1) Before the debate on the programme of the Department of Natural Sciences began, Mr. SEVERI (Italy) wished to pay tribute to the memory of the physicist, Fermi, who had just died from cancer in Chicago. Fermi, who was born in Italy and had taught for several years at the University of Rome, had done remarkable work on nuclear physics and artificial radio-activity. Mr. Severi hoped that Fermi's discoveries would be used solely in the service of civilization and peace, and that the great scientist, whose death was so untimely, would be counted amongst the benefactors of mankind.

(2) Mr. ANGELL (United States of America) wished, in the absence of the United States scientific representative, to express his delegation's deep regret at the untimely death of Professor Fermi, which had cut short a career with great potentialities for world peace and security. The United States of America, the home of much of Professor Fermi's work, could not but suffer from the loss.

(3) Mr. LEROY (France), on behalf of the French delegation, expressed sympathy with scientific circles in Italy and the United States of America in their loss.

(4) Mr. SANDOVAL VALLARTA (Mexico), on behalf of his delegation, joined in the tribute paid to the memory of Enrico Fermi. He had personal reasons for doing so, as he had known him and been a friend of his, and national reasons, as the distinguished research worker had had scientific contacts with Mexico for more than 20 years.

(5) The CHAIRMAN asked the Commission to observe a few moments' silence in homage to the memory of Enrico Fermi.
(6) He reminded the Commission that the decisions it had taken when discussing the Education Department's programme had resulted in an increase of nearly $100,000 in the budget estimates. He suggested that the Commission consider the other chapters of the draft programme and budget and refer its recommendations to the Advisory Committee on Programme and Budget, which would study them at the same time as the Director-General's proposals. The Commission could then consider the views expressed by the Committee and draw up its final report for the General Conference.
(7) The Chairman then drew his colleagues' attention to the need for expediting the discussions and limiting their remarks to the essential minimum. Even then, evening meetings would perhaps be required to get through the Commission's extremely heavy agenda.

## ITEM 8.4.2 OF REVISED AGENDA: NATURAL SCIENCES

Paragraphs 1-16

(8) Mr. AUGER (Director, Department of Natural Sciences) first paid tribute to the scientific genius of Enrico Fermi, with whom he had on several occasions been able to collaborate.
(9) He then said that it would be difficult for him to give the Commission full details of his Department's programme in a few minutes. Much had been said

about concentration and the remodelling of the programme, but, in the scientific field, the most important thing to remember was that Unesco's main object was to place science at the service of man.
(10) The Department of Natural Sciences had but limited means for achieving that object: $800,000 a year and some 50 people for the period 1953-54. Fortunately, those modest resources were complemented by substantial contributions from outside - the support and co-operation of governments, National Commissions, the Specialized Agencies of the United Nations and all scientists of good will.
(11) Mr. Auger thought that science could be regarded from four main standpoints, corresponding to the principal parts of the programme of his Department: universality, utilization, dynamism and value.
(12) In the first place, science was universal and of interest to all the countries of the world. Unesco was accordingly fostering the development of international scientific co-operation, the improvement of understanding between research workers, and the improvement of the standard of scientific documentation.
(13) Science was not of purely theoretical interest; it could be harnessed in the service of mankind and used to improve the lot of the people as a whole. In that respect, the Department of Natural Sciences was making a technical contribution to the work of the Specialized Agencies.
(14) Science was also characterized by continual progress, to which it was impossible to see any end. For that reason, it was necessary to improve science teaching so that the young could play their part in the scientific work of the future, and to spread scientific knowledge amongst the adult population so that the man in the street might have his share in scientific developments throughout the world.
(15) Finally, science had what might be called a commercial value, for countries rich in scientific knowledge were able to exploit their capital better. But the highly developed countries could place their scientific knowledge at the disposal of less privileged countries without any loss to themselves. They might even benefit from such action in the long run. The programme of the Department of Natural Sciences therefore included projects for providing Member States with scientific assistance.

(16) Mr. ESTELRICH (Spain) wished to comment on chapter 2 of the proposed programme and budget as a whole. In its broad outline, he found it perfectly acceptable and very reasonable in its arrangement of activities. But he had the following observations to make: (1) however praiseworthy might be the activities shown under Section II, "Contribution to research, particularly for the improvement of the economic and social conditions of mankind", he thought that the first and third headings of Section I best reflected Unesco's particular responsibilities in the field covered by the Department; (2) consequently, the delegation of Spain supported resolutions 2.11 and 2.12 unreservedly, and particularly the latter. Owing to its special position in the Spanish-speaking world, Spain believed that it had a great part to play in three of the tasks mentioned in resolution 2.12, i.e.: the standardization of scientific terminology, the compilation of multilingual dictionaries and the improvement of scientific translations. The delegation also supported resolution 2.121 and asked that one of the terminological bureaux proposed under it, be set up in Madrid; (3) Mr. Estelrich therefore advocated the stabilization of the budget for Section II of chapter 2, until satisfactory results had been obtained in international scientific co-operation and in the teaching and dissemination of science.

(17) Mr. STOLETOV (Union of Soviet Socialist Republics), referring to the three aspects of Unesco's scientific work set out in paragraph 2 of the Natural Sciences chapter, wished to add a fourth: the use of scientific achievement solely for peace and the benefit of mankind. He supported the resolution on the peaceful use of atomic energy submitted by the Indian delegation in document 8C/DR/9 (rev.) and hoped that it would be unanimously adopted by the Commission.
(18) The Soviet Union had long been interested in atomic energy and, not long after the discovery of a system of chemical elements by Mendeleiev in 1867, theoretical discoveries were made which foreshadowed the splitting of the atom. Soviet scientists had carried out important research work during the past decade; they had studied closely the achievements of scientists and physicists in other countries, especially those of Professor Fermi, whose death was deeply to be regretted. Great progress had been made in the use of radio-activity and radio-isotopes for studying the exchange of elements in living organisms, in the study and treatment of disease in human beings and animals, in biology and genetics and in general as a means of investigating the secrets of nature for the good of humanity.
(19) The Soviet delegation was also in favour of the French delegate's proposal for an expert discussion on radio-isotopes in Europe, but urged that more governments should be invited to participate.
(20) In conclusion, he urged that Unesco should adopt a strong policy on the peaceful use of atomic energy. The Soviet Government would support any action in the direction of prohibiting the use of atomic weapons and encouraging the use of atomic energy for the benefit of humanity.

(21) Mr. SAMBURSKY (Israel) considered the chapter on Natural Sciences one of the best in Unesco's programme. A study of the budgetary distribution between items, however, showed a slightly lower proportion for research than for the dissemination of science, and he felt that the reverse should be the case.
(22) A great deal had been said on the need for concentration, and the Natural Sciences programme was well concentrated; but there was a danger that, if the policy were pursued too rigidly, no room would be left for new activities. In his opinion the programme should be divided into three parts: contributions to scientific organizations; specific activities, such as arid zone research, the geophysical year and travelling exhibitions; and exploratory studies for the selection of future programmes, and ten per cent of the reserve budget should be used for exploration in new fields. There were numerous possibilities for research: for example, the creation of more food, the use of photo-synthesis, radio biology; and Unesco

could co-ordinate and give a stimulus to work already being done in the various fields.
(23) With regard to the teaching of science, he had been unable to find any reference to the teaching of the history of science. He strongly advocated its inclusion in an appropriate part of the programme.
(24) Finally, comparing the budgetary distribution between Natural Sciences and the other chapters, he noted that Education, Mass Communication and Cultural Activities accounted for 70.5% of the total, Natural Sciences for 17% and Social Sciences for 12.5%. If some of the scientific activities, such as dissemination of science, could be transferred to other departments, it would be possible to increase scientific research under chapter 2. He would like the proposal to be considered, if not for the 1955-56 programme, at any rate for the subsequent period.

(25) Mr. STANKOVIC (Yugoslavia) congratulated the Secretariat on having drawn up a well-balanced programme for the Natural Sciences. He considered that the European Organization for Nuclear Research and the programme of arid zone research could be held up as examples of well-conducted enterprises.
(26) In connexion with the International Advisory Committee on Research in the Natural Sciences programme, Mr. Stankovic understood that the experts who had met in 1953 had been particularly interested in the development of national centres for scientific research. However, the draft programme provided only for a conference of directors of national scientific research centres and councils (paragraph 72).
(27) Mr. Stankovic said that the Yugoslav delegation attached great importance to the question. Two trends were to be observed: in some countries, government action in the field of scientific research was increasing, not only in the financing but also in the conduct of research; in other countries, scientific research was developing with greater flexibility.
(28) Mr. Stankovic thought it essential for the various national scientific research councils to be able to compare notes and make a critical evaluation of the results obtained.
(29) It would also be well for Unesco to collaborate more closely with non-governmental organizations and the Specialized Agencies of the United Nations. The interest in oceanographic research, for example, was satisfactory, but Mr. Stankovic wished to know whether the Secretariat contemplated co-operating with the International Council for the Exploration of the Sea. The activities undertaken in connexion with arid zone problems had shown that it was impossible to tackle such vast and complex questions without the collaboration of specialist bodies.
(30) It was also necessary to co-ordinate Unesco's activities with those of the other Specialized Agencies. With regard to the "campaign against cancer" project, Mr. Stankovic observed that the World Health Organization was also interested in that question, and he thought that the respective provinces of the two Organizations should be carefully defined. It would perhaps be preferable, on that account, to call the project "Basic research on cell growth", in accordance with the suggestions made by WHO in document 8C/PRG/20, Add. 1, page 2.

(31) Mr. PHOTIADES (Greece) hoped Unesco would give more support to the International Council of Scientific Unions, the European Nuclear Research Centre at Geneva and the Computation Centre in Rome. He also noted that twelve of the fellowships provided for in the programme of the Department of Natural Sciences were placed under the "higher budgetary level", and asked that, if necessary, those fellowships be reserved primarily for the Geneva and Rome Centres.

(32) Mr. BERREDO CARNEIRO (Brazil) congratulated the Director of the Department of Natural Sciences on having established world-wide services with a budget smaller than that of many national councils for scientific research. He had, however, two remarks to make on the Department's draft programme.
(33) In the first place, the biological aspect of man's life received too little attention. It was all very well to deal with the environment and the material conditions of human progress, but more importance should be accorded to the problems of genetics, endocrinology, the nervous system and the brain. In a chapter in which the improvement of the economic and social conditions of life was taken to be one of the fundamental aims, the biological being who was to benefit from all those efforts should not be forgotten.
(34) The other problem that seemed to receive too little attention was that of the relations between science and ethics. Mr. Berredo Carneiro did not want restrictions to be placed on freedom of scientific research, but he thought it was time to set limits to the possible applications of scientific knowledge. International conventions were already in force on such matters as the production of drugs and narcotics. At a time when governments tended increasingly to take over scientific production, they should be asked to conform to certain rules.

(35) Mr. RAADI (Iran) was sure that the Director of the Department of Natural Sciences had not intended to place in order of importance the four standpoints from which science could be viewed. Indeed, the last two he had mentioned might determine the first two.
(36) Mr. Raadi thought that both the teaching and dissemination of science and aid to Member States in scientific matters should have priority. The development of international research and co-operation was impossible so long as science was not taught and scientific knowledge spread throughout the world.
(37) Mr. Raadi also thought it very important to increase the number of fellowships.
(38) With regard to the relations of science and ethics, Mr. Raadi thought that progress in specialization was causing scientists to retire into an ivory tower and to lose touch with general ideas affecting the whole of mankind. It would be advisable to see that a close connexion was maintained between science and general education in institutes and estaolishments where science was taught.
(39) Taking up the remarks of the Israeli delegate on the need for paying due attention to the history of science, Mr. Raadi emphasized that the question should be approached from the standpoint of cultural history as a whole and that barriers should not be raised between science and general culture.
(40) Finally, Mr. Raadi hoped there would be closer collaboration between the various councils set up under Unesco's auspices.

(41) Mr. AL-KOUSSI (Egypt) began by joining in the tribute to the memory of the great physicist, Enrico Fermi.
(42) He felt that after reading the preamble to chapter 2 and hearing Mr. Auger's statement, all delegates were bound to feel satisfaction at the balance achieved by the Department of Natural Sciences. Mr. Al-Koussi was sorry, however, that a working party had not been set up at the current session of the Conference, to study the Department's programme, for it was a field on its own.
(43) He was pleased at the results secured in international scientific co-operation, at the work accomplished in liaison with ICSU, and at the progress achieved with regard to scientific documentation.
(44) He thought it would be advisable to make a list of all the institutions and laboratories that might render practical services to nations or groups of nations.
(45) He noted with satisfaction the interest Unesco was taking in oceanographic problems. In oceanography, research was invariably rapidly rewarded. There was, for instance, no doubt that such important questions as the life and migrations of the tunny could be settled only by international co-operation.
(46) So far as the relations between science and society were concerned, dealt with in paragraph 9 of the preamble to chapter 2, Mr. Al-Koussi thought that the Department of Natural Sciences should co-operate closely with the other departments, and particularly with the Department of Mass Communication, once it had been reorganized.
(47) Mr. Al-Koussi, however, deplored the increasing clumsiness of the international bureaucracy, which rivalled that of national government departments. It was understandable that scientists should often feel impatient and disillusioned, lost, as they were, in a labyrinth of meetings of experts, commissions, committees and seminars. What practical results had, for instance, been obtained under the arid zone programme? Had any field research been undertaken? It would be better to send teams of experts to work in some arid region. Their work was sure to be useful, and direct action was better than symposia and meetings of experts.
(48) In the same way, Mr. Al-Koussi hoped that oceanographic research in the Indo-Pacific region would be begun shortly.
(49) Finally, he strongly urged the need for greater concentration of efforts.

(50) Mr. AUGER (Director, Department of Natural Sciences) noted that all the delegates who had spoken had laid stress on the importance of some part of his Department's programme. Each part had been regarded as meriting priority by one or other of the preceding speakers. It might, therefore, be concluded that there was no serious error of proportion in the programme, since no project had been severely criticized.
(51) For instance, the Spanish delegate had thought it better to stabilize the appropriations for scientific research in order to promote collaboration with international organizations and improve scientific documentation, whereas the Israeli delegate had been in favour of increasing the funds for research.
(52) These were budgetary problems, and the Department of Natural Sciences, with the appropriations proposed, could do no more than was suggested in that chapter. It was, incidentally, the General Conference which fixed the amount of subventions.
(53) With regard to the Soviet delegate's remarks, Mr. Auger drew the Commission's attention to documents 8C/PRG/24 and Addendum, in which the Secretariat proposed a work plan designed to implement the draft resolutions submitted by France (DR/1), India (DR/9 rev.) and Japan (DR/32 rev.), if they were approved.
(54) In answer to the Israeli delegate, Mr. Auger said that the Secretariat did not underestimate the importance of the problem of photo-synthesis, but there again it was a question of funds and of concentration of the programme. It was impossible to do everything at once.
(55) Referring to the Yugoslav delegate's remarks about the International Advisory Committee on Research in the Natural Sciences programme, Mr. Auger said that the Committee was to meet in 1954 at Milan and would consider questions concerning scientific research in the universities and in industry and the openings for research workers.
(56) Unesco was always ready to collaborate with the other Specialized Agencies. For instance, the implementation of the Japanese draft resolution concerning the dangers resulting from the use of radio-active products would necessitate close liaison with WHO. In the same way, the French and Indian draft resolutions, already mentioned, implied close collaboration with the United Nations and the Specialized Agencies concerned.
(57) In answer to Mr. Photiades, Mr. Auger pointed out that provision was made for a total of 38 fellowships, for two years, in his Department's programme. Several of them would certainly be used for the activities Mr. Photiades had mentioned.
(58) Mr. Auger then explained that the International Union of Physiological Sciences was soon to join ICSU and would thus be able to benefit from Unesco's aid. As for the relations between the natural sciences and the social sciences, Mr. Auger emphasized that the question of race, for instance, was both social and biological. He reminded the Commission that the periodical, Impact, was designed to deal with the problems involved in the relations of science and society. That publication was therefore an answer to the question with which certain delegates had been concerned.
(59) Mr. Auger agreed with Mr. Raadi that it would be regrettable to isolate the sciences from humanistic studies, but in his opinion it was no less important to see that specialists in the literary branches of study were not completely ignorant of contemporary science. The efforts made to encourage the teaching of science and the spread of scientific knowledge among adults should help to remedy existing shortcomings.
(60) Lastly, Mr. Auger joined with the delegate of Egypt in deploring the clumsiness of the modern bureaucratic system. But he emphasized that successive consultations were the only way of reaching general agreement on a particular problem in accordance with democratic principles. He also reminded the Egyptian delegate that an important

project for the study of a given arid region was mentioned in paragraph 98 of the chapter under consideration.

(61) The Commission finally approved paragraphs 1-16, subject to later changes in the figures.

2.1 Development of international co-operation

Paragraphs 17-24

(62) Mr. CHEVALIER (Secretary of the Commission) read out the first paragraph of draft resolution 8C/DR/18, submitted by the Indian delegation, and the comments made on it by the Advisory Committee on Programme and Budget (document 8C/BUD/1, page 11).

(63) The project was supported by the delegates of Iran and Liberia.

(64) In reply to a question from Mr. ANGELL (United States of America), Mr. AUGER (Director, Department of Natural Sciences) explained that the project had no budgetary implications, if it was simply a question of inviting Member States to make requests. The necessary funds would then be drawn from the technical assistance budget.

(65) The project was unanimously approved.

(A) International Council of Scientific Unions (ICSU)

(66) Mr. SEVERI (Italy) recommended increasing the subvention to ICSU. He made special mention of the needs of the Zoological Station at Naples, which depended for its resources on ICSU.

(67) Sir John SIMONSEN (United Kingdom), referring to paragraphs 20-24, said that he had to speak in the dual capacity of delegate of the United Kingdom and observer for the International Council of Scientific Unions.
(68) Speaking in the latter capacity, he said that many people were not aware of the scope of ICSU's activities, which included assistance to the meteorological station at Stockholm, the physical station in the Pyrenees and a number of abstracting centres, which all worked in the service of science. The original budget of $245,000 had been reduced by stages to the sum of $180,000 proposed for 1955 and 1956, regardless of the fact that there were now eleven unions to support and three new ones shortly to be added. The Secretary-General of ICSU had, at the last meeting of the Council's Executive Board, asked for additional funds for carrying on activities. In view of the increase in membership he felt justified in proposing that Unesco's subvention should be increased by $50,000.
(69) Speaking as the representative of the United Kingdom Government, however, he was obliged to oppose the granting of any subvention to ICSU, and to propose that any savings made on the science budget should be diverted to technical aid.

(70) Mr. PHOTIADES (Greece) thought it essential to strengthen ICSU, which was one of the pillars on which Unesco's work rested.

(71) Mr. LEROY (France) hoped that additional funds might be made available to ICSU.

(72) Mr. KRUYT (Netherlands) strongly supported the proposal to increase the subvention to ICSU, which was performing valuable work for international co-operation in science. It would be less costly for Unesco to support the Council than to undertake such activities itself.

(73) Mr. ANGELL (United States of America) reminded the Commission that the proposal to increase the subvention was neither made nor supported by the United Kingdom. Moreover, the budget of Unesco had already been exceeded by $100,000 and there was little possibility of any surplus being available for the purpose.
(74) He was in favour of concentrating on activities of major importance and opposed an increase in the subvention.
(75) On a point of order, the proposal was formally moved by the delegate of the Netherlands and seconded by the delegate of France.

(76) Dr. MUDALIAR (India) supported the proposal, with the proviso that certain of Unesco's activities, such as the conference on public understanding of science, and science exhibitions, should ultimately be taken over by ICSU.

(77) Mr. AUGER (Director, Department of Natural Sciences) said that ICSU could render great services to the Secretariat, when, for instance, the opinion of specialists was sought on some project. It was, however, difficult to commission ICSU to carry out specific projects, as the Council had only a very small secretariat, and, to obtain satisfactory results, it would have to establish a large service comparable to the Department of Natural Sciences itself.
(78) However, an attempt was being made to achieve closer collaboration between Unesco and ICSU. In the field of scientific literature, for example, ICSU had set up an Abstracting Service, which received contracts from Unesco and had already achieved remarkable results.

(79) Mr. ANGELL (United States of America) said that the proposal was entirely unrealistic and he would oppose it. There was no possibility of a surplus in the budget, and far more likelihood of a deficit.

(80) Mr. BERREDO CARNEIRO (Brazil) asked if figures could be given so that the Commission would know the implications of the proposal.

(81) Mr. KRUYT (Netherlands), referring to the suggestion of the Indian delegate, said that abstracting was one of the activities which might well be transferred from Unesco to ICSU. In reply to the delegate of Brazil, an additional $20,000, if devoted entirely to travel costs, would enable the scientific unions to meet more frequently. Hitherto work had been hampered by the lack of funds for meetings outside the ICSU congresses.

(82) Mr. ZAMORANO HERNANDEZ (Chile) said that

he was not very well informed about the activities of ICSU, but he did not think it advisable to contemplate hypothetical requests. In order to increase the ICSU subvention, funds would have to be withdrawn from other headings, a course of action which he considered to be futile. New schemes should be based on funds actually available. For that reason, he endorsed the views expressed by the delegate of the United States of America.

(83) Mr. LAUGIER (France) whole-heartedly supported any proposal to increase the subvention granted to ICSU. He added that the Commission's recommendation should also have weight with the Executive Board. If any savings were made on certain items in the budget as the work proceeded, a request should be made that those funds be allocated to ICSU.

(84) Mr. PHOTIADES (Greece) fully supported the proposal of the Netherlands delegate, for it seemed inconceivable to him that ICSU should receive only one-fiftieth of Unesco's budget.

(85) The recommendation of the Netherlands delegate was finally approved by 31 votes to 16, with 5 abstentions.

(86) Paragraphs 17-24 were then unanimously approved.

(B) Council of International Organizations of Medical Sciences (paragraphs 25-27)

(87) Mr. BERREDO CARNEIRO (Brazil) said he had the honour of representing the interests of CIOMS at the General Conference. He asked the Chairman to take a vote on the proposal made in paragraph 27, which fully met the needs of CIOMS. As Brazilian delegate, he entirely supported the proposed subvention.

(88) Mr. RAADI (Iran) also supported the proposal.

(89) Sir John SIMONSEN (United Kingdom) strongly supported the subvention, but suggested that better international representation on the executive committee would be secured if the term of office were reduced from nine years to, say, three years, with a lapse of time before the same member could be reappointed.

(90) Mr. AUGER (Director, Department of Natural Sciences) suggested that the Director-General be asked to send the CIOMS a note on the observations made about its executive committee.

(91) It was so decided.

(92) Paragraphs 25-27 were unanimously approved.

(C) Union of International Engineering Associations (paragraphs 28-31)

(93) Unanimously approved.

(D) Assistance to international scientific activities (paragraph 32)

(94) Unanimously approved.

(i) General Assembly of the International Union of Biochemistry (paragraph 33)

(95) Unanimously approved.

(ii) International Geophysical Year (paragraphs 34-36)

(96) After the Secretary of the Commission had read out the comments at the top of page 10 of document 8C/BUD/1, paragraphs 34-36 were unanimously approved.

Representation at meetings (paragraphs 37 and 38)

(97) Unanimously approved.

(98) Resolution 2.11 was unanimously approved.

Project 2.12 - Improvement of scientific documentation

Paragraphs 39-48

(99) Mr. CHEVALIER (Secretary of the Commission) read out the second part of draft resolution 8C/DR/18, submitted by the Indian delegation.

(100) Dr. MUDALIAR (India) said that, as certain seminars had already been held in the field of scientific co-operation, the second part of his resolution was no longer necessary and he withdrew it.

(101) Project 2.12 was adopted.

(102) At the CHAIRMAN's request, the Secretary of the Commission read out the comments of the Advisory Committee on Programme and Budget regarding the proposed contract with the Council of International Organizations of Medical Science (document 8C/BUD/1, page 10, (42) (A)).

(103) Mr. BERREDO CARNEIRO (Brazil) wished to know why the Advisory Committee had recommended striking out an activity which had always been performed satisfactorily by the organization in question.

(104) Sir John SIMONSEN (United Kingdom) strongly supported the publication of medical abstracts, but was opposed to their translation. Errors in translation could have serious medical results.

(105) Mr. KRUYT (Netherlands) thought that it would be more appropriate for the activity in paragraph 46 to be handled by the International Federation for Documentation. There was a danger of duplication if Unesco intervened.

(106) Mr. AUGER (Director, Department of Natural Sciences) said that the question was whether the lists of periodicals should be drawn up by specialist bodies or by some central body such as the International Federation for Documentation. In the latter case, the Federation would have to be granted a subvention. But the better course seemed to be to commission specialized organizations to carry out particular tasks.

(107) The CHAIRMAN wondered whether the Secretariat should not consider consulting the International

Federation for Documentation and the International Federation of Library Associations on all types of bibliographical work.

(108) Mr. MAHEU (Assistant Director-General) said that the Director-General, who was particularly interested in such questions, saw no reason why that should not be done.

(109) The Advisory Committee's proposal was put to the vote and approved by 31 votes to 7, with 9 abstentions.

(110) Speaking on a point of order, Mr. LAUGIER (France) regretted that the Commission had agreed to reduce a subvention approved by the Executive Board and that the decision had been taken before Mr. Berredo Carneiro had obtained the information for which he had asked.

(111) Mr. BERREDO CARNEIRO (Brazil) also regretted that the vote had been taken before the reasons for the Advisory Committee's recommendation had been explained.

(112) The CHAIRMAN said he had thought that the United Kingdom delegate's remarks could be taken as a reply.

(113) By 25 votes to 16, with 9 abstentions, the Commission finally decided to rescind its previous decision, pending the receipt of further information from the representative of the Advisory Committee.

(114) Mr. SEVERI (Italy), on behalf of his delegation, submitted the following draft resolution:

"Unesco shall encourage and promote the translation of treatises on the teaching of the applied sciences, in the case of texts of universal value. Proposals regarding the translation of a text into the language of a given country shall be submitted to the Director-General by the National Commission of the country that wishes the translation to be made.

The Director-General shall recommend such proposals to the State in which the original text was published and to scientific or cultural institutions, and shall bring them to the notice of publishers likely to be interested".

(115) The proposal, seconded by the delegates of Iran, Chile and Spain, was unanimously approved.

(116) Mr. CHEVALIER (Secretary of the Commission) read out the remarks of the Advisory Committee on paragraph 54 (International Anatomical Nomenclature Committee).

(117) In answer to a question from Mr. STANKOVIC (Yugoslavia), Mr. AUGER (Director, Department of Natural Sciences) said that the Advisory Committee's proposal was the result of lengthy discussions. To obtain rapid publication of the important work concerned, the first of its kind, it had been thought preferable for Unesco to conclude a contract direct with the appropriate organization.

(118) Sir John SIMONSEN (United Kingdom) thought that a wider interested public would be reached if the reports were published in the normal anatomical journals. Moreover, there would be no outlay for Unesco.

(119) Mr. KRUYT (Netherlands) considered the activity more appropriate for the World Health Organization than for Unesco.

(120) Mr. AUGER (Director, Department of Natural Sciences) explained that, under the agreement concluded between WHO and Unesco, the basic sciences came within the province of Unesco. A knowledge of anatomy was certainly essential to the doctor, but it was a basic science and therefore concerned Unesco.

(121) Mr. FORSYTH (New Zealand) wished to raise the same questions as the delegates of the Netherlands and United Kingdom.

(122) The CHAIRMAN said that there could be no satisfactory discussion unless a member of the Advisory Committee on Programme and Budget were present to answer questions.

The meeting rose at 12.55 p.m.

# SIXTEENTH MEETING

*29 November 1954 at 3.40 p.m.*

*Chairman:* Mr. BOURGEOIS (Switzerland)

(1) The CHAIRMAN, after explaining how the remaining meetings of the Commission were to be allotted in order to complete the examination of the programme, hoped that, at the next session of the General Conference, the Programme and Budget Commission might begin work during the first week of the session. He proposed to submit a resolution to that effect to the Conference.

**ITEM 8.4.2 OF REVISED AGENDA: NATURAL SCIENCES (continued)**

(Paragraphs 56-58)

(2) As paragraphs 42-48 and 54-55 were to be held over for later consideration, the CHAIRMAN opened discussion on resolution 2.121.

(3) Mr. ANGELL (United States of America) considered that the project outlined in the resolution was of less importance than resolutions concerning pure science. The proposed work could be done by national efforts. He proposed that the Commission recommend to the Director-General that a reduction be made on that project and the money thereby saved used for projects on pure science.

(4) Mr. CHEVALIER (Secretary of the Commission) read out the proposal of the Advisory Committee that the project for the establishment of terminological bureaux be placed in Category 3.

(5) The CHAIRMAN observed that the suggestion was in line with that made by the United States delegate.

(6) Mr. AL-KOUSSI (Egypt) intimated that the Arabic-speaking countries would be holding a conference in September 1955 on scientific problems and that the agenda included the question of scientific terminology in Arabic. He wished to know whether Unesco would co-operate in that conference.

(7) Mr. AUGER (Director, Department of Natural Sciences) replied that, after considering the Advisory Committee's recommendation about the terminology bureaux, he had discussed the question with the Egyptian and Indonesian delegations, and several delegates had expressed a wish that the scale of the project be reduced rather than that it be abandoned.
(8) The Director-General therefore proposed simply to provide aid to Member States, which would mean sending experts to some of them - in particular, Egypt and Indonesia - to help them in working out terminology. Assistance of that kind would require only half the sum budgeted for.

(9) The CHAIRMAN asked whether any delegation would like to submit a proposal along those lines.

(10) Mr. JOHANNES (Indonesia) asked whether the project came under general activities or special activities. If it came under general activities, the Indonesian Government would appreciate help from Unesco for translation into Indonesian.

(11) Mr. AUGER (Director, Department of Natural Sciences) pointed out that the Indonesian delegate's proposal was equivalent to placing the project in Category 2 and that it was for the Commission to decide on that point.

(12) The proposal was seconded by the delegate of Egypt.

(13) The CHAIRMAN said that the Secretariat agreed to the transfer of the item, and put the proposal to the vote, with the appropriation of $6,000 a year suggested by Mr. Auger.

(14) Approved.

SECTION II 2.2 - Contribution to research, particularly for the improvement of the economic and social conditions of mankind

(Paragraphs 59-63)

(15) Mr. SANDOVAL VALLARTA (Mexico) said that he would take the necessary steps to secure ratification by the Mexican Government of the Convention for the establishment of the International Computation Centre.

(16) Mr. SEVERI (Italy) was very glad to hear that Mexico was to join the International Computation Centre.
(17) He reminded the meeting that Rome had been selected for the Centre's headquarters and that a preparatory committee was already arranging for the first general assembly of Member States. The committee had premises at the headquarters of the National Research Council and provision had been made for a new building. Draft regulations were being drawn up and a comparative study of calculating machines had been undertaken, the results of which would be communicated to Unesco.
(18) Mr. Severi mentioned that Italy did not wish to be in charge of the Centre and considered that the

appointment of a director of another nationality would help to give the Centre a more international character.
(19) He also mentioned that, owing to lack of funds for recruiting qualified staff, the preparatory committee had been obliged to refuse the offer of several electronic machines to be supplied free of charge.
(20) The Italian delegate deplored the decision taken by the Advisory Committee on Programme and Budget to transform the subvention originally proposed into a loan. His delegation would like the subvention for which provision had been made in the 1953-54 budget, and which had been agreed in principle by the Executive Board, to be put back into the budget for 1955-56. Without a minimum sum at its disposal the preparatory committee would not be able to perform the task entrusted to it.

(21) Mrs. PECSON (Executive Board) said that the Executive Board was extremely interested in the project. At its thirty-sixth session it had proposed the creation of the Advisory Committee on Research.

(22) Mgr MAROUN (Lebanon) pointed out that the Commission was once more faced with a project undertaken at Unesco's suggestion and with its help; it would be foolish for the Organization to equivocate over giving the Centre the funds needed for running it.
(23) He supported the request of the Italian delegate.

(24) Mr. BERREDO CARNEIRO (Brazil) said that his Government was prepared to give its whole-hearted support to the implementation of the project, and was making arrangements, through its National Council for Scientific Research, to ratify the convention for the establishment of the Centre.

(25) In reply to a question from the CHAIRMAN, Mr. AUGER (Director, Department of Natural Sciences) explained that the Advisory Committee had recommended that contracts totalling $3,000 be granted to the preparatory committee for the two years.

(26) Mr. SEVERI (Italy) recalled that the sum originally contemplated was $5,000 and deplored the suggested reduction, which would prevent the Centre from recruiting specialized staff capable of operating the machines offered to it.
(27) He observed that, as soon as it began work, the Centre would have the support of many countries which already possessed national computation centres.

(28) Mrs. PECSON (Executive Board) said that the Executive Board had recommended approval of the resolution contained in document 8C/DR/29 to the General Conference because it wished to give the Centre a chance to make its preparations while awaiting the ten ratifications.

(29) Mr. LAUGIER (France), on behalf of his delegation, hoped that Unesco would support the International Computation Centre for as long as necessary. He pointed out the importance of the work undertaken by the preparatory committee, both in the technical sphere and in that of scientific research.
(30) Although most large countries already possessed calculating machines, many smaller countries had not yet been able to procure them. The Centre met a need for international co-operation.
(31) He thought it quite impossible for Unesco to abandon a body which it had helped to found and which was destined to become a centre of mathematical thought.
(32) Mr. Laugier therefore supported the Italian delegate's proposal, and urged that the $5,000 be granted to the Centre in the form of a subvention instead of a loan.

(33) The delegate of Uruguay also supported the proposal.

(34) It was then put to the vote and approved by 35 votes, with 7 abstentions.

Project 2.21: International Advisory Committee on Research in the Natural Sciences

(35) Mr. CHEVALIER (Secretary of the Commission) read out a draft resolution submitted by the Uruguayan delegation (document 8C/DR/54), together with the Advisory Committee's recommendation that consideration of the proposal be postponed until a later session of the Conference.

(36) Mrs. PECSON (Executive Board) said that the Executive Board, in consultation with the Secretariat, had decided to consider documents 8C/DR/35, 8C/DR/54 and 8C/DR/60 together. It had recommended approval of the resolutions contained in documents 8C/DR/35 and 8C/DR/54 but had suggested that the proposal contained in document 8C/DR/60 be deferred until the ninth session of the General Conference.

(37) The Advisory Committee's proposal with regard to draft resolution 8C/DR/54 was approved.

(38) The CHAIRMAN requested the Commission to examine draft resolution 2.21.

(39) Mr. BERREDO CARNEIRO (Brazil) suggested that the first clause of resolution 2.21 be amended to read: "In order to contribute to scientific research, particularly for the improvement of the biological, economic and social conditions of mankind... ".

(40) Dr. MUDALIAR (India) said that the Indian Government considered the project concerning special scientific research was one of great importance. He felt, however, that it should include research on lagoons and coastal areas.
